A BETTER INDIA? How?

By making Ali Indians Study the problems of national progress, think about them and work for the realisation of the ideal.

Every Indian is a Nation-Builder

And as such it is the duty of all to study National Problems and to do everything possible to help National Progress.

In order to be in constant touch with the various aspects of National well-being, it is highly useful to become a regular subscriber to Welfare. Welfare is a bright and finely got up illustrated monthly journal, edited by Ramananda Chatterjee and Ashoke Chatterjee. Its annual subscription is Rs. 6, post free, and it has been widely appreciated by the press and the public as the only comprehensive journal of National Weal and Efficiency.

Libraries, Schools and Colleges

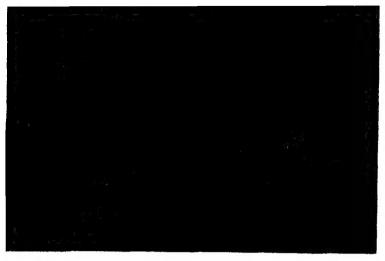

Should make it a point to subscribe to Welfare, as it steadily widens the outlook of its readers by supplying every month a large number of popularly written articles on subjects such as Education, Sanitation, Physical Culture, Trade, Commerce, Organisation, Business Methods, Women's Problems, Labour Problems, Child Welfare, Kindergarten, Home Training, etc., etc.

It is doubtlessly one of the most important items in Indian Journalism

To Give You An Idea

Of the range of subjects dealt with in WELFARE,—

Bustee Life

A Multan Jar

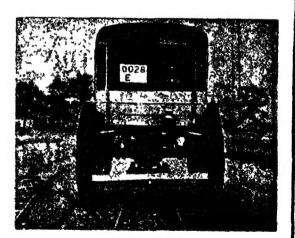

Turkish women wearing the New Head-dress

Cinema Photography

Baby Weighing

Rear View of 'Loce Tractor'

Write to-day to the Manager, Welfare; and become a Subscriber to it by sending an M. O for Rs. 6 (foreign Rs. 7-8.) or an order to send a V.P.P. for Rs. 6-4.

Manager, WELFARE

SAFE RAZORS

THE OLD FASHIONED METHOD OF SHAVING MADE SAFE

The only razor in the world which, owing to the old fashioned handle and the usual long bladgives the proper balance in the user's hand, enabling him to give the correct diagonal stroke down and across the beard. The blade which is the soul of the razor, is made from the best steel in the world oil-tempered and hollow ground. A certain number are placed in a patented folder with the edge-protected from contact with the paper by lttle tabs. The folder is then wrapped in a hermetically scaled paper wrapper making them absolutely sanitary and rust proof. It is interchangeable so that when it gets dull you have to pay only for a blade and not for the whole razor. It can be stropped or honed on any strop or hone with the help of the stropping device which used hitherto to be supplied only with the more expensive sets, selling at Rs. 4, and over, but having placed very large orders we have arranged for a moderately priced set with a special device of the same style and for the same purpose. This special low-priced set is our monopoly and not obtainable except from use or our agents.

Lastly, it is provided with a guard which makes it absolutely safe—there is not the least danger

of cutting the flesh. It can be used as an ordinary open razor and many people use it so.

You can also Trim your Hair with it

No. 1—Black handle, nickelplated fittings, one Durham Duplex blade, same as in the best sets and one special stropping device Rs 1-8 No. 2—White handle, superior fittings, package of thre blades and stropping device in superior leather flexible roll-up case

Rs. 4-0

CONCESSION-FOUR FOR THE PRICE OF THREE

Blades, package of three

Re. 1-0 Blades, package of five Concession—five for the price of four packages

R. CHATTERJEE 91, Upper Circular Road, Salcutta.

lote on the Principles and ractice of Advertising.

America is the land of Scientific Business and Advertising. The Nation which built Sky-scrapers to utilise space does not advertise in any way unless it pays Apart from Newspaper advertising etc. American Businessmen spent over Rs. 180,000,000 ın 1911 ın Magazine advertisements alone. (See Printers' Ink, May 4, 1911, p. 78.) time the figure is over Rs. 500:000.000 annually.

Why Do People Advertise in Magazines?

Because The public take more interest in Magazines than in Daily paners

Because Magazine Advertisements can be printed attractively

Because Magazines are preserved for reference

Because It costs less to be thorough in putting advertisements in Magazines than in Newspapers.

Truman A Dewesse, Director of Publicity of the Shredded Wheat Company, in an address before the Sphinx Club in New York, said about Magazine advertisements, "It is all there is to National (as opposed to Local) advertising." Magazine readers are exclusive and high-grade consumers and that is why it pays to advertise in Magazines

The Modern' Review is the Most Influential Monthl, Magazine in India The Prabasi is the Most Influential Bengali Magazine in India. There are 48 Million Bengalis.

Both are published from

91, UPPER CIRCULAR ROAD, CALCUTTA.

RAM BROTHERS, 883-29, Burns Hoad, KARACHI.

WORKS BY DR. BIMALA CHARAN LAW, M.A., B.L., Ph.D.

Publishers: Messrs. Thacker, Spink & Co., Calcutta.

I. Some Ksatriva Tribes of Ancient India. Price Rs. 10

The Times Literary Supplement, 28th August 1924 -In his search for material for the history of Ksatriya clans in early India, Mr Law has, one would think, very nearly exhausted all the available records. He claims to have studied not only the European and Indian scholars who have made researches but also to have ransacked an immense quantity of Hindu and Buddhist literature. Mr Law has however succeeded in showing that many of these ancient clans were exceedingly prosperous, and that they were for the most part a cultivated and manly race The section on the Licchavis which occupies more than a quarter of the book is very well done, and Mr Law claims no doubt rightly that he has added much to the information already available. The description of Gandhara is particularly interesting to European scholars because of its connection with Alexander and beacuse

Archaeological research has enabled us to supplement literary remains

Lord Curzon of Kedleston.—I am very glad to possess your learned book and I rejoice to think that Indian scholars so learned and competent as yourself are devoting themselves to researches in the Ancient History of India, one of the most interesting subjects

in the world

Dr. A. V. Williams Jackson of Columbia University -- Valuable work . I know its worth because I know your previous publications on Indian subjects that are of keen interest to me As I turn the pages from Licchaus onward, I see how much is in store for one who is a student of the History of India, upon which I have long lectured at Columbia University, such researches as indicated by this, and your previous work, are sure to prove an asset to scholarship.

Ksatriya Clans in Buddhist India Price Rs. 8.

Young Men of India (September, 1924) -It is the fullest account as yet published of the important subject of the ancient republics of India. No less than nine clans have been treated and their history supplied and customs and manners described. The author has also successfully refuted many wrong ideas, and shown how scholars both Eastern and Western often put the cart before the horse in trying to explain the origin of the largest and the most powerful clan Most careful and detailed account has been given of the Licchavis, the Videhas etc.

S. M. Edwards, I. C. S. (retd.) —It is to be regretted that I had not seen your Ksatriya claus at the time of my actually revising Smith's Oxford History of India It came into my hands later. Otherwise I should have modified Smith's view as to the Tibetan affinities of the Licchavis

III. The Life and Work of Buddhaghosa, Price Rs. 9 (cloth), Rs. 7-8 (paper)

Dr Geiger -An excellent monograph . All the questions connected with the date, the life and the work of Buddhaghesa are discussed in a most methodical and exhaustive manner

Dr Carpenter.—It is very important to have such a collection as you have gathered of the various data contained in his great commentaries and your additional illustrations are full of interest Your chapters on the origin of the Commentaries and the Interpretation of Buddhism by Buddhaghosa bring many valuable side-lights on the history of Buddhism your excellent volume will be a great help to future students

IV. Ancient Mid-Indian Ksatriya Tribes, Vol. I. Price Rs. 8. Contents — The Kurus, The Panchals, The Matsvas, The Surasenas, The Cedis, The Vasas or Vamsas, The Avantis, The Usinaras

Dr Burnett urites in his foreword.—Di. Law's work will be welcome. He has spared no effort to make an exhaustive and careful collection of the materials that Indian tradition. tradition offers, together with many relevant data from other sources that will aid in the construction of a critical history. By his earnest and energetic puratattranus and hitsa he has laid students of history under a considerable obligation.

V. Historical Gleanings. Price Rs. 6 (cloth), Rs. 5 (paper).

The Young Men of India - This is a collection of essays. The several pieces are all historical in character. They make pleasant reading and open out vistas into the dim past. The book will undoubtedly repay perusal by adding to one's stock of historical information.

 \mathbf{p}_{0}

It contains 4,000 Sutras of Panini, 900 Sutras of Sakatayana (Unadi), 200 Sutras on accent (Phit Sutras), 2,000 verbal roots and their conjugation—incorporating the whole of the Madhaviya Dhatuvriti with copious explanatory extracts from Kasika Mahabhasya, Tattvabodhini, Manorama, &c., &c.

Indian rate, exclusive of postage, Rs. 45. Foreign rate, exclusive of postage L 5

It has been patronised by His Majesty's Secretary of State for India, the Government of India, and several other Local Administrations, and rulers of Indian States.

This work has been found useful by University students

N B.—A Calcutta Professor, in publishing the translation of a chapter of this work said that there was no English translation of it Luzac's Oriental List and Book Review for October-December 1920, in noticing that publication wrote:

"The Professor is mistaken in saying that there exists no English translation of the Kaumudi, in view of the excellent one by Mr. Sris Chandra Vasi (The italics are ours).

The well-known Tibetan Scholar and traveller the late Rai Bahadur Sarat Chandra Das, c. 1. r in his "Memorandum on the Training of Pandit and Moulvis" submitted to the Conference of Orientalists held at Simla in July 1911 under the presidency of Sir Harcourt Butler said,—

"The translation of the Siddhanta Kaumudi with annotation has been done in such a manner that even a tyro in Sanskrit can understand it without the help of any Pandit.

"I suggest that the above-mentioned work be translated into Bengalee and Hindi to enable our Sanskrit students at tols and pathsalas to learn and understand Panini's grammar in a shorter space of time than they do at present."

Bhavabhuti's Uttara - Charitam.

Edited by S. Ray, M. A.,

Vidyavinode, Siddhanta-Vachaspati, Principal, Vidyasagar College.

Prof. A. Berriedale Keith, Edinburgh University, says:

whether there are any suggestions which I could usefully make to secure greater adaptation to its purpose. It seems, however, that the mode in which the work is performed is well adapted for its purpose, and I note with satisfaction the effort to render the text into effective English. The explanations seem well adapted to secure comprehension of the text, and certain new renderings deserve serious consideration."

Complete Rs. 3-8. Foreign 6s. 6d.

Prof. E. J. Rapson, Cambridge University, says .

". .I have read with great pleasure and interest. The commentary and notes are admirably clear"

WORKS OF PROF. JADUNATH SARKAR, M. A.

AURANGZIB.

Vol. V. (1689-1707) Rs. 4.

Will be out 26th December, (orders registered) The completion of a life's work and of 50 years' eventful history.

First 4 vols., Rs. 3-8 each (Sold Separately).

Vol. I. Reign of Shah Jahan

War of Succession Vol. II.

Vol. III. Northern India 1658-1681. 2nd. ed. Vol. IV. Southern India, 1646-1689

Based mainly on original contemporary Persian sources, na, the Mughal States Papers, daily bulleting of the Mughal Court, the letters of Auranga ib and his contemporaries, (more than 5,000). Marathi bakhars and letters and the Assamese buranus, besides contemporary Factory records of the English, French and Portuguese.

H. BEVERIDGE.—"Jadunath Sarkar may be called *Primus in Indis* as the user of Persian authorities for the history of India. He might also be styled the Bengalee (libbon."

VINCENT A SMITH—"You are doing first-class work. I have the highest opinion of your learning, impartiality and critical ability."

W. FOSTER, C I E-"It is easily the best authority on the period with which it deals"

Studies in Mughal India 320 Pages, Rs. 2.

Contains 22 Historical Essays, on India in the 17th century and Mughal civilisation in all branches.

ASIATIC QUARTERLY REVIEW - A series of essays of the most entertaining description."

INDIAN ANTIQUARY .-- "All the essays are brightly written and several contain information not hitherto available in English"

Anecdotes of Aurangzib

(Persian text, unth an English translation, notes and a long life of Aurangzib)

The work is exceedingly interesting and valuable, s it throws much new light on Aurangzib and whibits his puthy sayings, and his principles of overnment.

SHIVA

PIONEER .- "Probably the only really first-class meee of work in English on Maratha history published during the present century "

H. BEVERIDGE—"Jadunata Sarkar. All his works are good, but perhaps the best of them is Shwan. It is full of research and gives a striking putture of the birth of the Mahratta nation Based on an exhaustive use of all the available original materials—Persian Marathi, Hindi, Dutch and English—most of which were unknown to Grant Duff Shivan's character and achievements, and the Maratha institutors and system of Georgements. Maratha institutions and system of Government are discussed in two long chapters (45 pages)

Mughal Administration Second edition, Size more than Doubled.

A study of the administrative system of the Mughal Empire, the Departments, the functions of the chief officials, the provincial administration, its influence on the peasants the legacies of the Mughal Empire, the causes of its downfall—Emperor -aristocracy-State factories farmans

To Our Advertisers

The Modern Review is India's greatest advertising medium. It circulates widely in every part of India, Burma, Ceylon, F. M. S., S. S., South Africa and all over the world wherever Indians and people interested in things Indian are found. That it is a paper well worth advertising in is proved by its long list of advertisers who have used its columns for giving publicity to their wares for years without a break

Of late the Modern Review has improved its printing, paper, get-up and has made an all-round advance in popularity, circulation and quality of articles and pictures. This has meant extra expenses to the Modern Review and extra profits to its advertisers. In view of the above facts, it has been found urgently necessary to slightly increase the advertisement rates of the Modern Review. This increase shall not affect: existing contracts till their expiry.

Agricultural, Trade and Statistics of Railway Traffic. Cost of Railway Operation and Operative Statistics, Railway Finance, etc.

Introduction to Adwaita Philosophy (ENGLISH EDITION)

BY PANDIT KOKILESWAR SASTRI, VIDYARATNA, M A
Post-Graduate Lectures in Indian Philosophy, Calcutta University
Demy 8vo Pp. 194, Cloth, Rs. 4,

The work is a brilliant exposition of the Sankara-School of the Vedanta Philosoph. The most striking feature of the work is the full consideration of various altogether new issues such as (1) whether Sankara has denied the reality of the objects of the university of the philosophy into metallicity of the active power, of whether Vedanta advocates mertia emptying of the human mind rather than its expansion (4) whether Sankara's Theory can be called Pantheism, and so on The work will prove an indispensable companion for the thorough and correct understanding of the great Maya Vada in its various aspects. Copious authoritative quotations from Sankara's commetairies on the 10 Upanishads. Brahma-Sutra and Gita have been given in the footnote enhancing the value of the work, which are an invaluable mine of information, on the subject author attempts also to clear up various misinterpretations and misrepresentations the Sankara-Vedanta, giving a correct and right exposition.

System of Buddhistic Thought.

BY REV. S YAMAKAMI Royal 8vo. Pp 371. Rs. 15

The book presents in a comprehensive though short form a complete view of Buddhist Philosophy, both of Mahayana and Hinayana Schools

STEPS TOWARDS A WORLD FEDERATION

BY SYAMACHARAN GANGULI, B.A.

LATE PRINCIPAL, UTTARPARA COLLEGE

CESSATION of war among the States of the world would necessarily be the first step towards a federation of all the States the world into a World-State. War has red a necessary part in the work of human lution. At first, wars were wars of rmination or extermination with partial avenuent. They gradually became less less cruel, and led to conquest of one ble by another and amalgamation of confor and conquered. Thus large States e to be formed, within whose limits e reigned normally. But the warlike t continued, and wars continued to be ed on between States, territorial aggrandent and military glory being the main cements.

Var fosters certain virtues, notably courage the spirit of self-sacrifice, and for this s counted among its advocates and adseven so great a philosopher as Hegel. war has always had its terribly evil side has nourished certain savage instincts. sould not fail to impress and hornfy the n mind. As interdependence between sut States increased, humane feeling ced, and war came to be less and less

India, so long ago as the 3rd century Emperor Asoka, after his conversion idhism, regretted the conquest he had of the Kalingas, as is recorded in Edicts ed on tooler and pillars. In Europe, glorification of war has had a long record life, the last public ory for

perpetual peace came out in the year 1713 A. C. in the Abbé de St. Pierre's Paix Perpetuelle, which pleaded for perpetual peace among Christian nations, Russia, however, being excluded for reasons not very clear. In 1795 Kant put forth his powerful essay on Perpetual Peace for the whole world as an ideal to be cherished and pursued, however distant its realisation might be., Kant's second Article of Perpetual Peace is this: "The law of nations shall be founded on a federation of free states." A federation of the world was thus an idea of Kant's.

The Napoleonic Wars were a sad commentary on Kant's advocacy of Perpetual Perce. Other wars took place in Europe after Napoleon's time, of which the chief were the Franco-German War of 1870-71, and the Ite Great World War of 1914-1918. This list war caused slaughter, suffering and devantion beyond all precedent; and it has thus roused all over the world a strong hatred of war. Though there are still advocates of war in the world, their opinion is of but small account against the vast body of public opinion now against war.

To Czar Nicholas II of Russia belongs credit of initiating the first practical stop for minimising the chances of war, and the Hague Court of Arbitration, started in 1899, is a noble memorial of the Czar.

President Wilson of the United States
America, who took a leading part in concluding
the Treaty of Versailles, tacked on to the Treat
a Convention for the establishment of

League of Nations, with the object of securing international peace and promoting international co-operation. But the Convention has its faults, and Wilson's own country, the United States, did not accept it. It is not an effective institution yet. It cannot at any rate bar out such national wars as the late one between Turkey and Greece and civil wars such as the one now going on in China or the one that lately went on in Mexico. It may be hoped, however, that the League of Nations may hereafter so transform itself as to be acceptable to all the world, and become the instrument for putting

an end to all fighting in the world Other factors besides the cessation of fighting among States are necessary to make the world one State. One of these factors must be the removal of the barrier of customs duties among States. Customs duties act as bars for parting nations, and the removal of these pars may well begin with the British Empire The British Empire or the British Commonwealth of Nations, as it is called, is the one political agglomerate in the world which approaches nearest to the model of the World Federation of the future. It extends over all parts of the world, and covers in round numbers, an area of 14,000,000 square miles out of the world's entire land surface of 55,500,000 square miles.* It contains a vast population, mostly non-British, consisting of men in all stages of civilisation Its mercantile marine is the largest in the world, being a good deal larger than that of the next maritime power in the world, the United States, and vastly larger than that of any other maritime power The work before it is the noble and heavy one of bringing up all the parts of the Empire to a civilised self-governing stage. To extremely backward races within Empire, such as the Andaman Islanders, fate awaits of extinction, such as has over-

taken the Tasmanian race.

The British Empire labours, however, under the disadvantage of not being, wholly or mainly, a compact territory, like the other big States of the world, measuring more than a million square miles each, namely the United States, Russia, China, Brazil and Argentina. This disadvantage is irremediable. But unification, so far as is possible under this disadvantage, may legitimately be wished for and attempted.

The present bond of the British Empire

is the Crown. But the Crown is not uni versally considered to be a permanent institu tion, for it stands on the philosophically unten able principle of transmissibility by inheritance of the highest political function in a State. Crown have been disappearing in Europe, and in Asi: which has long been held to be the strong hold of monarchy, China and Turkey havcast off their sovereigns. In the Unite States of America, which is now the chie English-speaking country in the world, the monarchical feeling is dead. Can feeling exist for ever in other English-speaking lands? The current of public feeling against monarchy cannot fail to reach even monarch themselves, and induce them to give up then inherited positions out of noble impulses. Mon archy is therefore likely to disappear from Britain, however distant may be the date of this disappearance.

One universally recognised function of a State is that it allows trade to go on freely throughout its entire extent without the levy of customs duties, while it imposes, with a few exceptions, customs duties on merchandise coming into it from foreign countries, and on merchandise going out of it to foreign countries. The British Empire, as a whole, does not exercise this function, and is therefore not a State in the usual sense of the term, but a Confederacy of State-Would it be too bold a proposal that a Customs Union should be made a bond of union for the whole British Empire?

Customs duties are a bad which tends to disunite mankind-to disunite even peoples who are united by the bond of a common language, and which gives a vast advantage to big States over small one-Goods passing over such long distances as that between New York and San Francisco are not burdened with the obligation to pay any customs duties, but goods passing over such small distances as that between Paris and Liege, both French in language, are burdened with the obligation. In a federated world, there can be no customs barrier between one State and another. For the comfort of those who regard protective duties as a good device for nourishing manufacturing industries in backward countries, it may here be pointed out that the granting of bounties by Governments efficacious and a more equally equitable device for encouraging industries. Bounties are contributions from entire communities, while protective duties! gan their ends only by imposing bartlens on consumers of the particular commedition. the

^{*} Whitaker's Almanack, 1923, p. 112.

panufacturing of which is sought to be

moouraged.

In forming a Customs Union, the British Empire would only draw nearer to the ideal of a federated world, and would at the same ame present a more united front to other States than it does now. The fiscal independence of the different units of the Empires a strong obstacle in the way of a Customs Union of the Empire being established. But the principle of Imperial Preference, which is now naking some way in the Empire, requires only to be pushed a little further to give full freedom of trade between the different parts of the Empire. Would such pushing further be an impossibility in the face of the great good it night do to the Empire and the world?

The abolition of all customs duties would be so promotive of the sense of human protherhood throughout the world that a natural impulse in favour of the abolition may well be assumed to exist everywhere. But there is a practical difficulty in the way lustoms duties are a mode of indirect taxation which brings in large revenues to states. If they are abolished, States will be ard put to it to devise some other mode of axation to raise revenues equal to part of the salue of those lost by the abolition and to ducate public opinion to accept that other hode. Universal disarmament must make vast aductions in national revenues possible.

For the unification of the British Empire, addition to a Customs Union, it would so be necessary to provide an organisation r the control of all foreign relations of the mpire by the entire Empire and not solely mainly by Britain With the least deparru from existing institutions, such organisan may be effected by the formation of a reign Relations Committee, consisting of Premier of Britain, the Secretary of State Foreign Affairs of Britain and the High mmissioners in London of the several minions—Canada, Australia, South Africa. w Zealand and India. This would give to tain two members, and to each of the minions one member. This would not out of harmony with Britain's position as metropolitan part of the Empire and its ereignty over the many British Dependbies. The Foreign Relations Committee could d consultations, whenever necessary, with cabinets of Britain and the Dominions.

In a federated world, there would be no im for a British Commonwealth of Nations, sisting of territories scattered all over world. The Commonwealth or Empire

should break up when a World Federation formed, and its several historical members of parts should become federation. Only such small territories as could not form States by themselves for representations in the world's Federal Council, would remain as dependencies of Britain. But the World Federation would take a long time to form itself, and so the breaking up of the British Empire would take a long time to come about. So long as the Empire remains, it should be as firmly knit together as possible, and, working in close concert with the great American Republic, which comes within the limits of Greater Britain, it should exercise a controlling power over the rest of the world, particularly in putting a stop to fighting among human beings. Britain now detests war, and America too now detests war. If they go hand in hand together in the matter of ending war in the world, there would be hardly any chance of war breaking out anywhere in the world. The united strength of the British Empire and the United States, standing in declared readiness to prevent fighting among the human race, by force of arms, if necessary, would overpower the fighting propensity all over the world.

Besides the cessation of fighting among the human race and the removal of customs barriers that now hamper free commercial intercourse among nations, another vital requirement for a world federation is the removal of the restrictions that now exist in some countries to the free immigration of people from other countries It is quite justifiable to prevent the immigration of unde-irables. But the test of undesirability should be physical, mental or moral deficiencies. and not difference of colour or descent. Unfortunately for the world, the greatest offenders in this matter are memberof the present dominant English race in the world now spread over Greater Britain The worst offenders are the Americans, whose illiberal policy of the past towards immigrants of non-European origin has become still more illiberal under the new Immigration Law. The British kinsmen of the Americanin British Columbia and Australasia are al-o averse to admit among them non-European immigrants. Whites in South Africa, British and Dutch, are also intolerant towards noncolour Till Europeans. the and race prejudice abates much in English-speaking lands there can be no World Federation. • But the prejudices are bound to abate and ultimately to disappear. The French are a

people of the same grade of civilisation as the English. In certain matters they have been the leaders of progress. Race and colour prejudice has grown very weak in France, and it can fairly be inferred that other civilised countries shall in this matter follow the lead of France.

TO THE PEOPLE OF JAPAN

By RABINDRANATH TAGORE

MY friends. The warmth of your welcome deeply touches my heart. I feel extremely glad that I have been able to meet you once again, and I offer you on behalf of my country our sympathy for the disaster with which you met only lately, and I must tell you how deep was our sorrow when we heard of it. We felt this sorrow because in the present age it was Japan which had aroused the consciousness of itself all through Asia, and for that we are thankful to Japan, and for that we all accept this disaster as our own This was the only reason which brought me to Japan this time I had no desire to speak to you or to prolong my stay in this country for any special pur-

pose of my own

I always feel it unfortunate, my friends. that you should know me as a speaker, which I am not My mind only speaks through silence and in solitude. I have not the training to speak before crowds of men, but I always have lived the life of a recluse in order to dive deep into the depth of my being and to seek for the voice that hes hidden there. But it has been my fate to be known as a speaker when I travel outside my own country. I know that some of you will go away with the impression that you have seen me, that you have known the poet who has some reputation, because you have come before me, you have been in direct contact with me through the visits which I have paid to your country, but nothing can be farther from the truth. Very likely when I shall be away, or when I shall no longer be on this earth, you may know me more truly than you can possibly know when I stand before you and speak to you.

No INSTITUTION-BUILDER.

There are men strong of arm and with strength of purpose who build institutions,

stone over stone, brick upon brick, every day, and they finish their building before the eyes of the public, but I do not belong to then class. I am like a seed-sower who just scatters few seeds on the soil and then does not have the time to see if they germinate, and I may go away with misgivings in my heart that such seeds will never come into their fulfilment But still this is my mission, and when I have come in your midst, I have come with this purpose. I cannot help you in building up some solid organisation—something which will be visible and tangible to you, but I shall walk among you, and very many of you will not know that I have done anything which is of any practical value, because it not obvious. This act is not obvious, and it effect also may not be seen for some time to come. And I have to be content with the mission of mine.

THE FOLLY OF PUBLIC SPEAKING.

You may think me very old-fashioned when I confess to you that I myself do no believe in this Western method of speech making. It is convenient when I have to wi something to a big crowd of people, but, like most things that are convenient, it is ver superficial in its effect and it misses the human element, it is sure to become some what formal and mechanical. It is ver difficult to follow the inner inspiration who one has to lecture before a big audience " this manner of a long continuous monologue which I consider to be an act of tyranny " which no rational being should submit. It is not natural. I do not know about the custom which was prevalent in your country, but know that in India and very likely in miss of the Oriental countries we never have had this form of lecture, not even in classes a plucational institutions. Our lectures—if the could be called lectures were more in

hat is to say, they were the product of the ninds of the listeners as well as of the peakers, and because they were not one-ided they were living. And these products of two minds had something which was a sort of creation, which was a surprise even to the peaker. It was not some set speech, some dealist phrases, but constant surprises of new rowth of ideals, and I believe that it is the atural and the rational thing which we hould be able to expect.

TEACHER AND DISCIPLE

In former times in our country our gurus. ur masters, our teachers, would keep to their wn seats and those who wanted to listen to nem had to come around them and through uestioning them, would find out what they ought. Now our speaker of the present day oes out hawking his fruit from meeting to neeting without knowing what the audience eeds, whether their attention is fixed on his rords, whether they had come out of mere uriosity, not prepared to accept any lesson hatever, and yet having to go on talking at iterminable length and then be assailed by newspaper reporters, and to satisfaction that these thoughts hrases had been distributed to a number of eople at their tea-table in the morning. It is ery superficial, and to my mind it is sadly nreal, and it is wasteful. I have never felt ny satisfaction in talking to a big meeting n the subjects which are dear to me, for hich I have deep reverence-in throwing iem about in a very cheap and almost vulgar nanner before the respectable people who ome to while away their time and most of hom are not serious in their attention. I unk the best thing is to keep one's best loughts in the seclusion of silence till they re besieged, they are stormed-taken by orm by the people who must have them, clamour for them; and then to It terrifies me-this vast silence of ne meeting. It is a difficult silence across hich my thoughts have to pass unaided, ithout any compass, without any tracks do not know what is in the mindf my listeners and I feel nervous because am not a born speaker. I have always lence and solitude, but is it necessary, my iends, that you should banish me away from our living mind upon a platform, and do ou want me to be pouring down my woods the void, without knowing whom I are

addressing? The best thing would have been for me to go down among you and—not all of you but some few could ask me questions and draw out the answers from my heart. That would have been more satisfactory, and that would have suited me. But I know that in the modern time we are hurried in all our efforts. We have not much time to sparethe time, the leisure which is needed for the growth of life to loving hearts. Rain-clouds take their own time to pour down their rains. To pack them up in neat baskats—as you do beautifully your luncheon—and to send them to different parts of the country—that cannot be done. The rainy season cannot be packed into convenient packages. The clouds wait for questions and answers The thirsty earth sends her questions, her warm breath up above into the air, and then the answer comes in the form of the shower, and it is the creation of the thirst which rises from below and the heart which overflows above, and this combination is necessary for this function of irrigation upon which depends the fertility of the soil. And the arragation of hearts with ideas is like this shower of rain which comes on the thirsty earth

But I do want to speak My heart is full. But does it depend on me? Am I able to say what I must say? Though I wish to speak to you the deepest thoughts that I have in my mind, is it in my power to do so? I have often gone through my engagements-I have spoken, and I have gone away surprised at finding that what I had come to say had remained unspoken, and the same thing may happen even now in Japan. Have I spoken that which I ought to have said when I was in China? But was I alone there? Was not there a multitude of others who had their other thoughts and who possibly were not ready to listen, and could I, unaided and alone. speak against mattention, against misunderstanding? It is not possible for any mortal to do so. And though my heart is full, my friends, I may go away like the rain clouds that often gather on the horizon and take their departure without disburdening the rain which they have brought with them. The same thing happens over and over again, and so it may be that I shall make speeches and lectures and you will applaud me and they will be reported in the newspapers—and nothing will be spoken t

Appreciation of the Japanese

I shall take this opportunity to-night only to speak to you a few words—not a thing

which is my own or yours, but yet which is the only thing I can say in this meeting. am not flattering you, my friends. I have a deep admiration for your people. You are a stout-hearted people. You are brave, you are undaunted in the face of danger and disaster. I feel that your country has come out from the shock of volcanic fire from the bottom of the sea, and in your character you have combined the brilliance of the fire and the fluidity of the water—the bravery, the determination and the brilliance of mind and with it the suavity and—what I felt when I was in Japan last time and I feel it now—the poetry of life. You have tried to make life beautiful. You have not merely made it useful. Though you have wonderful power of efficiency, yet you take an infinite deal of trouble to make your everyday life full of ceremonies and civilities. This bravery with its richness and variety, which is moulded and tempered by the poetry of life-it is a great gift which you have, my friends, and I have felt at home in your midst because of this. You have the power, you have the tact to make your guests happy—not merely comfortable but happy—which is a great gift, and for that I must offer you my thanks. And when I had your invitation, I was certain that I should meet that heart-felt love and sympathy and your respect, which is genuine, for a poet, would be offered to me and I should go back home satisfied in my heart. And I want to thank you to-night not only for the present visit, which has met with such a welcome, but when I came last time and met with friends whom I shall never forget 1 have been welcomed into the homes of many of you. Not all people can do it. I have met with admiration and friendship and comradeship in other land, but in your land -possibly not the same depth of admiration, not the same depth of understanding, but som thing which is deeply human. I have been able to come close to you This acceptance of your guests close to your hearts is not an easy thing in the present age, and I felt apprehensive that the callousness bred of the touch of the rude utilitarianism of the modern time might perhaps have dissipated the poetry from your life and reduced you to the same monotonous respectability of the modern civilisation from which I hope you will be saved.

THE BEAUTY OF DIGNITY

This profit-making age is vulgar. It sneers, but it does not know how to smile. It can

make you comfortable as an hotelkeeper o but it cannot make for you a place hearth of its home. It can be tacetious n humorous. And I ask my friends in East: Let us at any cost keep our dign which is beautifully tender, simply hum and which does not raise up barriers between man and man. Offer your generous hospital: not in a grudging manner, but in the beaut ful spirit of exuberant generosity, which you always have done, and let you remain, like your beautiful island in the surging sea o utilitarianism of the present civilisation; likyour beautiful scenery, which is hospitable and like your dignified peak of Fujiyama raising its brow in the cloudlands, keep your dignity of the Oriental mind, the beauty of sentiment and beauty of behaviour, and do not mingle yourself in the hustling crowd of money-mongers.

1-4 1 HAZ

Do you not think that God would be ashamed if his beautiful world all of a sudden lost its tender grass, its beautiful flowers and the soil became full only of stone roads and iron bridges and viaducts and the foundations for all sorts of office buildings and nothing else? He would feel ashamed of such a world which loses its colour, its tendernesits invitation to love and beauty, which becomes merely useful. He would be ashamed And God would be ashmed of humanity when it loses its power of sympathy and love and hospitality and becomes unscrupulously selfseeking and egoistic and nationalistic, with what these people call the Nordic quality of those fit to become rulers of men. Ruleis of men, this they are—only rulers of men and not human beings meek and simple only rulers of men with cruel purpose and

unscrupulousness

WHAT JAPAN GIVES TO THE WORLD

I hope you will not be disappointed because at this meeting I have not spoken in you anything about any practical problem of the present day I hope you did not expect any such discussion from me. I crave your pardon if any of you did think that I had come to give you any good advice about present-day problems of politics or commence or anything of that kind. I don't want be do it because to my mind these things however great they may seem, will pass off like shadows. Great empires arise and vanish and w does great 'wealth like that of Greece, they are reduced to dust, but the products of life and specit, which have the immortal value of beauty and tenderness, they never die. They

for all time and for all people. That ch you create from your spirit will be med by all humanity and for all time. that which you merely produce as terials of use and convenience—your own alth, your own arms and armaments, fur own political power—they clusively to you. Humanity has no claim on them, and therefore God's blessing, hich gives immortality to all things, is witheld from them. They are sure to perish, are to vanish some day or other But if on light your lamp of truth, the flame ill burn across the darkness of time like ars in the depth of night. And that you ave done. Your people have produced omething from their heart which is still urning in your society, giving out the bloom f beauty, and your works of art bear testi-

mony of your power of spirit, and they are claimed by all men And I, who come from a distant part of the world—I know that your people have given birth to these works of beauty for me for the individual me. And all the individuals in this world can claim these works which you have done from the Nuberance of your generous creative spirit And these you cannot keep only to yourselves. but they belong to all the world And for these you can be proud-not for death-dealing weapons, nor for wealth which is sure to vanish some day or other, but for the immortal creations of spirit I have come to claim these for all humanity. I have come to praise them for all the world. And this is the message of the poet who has come to von from India.

A MEMOIR OF OLD DELHI

By C. F. ANDREWS

CHAPTER II.

ZAKA TILAR'S FAMILY

UNSHI Zaka Ullah, the subject of this memoir, was born in a house situated between the Great Mosque and the slin Palace on April 20th, 1832. The mily, into which he was born, had been for any generations the trusted teachers of the yal house of Timur. Originally, its descent is traced to Abu Bakr, the first successor the Prophet. The name Sheikh is given those who are thus descended.

In early Moghul times, this ancient family lits home at Ghazn; but at a later date, fiz Muhammad Ali came through the aibar Pass into India and settled at hore. Afterwards, he was appointed, by al command, chief tutor to the Prince, o in later life occupied the imperial one at Delhi, as Akbar Shah H. From t time forward, the family became permattly resident in Delhi, as tutors to the peror's children.

On Hafiz Muhammad Ali's death, his son hammad Ibrahim, who was also a Hafiz a. s. one who could recite the whole Quan

and Zaka Ullah, the eldest son, became marked out from the first for the succession to the post of Teacher in the Imperial All his early education was based Palace on that assumption. The grandfather of Zaka Ullah, Hafiz Muhammad Baga Ullah, lived beyond the age of ninety. He was a wonderful old man, very well known and highly respected by the Muhammadans in Delhi. It was the joy of his old age to teach his little grandchild. The child, from the very first, Zaka Ullah. began to show brilliant intellectual powers. There is a story current in the family that

succeeded to his father's rank as teacher of the royal princes and princes-es. Then later,

the eldest son, Hafiz Muhammad Baga Ullah.

succeeded to his father's post as Teacher of

Hafiz Muhammad Sana Ullah became Teacher.

Muhammad Zaka Uliah was the second child of Hafiz Muhammad Sana Uliah. The first-

born child, a daughter, had died in infancy;

the Royal Family.

In turn, his own son.

old grandfather to administer punishment to his grandson for some offence. But the old man replied: "No, no. The boy is so clever and has done his lessons so well, that I can-

the mother of the little boy once asked the

not punish him for any fault which he may

have committed to-day.

The two of them, the old grandfather and the child, spent a great part of each day together; and it was from him that the boy inherited that deep religious nature which ran through his whole personality, making him essentially, when he grew up, a man of The father and mother, who were religion. both deeply religious also, added their own spiritual influence and moulded his character But Zaka Ullah used in other directions always to relate that his grandfather made upon him the first and deepest spiritual impression, and taught him to realise the Presence of God, so that prayer became a His religious faith was thus reality to him a direct inheritance from his grandfather

Hafiz Baga Ullah was known throughout the whole city of Delhi for his strong religious character and complete devotion to God. For seventy-two years he never missed saying the five daily prayers of his religion in the Great Mosque at Delhi He was kneeling in the Great Mosque at prayer at the last, when he sank down and died People regarded him as a saint and his memory was preserved after his death

Hafiz Sana Ullah, the father of the boy, was equally devout. There are people still living in Delhi who can remember his saintly life. They recall how he was never known to have acted fulsely, or to have told a lie throughout his long life. I have often spoken myself with those who knew him well have told me how he used to retire for meditation and how he would sit for hours repeating verses from the Sacred Quian Once, when he was in great poverty and his friends had asked him to go to a celebrated Darwesh, and ask for his intercessions, in order that he might be relieved from his poverty, he had replied: "No, no, if God gives me poverty I am quite content need anything, I shall seek it direct from God and not from man." This was his attitude all through his life. He waited upon God to supply every need.

Sana Ullah was more decisive in his actions than either Baga Ullah, or his own son Zaka Ullah. He had an extraordinary power of faith, which carried him through the most difficult times. His courage was equal to his faith, or rather was an essential part of it. He was the Tutor of Mirza Kuchak Sultan, the youngest son of the Emperor Bahadur Shah. When the city was on the point of being captured and the young

Prince's life was in great danger. Sana Ulli offered to make his own house into a harbo of refuge for the Prince, though to do might place the whole of his own family But the your imminent peril of death. Mirza, who had a deep love for his old tute nobly refused to take advantage of his offe and thus bring upon his tutor and his famil mevitable disaster. The Princ escaped by himself to Jaipur, whence he wa

taken as a prisoner to Rangoon.

During the days that followed. Sana Ullah' family had to suffer terrible hardships. Their own house which was near to the Fort wa demolished, and they had to wander homeleand often shelterless while the whole country side was ravaged by robbers and by looting soldiers Throughout the whole of this period Sana Ullah wherever he happened to be would keep openly and fearlessly the five of prayer each day which hi Muhammadan religion appointed. On Friday he could bathe washing his linen with his own hand and waiting till it dried. Then he would say the public prayer appointed for Friday, in complete disregard of anything the happened to be going on around him. son. Zaka Ullah would be very anxious at such times and would keep guard. When bands of looters drew near, he would come up to his father and urge him to fly. Bu Sana Ullah would take no notice whatever until his prayers were all completed.

On one occasion at this critical time, the whole family was brought forward, under strong guard of soldiers, before a British officer named Captain Wilson Martial Law n. then in force Sana Ullah and his son Zaka Ullah were called upon to give explanation as to their antecedents. When it was shown to Captain Wilson's own satisfaction, that they were pious and peaceable citizens, le released them and gave them an escort of soldiers to a place of safety.

Munshi Zaka Ullah used to relate to me that he really owed his life to the care and kindness of that British officer; because veroften, in those critical times, when passion and greed of plunder were let loose, even those who were acquitted were not seldon killed by soldiers or robbers as soon as the In the very place got Sutside the camp. where Captain Wilson had met them, there had been many murders of this kind, and was the Captain's order and escort, which had stood them in good stead and brought then info anfety.

Sana Ullah, after a long and eventful life

ring which he had bestowed every possible te on the education of his son, passed away acefully at the age of seventy-two. yers were said daily in the Great Mosque to the time of his last illness, and sen-ces from the Quran were the last words t were on his lips when he died. Though influence of his father and his grandfather moulding Zaka Ullah's life was great. acially on the religious side, the greatest uence on his character and his daily cont as he told me himself many times, came oubtedly from his mother. He was of those many leading Indians of the steenth Century, who owe their commandpower of inward purity to a mother's

From his very earliest childhood, Zaka h, clung to his mother with a child nt and impetuous affection She was a ian of very strong will, and she ruled children as well as loved them ld never allow a fault to be passed over, her displeasure was greatly feared. But had the gift also of so winning her chil-'s affection that they would do anything

lease then mother

Zaka Ullah would relate the incident. some years before the Mutiny the family been in straitened encum-tances and it very hard indeed for his father to suphis six young children. But his mother her ornaments and household things and hased with the money which she obtained them the books that were needed tor children's education Zaka Ullah could r tell this story without deep emotion n he himself, as a child of twelve, received iist prize-books at the Delhi Schools, an all the way home in great excitement stopped only when he came to his mother's and laid them there with mingled joy and This was the attitude of all the ig children towards their mother, to please became their greatest joy in life.

The son of Munshi Zaka Ullah has told the following interesting recollection it his father, which reveals the depth is teeling where the memory of his ier was concerned "Some eight years , he said to me, "my father came to my e one evening. He was talking in his I way about ordinary things, when, all of dden, he became silent and thoughtful. ast he said to me with strong emotion very day, seventy years ago, my mother ght me forth into the world, and then ried and sobbed like a child. I was my quite startled and surprised to see han

in that state of mind which continued for some time till the memory passed away What affected him so much is still a mystery to me even to this day But there can be no doubt whatever that it was of his mother that his thoughts were filled at that time Perhaps it was the recollection of all that she had borne and suffered for him that overwhelmed him at that moment Perhaps it was the fond memory of all her goodness and affection that moved him Perhaps it was the sudden hope of seeing her after his

Munshi Zaka Ullah

own death, which could not then be far off, since he had already reached seventy years of age. Whatever it was, I record the scene just as I had witnessed it with my own To me it gave a very remarkable impression of the depth of my father's love for his mother and the devotion that filled his heart. I can myself remember her in her old age; for I was nine years old when she died. She was very greatly respected and feared by all, and in the household, her word was always strictly obeyed. I can never forget seeing my father treating here as if he had still been her young child and my mother treating him in a similar way, and the terms of endearment he used to employ. She was never so happy as when she had him by

THE MODERN REVIEW FOR JANUARY, 1925

- her side, and he was never so happy as

'He used to tell me that when he was a young lad, he and his brothers would come home together and one of them would say Father, I have caught such a nice pigeon "And another would say Father, I have learnt so much Persian', and another would say. 'Father, I have read so many passages from the Quran. His father, in his fondness for his young children, would embrace them all equally and be pleased with all their But his mother would only be answers pleased with those who had studied well and learnt their lessons, and she would scold the one who had wasted his time in catching the pigeon. Herself, she was never idle even for a moment From morning to night she was caring for the household or else attending to her religious duties.

"My father used to say that all he was in character he owed to her, and that his ingrained habits of regular work and industry, which stood him in such good stead all through his life, he obtained from seeing, when he was young, her punctual and orderly

ways"

It is not difficult with such material as this ready to hand to frame a picture of Zaka Ullah's childhood and early days. The laws of heredity seem to gain a special validity in the East in families where the whole current of life moves evenly forward in the same direction, and the same occupation is engaged in by grandfather, father and son.

That even current of life, which had run so smoothly at first was to be broken and to become a whitling torient in the days of

the Mutiny; but during the earlier period with which this chapter deals, the course of events went on very much as it had done in the past. The British protection, which had begun in the year 1803, had not disturbed the slowly decaying grandeur of the imperial Moghul Court Rather, for the time being, it seemed to have arrested its complete decay.

The Emperor still ruled within the Palana inside the Fort. The city of Delhi itself enjoyed a peace and calm such as it had no known before for many years. As one " the old inhabitants of Delhi, whose memory back to those times, graphically "The English Peace expressed it to me became a phrase which passed into the language of the common people". He added A man could go out to pray, to the toni of Nizam-ud-Din, and ask for the intercessions of the saint without any fear of robbery or murder" Another who is the oldest survivor still retaining a vivid memory of those time said to me "The city did not know what order was, till the 'English' Peace' began His own father used to tell him, how looting and robbery used to go on in the oper streets within the city-walls and no or could go outside the city-boundaries withou having an armed e-cort of from thirty t forty men, even these would sometimes to and rob the persons who hared them, and there was no remedy. It was during the later days of peace which had succeeded to days of violence, that Zaka Ullah was beand his whole childhood was spent. He is used often to refer to those days as a too of peace before the storm of the Mutin came which wrecked his father's house as very nearly rurned his own life.

(To be continued)

THE HISTORICAL NOVEL

By Prof. NIRMAL KUMAR SIDHANTA, N. A.

DISCOURSING on the function of history, Croce says: "History is never constructed out of narratives, but always from documents or from narratives reduced to documents and treated as such, so that if contemporary history leaps forth from life itself, the

contemporaneous also springs directly find life, for nothing but a present living into a can move us to seek knowledge of a past fact which fact, therefore, masmuch as it is drawforth by a present living interest, responds to a present and not to a past interest.

events of the past which, if properly untood, may be a guide for the present and future, the question for the historian is,

future, the question for the historian is. he is to bring out this tendency He try to unfold it either through fullth portraits of the great individuals whom akes as the representative men of the age: ie may investigate hundreds of records it the ordinary men of the time and try econstruct from them the national life of age. In the former case, the great men, heroes or geniuses, are supposed to be the on in little, for they sum up in themselves hat is best as well as most typical in rage; in the latter, we are asked not to ble so much about the best, but to erstand more fully what the ordinary man and for that we have to study hundreds etached incidents instead of the connected ts of a few lives.

We cannot here trace the growth of this ridea from Adam Smith to Buckle and m. It will suffice if we try to understand application that history is called upon to unt for "the vast mass unknown to your directions of kings and nobles". This ing of the focus of history from kings nobles to the people, from the "great" to ordinary men, means the substitution of

vidualities by generalities

The task of the older school of historians to marshal before us the noble acray of his of men, of warriors, rulers, reformers t actions and great thoughts were the letter individual representing the ideal age. The method of such a historian we may so term it, deductive. We rom the general conception of the 55 of the individuals, and their actions died only against the background of neeption. Then again he starts with all of the past age and what was best not he places that before the ordinary specting him to draw deductions from deal, deductions about his own ac-

historian of the type of Green or proceeds the other way. He follows may be called the inductive method. cos before the average man the picture average life of another day. The reconstructed from hundreds of inof ordinary folk, and from a study e examples we may infer the line of and conduct of the overyday life of e lt is an inference from one set of lar instances to another set, a general

· · 4

principle called a historical law is interposed between the two sets, but it is not the start-

ing point of investigation.

This substitution of the inductive method for the deductive is seen in imaginative literature too. Here we have the movement towards what is known as realism, for this seems to be the cardinal difference between the methods of the realist and the romanticist that the method of the former is inductive, that of the latter deductive. This analogy of imaginative literature, however, should not mislead us. We cannot assign any superiority to realistic fiction over the romantic or to romantic over realistic; somemay prefer the one and some the other; and a great work of art may be either.

But the works of history which employ the inductive method labour under an inherent defect if we judge them as literature. In drama or fiction, the aim of the inductive method is to create an individual, a creature of flesh and blood, but inductive history aims mainly at a general principle, an abstract principle, an abstract theory, if does not attempt to portray an individual as the older historians did. The disconnected facts utilised by the inductive historian are events in the lives of men but the author does not attempt to visualise these figures, they remain vague shadows. The result is a loss of dramatic interest.

In one respect, however, this attitude of the historian brings him into closer touch with works of imagination. When a historian tries to present a picture of the society of a particular age, he cannot neglect the imaginative works of the period. The pictures of men and women in these works may supply more valuable data than records of business transactions, or of legal doctrines Thus we may attempt to build up the society of Homer's time from a study of the Iliad or of the Odyssey, that of fourteenth century England from Chaucer and Langland, of Elizabethan times from Shake-peare and his fellow-dramatists, of the eighteenth century from Fielding and Jane Austen. For the writer of social history all such works are valuable and although the historian may not try to make his own work literary, he looks on literature with kindly eyes as here he sees part of the raw materials for his work.

e examples we may infer the line of The attitude of the literary artist to and conduct of the everyday life of historical works is something different. Every entries to another set, a general tural scene which is vaguely and indefinitely

As Stevenson puts it in his suggestive Gossip on Romance

"Some places speak distinctly, Certain dark gardens erv aloud for a murder, certain old houses demand to be haunted, certain coasts are set apart for shipwreck. The inn at Burford Bridge, with its arbours and green garden and silent eddying river, still seems to wait the coming of the appropriate legend Within these ivied walls, behind these old green shutters, some further business smoulders, waiting for its hour. The old Hawes Inn at the Queen's Ferry makes a similar call upon the fancy. There it stands apart from the town, better the waiting to the stands apart from the town, beside the piet, in a climate of its own, half inland, half marine—in front, the ferry bubbling with the tide and the guardship swinging to her anchor; behind, the old garden with the trees... The man or the hour had not yet come, but some day, I think, a boat shall put off from the Queen's Ferry, fraught with a dear carro, and come trooty night fraught with a dear cargo, and some trosty night a horseman, on a tragic errand, rattle with his whip upon the green shutters of Burford the unn at

It seems to me that the literary artist has much the same feeling while reading works of history The philosophy of history, the abstract tendency of things may not attract him. But some concrete episode, some individual figure has a special suggestiveness for him While studying Gibbon, for example, he will be attracted not so much by Gibbon's abstract hero, The Roman Empire, as by the figure of a Julian or a Marcus Aurelius, by the death of Hypatia, or the fall of Palmyra He will feel that there is something more than what the historian says, something of which a full record is lacking

He sets out to remedy this and completes by his imagination what has been left incomplete by documents He cannot look on Marcus merely as an indulgent father, a suffering husband and a tired defender of the Empire, he cannot think of Julian's German campaign as the crisis of his life. he cannot regard Hypatia simply as the spiritual antagonist of Cyril, nor Zenobia as the only individual affected by Aurelian's conquest of Palmyra He must body forth the suggestions which history does not fill out Hence "Marius the Epicurean", "Emperor and Galilean", "Hypatia" and "The Last Days of Palmyra" Hence the historical novel

But what is the historical novel?

Professor Ker, while speaking about the ballad, refuses to give us a cut-and-dried definition and says. "A ballad to the Milldams of Binnorie and Sir Patrick Spens and the Douglas Trugedy and Lord Randal and Child Maurice and dhings of that sort" So may we avoid an abstract definition by saying that what we mean by a historical novel is Warermi. mi. Muel.

eteers and Ninety-Three, The Cloister and Hearth and The Last Days of Pompeii, .

lambo and Quo Vadis.

Yet we have to explain why these such like novels should be called histori and this may be attempted simply by point out that in these works historical figu are introduced side by side with citions of pure imagination. But this will i be true of all so-called historical novel; a we may think of the Tale of Two Cities is The Last Days of Pompeii or even 's Cloister and the Hearth* and search in v for historical characters.

Nor would it solve the difficulty to that here historical events are treated alwith imaginary ones, that they describe ha penings which affected the fate of nations well as that of the individuals created i This may be true of the Tale the author Two Cities and The Last Days of Pompe but we look in vain for such a momentoevent in the Cloister, which does not base i claims to be called historical merely on a introduction of historical characters or even Or, to take it the other way round, a histori al event may decide the fate of the chair ters of the novel, and yet it may not a called historical Thus, for example, the bary of Waterloo has certainly an influence on : destiny of some characters of Vanity Fee. which nevertheless would hardly be calhistorical

Yet, again, an attempt may be made describe a historical novel as dealing wi the past and the distant, whereas other his els deal mainly with things of to-day. this will bring in the question of the so-cal comances which also deal with the p and the distant Lorna Doone has been cala historical novel and probably one may evthe term to the Master of Ballantrac, one feels shy of including in the class " stories of Stanley Weyman, not to men' certain things of Rider Haggard.

It will not do, either, to make a disti tion between bad and good historical material and to dismiss the romances as just ones. On the other hand, it is equally degult to place the Bride of Lammernion Guy Mannering among novels of continuous porary life. Nor, for the matter of that we know what is meant by dealing the "past". What is the downward will the past? Is it a matter of sixty ye is

The historical figures introduced are of perly speaking, characters in the novel; tic and not be called a historical figure.

or of the last generation, or can we bring it learer still? Can we call Disraeli's Coningsby or Endymion a historical novel, or apply he epithet to Mr Walpole's Secret

itu?

Then there is the question of a group of vorks which, for the sake of convenience, we nay call biographical novels. These are jorks like Gjellerup's Pilgrim Kamanita or loore's Brook Kerith or Sir Arthur Quilletouch's Hetty Wesley. Here we have an naginative rendering of the lives of people. ho have affected the destines of the human ice in spheres other than politics of war. hey may be leaders of spiritual movements in the three works just mentioned, or they ay be men who have made their mark in terature or art. We have an instance of the tter variety in Jokai's Green Book where introduces Poushkin as a prominent paracter; and we would have had such orks if Thackeray had confined his historicfigures in Esmond to Steele and Addison, id in Virginians to Johnson, Chesterfield

nd in Virginians to Johnson, Chesterfield id Horace Walpole. We may also think of ohn Inglesant which not only introduces nailes and Cromwell, but men like Nicholas

errars and Vaughan.

We understand, of course, that the historicfigures must be introduced under their al names and not disguised under pseunvms. In introducing figures from contemrary public life, the author has to put a in veil over the man, though he can be sily recognised by all interested in his But this method of historical allegory not that of the historical novel impole of Bleak House may represent Leigh unt and Boythorn, Landor; the General in othan may be a real leader of the Italian dependence and the Cardinal, that of the tholic Revival in England, Gushy and St u be in -Endymion may stand for Dickens d Thackeray But this method of disguisg historical characters is employed more ten by the critic of contemporary society an by the exponent of the historical novel, a latter, introducing, as he does, undisised figures from real life, has to tackle in dead and decently buried, if not ssilised.

So far then we have not been able to find t any essential characteristic of a historical vel. Some novels are called historical bease they introduce figures or events we set in the pages of historical works. Such a most of the novels of Scott and Dunas, ackeray's Esmond, Lytton's Harold, The

Last of the Barons and Rienzi, Ainsworth's Windsor Castle, most of G. P. R. James 8 works, and Kingsley's Westward Ho ore historical novels in this sense. But the historic interest of the Closser and the Hourth and The Last Days of Pompen, of Hypatia and Romola is different. It is not centred so much in illustrious individuals, or political convulsions, or deeds of might, that have changed the destinies of nations. Here is more of an attempt to portray the atmosphere of a past generation, to paint the life of an everyday world that is gone. Here humbler individuals have as much of prominence as an illustrious Monseigneur, the labourer's life is as much a part of history as the life of the chivalrous hero, and the keeper of the wayside inn rivals the leader of an army in interest

Of course, in literature it is never possible to form water-tight compartments in which to put particular works of art So we cannot say here that there are two types of the historical novel, one dealing with the illustrious figures and the great events of history, and the other describing the atmosphere of an age,— the normal life of the average man as distinct from the abnormal one of the here and the noble. We cannot have individuals without an atmosphere, nor atmosphere without individuals Esmond gives us some idea of the normal life of the days of Queen Anne, while the atmosphere of Hypatia is partly produced by figures who may be called historical, by Cyril the Patriarch, and Nonetheless, the distinc-Hypatia herself tion remains that in some novels the author is more interested in heroic deeds and aristocratic men, while in others he tries to come more into touch with the life of the man in the street, and, as we said in the beginthis distinction reflects a change ning. the of historian's m conception the duties.

The novels we have termed hiographical have points in common with both the classes we have noticed. They are interested in individuals exceptional in point of intellect. Yet these men by their birth and position in society are brought into close touch with the man in the street. Thus we have at least a side-glance at the everyday life of the day. Brook Kerith is as good an instance of this as any other work. Jesus and his disciples, Joseph and Pontius Pilate, supply the historical colours of the story. But the story of Joseph's childhood, the picture of his father and the people round about him, is an

**

attempt to bring out the atmosphere of the time. The life of the Essenes, either in their original home, or as depicted by Brook Kerith, may be abnormal; yet even here the life of the shepherd on the hills may be taken as a true picture, while Joseph's trading expeditions across the desert, his life in Alexandria, his connection with the Pharisees and Pilate,—all these give us the colour of the times.

There is nothing much to be gained by a discussion whether these novels may be called historical or not. The number of biographical novels worth mentioning is not large, and even the good specimens rarely keep the balance between fact and imagination. There is so much of real fact in Helty Wesley that one is inclined to doubt if it is a novel at all; while in Pilgrim Kamanita the author has been led away by his imagination to picture a state of things which never existed

in the country he describes.

The reason why the biographical novel has been less attempted than the historical novel proper, is easy to explain. One reason is, that here it is more difficult to keep the main historical figures in the background, and centre the interest on an imaginary creature. A King like James I or Louis XI may be easily subordinated to a figure endowed with the proper head or heart of muscle,* but with a figure like Jesus or Buddha in the background, it is almost impossible to attract the reader to a creation of pure imagination; and there is an essential difficulty in making a historical figure the hero of a work of fiction in that it unduly cramps the ımagınatıon of the author Another difficulty, which the biographical novel shares in common with works like the Closster, is connected with the problem of giving an accurate picture of the life of the average man; and this brings us back to the distinction we have noticed between such novels and those like Iranhoe or The Talisman.

It must be repeated that no attempt is being made to place the novels in two water-tight compartments; and the introduction of historic individuals without any picture of the life of the nation at the time, is as difficult as the creation of the atmosphere of the corporate life of a past age without bringing in any of its historic figures.

Scott imagined that the historical colour

of his novels was adequately supplied by the introduction of kings and their courtiers, of chivalric knights and aristocratic villains. Figures from everyday life are introduced; but the interest is centred in the deeds of the illustrious. Even if the times represented are near to his own day, he cannot think of depicting the humdrum life of the average man, but must choose an atmosphere of unrest and trouble, involving the association of imaginary heroes with figures of history.

Reade proceeds in a different fashion. He takes an ordinary traveller forced to leave home through the stress of circumstances and to journey from Holland to Italy through the Rhine-land He goes on describing experiences which probably fell to the lot of many a Gerard of the late 15th century. We have a record of wavfaring life for Germany, and of everyday life for Holland or Italy. Practically nothing is removed from the normal and we have a vivid picture of the life of

the age. Perhaps one may make the point: clearer by taking an analogy from the drama. Shake-peare's History-plays have been termed Chronicle-plays by critics endowed with the modern idea of history. They have their justification in this that Shakespeare was content to make his history deal only with kings and nobles, their wars and their troubles. I think there are individual scenes which may satisfy the present-day ideal of history The Bates-Williams scene in Henry I brings out as much of corporate life as any historical critic would probably want But, for historical plays satisfying his ideal, he has to go to the works of Goethe and Schiller, to Goet; and Don Carlos and the prologue to Wallenstein. Unkind critics suggest that these German' writers were incapable of drawing individuals and then colourless creations may be taken by us as representations of corporate life, or whatever else we may term it. But it is there, and it satisfies the modern historian, whatever its

This analogy holds good only partially for the novel. We cannot call Scott's works Chronicle-novels, though his conception of history is not the modern one. That Scott-novels are not a closer parallel to Shake-peare historical plays, is due to the difference between the two media. In a drama the number of characters has necessarily to be limited; and when the author's intention is to bring out a few well-carved figures, he is careful not to distract the readers of

^{*} The main defect of the Fortunes of Nigel is that the hero has no such attractiveness about him?

ctators' attention by adding too many or characters. Henry V admits of it as it one-man play; (boethe and Schiller could it in works which suffer in dramatic ellence, through the lack of vitality in the ing characters,* in proportion as the oric ideal is carried out.

Scott, on the other hand, could introduce nany characters as he liked. Thus in Mortality, the historical interest is in deeds of Claverhouse and Burley; yet have a picture of the times so far as the like and unsettled atmosphere of the story allow it. We see the behaviour of some nat Scotchmen, but under abnormal conness. So again the Fortunes of Nigel

One may take as an example Posa of Donos,

opens with an admirable picture of the London street-life of the day, but we soon leave normal surroundings and are taken to "ordinaries" (not taverns) and Alsain quarters, if not to the royal presence. The point is that the atmosphere has to be induced by a number of minor characters; if the author tries to embody it in a single individual, he is likely to produce a colourless abstraction like John Inglesant, or Paters Marius

The novelist has the advantage of having a wider net than the dramatist, and, though he may care more for the royal and aristocratic catch, he can drag in numerous smaller fry to bear them company. The question of the normal and the almormal brings us back, however, to the vital issue of the literature of recent times—the issue of realism and somance.

ARTIFICIAL GEMS AND THEIR MANUFACTURE

By S. R. M NAIDU, FRS (Sc.) TRAY, WSP, STEE, etc.

S early as 1837 Gaudin made artificial rubies by heating ammonia, alumina, and potash by means of an oxy-hydrom blowpipe, the intense heat volatilised e potash and alumina afterwards producing ystals in rhombohedral (figures of four equal des with unequal angles) forms identical ith those of the natural stone, and having a same specific gravity and hardness. Me-ods of producing crystals of corundum, ruby, pphire, etc., were discovered about 1858, It both these and Gaudin's processes had it little commercial value, the great expense ecluding their adoption. Until quite recentthe only artificial gems known to com-erce were coloured glass, and in some cases av-preparations backed with silver or a proury amalgam Now however, the chemist n produce imitations that, in hardness and stre, equal the real gems. Here the word nitation" perhaps is not the correct word, the composition of both manufactured and tural stones is the same. Sometimes it is ite impossible to distinguish between the o kinds of gems, although, generally, examin on under the microscope reveals some fierence. When seen through a microscope. Mark The Land

natural rubies contain minute cracks which show the lines of cleavage, the artificial gem shows very minute bubbles or gas holes Analysis has proved that the sapphire is pure alumina, that is oxide of aluminium (AlrOs) This is found in the form of a white powder fusible at high temperature only. The colour of a sapphire is supposed to be due to the presence of chrome, and is dichroitic, that is, it varies with the point of observation; thus it 15 successfully imitated only with difficulty. M. Sidot, the French Chemist, accidentally discovered a method of producing gems that possessed dichrotic properties. His method is to heat an iron-pot to dark red colour and to place in it 4 oz of superphosphate of hme; this is brought to the same heat and stirred with an iron rod it becomes converted to crystallised pyrophosphate, which on being further heated becomes a fluid resembling molten glass. It is supposed that in this state a part of the phosphoric acid is changed to a tribasic phosphate. The fused mass is stirred continuously until it is quite transparent and free from bubbles, when it is transferred to another pot, and kept at a white heat for two hours, the stirring being

kept up all the time. After standing for an hour, it is poured on to a metallic surface and allowed to cool slowly until it is as soft as putty, when it is put on plate glass When cold, a number of stones almost equal to the genuino sapphire may be cut from the plate. Another formula is -Smelt a mixture of 4 oz. of oxide of aluminium and 4 oz of red lead (PbsO4), and stir in 10 gr. of bichromate of pottasium (K2Cr2O7) and 17 gr. of oxide of cobaltum (CoO) When cold, stones may be cut that are as hard, if not quite so brilliant, as the genuine ones The ruby also is oxide of aluminium coloured with chrome Crystals of the rose-coloured 1 uby may be produced by melting together aluminium oxide and powdered silica, with the addition of floride of barium to form a flax, and then adding a trace of bichromate of potassium, 500 lbs, of these ingredients after perhaps a week's fusion, will produce rubies of 5 or 6 carats which may vary much in colour, running through all the shades of bluish sapphire and rose to the deep colour of the so-called pigeon-blood ruby. Ordinary borax fused with a little chromium oxide for a week or so produces large ruby crystals; but 200 lbs of ingredients may be required to obtain even two or three gems of any marketable One method of making artificial rubies is to smelt a mixture of 4 oz of exide of aluminium and 4 oz of red lead, and add trom 7 gr. to 16 gr. of bichromate of potassium. Natural emeralds are a combination of the rare element of beryllium or glucinum

with silicon; chrome gives the colour. By. llium is too expensive for use in producing imitations, so oxide of aluminium is used, 4 of this being smelted with 40z. of red lead, ... which from 8 gr. to 12 gr. of uranate of sodium (Na2U2O2) have been added. Perry and Hautefouille, the French chemists produced beautiful emerald crystals by fusing silice. alumina, glucina, and a trace of chromiui oxide with acid molybdate of lithia. After a fusion of 15 days some very small crystals having all the mineralogical and physical characters of the natural emerald, may be obtained. The longer the fusion the larger are the crystals. Emeralds and other genis have been produced from gas retort refuse by a method discovered by Mr. Greville Williams, F.R.s., who modelled an emerald composed of from 67 to 68% of silicia, 15 to 18% of alumina, 12 to 14% of glucina, and traces of magnesia, carbon, and carbonate of lime. The colour was an intense green, duit is believed, to the presence of sesquioxidof chromium Imitations of the amethyst topaz, etc., have been made very successfully by Donault Wieland, of Paris, whose method of preparing "Parisian Diamonds", or "Alaski Diamonds," is to smelt a mixture of 65% pulverised crystal quartz, 20% of red lead 8% of pure carbonate of potash, 5% of bon? acid, and 2% of white arsenic The brilliance of the resultant stone depends principally of the purity of the red lead and the carbonal of potash

NEGRO EDUCATION IN AMERICA

with such strides as have the Negroes in America since their emancipation. At the close of the Civil War (1864) only 2 per cent of the Negroes could read and write. The Negroes were handicapped in every way economically culturally and socially. Today after sixty years of hard struggle more than 65 per cent. of the Negroes can read and write and Negro achievement in Arts, Science, Music and the professions is a remarkable thing. In fact when one considers that the history of the American Negro was

slavery for more than three hundred out one must admit this people has made most remarkable advance and progress possifor any nation in a given time

yatching Negro progress it is clear that self-assertion of the Negroes in Americal move on faster than ever before, because younger generation of the Negro people most analous to secure education of they realize that it is essential to better the condition. The Rockefeller Foundation lately promised to contribute one mill

rs, or more than thirty lakhs of Rupees, Negro education provided a similiar ant be raised by private subscription. following news item will be of great rest to the Indian statesmen and educators

We are quite sure that the Negroes and the American friends of the Negro will raise the amount in a short time so that the handsome donation promised by the Rockefeller

Foundation may be secured

In the Modern Review we read that the Science College of Calcutta University needs ten lakhs of rupees. We also note that the Viswa-Bharati lacks support of the people of India, particularly Bengal We wonder how it is that the people of India, not to speak of the trovernment of India do not attach primary importance to the educational progress of the country. We know that the people of Great Britain annually receive hundreds of millions from India We know that the American Missionaries take greater interest in the education of India than the British who make profit from keeping India The British during the course in subjection of their occupation of India have literally taken billions of dollars from the Indian people. Is it not time that they did something to aid the Indian educational movement, the Science College of the particularly Calcutta University and the Viswa-Bharati founded by your great poet Tagore ?

What the Negroes are doing to promote their national welfare and what is being done by the American people to aid them in securing education, can be done in India. If it is not done, it is the fault of the people of India and their Government. This is the view-point of an American, one who wishes to see that no child of any land be demed

the opportunity of education

New York, Oct. 8,1924.

"Kawai "

THE IRRIGATION MOVEMENT IN BANKURA

THE District of Bankura in Bengal is clearly associated with the idea of poverty and recurring famine, but the problem has never been carefully studied and no systemstic effort has been made to find out a solution Chapter VI of the District Gazetteer of Bankura by Mr L S S O'Malley deals with Bankura's chronic hability to famines and gives a short account of the famines which occurred in the district in the vears 1866, 1874, 1885 and 1897 In the census report for 1921 it has been stated that serious crop-failure "happened twice within the last decade (1911-21) and on both occasions famine conditions had to be relieved by gratuitous distribution of both private and public charity "*

The magnitude of the last two famines. which occurred in 1915-16 and 1919 may to some extent be realised from the fact that the expenditure incurred by Government on these two occasions, on gratuitous relief and relief works, amounted to about 14 lacs of rupees The relief given by Government was supplemented by considerable sums of money raised by public subscription from all parts of India and, in some cases, from places outside India In addition to gratuitous relief, the Government had to advance, as loans to agriculturists, a sum of Rs 841,878 in 1915-16 and of Rs 5,33,413 in 1919 to enable them to tide over the difficulties and to live until the next harvest of paddy

It can well be imagined that such widespread disasters must have had a marked effect on the population of the district and this supposition is home out by the census figures, which show that m the decade 1911-21. Bankura suffered a loss in population to the extent of one lac and nmeteen thousand souls. This decrease, which works out at 104 pc. is the heaviest among all the districts of Bengal Although during the time when the district was actually in the gift of famine, the efforts made by trovernment Officers and the public tended to reduce to a minimum the number of deaths resulting from want of food, there can be no doubt that the loss of vitality due to the famines. accounts mainly for this appalling decrease

in population, which threatens, unless it checked, to end in absolute depopulation the district.

In the following pages an attempt will made to set forth the real causes that 1, to repeated crop-failures in Bankura and give a brief but self-contained account of the movement recently set on foot for renders famines normally impossible in the distri In dealing with this subject, the writer is borrowed freely from (1) "A Bengal Dish Choice between Life and Death, the Story its Lesson" by Mr († 8 Dutt, res, form Collector of Bankura, published by the Bee-Co-operative Organisation Society, and The Report of the Bankura District Agritural and Welfare Association for the perending on the 30th September, 1923 writer has no hesitation in commending to publications to the notice of all men interin the welfare and material advancement the district and other areas similarly enstanced

To people not perfectly acquainted the condition and physical characteristics the district, it may appear that the sea Bankura is barren and not naturally sun for cultivation. But this is not so in and the hability of the district to reperiop-failures is not due to any such immand irremediable causes. It is true Bankura differs widely from the in Bengal.

Bankura may be described as a connectable tween the plants of Bengal on the East Chota Nagpur plateau to the West. To the and the North-East the land is a low-lying tract presenting the appearance of the enco-field of Bengal. Towards the West the gradually rises and the lovel plant gives an undulating country interspersed with hillocks and broken up into low ridges and Taken as a whole the district consists of expanse of gently undulating ground in the rivers and streams flowing from Note the South-East which divide it into a of parallel strips.

This peculiarity of the country has cultivation more difficult than in official than in official the province, in the first place, to water is speedify drained off by innustreamlets into the larger freams and and within a short-time after rain has a

Water overflowing A Lock-gate in a Bandh in Bankura (Bengal)

trace is left of the moisture secondly, is no annual mundation bearing a rich fertile deposit of silt. The intelligence sagacity of the pioneers in cultivation Bankura, however, found in this very back an easy and effective remedy for problem, and provided the district with ritable network of irrigation tanks, or, as are locally known, bundles

in the benefit of those who are strangers to rn Bengal it might be explained here that an non bandh is a reservoir constructed ing up an embankment in sloping ground for teliment of water flowing down from the levels. In the undulating country of in Bengal this serves as an easy mexicusive estive method of storage of water for the e of registion and drinking. Nowhere was stem of registion tanks and bundles cond with such systematic thoroughness and ing wisdom as was done in Bunkura and arts of Western Bengal covered by the old Mallabhum by its old benevolent landlords Mallatonian TV its old benevolent landfolds the Rajas of Vishinupui who ruled over it as again have the narrow selfishness folly cell is blindness of subsequent generations at to bring this elaborate sy ten of tanks the on which the health presperity and like of the population depends into such cay and destruction. Upon the healths etc. is and in rows and tiers along the stopes undulating ground in and around the lifes and our among the fields, these tanks dhs were constructed with a thoroughness almost screening processon which even in resent runed and mutilated condition the admiration and wonder of the be-

Dutt estimates the total number of engal Districts Choice between Late and Death, p. 12.

these reservous to be between 30000 and 10,000

Some was almost as large as lakes each mugating everal thousand bughas of land, which inigating everal thousand bighas of land which they rendered inimum—from divergent throughout the year while others—though smaller and of a more inclosed descriptor—were councily (flowtween serving the land for the protection of which they were designed. The Va2+ handles were supplied with adet channess for the reseption of the water of their each limits areas and with an elaborate and carefully worked out system of distributances for serving the water to the lands protected by them. These tanks and lengths for only supplied water to the field but furnished a sure and adequate supply of drinking water to men and cattle. men and cattle.

Bankura to-day is a district of dead tanks of tanks and large briefly which have either completely vanished out of acceptation or of which only a tragment of an embankin nt here and there is rainto indicate the evidence of their are conservations or of their shrunk, and imutilated remains in the form of shallow salted up poets of water γ

The inevitable consequence of this state of things is that paddy and other crops which could fermerly be irrigated from these reservens are now dependent extracts on the caprices of the weather, and if it does not rain, when rain is wanted the unfortanate cultivator sees the crops do and blank starvation states him in the face

The urigation movement in Bankura and at restoring these reservoirs to their fettaet state of efficiency and thus making fumines normally impossible in the detrict. The problem is by no means a smalle one, but

I Bound Ibstrace Characterists in Proceeds

⁺¹⁴ p 13

all the same the difficulties with which it is beset must be faced and overcome if the district is to be saved, from depopulation.

The first question naturally is that of finance. Where is all the money to come from that is required for the re-excavation and repair of these 30,000 tanks? If the modest sum of Rs 100 be spent on each tank, the total expenditure would be about 30 lacs of rupees But in most of the tanks. a hundred rupees would be absolutely inadequate. It is clear therefore that such an enormous expenditure cannot be met from the funds of Government, much less from those of the Bankura District Board Under the present system of land settlement and the sub-infeudation of tenures, it would be idle to expect the zamindars or tenureholders to take any interest in the matter. We have therefore to fall back upon the cultivators living in the villages of Bankura as the only party by whom this great task is to be shouldered, for it is they and they alone that suffer most when crops fail. But these men are poor, ignorant and disunited Ignorance and want of unity are met with in other parts of the province But the degree of poverty prevailing in the faminestricken villages of Bankura can be imagined by few people not intimately acquainted with the condition of this unhappy district How can such people find the money that is necessary for the re-excavation and repair of their tanks. The answer hes in one word, Co-operation Co-operation which gives to the proverbial straw the strength to restrain the elephant

The irrigation movement in Bankura furnishes yet another example of the protean shapes which the principle of Co-operation is capable of assuming for the relief of suffering humanity The system which is being followed in Bankura is to organise the persons, whose lands will be benefited by any 1711gation project to form themselves into a co-operative irrigation society, for the provision of necessary funds and for the execution of work For the sake of illustration. let us take the case of a bundh which is capable of nergating 200 bighas of land if properly re-exeavated. The cost of re-exeavation and repair is estimated to be a thousand rupees, so that the cost per bigha works out at Rs 5. The villagers holding land to be irrigated from the tank are called together and the project is explained to them. The natural and mevitable reply to 1 .. that they are poor and unable t

to pay the money. It is thereupon explained to them that if they raise a sum of Rs. 200. at one rapee per bigha, and organise themselves into a society, registered under the Co-operative Societies Act of 1912, they can borrow the rest of the money, i.e., Rs. 800 from a Central Bank, and later on they can repay the loan, together with its interest, they go on paying one rupee per bigha for another five or six years. The payment of the first instalment is difficult, because few people have any money to pay from. By once the first instalment is paid, and the society is organised and registered, the ied is all, comparatively, plain sailing. the loan, which the Central Bank is willing to advance to the society, the entire money is found with which the tank can be properly repaired, and restored to its original condtion of efficiency. From the next year the paddy crop on these 200 bighas of land insured against drought and when the cult vator has a good harvest, he feels no diff culty in paying the subsequent instalmen on the loan

But the protection of the paddy crop by no means the only advantage which i sults from the re-excavation of the tant Go to any village in this poverty-strick district and you will hear stories of the ge old days when the tanks were full of war and the lands produced wheat and musta and sugarcanes "so stout that it had to split into four pieces before being put it the press' With the provision of water, has been possible to cultivate the valua soona crops winter crops) on a larger . tion of the lands Mr. Ramananda Chutter Editor of the Modern Review and I basi, visiting certain irrigation works winter 1923-24, actually found wheat potatoes growing on lands which had in in former years, yielded a good harves' paddy. After the completion of the ution work at Panchmura, the cultivators been able to grow melons of a size latt unknown in that part of the country

The re-exeavation of the irrigation 1 has also a very important effect on water supply, because most of the tanks so situated that they serve the dual purificultation and water supply

Scarcity of water for drinking and do ic purposes is more or less acute through this once, "well-watered" province, on though the question has engaged the tention of many, it has not yet been possible to arrive at a satisfactory

A Lock-gate in a Bandle in Bankura (Bengal)

ie peculiar conditions of Bankura enable us solve this difficult problem with comparate ease, through the combined and volungy action of the villagers themselves

In addition to the improvement of Agriliture and water supply, the people are nefited in other ways by the re-excavation the tanks. The deterioration of these ks has led of recent years to remarkable creity of fish, which is the only animal d comprised in the dietary of the ordinary ngalee household The re-excavation of iks has resulted in a marked increase in growth of fish. Then again, on the empakments, renewed with fertile soil from the d of the tanks, vegetables of all kinds grow undantly for two or three years. I have d some stress on these points, because se are collateral advantages which are apt be lost sight of, when our attention is ed upon the more important aspects of the estion. The merease in the produce of and vegetables, however, is a substantial lition to the food-supply of the villagers cerned and is often of great assistance to

them in paying off their loans. We learn, for example, from the report of the Bankura District Agricultural and Welfare Association, referred to above that several societies had obtained, from fish, and vegetables alone, a sufficient amount required to pay off the first instalment on the loans taken by them

The right of fishery leads us to the question of the conflict of interests between the several parties having rights in the same To understand this difficulty at must be realised that the tanks in Bankura Distriet were, most of them, originally constructed with a view to facilitate irrigation and to protect the crops against destruction by drought. The catchment, the tank as well as the cultivated lands (arranged below the tank in the form of terraces), all belonged to one and the same proprietor and formed parts of what may be described as an agricultural unit. These units came into existence, when the woodlands of the district were gradually *brought under cultivation Even today instances are not avanting where people on taking settlement, or purchasing a mouja, intherto

uncultivated and covered with jungle, begin by selecting a suitable site for the irrigation tank and then gradually prepare plots of land for cultivation, below the tank, and capable of being irrigated from it. Now, so low as the monja, with the tank and the lands it diligates, returns its integrity and remains the property of one person, everything goes on well and the tank is maintained in efficient condition by its proprietor. In coms of time, disintegretation sets in, and probably after fifty or a hundred years, we find the tank in the possession of a single individual or a body of cosharers who enjoy the fish grown in the tank, while the lands below it have passed into the possession of a different set of persons, by inheritance, sale and otherwise. Some of these persons may not cultivate the lands themselves and they are seldom together by any common tie of relationship or domicile. In the circumstances the gradual detereoration in the efficiency of the tank is rnevitable

But through all the changes in the ownership of the lands and the consequent subinfeudation, the relationship between each plot of land and the tank remains intact and is all along claimed and recognised. In the recent settlement operations in Bankura the plots of lands having the right of irrigation from each tank have been ascertained and specifically recorded with tolerable accuracy In many cases, of course the right has long ceased to be exercised and exists only in name. Sometimes in years of drought the right of mirigation leads to serious quarrels between cultivators seeking to irrigate their lands from the same tank which does not contain sufficient water for them, or between cultivators and the owner of the tank who apprehend that the fish will suffer if the water is drained out: these quarrels are sometimes dragged into cenit and end in ruinous litigation. It is needless to say that the obvious remedy for these 10 ards 15 16excavation of the tank so tret it may contain sufficient water to satisfy the mode of all

It may appear at first sight that this conflict of inferests between the owner of the tishery in any particular tank and the cultivators having the right to ring ite their lands from it may become an insurmountable barrier in the way of organisation of co-operative occities and that the attempt at such organistic a may not infrequently result in a tension of feeling between the pairies. But the objection is not re-theoretical than real. In the first place, he re-excavation of a tank necessarily means.

an enlargement of the reservoir of water an a consequent increase in the fish production. In the second place, the organisation of the societies, under the system at presention to the district, does not confer or any individual or body of individuals and inght which he or they did not previously possess, or deprive any body of any right which he has hitherto been enjoying

When, as is very often the case, the righ of fishery belongs, not to the cultivators but to the owner or owners of the tank, the former often objects to re-excavate the tank of the ground that the other party would derive a pecuniary benefit without making any contribution to the cost of re-excavation. It has been found that the best course under the circumstances is to induce the owner to settle fishery right with the societies, either in perpetuity or for a sufficiently long term of years.

A passing reference has already been made to the question of financing but any account of the irrigation movement would not be complete without a somewhat detailed examnation of these arrangements It is welknown that co-operative societies are financed by co-operative Central Banks

Accordingly, at the very outset of $t \circ$ movement, two Co-operative Central Banks have been established, one at Bankura and to other at Bishnupur, with authorised capital of 5 lacs and 25 thousand rupees respective Capital in our country is proverbially sle and it is more so in the backward district Bankuta, where moreover the number of the men is very small. When these facts a taken into consideration, the response wh has lutherto been made for subscriptions? these Banks must be regarded as satisfactor The money that has been collected by mer of share capital and deposits has been -> crent for the very small number of socie which the Banks have till now been caup in to smance. But as the movement glesses and if we want to make any appr able effect on Banking shability to erop-taand famine we must have more money in Banks For this so depend on the 1 public as well as on the Government

During the iccent years a very lamber of Leitral Banks have been estable all over Bengal, and generally speaking have received sufficient financial support the people. Then working has, on the value of safe factory and, conducted on safe factory and, conducted on safe factory alike to the research and the borrowers. The Central 1

rganised in this district for the irrigation invenient are, to say the least, quite as safe; other organisations of a similar nature, scause the advances made by these banks e directly spent in increasing the productive pacity of the soil and consequently the lifty of the borrowers to repay their loans.

It would be a traism to state that the obabity of a man's repaying a loan vanced to him depends not so much on his nesty as on his ability to pay and judged this standard the lirigation Central Banks of extremely safe means for investment

The experience of the last 2 years had monstrated that, although the co-operative igation societies are of limited liability, he is practically no risk of non-realisation had debts

The banks charge an interest of 9% per nt per annum on the advances made by them dit is satisfactory to find that the Bankura ntral Bank has been able to declare a ridend of 4 per cent at the close of the first ar of its existence. It is confidently hoped at it would be quite easy to pay a dividend between 7 and 8 per cent per annum when the nks are properly established and working

If the paramount need of this unfortunate strict can be expressed in one word rigation,' the means required for achieving object may likewise be expressed by the word "Organisation". The movement has ng passed the stage of experiment and vestigation. The activities of the Bankura strict Agricultural and Welfare Association pring the last two years have demonstrated yond doubt that it is possible, by organising po-operative society, to airlange for the repavation of an existing irrigation tank as It as to construct a new reservoir where ne existed before—It will appear from the ort of the association referred to above t by the 30th September, 1923 as many as Co-operative Irrigation Societies, large and III, had been organised and registered and in many of them the work was complete had been nearing completion. It will her appear from the same report that the ration of these societies, covered an area over 26000 bighas of land, the annual urn on paddy from which may be estied at over 5 lacs of rupees

The irrigation tanks which it is necessary beeveavate are spread all over the district the people who have to be organised corporate bodies are, for the most part, rant, backward and poor beyond all ription. These inherent difficulties apart.

the field for the co-operative movement is practically unlimited and there is no doubt as to its potentiality to transform the district of Bankura from a land of recurring famines into one of unusual prosperity and liappiness. It was in consideration of these facts that Mr. Dutt said in his paper to which reference has been made above that "the rate of progress that can be attained is limited by nothing but the organising staff, official and non-official, available for the purpose the staff for drawing up plans and estimates for the larger schemes and the manning resources available from the Central Bank and Government."

In this remark, Mr. Dutt has put in a nutshell the whole situation about the material advancement of Bankura and the experience gained by the working of nearly two years which have elapsed since the paper was read has only lent confirmation to the truth and sagacity of his observation. We can do no better than take up, one by one—the several points mentioned by Mr. Dutt

We want in the first place a sufficient staff for organisation. At present there are two Inspectors of co-operative societies working in connection with the arrigation movement Their efforts have been supplemented by a few Honorary Organisers specially appointed by Government and by the Sub-Deputy Collectors, who are posted in the district as Circle Officers II this staff was found by Mr. Dutt to be inadequate in 1922, it must be more so today when after the lapso of two years the people even in the remotest villages have realised the necessity for ningation and are willing to organise themselves. In a district, where there are nearly 30 000 ringation projects, large and small to be taken up the services of one or two Inspectors are nearly a drop in the ocean, and andess the Government takes up the work in rapid carnest and puts on it a sufficient staff it, tricked organisers, the difficulty will not be really solved.

It must not however be supposed that we are entirely dependent on Government help, and that the people have nothing to de In the relentless war which we have to declare against poverty and tamine every man will have to do his bit and the duty of advising, organising and guiding the others will naturally fall on the educated classes. With utter annihilation staring us in the face, it might well be urged that a tone has come when we should all suspend our notical activities and devote our combined and

organised efforts to this great task of selfpreservation until the entire 30,000 tanks and bandhs of Bankura are restored to their original efficient condition and famune. poverty and water-scarcity have for ever become things of the past. This may be taken as asking too much, but if we consider that agriculture is our basic industry, that the ceaseless struggle for existence which goes on in the market-place and in the law-courts become a meaningless tragedy if the crops die every year on the fields of the cultivators, we can grasp the inwardness of the situation But unfortunately, it is not yet necessary, to resort to any such revolutionary measures and much may be done and the progress can be immensely accelerated if the educated classes of Bankura take an active interest in the movement

Next to the organisers and, in addition to them, we want a staff of supervisors. Their duties are thus described in the report of the association.

"Their main duty is to see that the land lists are prepared correctly and in accordance with settlement records and that the accounts and other books are properly kept."

It will be clear from this description, that supervisors, though lower in rank, are of great importance to the movement and that without their assistance it is not possible for the organisers, officials and honorary, to perform their work. Later on, when the Central Banks have a large working capital, it will be possible for them to entertain from the margin of the profit, a stait of supervisors to look after the societies affiliated to the Bank But even then, it will be necessary to have a separate body of supervisors for helping the organising of new societies. At present when the banks are in their infancy, it is not possible for them to pay for any supervisor Accordingly such supervisors as have hitherto been employed here have been paid by Government or out of the funds of the District Agricultural and Welfare Association which are mostly collected by public subcrip-Up to September, 1923 the Association had already spent a sum of about Rs 1100 on this, but the want of sufficient funds has stood in the way of the employment of a larger number of supervisors, with the result that the progress of the movement has been greatly retarded

The next thing mentioned by Mi Didtt is an adequate staff for preparing plans and estimates of the large scheme. In the

of schemes for the re-excavation and repai: of irrigation tanks. In addition to this, it has been found possible to arrange for the irrigation of large areas, from 1000 to 10,000 bighas or more, by utilising the water of the perennial streams which are fed by the flow of subsoil water and of which there is a large number in the district. There is sufficient evidence to show that the proneers in cultivation did not fail to tap this very important source of water-supply, but they were handicapped by want of engineering skill and the ability for a large number of people to act in unison In spite of these drawbacks the remains of large irrigation works which are still to be seen in various parts of Bankura, "even in their present ruined and mutilated condition to use the words of Mr. Dutt. "excite the admiration and wonder of the beholder Unlike the projects for re-excavation of existing tanks, the schemes for the utilisation of perennial streams are beset with great difficulties. In the first place, the stream and its neighbourhood have to be accurately surveyed and a plan and estimate have to be prepared of the project. This requires money for payment of surveyors and surveying epenses. In the beginning the schemes wer prepared by the District Engineer of Bankin but latterly the Government have appoint a special Engineer for irrigation projects Tr Government have also sanctioned a staff a surveyors but no provision has been made for the expenses of survey Unless th expense is paid by Government the progre of survey must necessarily be retaided.

When the plan and estimate of project a prepared and sanctioned the proper author. (who is ordinarily the Superintending Engine of the Circle) we come to the stage of or A scheme which comprises ab-5000 bighas of land would probably have individual members living in 4, 5 or m villages. If it is difficult to get ten pers to agree to act together, the difficulty organising a co-operative society with 500. more individual members can be 💢 imagined -And the progress in the organ tion of such societies must necessarily very slow. Within the last four years ! Auch big societies have been organised in district. The Salbund Society in Vishen sub-division is designed for the irrigation 5000 bighas of land from the water of Harmmuri Khal The work is nearing (pletion. The Gurusaday Society have compl athf edustruction of a masonry weir at a of rupces 17,000 for the arrigation of

The Taldangra Rukm Canal, Bankura (Bengal)

D bighas of land The Rukni Khal Society been formed with the object of irrigating it 1000 bighas of land from the Khal after the water is held up by ch it is named earthen dam and taken to the village by ns of a canal constructed at a cost of 300 The last is the Brajadurlay Society, h intends to construct a masonry were so the Kukra Khal at a cost of Rs 28,000 rrigation of about 4500 bighas of land he last point mentioned by Mr Dutt, is provision of money for financing the ties Experience of the two years indithat the utmost that we can expect is the Central Banks, if properly supported to public of the District, will be able to with a normal growth in the number operative societies for the re-excavation inks. It may, with the help of deposits local people and loans from the Pro-I Federation, be able to finance larger ies (those relating to construction of across streams) if they are organised present rate. But it has already been that in order to remove, to an apprecilogree, the famine condition now prevailthe District the progress of the work be considerably accelerated and pari passu must be an increase in the ability 3t nks to finance the societies. We therefore.

hope that the Government will be prepared to assist the Central Banks as necessity arises, in view of the large amounts which Government had to advance as loans to agriculturists during the two famines which occurred during the last decade it is certainly not too much to expect such assistance. Prevention is better than cure and nobody can say when famine, which is hanging like a Damocles' sword on our heads, will come down upon us

In this connection the following extracts from a letter which has been addressed by His Excellency the Governor of Bengal to the present Collector of Bankura after HFS Excellency's visit of inspection to Bankura in January last, will be read with interest

Government House Calcutta, 30th January 1924

Divir Mr. Hyrry,
I should like you to know how very pleased I have been to see the interesting examples of Co-operative Self-help which were shown to me in the Bankura District. The work which is long done by co-operative irrigation societies in providing by local efforts against the dangers of district and crop-failure, is most encouraging and the loss possible guarantee of the future prespectly of the district. The members of these societies have shown how wealth can be created even by very poor communities and I hope that their example will be widely followed. I have said on other

The Bundh on the Rukm Canal Bankura (Bengal)

occasions that Government help ought to be proportioned to local effort and according to this principle the people of Bankina have established a strong claim upon the assistance of the Government I shall not forget this admirable effort and shall see that it is properly encouraged.

I was also very interested in what I learnt of the work of the District Agricultural and Welfare Association. This body seems to have been very successful in developing a spirit of self-help and co-operation among the people and thanks to their effort some 26 000 bighas of land have now been rendered immune from drought and cropfailure to which they were previously subject.

Yours Sincerely, (Sd.) Lytrox

To B Hazra Esq

But it is not by Government officials alone that the importance of the work has been appreciated. During the last cold weather Mr. Ramananda Chatterjee, the editor of this journal, paid two visits to Bankura with the object of acquainting himself with the work that is now being done for the material advancement of the District. The result of his observations has been published in a signed article in the Baisakh issue of Prabasi Says he:

"The movement now on foot for irrigation is being conducted on right lines and there is no doubt that the societies are doing extremely useful and important work. In irrigation is involved the question of life and death. At intervals of a few years Bankura suffers from famine and has to save

its life by begging from others. To prevent shame and indignity it is incumbent on us to ornise irrigation societies. These will provide waalike for agriculture and drinking. Agriculture vigive rise to wealth, and wealth in its turn of facilitate education, health, and improvement other directions.

When we think of the conditions prevaing in the villages of Bengal,—appalling prefix and disease, ignorance and want unity, apathy and fatalism, born of despair we must recognise that the movement has moral aspect, apart from that of mere material advancement. A co-operative irrigation socialize or small, is a living and forcible illitration of the power of self-help and unit action. The villagers are made to feel the they are not like bits of straw borne also the current of circumstance, but that the can do something. They also realise that is good to forget petty quarrels and jealou and to act together for their common good.

It is impossible to close an account of the initiation, movement in Bankura with the referring to the services of Mr. Gurusad. Dutt, I C S who, as Collector of Bankur initiated and fostered the movement. If progress achieved by the movement in the two years 1922 and 1923 is mainly during, energy and enthusiasm and his wonderful power of organisation. In the report of the District Agricultural and Welfare Associated

services have been acknowledged in the awing terms:

n the midst of his heavy and engrossing as as the head of the district he found time to also and direct a movement embracing the entire district in the scope of its operation. Those who were associated with him in this noble work can alone realise how keenly he felt for the people and how untiringly he devoted his energies for their welfare."

A WORKER,

EDUCATIONAL EXPERIMENTS IN GERMANY

By EMMA GOLDMAN

IE German system of education under the old regime is not a matter of mere theory to me. In my youth I exmed four years of its brutal discipline deadly routine, I felt its crushing tupon the mind and spirit of the child unately, it lasted only four years, but years helped me later to understand nature of Prussian militarism. I realised it was the culminating expression of the and coercion prevalent in German vational institutions.

Most writers on Prussian militarism have pletely ignored the relation between that system and the formulable hine dreaded by the whole world ally near-sighted are those who still ube Germany as a continued military ace, while ignoring the changing spirit of cation. To them the sabre-rattling of the tionaries is the strongest indication of a ving military spirit. Yet it is not that ch will decide whether Germany is again e under the iron hoof of Junkerdom, or row in breadth and vision. The decision finally test with the changing modes of

Two distinct educational tendencies are at work along these lines, the Decisive pol Reform movement (Die Entschiedene ale Reloim) and the Experimental Schools e Versuche School) The Decisive School orm movement embraces teachers and cators who work within the folds of the School, but who strive to enlarge scope of education by various reforms a modern lines. How difficult their is can be judged from the fact in Prussia especially the schools are still er the police regulations and restrictions lifty years ago. A striking example of

the antiquated conditions in the Berlin schools was given me by Professor Paul Oestereich, a leading pedagogue and head of the Society for Decisive School Reform A school teacher in one of the public schools in Berlin attempted closer capport with the children in his classroom by doing away with the traditional arrangement of the benches The school authorities compelled the teacher to replace the benches in their former position at his own expense, for, as the Germans so fondly say, 'Order there must be.

The school reformers see in this kind of order a paralysing factor upon the mind and body of the child. Then efforts are directed to freeing the school from the dead past by educational methods that will develop the child and its character. Some of the results of their work so far can best be seen in the types of young students in the trade schools which exist specially for the continued education of apprentices. It must be mentioned that the employers look with disfavour upon these schools, because they take the young workers away from the job for a number of hours during the week. But as it is obligatory upon them to permit their employees to attend, they must submit However they leave nothing undone to to irustrate the efforts of the reformers

Recently I was present at a public meeting of the society. The students spoke of their conception of the function of the schools and teachers. Several prominent members of the Ministry of Education were there, but that did not deter the grils and boys from voicing their grievances, and presenting their ideas upon the telation of pupil and teacher in a manner that showed a remarkable degree of intelligence, logical thinking, and independent spirit. The bear-

Boys and Girls Studying Anatomy-Helle trau Experimental School

ing of these students was most refreshing—refreshing even to the conservative school heads present. Thus, one of the latter during the discussion remarked that he had been school principal for twenty-five years, but had never understood his living material as he was made to understand it that evening.

Undoubtedly the efforts of Professor Oestereich and his colleagues are slowly producing the harvest of a new young generation—one that is not likely to fit into the

straight-jacket of Prussianism

The originators of the Experimental Schools do not deprecate the value of the work done by the reformers. They contend, however, that too much energy is being expended in lighting the obstacles and traditions of the old regime. The teacher has neither strength nor energy left to devote himself to his main task of reaching the child. For this reason, they have created a new field, the experimental school—emancipated from the superfluous ballast of the past Nearly every large city in Germany now has such schools. Hamburg has twelve,

Stuttgart, Leipzig, Frankfurt, Bremen, ha them They are to be found even in sor remote country-sides

Thuringen and the Harz have a char of country-homes (Landheime), based on trideas underlying this experimental education work. The limited space of my article whost permit of treating many of these victures. I have, therefore, chosen two of standing experimental schools, both located in Saxony. Helieran and Dresden

Hellerau is half an hour's ride from Dresden, a small settlement organised by venturesome artisan fifteen years ago be established a workshop of artistic furnition and gathered round him people of advance ideas. Later, artistic metal work was added Hellerau is not unknown to Europe at America, for it has since become fame because of the Daleroze School of Rhythm Dancing. But my concern at present is fourth that anstitution. It is, with the experimental public school, which has an attendam of 600 children.

That school, while of pre-war origin, denot begin its constructive work along model

es until 1921. It was then that a group young teachers, inspired with new educahal values, essayed to apply them to life leir guiding principle is the recognition of b inner life of the child and the developent of its latent powers To them the ild is the starting point-and education, e medium to create the proper backound and atmosphere that will bring the ld in close rapport with life and the work the world As their school journal express-" Not the traditional methods or dead tine within the classroom will prepare the d for its place and work in society, life itself,-life, with its varied and sating events and interests" It is their contion that the supreme mission of the teacher o learn to understand the nature of the d, to win and hold its confidence, and er to lose faith in its innate goodness

oung Scientists at Work at the Microscope— Hellerau Experimental School*

y seek to create a new relationship bein teacher and pupil. The former is no jet the authority, the dreaded judge and in . He is the friend, counseller and rade. Not external power, but confidence love now determine the attitude of the child towards the teacher and the latter's influence upon the pupils

The daily experience of the Hellerau teachers seems to bear out this point of view. In my interview with the Director, Mr. Max Nietzsche, I learned of numerous examples A particularly interesting experience is that of a young teacher who had not yet adjusted himself to his class. One morning he had prepared a lesson on geography East Africa was to be the subject. Just as the class assembled, a child ran in, new-paper in hand, breathlessly announcing an earthquake in Chile. At once the whole classroom was in commotion, and the well-laid plan of the young teacher was destroyed by the events of life.

"The map! Let's find Chile," shouted all in one choice. All the heads were glued to the map and everything else was forgotten. "There, I have it. America. South

The Children of the Helleran Experimental School have their Own Weekly Paper which is posted on the Bulletin Board

America • the West Coast At once the far-away people and their sufferings became vivid to the children. "They live across the big sea. They are the same as we. Their

Gul Students Cleaning up at the Hellerau Experimental School

children go to the school as we do They feel joy and pain as we They are our brothers." For a long time the class would have nothing but Chile, and in the end they mastered the subject as no amount of lessons on geography could have accomplished

Where the breath of actual life is permitted in the school one event follows another The interest of the children carries them "from Greenland to Africa from Germany to India, and even a jump to the moon may be ventured." Using life as the source of education, the experimentalists lead the children out of the school into life Classroom work is not abolished, but it is used as a laboratory for the impressions received in contact with life. The children are taken on long trips through the country, through forests, fields, across mountains and valleys, and everywhere they are introduced to the forces of nature One week's tramp gives them more of the fundamentals in geography, geology, natural history, and botany than months of class-room instruction. The first plans, train schedules have to be read, distances between stations figured out, plans written home and to friends. It result the smaller children begin to feel need of being initiated into these "myster: The out-of-door life does more. It develocably bodies, litheness of movement, independence. It cultivates the power orientation and absorption, and increases eagerness of the children to learn more the rudiments of knowledge picked up dot the tramp. Back in the school, they be feverishly to classify, elaborate, to deeper information thus gained.

The journeys into nature are valid excursions to museums, stores, watch to factories, railroad vaids, and other place human effort. Here the children learn the interpretable of values of values of values forms of labour. Here they come face to face with the underly principle of human helpfulness at the base all production.

The experimentalists hold that ""

The School Orchestra at the Hellerau Experimental School

d age, guided by the precept 'Each for elf and the devil take the hindmost, al helpfulness is particularly needed spirit of co-operation in the daily life work of the school is fostered, beginning the lowest grade. The results are "most leial masmuch as it gives strong and ted children a large scope for expression,

the weaker and backward ones thus encouragement and confidence. The ice of mutual helpfulness creates an phere of comradeship and sympathy awn in the old school. The Hellefau brosden experimental schools teed several feds of the poorer children, the greater of the food and labour being contributed e other children and their parents.

allerau, a small community, populated an advanced element, may not be an priate criterion for the larger, more it world. Therefore I also visited the an achool to study, the application of a methods in a large city. The school ated in the very heart of Dresden and indeed by 550 children from every con-

dition of life. While attendance at this school is not obligatory children come from temote districts, preferring it to the old, which speaks in favour of this experimental endeavour.

From the annual report which gives the aim, practices, and experience of the teaching staff, I learned that the actual modern attempts were begun in 1920, though the school is in existence since 1913. A group of Dresden teachers, comprising six women, and sixteen men, joined the experimental school in that year. The salaries of these teachers as well as those of Helleran are paid by the State, while the buildings in both places are supplied by the community Dresden also contributed substantial sums toward furnishing the equipment of the school. Its main support, however, in money and labour, comes from the parents. The parents. Mr Minkert, the School Director, said to me, are a most essential part, of the work. They contribute. the element which makes of our school a true and vital community center. By actively interesting the parents in the school and its

Boys and Girls of the Hellerau Experimental School at Play A Snow-ball Fight in which the Teachers Join

efforts the experimentalists have developed a remarkable degree of understanding between parents and children—not only their own, but all children

A striking feature of the schools in Hellerau and Dresden is the novel arrangement of the class-rooms The old austerity is gone, gone also the torturous military benches and desks Instead, one beholds cheerful living rooms, with comfortable tables and chairs, the walls ornamented with warm colour designs, lamps covered with lovely shades. Nearly every-thing in these rooms is the collective work of children and parents, and speaks of their devotion and love to the school. Mr. Minkert emphasized again and again the soothing effect of the tables and chairs on the children, then conduct and work The new arrangement makes it possible for them to collect in groups, drawn together by temperament and mutual interest, a circumstance which has raised the morals of the class-room and has almost entirely done away with necessity of outer discipline Unfortunately, lack of funds compel both school to still retain the

old arrangements in several class-rooms, to evident detriment of harmony

As concerns discipline, Mr. Minkert that the greatest obstacles to its entire altion are those parents who are still steem the old idea of coercion and punishm. The children who first come to the expmental school from the old institutions also imbued with the same spirit. "My fat said, unruly children must be thrashed", sa child remarked to the teacher. The lateplied "But I'm not the judge here, the policeman. I am your friend We you do injury to your friends?" "X replied the youngster, "of course, not to friends." "Well, then, what is to be deto keep, order?" The children deliberator for a number of days, and finally dead that they would have to keep of themselves.

In the higher grades the encouragem to free initiative and self-reliance has protein an aid to self-discipline, and has developed strong sense of responsibility within different groups. A teacher related to me

se of a boy who had pilfered a piece of rying wood from the work-room He was scovered His classmates discussed the nd of punishment to be meted out. One y suggested arrest That was hotly resented the lest as likely to throw a stigma on the hool and to cause great sorrow to the boy's ients Another one said, "I do not defend e act, but I do not blame him so much cause his parents are at work all day, and has no one to help him" Another boy lysed that the graduation papers of the ilprit should state that he had committed a ime That also was repudiated because. t would bar him from all sporting clubs and ould 'queer' him with every employer should After a long begin his apprenticeship scussion the class came to the decision that e defender be induced to restore the loss it of his carnings at odd jobs. The old ethod of terrorising, humiliating, and often arring first offenders, was replaced by the meal to the sense of responsibility of the

The Dresden experimenters stress the eat importance of impressions derived outde of the class-room "By introducing a child to the larger outside life he adually learns to appreciate that all progress ld labour are based upon mutual effort is does not always create social consciousss, but it paves the way for social feeling d activity. In illustration, they related children's experience with a plot of land esented to the school - Some of the children inted a portion allotted to them for their vate use. Then desire was satisfied by Fmall patch which was given each one hers preferred to work them land in comn Belore long 'the property ewners' dised that they had made a bad bargain. t they continued their work undismayed hen the community lot yielded a larger antity of fresh, lovely vegetables while the ividual patches grew very liftle, the ldren announced that mutual effort was erior, and that they wished their plots to included with the rest

The new educational methods afford the chers opportunity to learn to understand psychology of the child and its reactions art instructor, for instance, discerns four finct types among his pupils; the inventive reh in new ideas but never taking time elaborate them; the adaptive who avail miselves of the new ideas, adapt them to it own needs, and apply them with great e, the initiative who appropriate the

;·..

successful efforts of others, simplify and reduce them to generalisation, these are the numerous beaters of tradition; finally, the dull kind who are the onlookers until some day they suddenly awaken and fall in with the third class. At work these types again subdivide into four categories. The variators concentrate more on diversity of form no house at the feudal market-place is like any other, no two workers on the railroad track are dressed alike The decorators absorb themselves wholly in colour and ornamentation The imitators constantly repeat themselves, their houses and people are the same whether depicting Dresden or South Africa Then there are the prosaic ones who content themselves with sober representation of essentials

The serious contact with life is not permitted to dull the capacity for joy and Quite the contrary All learning is acquired through play. Thus reading and writing are gotten more easily by interest in acting and mimicry than by the primer The theatre holds a very important place in the life of the experimental schools as does music, thythmic dancing and various games, Not only the mind, but the body and spirit find untrammelled expression in the experimental school. In summing up an essay on the place of the child in the school, one of the teachers writes "The child should not be stuffed with educational twaddle: Rather should it be brought close to the wonders of its surroundings. Not sated should the child leave the school, but rather he should be imbued with vearning to add to his knowledge by independent pursuit'

In the light of the educational experiments carried on in America, for example where there are dozens of experimental schools, the efforts at Hellerau and Dresden may not appear very novel. But it must not be forgotten that with America, the new educational ventures are almost entirely of a private nature, on a small scale, and accessible only to children whose parents can afford the luxury of modern education. Moreover, in the United States the municipalities take very little interest in the experimental schools, they are, as a matter of fact, usually antagonistic to them.

In Germany, on the other hand, the educational experiments are on a wide scale, and embrace large numbers of Children and thers parents. The two ventures I have described represent communities of nearly three thousand people. One of the vital forces pertaining to the schools is the official interest and support they receive from their communities

In trying to get at the correct estimate of changes taking place in a given country, it is a mistake to compare it with any other country where every condition of life is radically different. To appreciate the radical changes in educational standards achieved by the experimental schools in Germany, one

must compare them with the German sche of pre-War times, or even with the Pruss schools of today. Only then can one real their value and effect upon the future of country. The former barrack, tortu chamber and grinding mill, the cradle bureauciacy and militarism, turned a playhouse and workshop for the idevelopment of a now generation is an attersurely worth knowing and watching.

NOTATION OF HINDUSTANI MUSIC: ITS POSSIBILITY AND DESIRABILITY

By Prof. N. S. PHADKE, M. C.

/INHE instinct of recording is deep-rooted in man and it is the source not only of History which is the record of events but of many other sciences also which together lend order and system to human life Man is so made that he cannot rest satisfied with seeing or hearing a thing only for once He craves for the repetition of the experience The dog that pants by the side of a globetrotter may look at the glorious sunset from the heights of the Himalayan peaks, perhaps it may even feel a thrill at the sight of the wonderful vision, but it is doomed to forget the sight as soon as the darkness of might shrouds it in its folds. Not so with the globe-trotter He cannot rest content with a himself single peep into the sunset's glory He cannot suffer the vision to pass away irrevocably With a skilful click of the Kodak he will record the splendid scene and console himself with the assurance that he has secured in his pocket something which will at least partially pacify his eyes thirst for the grand and the beautiful What is true of the eye is equally true of the car A man will instinctively attempt to record a maddening note with the sole purpose, if not with any other, of enabling himself to repeat it whenever his heart yearns for its joy. Everything in nature is evanescent. Its sounds and sights come and go. And man 1- ever fighting against this evanescence. Himwlf but "an exhalation that is and then is not" struggle is to give permanence to the fleeting

aspects of mature A strange from, fithere it is "

The notation of Music is not, thereto an extraordinary phenomenon. As the hunt runs after the deer, so the annotator chas-Music, easting huge nets of all sorts of siand words in which he hopes to catch a volatile strains. Leaving aside the case nations or rather communities, whose Musis but in its infancy, we could hardly poout any instance where a nation posses great Musical traditions without possessione system of Musical Notation. The Mu of India is as old as the Vedas, and it history were ever written the historian won have to trace back the first attemptwriting Music down, though not to the Vid yet to protty ancient times. A research " the ancient treatises, however, will show [11] the question of a System of Notation, in 1 sense in which we understand the term day, though then vaguely present to be Indian mind, was neither very eagerly be elaborately discussed by the ancient music scholars And even skipping over a period of some centuries, and considers that period in the history of Indian Man in which it was so exclusively studied at monopolised by the Muslim artists that came to be called the Hindustani Music. 11 the period of Muslim rule in India--we ship vainly look for any definite attempt to his one system of Notation. In the case of Hinds stani Music, therefore, the question of Nil

n is more or less a modern question--idern in the sense that it has come to the refront owing to modern influences If we lect together the various systems of Notan that are at present fighting for universal ognition, the first thing that strikes us is t theirs is a growth of hardly half a cen-I have already indicated that Indian olars were aware of the question of Notan even in the ancient times of 'Ratnakar' reatise which is universally recognised as best ancient authority on matters of han Music. It will be wrong to assert t the idea of Notation was unknown to nent India But it will be equally wrong deny that the question of Notation, in the m in which it is discussed to-day, is very When Hindustani Music cly modern he in contact with Western Music in more ys than one, when European scholars, in oble spirit of research and comparative ly, took to Hindustani Music, when some the progressive Indian Musicians and plars were fired by the ambition of popusing and reviving Hindustani Music and sequently felt the great need of some uum through which Hindustani Music d be imparted in Musical schools and demies, when standardisation of Music e to be regarded as extremely necessary the life and progress of Hindustani Music as then that the question of Notation came c regarded as the central and vital ques-And since the forces of which we have spoken have been active not only in one of the country of in the case of one ted individual, but all over the land and numerous individuals in the field, the ral result has been that each intellect tackled the question in its own characterway, and to-day we find more than a n systems of Notation, each with its sets miters and opponents. The sight of more a dozen systems of Notation warring st each other for the supreme place n ugliness about it. And those whose of Hindustani Music and anxiety for its ess is not vitiated by prejudice or anship have for some years past been t to evolve a system of Notation which most efficiently express Hipdustani and would consequently be acceptable whole nation. It is this attempt that sts, or rather ought to suggest the two questions of (1) the possibility, and desirability of a Perfect National Music.

Is a 'Perfect' Notation, in the real sense of the word, possible in the case of Hindustani Music? This seems to be a very strange question at first sight, a question which would only be asked by a sceptic of the hopeless type. If Hindustani Music is quite mature. developed and definite, and if we possess the necessary amount of ingenuity to invent symbols for all the details, there should be nothing to foil our attempt to evolve a 'Perfect' system of notation. That is how common reasoning would run But a close study of all the characteristics of Hindustani Music would enable any one to perceive how the case of Hindustani Music is infinitely out of the common, and how the question of its Notation cannot be judged by the ordinary criteria

Notation means 'noting down writing' down And only that can be 'noted' or written' down which is not so subtle as to defy expression. The question of the possibility of a Perfect system of Notation for Hindustani Music can, therefore, he settled by inquiring into the nature of the latterthe characteristics which make it what it is A careful comparison of Hindustani Music with Western Music will bring into bold relief some considerations which are of the utmost importance in this connection. The Music of a nation is not only the mere way in which notes of certain values are collected together and used by its people. Music is an art. and like all other arts it reflects in itself the whole mental and spiritual poise nation. A nation's Music reveals its temperament, its likes and dislikes, its reverences and meverences, its whole philosophy, its entire way of living and thinking It need not surprise us therefore, if Hindustam Music is vastly different from what may be generically termed as Western Music. To point out but one or two essential characteristics which mark this difference between the two kinds of Music it may be said that -

ugliness about it And those whose Hindustani Music and anxiety for its is not vitiated by prejudice or inship have for some years past been to evolve a system of Notation which most efficiently express Hindustani and would consequently be acceptable whole nation. It is this attempt that is, or rather ought to suggest the two questions of (1) the possibility, and desirability of a Perfect National of Notation as regards the Hindustani Suarus whose firsts delightfully intermingle Consequently it occupies a length of time

which may very well puzzle a European listener who is accustomed to hear songs that

quickly expire

2. And again, a truly Hindustani song is such a subtle affair that to put it on paper and claim to have caught it is like putting the dead body in a coffin and claiming to have captivated the Man As Rabindianath Tagore has comewhere very aptly remarked They in Europe go to listen to a song, while we in India go to listen to a singer'. Unlike a European song a Hindustani song derives much of its grandent from its accompaniments. The amiable fight between the singer or the instrumentalist and the drummer, and concerted and complementary performances form the very essence of a Hindustam song The European song is only a special thing It has no temporal aspect of importance But a true Hindustani song vibrates both in time and space Special and temporal undulations run across each other, and a Hindustani song, if it is a faithful expression of Indian Art, is a network of vertical and horizontal fibres

These and other similar considerations ought to convince anybody how futile it is to record a Hindustani song---when it is really Hindustani Listen to any famous Hindustani singer and you will find that every Suara that comes out from his throat is not a bare Suara that can be easily put down on paper as Ma or Pa or No of the Musical scale, but it has its own bre-notes, its 'frills', as we have said above, or its own 'atmosphere' is true that many systems of Notation have attempted to indicate difficult actions like a Meend by some sign like an arch The signs invented certainly look ingenious and demand our allegiance to the eleverness of the inven-But let him, who really knows what a Meend or a Gamuk 18, pause awhile and 1eflect if a simple sign like an arch is sufficient to convey the full significance of the action connoted, to a novice who tries to learn Music with the help of a ready-made Notation placed before him. None who has really understood the essence of Hindustani Music would deny that the peculiar atmosphere which surrounds every Suara when a firstrate Hindustani Artist sings is incapable of being fully expressed by one or many lines, vertical, horizontal or arch-like, however ingenious and elaborate they may be in their Take, for instance, the first line of • the famous song, "Itane Johan Par Man Na Keeje" in Bhoop Raga. Granting that you have developed a very claborate system of Notation, and that you have trained one many students in reproducing songs from Notations conforming to your system-evi granting all this, the reproduction of the h in auestion by the best of your students w undoubtedly lack the peculiar atmosphe which surrounds the line as it comes to the original first-rate Artist You may indul in this experiment as often as you choose varying the circumstances in as many w. as you can conceive, and your experience y invariably be the same It can never be med that there are certain 'heights' in Him stant. Music to which no system of Notat can ever reach, certain 'subtleties which d

all expression

The most important characteristic of Hin stam Music which we cannot afford to ign that much of its heavenly charm derived from what the Artist sings 'impromias if by divine inspiration. Take an eas Hindustani singer soars onwards and upw as the performance progresses, and when one reaches the supreme heights he loses himse the rapturous harmony of his own crea Then it is not so much he himself as voice that sings. Then he does not plan collection of notes nor is he in a position remember the wonderful constructions sound, as if by themselves, through his if He is like the maddened soldier who in on into the thick of the battle and then not know what he is doing lister Hindustani song sung by a set of stuaccording to a definite plan rendered con by some sort of Notation papers placed ! The song may perhaps please But it cannot stir your soul, and Cul will refuse to call it real. Hindustani The case of Western Music is different Western song like the much too famou a long way to Tipperary", when once Notation, gets standardised, and then it same whether the renowned Harry Law the commonest soldier sings it (Thoug) here it is worth noting that it is only Lauder's song that sets the heart of the ence beiting because there is a peculi spired 'impromptu' element in it which above the region of Notation) ∡his way standardize a Hindustani son iob it of its real grandeur. It is like o the sun in a potful of water. splendour of Hindustani Music owes itto what the expert Artisk performs pore' in inspired moments, it ough clear that even the most elaborate st Notation, when applied to it, is do

leat its own purpose, so far as the real lence of the Music goes. It will fail to press and record that essence, because by very nature it is mexpressible. Hence no item of Notation for Hindustani. Music can claim to 'Perfection'. There is a limit ere all systems of Notation will have to it and admit their own futility.

Within these limits, however, a system of tation has its value - A system of notation ich is humble enough to concern itself v with the elementary aspects of Hinduhi Music, and frank enough to confess that function is only to guide the novice up to certain point, would be the most rational tem of Notation and would deserve the atest support. If scholars are endeavourto evolve a universal Indian Notation y should first understand and openly admit even granting that such a system is lived, its use will be confined only to the ression of the lower levels of Hindustani sic and to teaching its rudiments to new otees of the Art - That will bery greatly tribute to a healthy understanding between Musicians and Instrumentalists on the hand and the Pandits and research-lovers Every language has an alphathe other But the alphabet're only used as a leadstring for small boys. The art of torv is an altogether different aflair

alphabet cannot be expected to make orators of the boys, however diligently they may learn it. A system of Notation has much the same value as an alphabet. It may tell you But it can never help how to read Music you to become a real singer And it can contain real Music---of course, we are speaking of Hindustani Music---as little as an alphabet can contain real inspired speeches. A system of Notation is after all meant for the beginner The higher regions are not accessible to any system of Notation, nor do those who excel in the art depend on any standardised guidance. If all these qualifications, are accepted and an attempt is made to reconcile the numerous Notations that are at present current in India, and to fix a common system, nothing could be more desnable, and profitable. Evolving a 'Perfect' Notation for Hindustain Music is like running after "The Will of the Wisp" Once this is realised much of the bitterness created by the present controversies will be mitigated, absurd claims and ambitions will be weeded out and a clear ground will be in view where all schools of thought can meet and come to common conclusions It will then be easier to compare all the prevalent systems of Notation to adopt an eelectic method and to give the nation a universal system of Notation. Let us hope that day is not far distant

THE RELATION OF THE SEXES

BY MAJOR B. D BASU, I M S (Retired)

E question of the relation of the sexes is an important one in the consideration of the subject of the uplift of Humanity is also necessary, because the sexual lise is naturally so strong, that without er control, it not only ruins men and en in body, mind, morals and spirit but he long run saps the foundation of ty and brings about the downfall of its irresistible nature of the sexual lise brings into existence degraded humanity. It has been very rightly said by an ent psychologist that

any case the sex appetite is more vibrant grestible than either of the others. Truly

appalling is the swiftness with which sensually and lewdness may infect a people. In a mushroom mining camp defauchery is swifter than drink in breaking down steady habits. This is why no society can afford to let its members say or publish or exhibit what they please. Lust is a monster that can be fulled to sleep only with infinite difficulty whereas a pra-prick a single stoicatio note is enough to arouse. The ordered sex relation is perhaps, man's greatest achievement in self-domestication. Common sense forbids that the greed of purveyors of 'suggestive plays pictures or literature be suffered to disturb it. Moreover if as experience, seems to show the social evidenment be utterly stamped out in cities it is better to sweep it aside into some 'tenderlom or levee' than to let it align in the frequented streets."

^{*} Ross's Social Psychology p 126

Marriage is intended to regulate the relation between the seves. Hence the institution of marriage brings about, or gives prominence to "chastity". The survival value of "chastity" in nations which hold it in high esteem, especially as far as their womanfolk is concerned, is proved by history. The Hindus and the Chinese are pre-emmently the two nations who have survived the cataclysms of conquests and revolutions This is to be attributed to a great extent to the chastity of those races. While "confiscation of women" practised by Muhammadan conquerors brought about the extinction of Christianity in countries bordering the Mediterranean Sea, such as Syria, Egypt, Morocco, and Algeria This was not the case with the Hindus when India came to be conquered by Muhammadans Most Hindu women cheerfully mounted the funeral pyre and reduced themselves to ashes rather than suffer themselves to be polluted by the touch of their Mahammadan conquerors

Says Mr T W Rhys Davids

The people (of India) in the 6th cent B C had already built up for themselves, quite independently of religion, a social code regarding sexual relations ([Encyclopaedia of Religion and Ethics III p. 490]

Buddha laid great emphasis on chastity

In the Iterataka Buddha is represented as declaring that the life of chastity is not lived for the purpose of deceiving or prating to mankind nor for the sake of the advantage of a reputation for gain and one's own affairs but this life of chastity is lived. O monks for the purpose of Insight and thorough. Knowledge while 'by mutual relisance. O monks a life of chastity is lived for the sake of crossing the flood (of earthly longings), and for the sake of properly making an end of misery.

There is little doubt that Buddhism borrowed the ideal of chastity from the Hindus. To quote the above mentioned author

All that Buddhism did was to adopt the highest ideal current among the clans and to give it additional clearness and emphasis. It was this ideal that it carried with it wherever it was introduced

The percentage of illegitimate births is low in those countries where the influence of early Buddhism has been greatest and its canonical literature is chaste throughout [E.R. E. III], p. 490].

This reflects great credit on Hinduism and India.

Regarding the chartity of the Chinese women, Mr W. Gilbert Walshe writes.

Chastity in females is regarded by the Chinese's a virtue of prime importance ... In the city of Hangchow is a well into which hundreds of hinese guls threw themselves when the city was

threatened by the Tai-ping rebels. Instances as these afford more reliable evidence as to high standard of chastity which undoubtedly ex among women in China than any deduction of the methods which seem to reflect upon the fencharacter, and which are intended rather as increase to virtue than preventives against vice. Houses of ill fame exist in the majority of cibut they are generally unobtrusive in their chater, and their existence is known only to habit. The immates are recruited by kidnapping or chase from destitute parents very few of them willing votaries. The immorality which is obsable at Chinese treaty-ports would not be to ated in inland cities. "E. R. E., III. pp. 490-4

While early Christianity laid great stron chastity and censured re-marriage either sex, for it was looked upon as a matest sign of incontinence, in Christian cotries in modern times, chastity is not protised as it is in India amongst. Hindus of Buddhist countries.

In Christendom, two thousand years hassed in an ambiguous unreasoned, and in worst sense superstitious attitude towards sexual life. Westermarck finds that 'irregular energions between the sexes have on the wheekhibited a tendency to increase along with progress of civilization and Gibbon had alternoted that, although the progress of civilization as undoubtedly contributed to assuage the fire passions of human nature, it seems to have a loss favorable to the virtue of chastity. Men in an hurry to solve the question which more than other involves the future prosperity of race. In the meantime the practical question sexual life is a hand to mouth affair when it is given over to false ideals or degraded vanilly. A E Crawley in E R E III p. 4861

Some of the races called savage worthous as far as sexual morality went believe came in contact with the Christ nations of Europe

"Several of the virtues, and among them chart were more faithfully practised by the [Amer-Indian race before the invasion from the East to these same virtues are practised by the white of of the present day" [A. B. Holder Amer-Journal of Obstetres, XXVI-1]

Mr Havelock Ellis, in his Studges in a Psychology of Ser, Vol III, pp 207 et seg, with

When prestitution is attributed to a sixtepeople, we must almost invariably suppose all that a inistake has been made, or that the people question have been degraded by intercourse with the peoples for among unspoilt savages custom that can properly be called prostitution that can properly be called prostitution of savages. When, therefore, we are considering chastity of savages, we must not take into a contract with Europeans.

In his Work on the sexual life of time, Ivan Block has devoted a chapter ! "Sensual Life," in which he writes that

"He who wishes to characterize in a few world

European civilisation of the present day may that its nature consists in epicureanism, miti-d by toil and the struggle for life: . Our sual life to-day has now degenerated into a sual life to-day has now degenerated into a vulsive search for the most violent sensations vinsive search for the most violent sensations sible, into a wild hunt after the strongest sible and most frequent enjoyments, because the e is lacking for a peaceful, harmonious tence

For the majority of those living in great towns isement is equivalent to a continued succession superficial sensual pleasures, as preparatory ruli for an equally fugitive and debasing sexual

The frequently heard and favorite plinases to hrough with it', to live one's life', 'to sow one's loats, &c, have all the same significance in sense of preparation for sexual indulgence by ns of such stimuli. We include too often in ıal intercour≤e

He quotes the psychologist, Willy Hellpach says that

The whole arrangement of the sensual life culates in the stimulation of erotic activities. Such idency is inevitably associated with the developt of the modern large town and there ensues mutation of the sensual life of large towns in ller towns, and even in country villages

Ivan Block says that the sensual life of time

Also possesses its literary guides and course of nuction in the form of the nuncious printed thooks for the world of pleasure. All the ous pleasures of Paris for the eve the cu and sense of taste, lead ultimately to—woman the sexual impulse is, in every possible way enced, increased, elaborated and complicated he civilisation of the present day. Especially life of great towns where the essence of arn civilisation is found in its most concentrated is a sexual stimulant in the highest degree to old England and in the new the excessive imption of meat and of alcoholic beverages has turally stimulated the sexual impulse and has ncted it into devious paths - The sexually lating influence of bixurious feeding is d a well-known fact of experience — alcohol the evil genius of the modern sexual life ke in a malicious and underhand manner it is its victim to sexual misleading and corrupto venereal intection, and to all the conse-es of casual sexual intercourse."

exual Impulse is a biological instruct n it is not always safe to repress mote again from the work of the last d auther

sed by the necessities of civilised life and coercive force of conventional morality instincts still slumber in every one? but

he evil results of conventional morality been depicted by the Danish poet, J. P. sen who has characterized this double

the upper hand in him by an overwhelming force he was driven to the coarse lust of coarse enjoyhe was driven to the coarse list of coarse enjoy-ments he yielded, overcome by the human passion for self-annihilation, which while the blood burns as blood only can burn, demands degradation, perversity dirt and foulness, with no less force than the force which inspires the equally human passion for becoming greater than one is and

Regarding sexual morality, writes English author

At present the sexual morality of the civilized world is the most illogical and incoherent system of wild permissions and insure prohibitions foolish tolerance and ruthless cruelty that it is possible to imagine. On current civilization is a sexual luna-To approach it (the discussion of the matter) is to approach excitement. So few people seem to be leading happy and healthy sexual. Irve that to mention the very word sexual is to see them stirring to brighten the eve lower the voice and blanch or thish the cheek with a flavour of

guilt.
The essential aspect of all this wild and winds business of the sexual relations is after all boths. The presumment value of sexual questions in morality lies in the fact that the lives which will constitute the future are involved

Mr. Wells also sass It is possible that in the last hundred , as in the more civilized states of the world the average of humanity has positively faller. All our philanthropists all our religious teachers, some to philanthropets all our regions teachers somethat he has not of informal conspirate to preserve an atmosphere of invented ignorance about those matters which in view of the irresistible nature of the sexual impulse results in a swelling tide of miserable little lives consider what it will be to have perhaps half the population of the world in every generation restrained from a tempted to evade reproductions

To the sociologist, the problem of the relation of the seves derives its importance from the fact that on its right solution depends the suppression of prostitution, and of venereal diseases as well as the happiness of the home and welfare of the race. Because this onestion has not been properly tackled, therefore, there is so much misery observable in this world of ours. It is therefore that Ivan Block writes

It is not by chance that prostitution is an anix a product of civilization, that it finds in civilization its proper vital conditions, whereas in primitive states il cannot properly thrive

Prostitution degrades humanity physically It diffuses venereal diseases, the evil consequences of which to the family to the offspring and the race are too well known to be mentioned here Hence the necessity of moral and physical purity in the relations between the seves

t when he had served God truly for eleven 'F Lord Sydenham of Combe, Chanman of the coften happened that other powers gained Royal Commission on Venercal Diseases said

But men do not often lead pure lives, because purity is not taught in childhood. From statistics of schools in Christian countries of the West, it is evident that at least 90 per cent of the boys attending schools are addicted to self-abuse. Dr. Dukes, in his work on "The Preservation of Health" writes

"I believe that the reason why it is so widespread an evil—amounting, I gather, although from the nature of the case no complete evidence can ever be accurately obtained, to somewhere to 95 per cent, of all boys at boarding schools is because the boy leaves his home in the first instance without one world of warning from his parents—and thus falls—mio—evil ways from his innocence and ignorance alone"

In "Youth and Sex" published in the series of "The People's Books," Di F Arthur Sibly says that the box

"has long been accustomed to caress his private parts, and the pleasure with which he does this is enormously enhanced. He does not suspect that indulgence is harmful. This pleasure, unlike that of eating, costs him nothing and is ever available. His powers of self-control are as yet undeveloped.

It is necessary to teach every child selfcontrol.

Self-abuse with its corollary, un-natural offerce in childhood leads to further un-controllable passions in early manhood. Regarding the results of youthful impurity the above-mentioned author says.

Another injury done by impurity to the growing mind of the lad is that in all matters relating to sex, he learns to look merely for personal enjoyment. In every other, department of life he is moved by a variety of motives by the desire to please, the desire to excel by devotion to duty by the love of truth, and by many other desires. Meanwhile as regards the sexual appetite—the racial importance of which is great, and the regulation of which is of infinite importance for himself for those who may otherwise become its victims for the wife he may one day wed and for the

Appalling as are the effects upon individuals who have contracted disease by contagion. I believe that the results of transmission are more dangerous to the race as they are certainly more insidious. Sterility still births and infant mortality are largely due to this cause. To them must be added large numbers of children who die young or who linger on under some great disability which prevents them from ever becoming useful citizens and relegates many to the care of the State at large expenditure. Thus not only is the birth-rate being lowered at a time, when other causes are operating in the same direction, but the whole standard of public health is degraded, and the vitality of the race is undermined.

"Thoughtful men and women can render no higher service to the State than by promoting with ceaseless vigilance the chastity of its people for such national foundations are as indestructible as those of licentiousness are destined to decay (Race

children, legitimate or illegitimate, that he beget-his one idea is personal enjoyments.

He very rightly observes that,

"considering how large a part the sex-plays in the lives of most men and women sidering how it permeates the literature an of the world and is—as the basis of the hom most potent factor in social life, its profanatial terrible loss."

It is this impurity of boyhood whitesponsible for many of the evils prevale society. Dr. Sibly says

'As a result, young men become power face the sexual temptations of manhood, and who in all other relations of life are admirable in this matter into the inite of prostitution class demoralizing but far crueller sin of sedu

less demoralizing but far crueller sin of sedu. Into the contamination of this inferno active support of this cruel infamiv, mai many a young man is led by the impurity of boyhood.

This impurity then leads to the dection of women. Di Clement Dukes wil the work already referred to above,

This evil is I believe, the root of evil of prostitution and similar vices, and latter evil is to be mitigated it can only be mind by making the life of the school-boy p

How is it possible to put a stop to this t social exil. How is it possible to elerate, while the demand for them for base purpso great? We must go to the other end scale and make men better. We must train boxs more in purity of life and chastity befor passions become uncontrollable.

Whereas the cry of every moralist phropist is let us put a stop to this prostioner and claudestine. This cannot be efficient, much as it is to be desired the door it is too great even possibly greater the supply. If we wish to cradicate it we must to the fountain-head and make these who the demand puter so that the demand falling supply will be curtailed?

Di F Arthur Sibly after quoting approval the above passage from Dr | I work writes

To this I venture to add that by to chastity we not merely decrease the dense prostitutes, but we greatly diminish the Few girls if any take to the streets until have been seduced and the antecedent duction are the morbid exaggeration of the appetite the lack of self-control, and the hedonism which youthful impurity engend is So blind, so callous does impurity make eventured and generous, that many a young take can be a good son, a good brother a noble is a patriotic citizen, will doom a girl whose fault is that she is physically attractive possibly tog affectionate and trusting—to independent travail, to disgrace, and in inferior out of twenty to ostracism and the infaministreets,"

edge and purity teaching, as well as in tic suggestion. He writes

there is a remedy—I believe a specific can rapidly and, I think finally restore h to the enfectived will and order the unpirit to come out of the man. It is hypnogrestion—In hypnothy hands hypnotic ion is a beneficent power which has no sand no drawbacks and to decline to use accept a very serious responsibility

t while chastity should be aimed at of necessary to bring into existence es of either sex in any society. Celibaas be good for a few individuals

either from choice or compulsion, but certainly it is not a virtue for the welfare of Humanity It is incompatible with the haimonius development of all the faculties of man By suppressing one passion, other passions are, as it were let loose beyond bounds

Then again statistics collected by the Federal authorities in America and edited by Professor Wilcox of Cornell University, show conclusively that married men have a much better chance of life than bachelors. Men of all ages die twice as fast if unmarried

Accession No. 48649

iolently exaggerated accounts of their misdeeds.

The author quotes the following from Burke's speech on Fox's East India Bill of 1783: "I engage nyself to make good to you these three positions first, I say, . there is not a single prince, state, or potentate, great or small, in India with whom they have come in contact, whom they have not sold—a single treaty they have ever made which they have not broken Thirdly, I say, there is not a single prince or state who ever put any trust in the Company who is not utterly ruined, and that none are in any degree secure or flourishing but in the exact proportion to their settled distrist and arreconcilable enmity to this nation.

The tollowing from the Marquis of Hastings Journal will stand repetition to this day, though it

was penned in 1814; "Instead of acting in the character of ambassador he [the Res dent attached to a Native State] assumes the functions of a dictator interferes in all their private concerns countenances refractory subjects against them and makes the most ostentations exhibition of this exercise of authority

After the renewal of the Charter in 1813 English manufactures were exempted from customs duty manufactures were exempled from customs duty and began to be freely imported in India. On this Wilson, in his History of India makes out a strong case for Protection. The arguments used by him long ago are equally applicable to-day. As similar long ago are equally applicable to day. As similar immunities were not granted to the manufactures or products of India in the ports of the United Kingdom, this was a piece of selfish legislation in which the interests of the dominant country were alone consulted and those of the subordinate dependency deliberately injured the latter being not only deprived of a legitimate source of revenues. but being further exposed to an unequal competition under which native industry was already rapidly It might be argued that India benefited declining by the reduced price of the commodities imported from Great Britain in propertion to the amount of the duty remitted But this was disadvantageous in another respect, a it rendered the articles of domestic production still less able to compete with foreign articles in the market, and further dis-couraged native industry. The competition was unfair India was young in the process of manufacture, and was never likely to improve if her manufactures were to be crushed in their infancy Could time have been allowed for the acquisition of experience and the introduction of machinery, her cotton fabrics and her metals would probably have been saleable in her own markets for a less cost than those of Europe A native sovereign would undoubtedly have given India a chance by the imposition of protective duties

It is interesting to note that one object of sendmg King William's presents for Runjit Singh by water, was to ascertain as if undesignedly the trading value of the Indus, a trick which was strongly denounced by Sir Charles Methalfe. It was the first step to the conquest of Sende the iniquity of which beggars description, and the pushing forward of the border to the frontiers of Afghanistan, which has led to so much waste of

India, that haughty spirit, independence, and | thought, which the possession of great was sometimes gives ought to be suppressed. They directly adverse to our power and interest. directly adverse to our power and interest and not want generals, statesmen, legislators want industrious husbandmen." Truly did Pres de Abraham Lincoln say. "There is no man go enough to govern another man. It is equally to that there is no nation good enough to govern another nation," and Macaulay echoed the set sentiment when he wrote, "Of all forms of tyrair I believe the worst is that of a nation over pation

nation"
A tract entitled "The Government of India state of the renewal of the Charter in 1873, contains some home truths the miserable condition of the Indian raise says at the state of the truth of the Indian raise says are tracked that is being gradulated. sed it is society itself that is being grain, destroyed. The race of native gentry has alreadmost everywhere disappeared, and a new disappeared. has arisen that in another generation or twe cultivators will not be worth having as subject for moral debasement is the inevitable consequence of physical depression. Already the Police "become the engine of oppression and a greater of the corruption of the people." As to educate this is well known that whereas in Hindu to work all the corruption of the people. every village community had its school, our truction of village societies or municipalities deprived the natives of their schools, such as were and has substituted nothing in their shaft to public employment the following of would go to show that the policy pursued in quarters of a century ago did not substan-differ from what it is to-day. In our earlier b career natives were employed in the most me ant and confidential posts of our government regiments were officered by natives in many; we had native agents and representatives, where we were then obliged to make use of a talent. But gradually this use of patrye was displaced and every post of profit of trus value transferred at enormous addition to the of governments to Englishmen, until it became and parcel of our established policy. The dibetween the covenanted and the uncover-services is still kept up though the covenant is absurd and ridiculous. and the purpowhich it is maintained is to draw an artificial by means of which the natives may ever however educated able and competent to be ed from all high and lucrative appointment any real share in Government administration and responsibility is denied to the people of h In a petition submitted by the people of Mi they complain, that in order to ruse revereardent spirits the Government is forcing diness on them, -a complaint which has a accumulating in force and volume ever sme

sement of secret service money in India will learn strange things. Meanwhile those who have lived long enough to see how y is written can regard it as but little better poor romance." British Indian history has thout been a case of the lion painted by if and to extract truth out of it is as impos-

is to extract ruth out of it is as impos-is to extract sunbeams out of cucumber in Napier, the hero of Scinde, in a moment of rightness wrote as follows. "Our object quering India, the object of all our cruelties ioney. More than a thousand millions sterling id to have been squeezed out of India in the kty years Every shilling of this has been out of blood, wiped and put into the rers' pockets, but wipe and wash the money will, the damned spot will not out

will, the damned spet will not our Mahaiaja of Gwalior the only sovereign India in the forties of the last century was I to a feudatory during Lord Ellenborough's alty "All his arguments, all protestations says Mr. Hope, "as would those of a goose of the equal pertinacity declined the professed hungry fox." In quoting this, we do not make intend to lay the whole blums of means intend to lay the whole blame on The weak, the improvident, the unwise t. The weak, the improvident, the and in who are wanting in political sagarity and in danger. er of combination against a common danger here go to the wall. As a writer in the Journal of May 1821 has truly said, "we to down as certain, that whenever one-hour of the population of India becomes dent and as scheming as ourselves, we shall t again, in the same ratio of velocity again, in the same ratio of velocity incurse of our original insignificance. The are betraved by their leaders, who were yethe British as at Plassey and everywhere after Basic savs "the British should have amed of their conduct," and that Asiaties implicitly of their hearts could not fathom a of duplicity, want of scruples and hypothe occidental diplomatists. While far and on the conduct of the British, we feel the the occidental diplomatists? While far inding the conduct of the British, we feel say that this defence of the Indian traitors justified. No war has ever yet been conabsolutely righteous, methods, from the Kurukshetra downwards. The enemy ry to seduce and create dissensions n come in contact with ignorant peasants llages, who, in spite of all their apparent which is really due to their ignorance rty, are full of wiles and duplicity in

regard to matters within the reach of their intelligence. Their duplicity does not prevent their falling victims to village touts, who employ similar weapons against them with superior intelligence, but the town-bred gentleman unaccustomed to their devious ways, cannot thrive in such atmosphere. The tactics employed by the British in their wars with Indian princes did not, in our opinion differ in kind from those which the latter would be glad to avail themsolves of, if only they knew how to do so. It was not a case of diplicity against simplicity but of ability, organization, patriotism and trained intelligence on one side against the want of all these

qualities on the other

The story of the second Burmese War is told at length in the fifth volume and prepared as we were to find that this particular war waged by Loid Dalhousie was not less iniquitous than others in which England had engaged in the East we confess we were not prepared for such shameless and downight injustice and such total subversion of the elementary canons of international morality. Lake everything else in Major Basu's monumental work the tale has been told as far as possible in official language and a pamphlet of Ruhard Cobden of anti-coin-law fame based entirely on supports called from narlamentary papers has Cobden of anti-corn-law fame based entirely on materials culled from parliamentary papers has been largely drawn upon The readers will be surprised to hear that the Burmese Government readily agreed to satisfy a totally untenable claim for £920 and the casus belli consisted in nothing more nor less than the fact that the deputation which went ashore to enforce the claim was kept waiting in the sun for a full quarter of an hour! It is not as if the Burmese efficials had shown fight or the people had behaved rudely. In the words of Mr Cobden 'a covery of partialges with a hawk in view ready to make its fell swoop or a flock of sheep with a wolf's eyes glaring into the fold could not shrink more fundly from that the fold could not shrink more finadly from that terrible and irresistible few than did the Burmese officials at the prespect of a hostile collision with England. But that is perhaps exactly the reason why any sick was considered good enough to beat them with In this mad world of ours the weak have always to go to the wall however just their cause may be. The cost of the war was of course borne by the people of India. Mr. Cobden justly enquires. What exclusive interest had, the nstly enquires. What exclusive interest had the half-naked persant of Bengal in the settlement of the I fantastic I claims of Captains Siepperd and Lewis that he should be made to bear the expense of the war which grow put of them?

None whatsoever except that the neek and helpless Indian peasant can be bled white without a word of protest Well might General Cass say in a speech delivered in the Senate of the United States in December 1852. The whole history of human contests since the dispersing of the family of man upon the plans of Shinar, exhibits no such national provocation followed by such national punishment

The annexations of Nagpur Jhansi Satara, and other important states were treated as affair of high politics, but the annexation of Tanjore, on the same ground of failure of heir, as if the British Government had any divine right of entry in such an event was judicially questioned, and though their lordships of the Prey Council considered the seizure to be an act of States with which they were not competent to deal they made the following pronouncement on the Tanjore spoliation:

"It is extremely difficult to discover in these papers any ground of legal right on the part of the East India Company or of the Crown of Great Britain, to the possession of this Raj or of any part of the property of the Raja on his death and indeed the seizure was denounced by the Attorney General as a most violent and unjustified to receive the seizure was denounced by the Attorney General as a most violent and unjustified to receive the seizure of the seizure and unjustified to receive the seizure of t

Herbert Spencer the philosopher has the follow-t on Anglo-Indian rule. The Anglo-Indians ing on Anglo-Indian rule. The Anglo-Indians of the last century whom Burke described as birds of prey and passage in India showed themselves only a shade loss (fuel than their prototypes of Peru and Mexico A cold-blocded treachers was the established policy of the authorities. Princes were betrayed into war with each other and one of them having been helped to overcome his antacomst, was then himself dethroned for some alleged unsdemeanou. Always some muddled stream was at hand as a pretext for official wolves. Even down to our own day kindred iniquities are continued. Down to om own day, too are continued the grevous salt-monopoly and the pittless taxation that ring from the poor ryots nearly half the produce of the soil. Down to our own day continues the cuming despots in which uses native soldiers to maintain and extend native subrection.

Attocities alleged to have been committed on women and children during the Sepoy Mutiny have been proved to be pure fabrications. The Indians are not like the masses of western countries, when under the influence of strong drink in regard to these matters. Says Williustin McCarthy in his History of Com Coun Times. The elementary passions of manhood were inflamed by the stories happily not true, of the whole-ale dishonour and barbarous mutilation of women. As a matter of fact no indignities other than that of compulsory that no indignities other than that of compilsory corn-grinding were put upon the English ladies. There were no outrages in the common acceptation of the term upon women. No English women were stripped or dishonoured or purposely mutilated. But listen to the story of the reprisal folin Kaye, the historian of the Mutiny writes. Soldiers and civilians were alike holding bloody assizes or slaying natives without any assize at all regardless of ser or any Afterwards the thirst for blood grew stronger still. Englishing the not besitate to least or to record their leasting in not he state to boast or to record their boasting in writing, that flies had spared no one and that perpering away at niggers was very phasaut pastimes enjoyed amazingly. And it has been stated in a book patronised by high official authorities that for three months eight dead-carts, daily went their rounds from sumise to suger to take down the corpses which hime at the cross-roads and

market-places? Sn Charles Dilke writes 'revels thus hanged or blown from guns were taken in arms but villagers apprehended on atrocities were committed at w DICION Monamad Toglak himself would have stood asha It is certain that in the suppression of Mutiny hundreds of natives were hanged Queen's officers who unable to speak a word any native language could neither -underevidence not detence

John Malcolm Ludlow in his history of Bi dia (1859) says The establishment of India (1859) says. The establishment of English power in India is an ugly one. It be in bebleness and cowardice it is pervadi-japacity it closes with a course of traid and i hood of torgery and treason as stupendons as lay at the foundation of a great empire' five volumes of Major Basicare only an an amp tion and illustration of this theme

It will be news to many that the transfer of Government of India to the Crown was made in the interest of the people of India 'to whore seems to be a matter of indifference (Metcall) to encouraging Englishmen to colonise in 1 and for their special benefit. This is quite and for their special benefit. This is quite from the official records of the times and the petition submitted by the East India. Communication of the control of the contr

THE POSSIBLE FRANCO-GERMAN-RUSSIAN COMMERCIAL UNDERSTANDING

By TARAKNATH DAS 191 (c)

T present Great Britain is suffering more than unemployment fat According to the France and Germany st available figures, we find that the nber of the unemployed in Great Britian 1,180,000, whereas the numbers of the imployed in Germany and France are 214 and 7.837 respectively. As for the real se of the present unemployment situation Great Britain, the Prime Minister, Mr donald, just before the recent dissoluof the British Parliament, put all the ne for it on the French efforts for making many speed up her production, so that rewould be reparation payments. This This hurt British trade considerably

lanation will not be acceptable to all French people, mespective of all party rations, resent it. In fact M. Poincare a vigorous article published in the New & Erening Post of Oct. 27, 1924, has ated out the fallacy of the position of

Macdonald, who, according to M. Poinp, like Mr. Livod. George is ungrateful to nee. M. Poincare gives the following from on the possible effects of revival of man industry on. British enterprises.

recently had the occasion to show—with conveniences to prove it that at the rate thingsiong German coal will soon supersede English in the most important markets of the world hat soon German metal products will victoring the figure of the products of the Imperial lies and even of England. But what is invalid in the statement of the intellectual attainable is that men of the intellectual attainable of Mr. Lavod George and Mr. Macdenald have realized that Germany has arrived at this role economic expansion, which was seen but by General Dawes and other expertise in the last five years she was relieved of reparation builden and that not having been med in her industries nor by invasion nor ittles she was easily able to rise again, even than the victorious nations.

One of the net results of the World and the Peace settlement is that there risen a serious. Anglo-French rivalry continent of Europe and other parts world. Great Britain is imightily us to curb French power. Great Britain rking to bring about isolation of France.

in World Politics—while the French statesmen to avert that calamity are trying to bring about a continental concert for self-defense. Great Britain is trying to recover her position in world commerce. This explains her solicitude towards Germany and Russia. However, France is not idling her time allowing Britain to steal a march on her France is also trying to win over Germany and Russia for political and commercial reasons. In this connection the following report of the speech of M. Herriot, is very illuminating.—

Lyons I rance O t 27-Frances need for the restoration and extension of trade a lations with Germany and Russia was voiced by the Premier Herrot in a speech before a banquet of the foreign trade councillors here vesterday. The time had come said the Premier to create anew international made currents in which France should have her proper place. Negotiatives for a commercial treaty with Germany had begin he said and within a few days barring any untoward meident the French would see the roads to the East reseptened to them. Allow meeters ay personally the Premier went on that it is well for us to think of buying in the East to be able to struggle against the untavoiable situation created by our constant buying in the West. I am partisan to buying in the East—buying creats wood and petroleum. The Premier declared France needed new markets. She now was an industrial country of fast rank and should work out a broad plan of action. He urged that colonial trade be developed so that France would be able to obtain raw material from her own territory. If we always depend on Gregon supplies, he added notably from the United States we are in grave danger of seeing our cetton and silk industries exposed to disappointment.

Less than two days after this speech had been delivered by M. Herriot France accorded de pure recognition to the Soviet Government of Russia. The following are the texts of the notes exchanged between France and Russia.

Paris Oct. 29 (Associated Press -The texts of the French note to Russia and the Soviet highly as given out officially and

given out officially (cad)
Following the Ministerial declaration of June 17-1924 and your communication of July 19-last the Government of the Republic faithful to the friendship which unites the Russian and French peoples recognized de pure from this date the Government of the Umon of Soviet Socialist Repul-

ics as the Government of the territories of the ormer Russian Empire, where its authority is scepted by its inhabitants, and in these territories is successor to the preceding Russian Governments Consequently it is ready at once to establish regular uplomatic relations with the Government of the nion by the reciprocal appointment of Ambas ador-

"In notifying you of this recognition, which annot affect any engagements entered into or reatics signed by France the Government of the Repullic behaves in the possibility of a general arrangement between our two countries of which the resumption of diplomatic relations is a preface in this respect it wishes it to be understood that it expressly reserves the rights of French citizens acquired under obligations contracted by Russia or its rependants under anterior regimes obligations the respect of which are guilanteed by the general principles of law which are for us the rule of international life. The same reservations apply to responsibilities assumed since 1914 by Russia towards the French State or its dependant-

Dr Taraknath Das

"In this spirit the Government of the Republic ishful once more to serve to the utinest the terests of peace and the future of Europe designs seek with the Union n just and practicable settleent which will permit restoration between the o nations of useful relations and normal exchanges ien the French conscience shall have received e appeasement to which it is entitled.

"As soon as you have made known your assent

more particularly of an economic order, we welcome to Paris your delegates, furnished welcome to meet our negotiators.

Until a satisfactory conclusion of the negotiation.

the treaties, conventions, and arrangements ha existed between France or French citizens, and line shall not have effect. The individual legal relate formed before the establishment of Soviet por between Frenchmen and Russians will remain hitherto and the auditing of accounts between two States shall be deferred in all respects measures of conservation in France being taken about to be taken.

Finally it must be understood once for all a non-intervention in internal affairs shall rule in

relations between the two countries

HERRIOT

"The Soviet reply reads ---The Central Executive Committee of the 19 of Soviet Socialist Republies has received with a satisfaction the proposal of the French Govern fully and entirely to restore regular diplo-relations between the U.S.S.R. and Fran-the reciprocal dispatch of Ambassadors, and open immediately negotiations with a vew instituting friendly relations between the per of the U.S.S.R. and France
"It expresses confidence that the questions

of the French Republic of today's date settled by full agreement between the U S S R France goodwill existing on both sides in as absolute respect for each other's interests

The Central Committee of U.S.S.R. a greatest importance to the removal of all m-standings between U.S.S.R. and France the conclusion between them of a general agreeapable of serving as a solid basis for them 6 relations. Allowing itself to be girded to constant despe of the U.S.S.R. to attain guarantee of general peace in the interestworking people of all countries and to friendship with all peoples the Central IX Committee of the U.S.S.R. draws pe attention to the immense advantages which for the two countries from the manguration 1 them of close durable economic ralations ! development of their prospective powers at trade exchanges

"As does the Figure Government the 'Executive Committee of the U.S.S.R. that mutual non-intervention in internal disan indispensible condition to relations to states in general and with France in iand greets with satisfaction the French Govern declaration in that regard

"In accepting the choice of Paris as " for the negotiations between the U.S. I France the Central Executive Commun. U.S.S.R. informs the French Government. has instructed the Council of the People ! sames and the Commissariat of the Foreign ! of the Union to take all necessary mersionen the negotiations without delay and them toward a friendly solution of the Uniteresting the two States, and we explain hope that these questions will be the transfer of the trans settled in the interests of the two countries the general peace.

nin, Premier Rykoff and Foreign Minister tcherin.'

The motive behind the French recognition he Soviet Government is commercial as l as political. This point has been made ir by the following wireless dispatch from is to the New York Times

There is little doubt that underlying the whole ch attitude is the hope that within a year of Russian wheat supplies can be again made able In a country like this where bread is staple food, its price is the first consideration all Governments, and none dares risk being lly dependent on American harvest, especially in ne when American exchange is so much against e ... Beyond that argument in favor ie resumption of relations, there is this, of which the Temps recognizes the importance that seven years experience of nothing doing

iot's action provides the only remaining chance ectively defending our rights and of binding Soviet Government in agreemnts freely arrived which will be in the interest of Russia to we if she really wishes to recover her place to family of nations and really desires coston in a committee recovery."

ation in economic recovery

It is rather interesting, if not significant, France accorded recognition to the let Government at the very time when Anglo Soviet relation had become strained the so-called Zinovieff letter, inciting the ish Communists to revolt in England he eyes of the Soviet Government and rs British labor is no less imperialistic the British Tories or Liberals So M k, in the *Pravda*, makes the following rk regarding the French recognition of Soviet Government

ontrary to England, which strives to control a-routes leading to Soviet Russia and hates you (Soviet) for journing to hatted the people of and Middle East by the mere fact of its exis-France has not any existing territorial its which should inspire her animosity to-Russia

is reminds us that although the Tsar nder III hated French republican and i ideas as most obnoxious, he found it advantage of Russia to form an alliwith the republic The French were also to forgot the autocratic rule of the Tsar pre the alliance which afforded security t Great Britain and Germany and the Franco-Russian Alliance came into exisin 1893-.894. It can also be pointed out on after the conclusion of the Russose War, Russia and Japan came to an

and Russia to further, it is only natural-that these two States will come to some kind of understanding.

It has been predicted by Premier Rykoff of the Soviet Government that Japan will soon recognise the Soviet Government. It has been reported that the Russian Piemier has said that

"France's action was prompted by its economic interests, the pressure brought upon Herriot by French business circles and European inclination towards peace. With the possible recognition by Japan, which may follow in the near future soviet Russia will consider the task of re-establishment. ment of relations with European countries and others bordering on Russia whose friendly relations are politically ital to the Union as fully guaranteed America is the sole outstanding country. Even should the coming elections being on changes in the United States Government America is finding itself isolated on the Russian question and will hardly be able to retain its unreconcilable attitude The continued growth of Soviet trade its economic progress and influence should serve as the final argument even for such an irreconcilable country as America

Mr Tchitcherin, the Foreign Minister of Soviet Russia, who is regarded as one of the cleverst statesmen of the world, has given out an interview which clarifies the Russian official attitude

Pans O t 30-In a highly important interview given by Google Teintcherin three declarations regarding the French recognition of Soviet Russia are of vital consequence. First it is made clear that the Russian Government is ready to treat with goodwill the question of the reimbursement of the bearers of Russia bonds. Secondly, that in certain conditions Russia is prepared to open its markets to French capitalists. Thirdly, that the Russian Government presents a character of stability and gives promises which fully justify the Herriot gesture. European necessities demand that states-men should recall the phress of Talleyraid, you cannot solve the German problem without England and Russia. The Franco-Russian rapposed ment and the development of the Entente Cordide will help determine the Franco-German understanding. Mr Tehitcherin sud

"The Poincare Government favored all the

enterprises against us. This policy was opposed to the interests of France for we were always happy to find some fair method of dealing with small holders of Russian bonds. We propose to give a maximum measure of satisfaction after a loyal conmaximum measure of satisfaction after a loyal conference. Where differences can be discussed. The financiers and industrialists of France have considerable interest in the resumption of comme cut relations with us for we dispose of immenters and industrialists of France in the resumption of comme end we and industrialists of France have no of immenters and industrialists of France have no of immenters and industrialists of France have no of immenters and industrialists of France in the resumption of commenters and industrialists of France have no of immenters and industrialists of France have no of immenters and industrialists of France financiers and industrialists of France have no of immenters and industrialists of France have differences can be discussed. The financiers and industrialists of France in the resumption of commenters and industrialists of France have differences can be discussed. The financiers in the resumption of commenters and industrialists of France have differences and industrialists of France have differences and industrialists of Fra

serious crisis. Russia offers a grent market. From the view-point of security our Government gives every guarantee. The principal guarantee is the Governmental stability. We are about to celebrate the seventh anniversary of the Soviet regime. We have elaborated new legislation which gives particular attention to contracts companies and trade circulation. There are two sorts of concessions—first, those in which the Government participates probably to the extent of 50 per cent. The economic situation while not good is improving. The principal radioads are working normally. Money is stabilized, prices are lower and commerce free If nations do not re-establish peace relations the ruin of Europe is certain but happily. Russia is now on the point of concluding an accord with France. We are profoundly profist we want to he reduced by torce.

French efforts to secure commercial understanding in the East, i.e. with Germany and Russia, would affect the British industrial and economic position untavorably probably cause further misunderstanding between France and Great Britain in world-To offset the loss in trade due to politics. Franco-German-Russian commercial co-operation Britain will try to dump her goods more and more in India and the rest of Asia particularly China The Tory Government which will soon come into power in Britain, will advocate protection for Britain and Imperial preference for the colonies, and particularly in India Great Britain will fry to keep her grip over the Indian market and economic life in general at any cost. As the Indian people are not the masters of their own house so that would not be able to offset British commercial and economic domination to the detriment of Indian interest by means of legislation or constitutional agrtation Any vigorous attempt on the part Indian people to boxcott British the goods will be made with constructive repression , / /, putting people in pail without any trial as has been the case m the past. But economic and political supremacy cannot be attained without struggle and the people of India vill have to overcome a great many obstacles before they can be masters of their own country

However, the British will find a very different situation in Coina. They will accserious Japanese competition in the Chinese market Angio-Japanese commercial in the Orient has already become a factor in political rivalry between Japa Great Britain, the late partners in the Japanese Alliance. None should forgo Britain will try to use India as the in the economic and political conflict Japan as she did in the past against and Turkey.

It is not at all imaginary that w short time Germany will also be a factor in the Chinese market - It in there be a commercial understanding France, Germany and Russia, as has suggested by M. Herriot and favor French industrialists and the German cians who are known as 'Continental ker, then it would be naturally t interest of Japan to co-operate as imp possible with this grouping of Powers. out fixing her hands in any definite w. fact, owing to the change of world con-Japan has a good deal in common with in the Orient Both France and Japan that Britain's Singapore naval base i (which has been only temporarily aban and surch will be taken up by the I fore tovernment) is directed against Germany and Japan can come to close i standing politically and economically, be Germany has no colony in Asia and because both Germany and Japan have mon interests in co-operating in China-

To sum up then France has a d conomic policy to do all that is possisecure: Franco-terman-Russian co-oper and this in all probability will lead to Fe German-Russian-Japanese co-operation, ing British interest very unfavourable offset this situation (creat Britain wi India in every possible way so long British policy is to keep India under from and to long as India must have to for herself to assert her position as a internationally it is desirable that the l state-men should ponder over the p re-arrangement of Powers politically a as commercially to preserve her own the interest.

New York City,

No. 1, 1921

REVIVAL OF INDIAN ARCHITECTURE

By SRISH CHANDRA CHATTERJEE, A.M.A.L., M.R.A.S.

index of the civilisation of India is imprinted on her ancient Architectural Monuments. The iconoclastic zeal early Turki conquerors of India and f the later Indian Muhammadan rulers in responsible for the destruction of a lany specimens of Hindu Architecture. Muhammadan fanaticism destroyed ents at first, it made amends by giving a somewhat new type of architecture abining Arab—ie, borrowed Byzantine resian elements with the Hindu styles)

owning glory of which is the Taj, one greatest heritages of Indian civilisation

the distant south of India, in the Tamil and Kanada countries, in the of Rajputana and in the far away remote from the high way of marching man aimies or in out-of-the-way places the temple and idol-breaking arm of oslem could not reach or wholly work l, a great many specimens of Hindu ecture have escaped intact and have rumanity richer by the possession of and Ellora, Mahahalipuram and Madura, er and Abu, Khajuraho and Bhubane-Dwarka and Mudhera. The Architecraditions of Hindu India are a thing few countries can approach in the at results they achieved, not only India itself—in the magnificent ancient liaeval works like those of Sanchi and -but also in the greater India of ina and Java where Angkor and dui still remain architectural and narvels

architectural traditions of India a remote past. Formerly no specimens of Indian architecre ancient than a few Maurya s of the 3rd, or 4th century, B C recent discoveries of Sj. Rakhal Das in Mohen-10-Daro in Sindh have the presence in India of a finished ural style as old as 3,000 B. C. He avated an old site by the Indus in District, and has found out remains brick structures and glazed tiles, d staircases and conduits, all of construction, which resemble greatly the oldest Babylonian structures These ancient Indian things are to be associated evidently with pre-Aryan Dravidians. Other important articles have been found there which are now being studied by Archaeologists. Sir John Maishall, Director-General of Archaeology, India, has written to the English and Indian press on the stupendous importance of these discoveries of Si. Baneriee He says "that five thousand years ago the peoples of Sind and the Punjab were living in well-built cities and were in possession of a relatively mature civilization with a high standard of art and craftsmanship and a developed system of writing

Fergusson remarking about Indian Architecture says—"No work was too gigantic for the Hindu Architects to attempt, no design was too minute or elaborate for them to accomplish for an honest, purpose-like.... art, there is probably nothing much better to be found elsewhere. Competent authorities have spoken nothing but unstinted admiration for the achievements of India whether under the Hindus or under the Muhammadans—for the Muhammadans nobly carried on the building

impulses of the people of the land

Palaces of Agra, Delhi and Rajputana that were erected a few centuries back are so elegant, graceful and faithful to the purpose for which they were conceived and built, that all lovers of frue art have felt with pain the decay and degeneration of this craft in India. It was a great shock to the writer when after seeing the most beautiful buildings of Hidustan and Rajputna that had appealed to his aesthetic sense so much—he stood in front of a hybrid monstrosity like a portion of the much-talked-of Lakshmi Vilas Bhavan, Palace of Baroda, the new Durbar Hall of Indore, the Scindhia's Palace at Ujjain, the public offices of Jodhpur that face the Rar-kabag Palace station, the new public offices under construction and Military Barracks at Bikanir. the Railway Station buildings of Udaipur and Chitore. Guest House at Jaiselmer, the Nizam's Palace at Hyderabad, the Hospital Buildings at Mysore, modern offices adjoining the Thebaw's Palace, Mandalay, and other similar creations" in the lands which draw people from distant Europe and America to admire

their architectural remains

All this is due to an unfortunate admixture with English styles He has noticed that English type of buildings has been constructed in the Shan Monasteries of the remote Myitkyina district in the Burmo-Chinese frontier and around the sacred temple of Badrinath in the upper Himalayas at an elevation of over ten thousand feet,-such has been the terrible route of Indian Architecture before the onset of Anglo-Indian The writer is buildings in the new style not speaking of frank attempts to adapt European styles, Greek or Gothic or Renaissance-which must remain as alien in the land and which with the growth of common sense in India will be abandoned as a matter of course. But what pains him and other true lovers of Art is that when Architects consclously set about designing in the Indian style they should so persistently refuse to be inspired by the noble remains of our ancestral culture. And specially when we have Anglo-Indian Architects catering for Indians by bringing in this "revived Indian" things we do not know whether to laugh or to weep

Foreign Architecture has slowly been driving out indigenous style of buildings as Manchester cloth drove out the muslin In fact, it has been killing our culture and nationality in one great side of domestic, civic and religious existence, the houses we live in and carry on our business with our fellow of a or dedicate ourselves to the thought

beings, Higher Being

Even now the older quarters of towns like Gaya and Ben ares, Delhi and Udaipur, Poona and Bijapur, Madura and Tanjore, Jaipur and Jaisalmer, Ahmedabad and Ujjain appeared to the writer to preserve in their architecture the charming Indianness. But our modern towns and modern quarters of old towns have totally lost their individuality—they have become cheap and garish and hybrid, and where there has been a combination of wealth with vulgar display, positively ugly. To seek the Indian thing in Indian towns, artists and foreigners are driven to the dilapidated quarters. Modern municipalities in a Philistinical zeal to be "up-to-date" and "sanitary" seek to make clean sweep of the older quarters by removing old buildings and narrow streets and opening up new roads with drains and gas-lights complete, and flanked by ugly modern buildings of the Calcutta or Bombay type. There is never the slightest attempt at

conservation by preserving the oldbeauty while introducing sanitation, suchas been done, we are told, in the old of Europe like Venice and Naples, Fran and Edinburgh, in their older quarters

Fifty years from now, if this stat things is to continue, India will become barbarian copy of all sorts of scrap European Architecture—not a bright profor the people whose ancestors built the

Bhubaneswar and the Taj

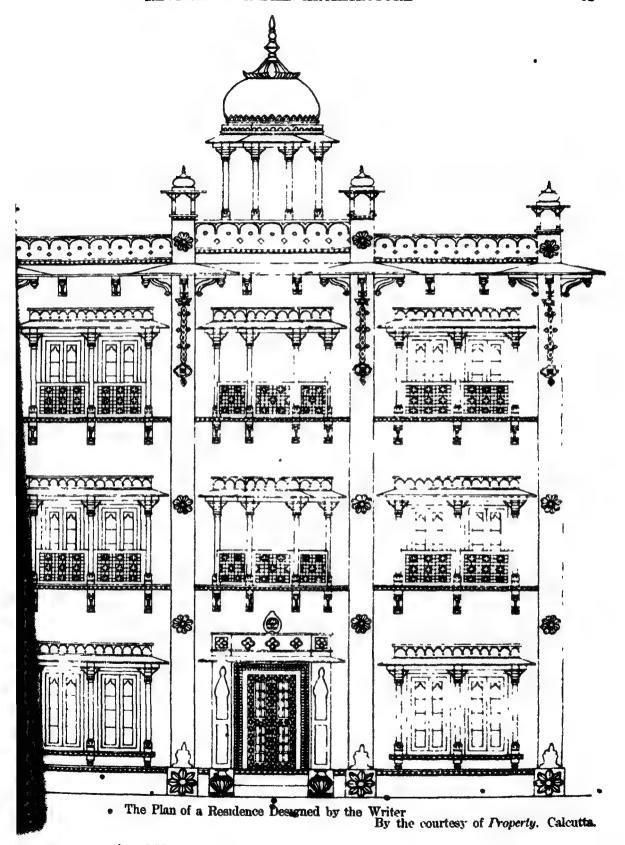

And yet it should not be so. The still enough talent in India. After all in only strove to know and realise ourselve could easily do it. An acquaintance we building according to the styles of Rajpin Mogul India or of earlier periods is not a difficult task than an acquaintance was building along French Gothic or by Renaissance styles or a building according to style or no principles of beauty what

Mr K H Vakil has in his paper Revival in Architecture (Property N September) truly said that "civic desan artistic endeavour, adjust needs of the city ... creating a environment perfectly artistic ... an ponsive to the noblest demands of a The most outstanding feature of that ement is the City's buildings. That medium by which the Architect can and interpret the spiritual and aspiration of the community."

The state is worse in Bengal Hen types of buildings are very few in Bengal does not produce stone and her Architecture, in Hindu times, was few costly temples of stone, or building to be better with the few costly temples of stone. Most of the have perished together with the few wood architecture which we used by recently in our Chandi-mandaps. To thus no great buildings to inspire the of Bengal The present day styles bastard copies of South European introduced by the Portuguese and English

Students draw inspiration for architecture. They cannot have true and partiotic spirit unless and undeal in, or move along avenues of which are really great and which of the national life and culture

The Central Avenue of Calcutta a failure as regards Street Architectannot create any true civic entropy for Indians in Calcutta—whether Res

Hindustanis or Marwaris. It has been laid with massive buildings which have been designed after the Banks and other mercantile buildings of London, but, unfortunately it has failed to render that massiveness, strength, elegance and charm which the London edifices do. There the Architects knew what they did and why they did it. They had a true perspective, being acquainted with the history of house-building in Europe and elsewhere Here our "Architects and Builders and Contractors" helplessly copy Englishmen's work The little smattering of European terms and styles which they read about from books in their Engineering Colleges do not and cannot give them any ideas

Indian Architecture is not taught in Sibpur and other Government Engineering Colleges. It is a standing disgrace that our Engineers and Builders and Graduates of Engineering should know nothing of our National Architecture It is like turning out research students of Indian history without giving them even an elementary knowledge of Indian History, but spoon-feeding them with doses of modern English constitutional history. This state of things is disastrous

for national well-being.

The writer, of course, was pleased to visit the Kala-Bhavan of Baroda, the Arts College of Jaipur and such truly national institutions

where students are trained in Indian Arts But how few Architects are recruited therefrom to meet the needs of the

country 1

The Government of India as its first duty when building with public money in India should pay attention to this. Many lovers of Art of India have repeatedly urged upon the Government to do this duty. The Government however remains silent in this matter and goes on building in its usual style, with a sop thrown here and there to legitimate demands of art by giving us something in the Indian style like the Lucknow Medical College, or Mathuia Hospital, or Prince of Wales Museum of Bombay. And it seeks to ease its conscience by creating a mongiel Indo-British style.

And all this, because it is easier for the British Engineers who are at the helm of the Indian Engineering Departments to design and instruct construction of buildings in English style with which they are familiar, rather than leasn Indian Architecture which is always a bother and to use which means taking assistance from Indian Architects with

are still to be found here and there, means lowering British prestige, perhap

There are standard text book-Engineering and Drawing in Indian Co. written and published in London and sta building plans and specifications for " tion of buildings in the Indian P.W which are almost copies of those in En but with very slight modifications to local atmosphere and local building mate But as specifications are mainly those in ed for English buildings they are inval found unsuitable for Indian P W. D. buildings are rarely strong durable works, apart from their ugliness.

Our forefathers had different specifical As the writer was touring studied an unfinished tomb of Sultan Shah over which a heap of dry mortar seen! At the death of the Nawab the was suddenly stopped by order, and the tar remains there up to this day-et compact as stone. He has also, with a knife, examined a joint of the Taj The mortar could only be sent masonry with much effort. Still there are roofhouses in Calcutta which have had hit no repair since the date of their cons tion But Government building roofin the very year of construction vingredient "approved by P.W.D.", has driven away the native Indian thinglatter should be revived if any new public private houses are really to stand comm with the old ones

Indian architectural traditions can be made to take their proper place in l life. It has been for some years the p of the present writer to bring back the tage to our people. Connected as let with the inner workings of Bengal P for over eight years, during and after period he made time to read publicated Indian Architecture and travel exten all over India and Burma and Chinese frontiers-Rajputana and South he toured three times and Burma tall study the problems scriously and d material and photographs, he has some nite views as to how Indian Architectal be revived. He hopes to present the ! and the solutions he proposes beld public. Two great accusations again revival of Indian Architecture they do not suit, or cannot be made to

Colonel Maddock operating upon Mahatma Gandhi in the Sassoon Hospital of Poona.

, modern conditions and modern materials lengal. The writer hopes to demonstrate Indian buildings can be done cheaper buldings in the barbarous styles now in ite, and they are at least equally strong the same price, and more graceful and can be built with Reinforced Concrete he modern materials of which even ships

are built in America. He hopes to prove his statement by actually carrying out several works.*

* The writer expresses his obligation to Dr Sunit: Kumar Chatterjee M.A. D Litt (Lond) Khaira Professor of Indian Linguistics of Calcutta University for many valuable suggestions,

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed Assamese, Bengali English Gujarati Hindi, arese, Malayalam, Marathi, Nepah, Oriya, Punjah, Sindhi Tamil Telugu and Urdu Newspapers, ideals, school and college text-books and their annotations pamphlets and leaflets, reprints of magazine cles, addresses, etc., will not be noticed. No criticism of book-reviews and notices will be published—to, M.R.]

ENGLISH

r John By George Bernard Shau (Constable Company)

great critic in England has said that two publications of 1924 that he values are E. M. Foister's "A Passage to India' and orge Bernard Shaw's St. Joan'. So much has written about this latest production by Shaw it is difficult to write any more on the subject ce it to say that those who have read it will e with the almost universal praise that has given to it, and those who have not have in tor them a most delightful treat. In writing it so romanite a personality as Joan of Arc. it ifficult to keep a perfectly fair and open mind life of Joan of Arc. has been treated from y points of view. In Henry VI Shakespeare ets Joan Schiller's Die Jungfrau Von Orleans iomance which does not attempt to give a historic account of the principal character aires. La Pucelle is an obscure publicationing in all decorum and deceney and merely an ise for an attack on all ecclesiastical and social tutions that he held in abhorrence. Mark in attempted a life of Joan. Anatole France g ante-clerical and ante-mystic was fundatally unable to believe there was any such on as the real Joan. This so much annoyed rew Lang that he too wrote a life of Joan. The is a summary of what Shaw has to say the Maid in Literature. None of these points ew give any real idea of the character of the of Orleans, and Shaw sets himself with that y of view, and courage to face facts that in the play of view, and courage to face facts that iterizes all his works to give in his preface he play (Shaw's prefaces of course are always are of great moment), a considered view of which he illustrates in the play and led he ken to seriously and thereby tend to lose

with an epilogue extremely clever but almost farcical. He begins his preface as follows. Joan of Arc a village girl from the Vosges, was born about 1112 burnt for he rest with right and sorvery in 1131 rehabilitated after a fashion in 1456 designated Venerable in 1904 declared. Blessed in 1908 and finally canonized in 1920. Shaw of course cannot refrain from one of his characteristic touches, 'she was says he the pioneer of rational dressing for women. As Joan was 'pure upstart' and as she asserted herself in numerous ways amongst kings and generals as her pretensions were beyond those of 'the proudest. Pope or haughtiest Emperor' there were only two opinions about her. One was that she was unitarities extually. She seemed neutral in the conflict of sextions, we are told was the daughter of a working farmer. She worked on the farm but she never experienced the sordid poverty some have attributed to her. As to her voices and visions. Shaw holds that Joan was unusually sane but her drainatic magination played tricks with her senses George Bernard Shaw analyses very particularly certain of her voices or divisions and compares the modern attitude towards such matters with the old romanne ideas in a most instructive and interesting manner. The author sums up Joan as 'a sane and shrewd country girl of extraordinary strength of mind and hardihood of body.' She was very capable, a born boss. In dealing with her trial the author comes to the conclusion that it was comparatively fair. There are several other headings in the preface the whole of which will hold the readers' attention. It is a great piece of work and one destined to show the worthlessness of humbing and cant as applied to religious and moral subjects. It must be read in toto. At the end of

the Preface Shaw has a dig at his crities. It is impossible to do justice to this book in a short review. It has had a great success as a play both in New York and in London. In New York it was performed by the Theatre Guild in December 1923 with Winifred Lenthan in the title part and in London it was performed in March 1924 with Sybil Thorndylle as the Saint It is essentially a play to read as well as to see and contains, as do all the plays of Bernard Shaw, much matter for reflection put in a forcible and in some instances startling manner. It shows that Rationalism can be romantic. The mind is joused by various means to grasp truths that would be neglected were they set down in a matter of fact and conventional form. It would not be fair—indeed it would be impossible—fully to describe the play. There are six scenes of which perhaps the most interesting are scenes IV and VI. In scene, VI the Inquisitor makes a very long speech setting forth the spirit in which the trial should be approached, this is very effective as is also Joan's recantation, and her with-drawal of such recantation. The Epilogue could only have been conceived by G. B. Shaw. It must be left to speak for itself. This is a very great work and one that will make a very great appeal to every cultured reader of English. It is published like the other plays of Shaw in a very handy form. Those who miss reading St. Joan will miss a great intellectual treat.

The Antifert Growkapite of India By Alexander Ounninghum Edited by Swendrunath Ma unidar Shastri, MA Reader Patna University Published by Chuckerverty, Chatterjee & Co. Ltd., Culentia (1924)

This is a reprint of the edition of 1871, published by Truebnei & Co, which has been very long out of print. The book was becoming so rare that old copies were selling at fairly prices. Messis Chuckerverty, Chatterjee and Co, have done a public service by their present venture which we hope will not fail to be appreciated by all lovers of antiquity. To add to the value of the book portions of which have become antiquated owing to the progress of research and scholarship during the last fifty years. Babu Surendianath Mazimdar has added an introduction and notes which have made the book quite up-to-date. It is understood that Mr. Mazimdar got his P. R. Studentship on the present thesis which easily strikes one as a painstaking performance. The printing is excellent and is just what is expected of Sri Gouranga Press. Except for a few mistakes in transliteration and proofing, no other blemishes have as yet come to our notice. The present price has now brought a rare book within the means of many and we hope the publishers will continue their ventures. In this line, and thereby earn the gratitude of the public.

A G

AT THE ROOTS OF THE GRASSES By Municl Strode (Maffat Yand and Co., New York)

The extending vogue of prose-poetry to-day is not a circumstance on which the world of literature deserves to be congratulated, but it is difficult to complain when a poetess starts with the very laudable aim: "I want to serve the God in man, the beautiful and if the beautiful unit apparent?

I want to bring it forth, to give life to it, to nourish it." In view of such a declaration one is indeed inclined to overlook the absence of such an essential feature of lyric poetry as metromised the strong of the beauties of nature and generally of everything in the universe, and of the vorse sometimes deteriorates into a form which can only be characterised as being the Walt Whitman, she can still be read with enjoyment "I bring you beauty whose on't use is beauty—you cannot ride it, you cannot hitch it to your cart like mares.

It some and sings—you cannot harvest it is your gamer, not sell it in the mart—There is no market quotation on gassamer wings and

n stasy]

Students of aesthetics may find it necessary to question of modify, in some measure, the implications of this statement, but there can be no to opinions about the value of such a message prote by the publisher informs us that these poors were written in the intervals of a career in busy mess, 'now atop New York buses, in busy dependent stores' and so on, and it is significant of a real poetic inspiration that it could not be stirll even in such surroundings.

DEADLY STEDS OF HISTORY By Patent Gradies (The Modern Publishing Co. Bombay Rs 2

One more proof of the uch and comprehen culture of Prof. Patrick Geddes is furnished this publication which is a Masque of Ancellearning and its many meanings, being a page of education from primitive to Celtic time. A very well-informed mind and a powerful midmation have combined to produce these profine which should meet with wide appreciation in educational institutions. From the record explored civilisations of Babylon and Assyria, don't to the Universities of our own day, through all types to the Universities of our own day, through all types advancement of learning is traced step by the advancement of the laymen as well as it serious student. It may not be possible for expressions student. It may not be possible for expression and allegorical interpretation introduced the primes by the learned author, but it will segment that he has undoubtedly made a value contribution to the effective visualisation of the important aspects of the story of mank? A bibliography at the end would have probe enhanced the value of the book.

OCCASIONAL MEMORIS OF THE NUMERATIC SOFT OF INDIA II, HISTORICAL STUDIES IN MUGHAN NO. MATICS: By S. H. Hodivala, M. A. Baptist Mos. Press, Calcutta, 1923.

The name of Principal S. H. Hodivala and haps little known in this country but among ontalists he possesses the very enviable reputation being equal in rank with William Irvine and Nath Sarkar. Mr. Hodivala is the only Original with a personal acquiantance with Institute the original with a personal acquiantance with Institute the original Numismatics and medals. This country ton has made him to-day the foremost a that on Mughal Numismatics. His identification of number of obscure mint-towns of the Made Empire and a long and intimate knowledge of the state of the state of the Made Empire and a long and intimate knowledge of the state of the Made Empire and a long and intimate knowledge of the state of the Made Empire and a long and intimate knowledge of the state of the Made Empire and a long and intimate knowledge of the state of the Made Empire and a long and intimate knowledge of the state of the Made Empire and a long and intimate knowledge of the state of the sta

re of that dynasty could have accomplished ask. The Memoir now published by the smatic Society of India is really the most le contribution to Indian historical literature the pen of Mr Hodivala. It consists of y-five different essays on Mughal Numissillustrating every possible phase of Mughal connage including the chronology of the dynasty ssays on the earliest phase of Mughal connage un-khis", "the Nisars", "the Mahmudis", and ally the freak coinage of Jahangi such as codiacal Coins" and "the portrait coins of rir" deserve special mention. This collection and really consists of materials arranged in zir" deserve special mention. This collection averaged to consists of materials arranged in our a first class introduction to a Mughal matics. Many of our Indian Universities rescribe a course of studies in the Mughal of Indian history. Wherever the Mughal of Indian history is studied, Mr. Hodivalas ook should form a part of the curriculum R.D. Bantrii

PALT

HDHANAPPADIPIKA Edited by Muni Jingi igaga hed from the labad Ciunat Punatatra-Mandina

s a Pali lexicon by Moggallana of Cevlon who hed in the reign of Parakramabahu the Great AD) and is exactly what the celebrated thosha is in Sanskrit First it was edited (for nud time in 1900) in Ceylonese character Subhuti making it useful for both his country-nd the English-knowing people by writing ial notes in Ceylonese and English and a full of words together with some appendices rmavisarada Sthavira Jianananada Swam the edition poorly in Bengah character in The same original edition without the Engntion is now published again by the venerable linavijayaji in Devanagari. The Devanagari will undoubtedly facilitate its wide circulapecially among the Indian students. As the lictionary of R. C. Childers and that of the ext Society (not yet complete) are highly priced At Society that yet complete are mighty prices, to who cannot afford to buy any of them re not able to read Ceylonese script should with them a copy of the present edition of pk. Pali books in Devanagari are badly needing the control of the complete that the complete that the control of the complete that the control of wo books in the current year published in Bracter, viz the volume under notice and stampata edited by Prof. P.V. Bapat, Poona VIDHUSHUKHARA BHATTACHARYA

SANSKRIT

Labhaya, M.A., sometime Research Scholar ofessor in Sanskrit University of the Panjab a Kanda Fusiculi I—III Published by the h Department D.A.V. College, egards the original text of the Ramayana of the condition is the same as with that of habharata of Vyasa. In course of time the undergone so much change that there veloped a number of recensions of both of teat epics some of them being already d. The Bhandarkar Oriental Institute, has undertaken a contral edition of the has undertaken a critical edition of the rata with a view to restoring its genuine text being perfectly free from all sorts of and interpolations of which it is now full

RAMALANA OF VALMERI. Edited by Pandit

in its present form. The tentative volume of the Viralaparran issued by that Institute is very promising, being edited by Mr. Utgikar whose sudden resignation has caused a great disappointment in the minds of those who are watching the progress very closely. The public have reason to hope that in near future they will be presented with the Mahabharata in its true and original form. So far no such attempt has been made for the Ramayana. far no such attempt has been made for the Ramayana. The object of the edition under notice is not the same, for it is not intended for getting the first original text of the Ramayana, but it supplies only a particular recension of it which the editor calls the North-Western Resension. The only calls the North-Western necession. The only point, therefore, to be examined as if the edition represents the recension as correctly as possible. As the entire book (Avodiva-kanda) is not yet published, nor is the description of the apparatus sufficient, nothing can safely be said about it. Yet, so far as the materials at our disposal are concerned one may say that the edition is hardly up to the mark. In all twelve MSS have been used of which No 1 ("about 100 years old) is taken as the basic one but the editor does not tell us why nor does he enlighten us as to why MSS Nos 2 and 3 are not collated up to the 15th sorga Nos 7-12 are collated only for the first four sarges because they "are too divergent on words. For the same reason No 4 is left out where found too divergent." We do not know of what kind this divergence is but at any rate they should not have been discarded only

any rate they should not have been discarded only because they have too divergent readings.

It is said Nos \$-12 form a strange Side Recension. Is it recension or group? They are collated, as said above only for the first four sargas and judging from the readings quoted therein one should like to call it a group and not recension, one or two slokas here, and there either control on subball do not necessarily prove it to be a did one alloyed on the constant of the said of the subball do not necessarily prove it to be a did. or added do not necessarily prove it to be a dif-

ferent recension

There is a question Should one consult in determining readings of a particular resension those of the others either in print of MSS which are in fact indentical in most cases though with some variations. The answer must be in the affirmative. The present edition has however, ignored the fact altogether
The method of editing is not quite satisfactory

The method of citting is not quite satisfactory nor is it the same in all the fasciculi. We write this samply in order to raise the standard of editing books in our country which must not be allowed to be inferior in any way to that by European scholars—and not with a view to finding fault with the editor. It is far from our intention

In conclusion, we must say that in spite of what is said above we welcome the publication, for it has its own value and tesides, it will certainly render much help in preparing a critical edition of the Ramavana some time, similar to that of the Maliabharata undertaken by the Bhandarkar Oriental Research Institute referred to VIDHUSHERHAR BHATTACHARYA

MARATHI NITISHASTRA-VICHAR OR THOUGHTS ON ETHICS: By Prof V. S. Gounte with a foreword by Prof R. D. Ranade. Publisher Indian Institute of Philosophy Amalner. Pages 125 Price Re 1-S-0

This is one of the several useful publications issued from the Institute of Philosophy founded by the princels charity of Shet Pratap of Amai-

ner. The title of the book sufficiently explains the nature of its contents lt is not a systematic treatise on Ethics like the one by Prof. V.M. Joshi, but a popular dissertation on some of the leading questions of Ethics, such as conscience, moral freedom, equality, the relation between morality and religion, the doctrine of karma. Free Will etc., skilfully pieced together. While reading the book one cannot help feeling the regret that the author has thought fit to sacrifice depth to compactness The first chapter impresses one with the necessity of adopting what is called the Historical Method of study without showing what exactly that expression means or stating its limitations. The author shows little acquaintance with Indian writers on shows little acquaintance with Indian writers on Ethies such as Shankaracharya Manu, Yadnavalkva and others. He has made only sparse references to the Banginadiala the monumental work on Hindu Ethies. There is however much in the book, which is commendable. The lucidity of thought clearness of expression and the power of explaining abstituse points with apt illustrations are noticeable. The manual will, no doubt sorve the intended numbers and evoke among its serve the intended purpose and evoke among its readers a desire to know more about ethical problems

Sharikshastra va Arogyashastra or Physiology and Hagifyf By Mo N (a Goldhale Pages 52)

Price as 14
This is a school-book on the subject mentioned in the little and as such will serve to instil into the minds of its young readers the principles of Hygiene based on the knowledge of the structure of the human body. It will also be a useful reading book for the masses who are neck-deep mamer-ed in the ignorance of the laws of health

The review of the late II N. Apte's book published over Mr V G Apte's signature in December last, was meant to be superseided by the one published in October last It was published through inadvertence —Ed., M. R.]

TAMIL
UTHAYANAN KATHAL By K S Seshagur Tyer
43 New Street, Mylapore, Madras Pp. 46

Price 5 as.

This is a summary in prose of the famous Jaina work of the same name. The author could have made it more interesting by introducing the reader modern. to the age and topography of the story in modern

SCOUT LAWS AND PROMISES By M V Venkataraman, Scoutmaster. 1st Vepery Troop Pp. 84. Price as 6. Madras

A very useful work. The fine selection of examples from the lives of Indian worthies of historical fame to illustrate the scout laws makes it pre-emmently a work that ought to he in the hands of every Indian. It cannot but he said at the same time that the author has trodden upon doubtful grounds when he expresses his belief in Sagunams and wants us also to believe that the birds and lizards serve a very useful purpose in that they are able to warn us of the coming events.

MADHAVAY

HINDI MISAR KI SWADHINATA By Mr. Sampurna-nanda, B. Sc. Published by the Sulav-grantha-pra-charak Mandal, 23. Sankar Ghose Lane, Calcutta Prece Rs. 2. Pp. 217. 1923.

Mr. Sampurnanda has carned a reputation as writer of works on modern history. In the prvolume he traces the modern political develops of Egypt The treatment of the subject is all nating and sympathetic. "The Secret Histor the British Occupation of Egypt" by W.S. It has been amply utilised. The book reads all his a romance. It will be welcome to all syntheses with the public of a nation, whose Editors with the public of a nation, whose Editors with the public of a nation, whose Editors are the content of the c thizers with the uplit of a nation whose gel

tual Notes on the Newly-Discovered lunga Inscription from Ayodhya

IR A BANERH-SASTRI MA, PRD (ONOS) Professor of Sanskrit Patna College

the Modern Review, October 1924 Vol. 71, pp. 430-32 Mr. k. P. Javaswal has pulsand interpreted an inscription from Avodhya ling to be of one by the Sungas. The same ting to be of one by the Sungas. The same has re-edited it from a first hand expert sion, in the Journal of the Bihar and Orissa ch Society, September 1921, Vol. X, pp. 204-

teads it as follows

**Enapatch Puship 1 Kosala-Ihipena deirasi amedhayayinah

Senapaleh Pushyam(a)trasya shashthena kausakiputrena Dhana ... 2 dharma-rapi (a) pituh Phalguderasya ketanam karitam Javaswal's translation —This ketana (a statueor a flag-staff—a funeral memorial) dera (his) father is caused to be made by (dera) the Dharma-ayan, the ruler of the son of (the Lady) Kausski, the sirth of Senapali Pushyamitra who performed va-midhas (Horse-sacrifices).

For the last fourteen years it has been Mr Javaswal's privilege to play the stormy petrel in the hitherto stagnant pool of matative Indology and to roum as a buscancer teld ever in search of new horizons. Hence everything he writes compels thought, and provokes controversy. The present one is over an inscription that is in Sanskrit so non-epigraphic sanskritists and sanskrit-safe epigraphists are equally busy in creating confusion all in good faith. A few points serving both views may not be aims. The script may be later than Pushvamitra leading to a gratintous petitio prin ipri as regards the inscription-matter. I means to criti-cism is a thing again standing of falling by itself as shown below, and helps to determine the real meaning

The present controversy centres remypression Pushyamitrasia Shashihina Nagart-Pracharum-Sabha-Patrika, the first to publish an imperfect impression gave the translation as suith in descent from Pushvamitra. Between this and Mr. Javaswals sixth [Inother or son] of Pushvamitra, has the difference between a literal and a textual construction. The following details decide the issue

(e) Grammatically it may mean both or either.

But Sanskrit grammar has ever remained the despair of all students of Sanskrit language and literature from the predecessors of Panini to the successors of Nagon. It would hardly be a safe guide in a case like this tis an inscription and must be treated as such. By a currous coincidence, the very first incorporation in the Engraphia Indica the very first inscription in the Engraphia Indica Vol. I runs in a similar strain kanchipina Agnithoma-Vajapeyassamedhayayi Dhammamaharayadhirayo, etc. (of the Pallava King Sivaskandavarman) Dealing with an inscription, it is necessary to find out whether

(a) the word following 'tasya' ever means genera-

tion, if not how is that idea expressed

(b) is there any instance where the four (more or less) preceding generations are omitted and the sixth or some other stage mentioned.

(c) is the mother's name given as Kausiki's son or a mere metronymic like Satakamputra

(a) A careful analysis of the uses of tasya and tannat in the inscriptions published in the Epigra-phia Indica, the Indian Antiquary, Fleet's Corpus phia Indica, the Indian Antiquary, Fleet's CorpliInscriptionum Indicarum, etc., reveals a certain
discrimination. Thus tusya may be used without
any substantive after it, in the sense of son, e.g.
Ep Ind Vol I No 8 line 6. Tusmat may suggest
greater distance in relationship, generally followed
by a connecting verb derived from roots like jan,
etc. But whenever "generation or descendant is
meant, and not a son or brother, the fact is explicitly stated in the text, of Guptonam ramsajusya in
Fleet's Corpus Inscr. Indic. No. 15, Plate INA
line 2. line 2

(b) The answer is in the negative. In inscriptions and even in coins, the father, the grandfather, etcare all mentioned in chronological order with names. None is skipped over in tayour of an earlier ancestor, however illustrious the latter months have and however illustrious the former. might be and how-sever insignificant the former The established custom is either to give them in

order or not at all

(c) No one has fully gauged the extent of Sanskrit literature, extant and yet undiscovered But to argue in the negative is to argue in the air. So far, Kausikiputra's resemblance to Satakarniputra seems more apparent than real. It is more

natural to take it as giving the mother's name only
(u) In Simitis e.g., Yajnavalkya Narada etc. some
of which are near the Sunga times, descent is
signified by a panchami like tasmat with a word signined by a pancham like tasmat with a wold like nodhom, etc. of Yanavalkvasmiii 53, where Vijnanesvara (Mitakshara) expressly repudiates another reading with a shashthi possibility and says that to indicate descent panchami form tasmad should be used (If Ed of J.R. Gharpine 1914, Vol. 1, p. 13 and Balambhatti Commentary on Mitakshara, 1914, pp. 174-5*

* Cf. Narada, Ch. XII, Verse 7 आ सप्तमात् पचमाच बन्धु सक्षः, पितृमातृतः । अविवाद्धाः, सगोत्राः, स्वः, समानप्रवर-समा ॥

मातृतस्या पचमात् प्रद्यात् पितृतदाः सप्तमात्। Gautama: 'अर्थ तु सप्तमात्वितृवन्य माविनित्रम मातृ-वन्त्र स्थः पचनात्' [Quoted by Apararka in Yajnavalkya-Smriti, Anandasrama, Series, 1903 p. 51 Gautama 🕆 'बातृबन्ध् माः पचनाद्र्ये ।' 🝍

Under the above circumstances, one has to acthe only alternative left, mt. sixth son or brothe. The meaning of 'brother' may be preferred that of 'son' for the following reasons

(i) After Pushyamitra had established his not be a sixth son or brother than the preferred that of 'son' for the following reasons.

(i) After Pushyamitra had established his mand family, his successors naturally adopted surname Mitra, added to a planet name Indragni-Mitra (Indragni-Visakha), Vasu-Mitra, Agmi-Mitra, Bhanu-Mitra, Surya-Mitra, etc, borneby the Puranas as well as Inscriptions and Coff Pargiter The Purana Text, 1913, pp. 30-Cunningham, Coms of Ancient India, 1891, pp. 3, 93 V S. Smith Catalogue of the Coins in Indian Museum, Calcutta, 1906, pp. 186-88 members of a family fashioning their name the founder's appellation, cf. the geneological given in Fleet, Corp Inser, India Vol III, pp. 11–189 Chronological table of Rishis (under or 11 189 Chronological table of Rishis (under or Families), Pargiter, Ancient Indian Historical Trition, 1922, p. 192 Mr. Javaswal's suggestion at the identity of Pushva Mitra and Brihaspati (Mitra). finds a striking corroboration in the passage citor Professor Vanamali Chakravarty in the Wo

Review Dec. 1921, p 691

(a) It is clear from available data that Pa Mitra's father was not a king Dhanadeva brother of Pushya Mitra explains the individual of his name based perhaps on that of his a Phalgudeva who might have named his according to an ordinary man's freedom of the But Pushva Mitra left the legacy both of a dom and a name Dhanadeva, if sixth in desand evidently proud of it, has to explain apparent incongruity in name Nothing prothe scion of a family to change his name but

more usual to retain it

The construction Pushyamitrasya Shash Kauskiputhena Dhanadriena * pituh seen emphasise the three important relations (brother) of Pushvamitra a son of Kausiki a ... Phalgudeva Unless therefore it can be debe proved on the other side that Pushyamitra hid six brothers that Dhanadeva was a late sign and Pushvamitra's father was named differ the descent theory has to be given up

Purely epigraphic considerations should be allowed to interfere with a normal interpret

The Labour Government's Achievement in India

By THEO H THORNE WE WIT

Ns contribution in your December issu 🥫 the above heading forces me to write a reply I thoroughly appreciate N's heriness of st" indicating his enthusiasm for the political of

पचनी मातृतः परिचरित सप्तमी पिन् Paithina-i माकुत: पच पितृतो विति । [Quoted by Balam' Commentary on the Mitakshara, Ed. by Gharpure 1914, pp. 190, 193.

Dharmapradipa असपिकां च पितृतः सप्तमात् । परा मानृतः पचमानृषुमसमामासंगोधनाम् । [Quole Baambhatti Commentary, op. cit. p. 194]

on of India, but I feel I must defend the party hich I am a member against attacks which N's zeal forces me to describe as unjust. he Labour Party, was committed, is committed I hope will always be committed to the prin-

of the self-determination of peoples. ide is not with us a mero academic question. something much more than that, forming as it part of the whole of our policy of socialism? has had the opportunity of meeting many ur Labour people, of all ranks, he will find in them a genuine feeling of the equality I men Labour is in its very principle inter-inal Its all-embracing attitude of the greatest for the greatest number has made of its cal work a missionary enterprise. Its feelings rds India are exactly the same as its feelings rds all other countries one of brotherhood.

aving made these remarks I want to remind of the position in which the Labour Party itself when suddenly jockeyed as it were, office It must always be a delateable point her Mr Ramsay MacDonald did the right in accepting office, or whether it would not been better for him to have allowed the als to go in and instead of being the Party on ky perch to have had Mr Asquith and his

reis in that unhappy position rsonally I consider that the steps taken by abour Party of accepting office was the right for it has definitely exploded once and for all quaint idea, set atoot by the reactionary ryative party, and kept in motion by Church-Haberals that Labour was not fit to govern MacDonald's handling of Foreign Affairs has he admiration of the civilized world even nemies conceding to him brilliance in this form. This however is the asset side of the control of the data and the same nemical production.

On the debit side we have many followers bour declaring that Mr MacDonald had ten all about his capital levy and nationaliprogramme and in India many more like naming really hot because our Party did not

ome Rule tor them in an atternoon

ely 'X and all fair-minded people must that it was an impossibility a numerical fibrity for Mi MacDonald to carry out the Party's programme. All that the Party do when in office it never was in Power of introduce non-contentious measures and this direction as "X knows the Party feated nearly a dozen times. The temper Laberals could never be relied upon, and the tracting that Party became in its demands. garting that Party became in its demands, te the late Prime Minister remembered the of his office and refused to take orders from section. I think that "N' must agree with tude at any rate it was a line of conduct was strongly approved by the Labour

being the political situation at Home how fr Ramsav MacDonald introduce measures in into India "N' allows his zeal to run ith him when he states that the Labour nent adopted an Imperialistic affitude to-adia. He refers to Mr. Ramsay MacDonald's shortly after assuming office, to India in e emphasised the need for the maintenance and order "N" describes this as Impenalism. hinks so, then I can but retort that every country in the world is imperialist. cause without law and order no civilised country can carry on, and I myself, though very much a Socialist, would have to be in "N's" eyes an Imperialist. It would not however after the fact Imperialist. It would not however after the fact that the Imperialism the Labour Party stands for vi: the commonwealth of all people differs very much, indeed is entirely dissimilar to, the Imperialism which "N' condemns. The Labour Party most thoroughly condemns the Jingoist-Imperialism of the Conservative Party and so I think at heart does every person who has a genuine spirit of ingrained commonsense

write-If Mr Baldwin had sought to remain in office after the last elections—we would have found the same Mr MacDonald abandoning his partheism and leading similar violent attacks in the very heart of the British Parliament. I entirely agree with N in the words he had in the words he had written but as wholeheartedly disagree with the

intention he wishes to convey

Mr. MacDonald will and is even now once more engaged as the head of His Majesty s. Opposition in leading 'yiolent attacks' against the (rovernment, and he and his followers may confidently be rehed on to do so for the whole period of Conservative power. This opposition and I want. No to note this carefully is constitutional. The violent attacks are not with bomb and dagger but N tearing away the words violent attacks from their context endeavours to my mind to create for them material for physical violent attacks. No I am

material for physical violent attacks. Not an perfectly sure does not mean this for he must be a sufficient student of history to know that that way leads to the cul-desse of suppression. He has but to take the case of Bengal I should suppose that there has been no more painful step which Lord Lytton has had to take than the using of the special powers granted to him under the new Ordinance. The powers he now has are similar to the letters described of the pre-French Revolutionary period in France though they are lessened in effect in that a closed door they are lessened in effect in that a closed door indical examination of the papers of the arrested are made after arrest. But Lord Lytton has used these powers and azainst whom a Unly those who, he is advised are engaged in unconstitutional violent attacks, against the maintenance of law and order. Does N favour the freedom of the assassin. What has that noble Indian Gandhi, had to say on it. He condemns, equality emphatically the assessin and the steps taken to cope with him But no one has favoured the steps taken, everyone would wish to see them changed but what is to be would wish to see them changed but what is to be substituted as a check on the political assassing If 'N or anyone else can put forward a remedy to replace effectively the New Ordinance then he has but to produce his alternative for it to be eagerly adopted. To interfere with a citizen's freedom is the absolute negation of the principles of British thought but where you have to meet unitarial conditions how also can they be not but usual conditions, how else can they be mot but by unusual methods which I am confident the Government will with succee happiness desist from the moment they feel that the ends desired have been attained

With the other type of "violent attack, the constitutional type I am all with N I personally think that C R Das made a great blunder in declining office when, as leader of the majority in the Council, Lard Lytton offered it to him. Can any really fair-minded person after this step

accuse the Governor of Bengal of wanting to suppress Indian opinion of I don't think he really can, and even "N" when at his hottest, must allow

Lord Lytton to score here

There is only one comment I have to make before concluding. Under no circumstances, now that there is a Conservative Government in power, should the leaders of political opinion cease their constitutional agriation for the demands which they consider should rightly be granted them. The big efforts which they must make in this direction will but finely temper them for the goal which must containly be reached. Let the fight be as heree as it may, the hitting as hard as strength permits, but always and every time let the blows fall well above the belt. This way leads to Home Rule.

EDITOR'S NOTE

There is not the slightest justification for

anybody to assume that by "violent at "N." meant or suggested attacks with the and the dagger. This is entirely a figme Mr. Thorne's brain. As the maintenance of and order" has been often made the prete suppressing entirely legitimate popular move having no connection with the use of force having on an infection of Indian politicians, "N's" con are, therefore, not at all peculiar. We are at the maintenance of "law and order" in the sense of that expression. There is unanimount opinion among us that Government ought to maintained law and order" in Kohat, for in but it failed to do so. Mr. Thorne's defer hard latton is indiculous and does not requirefutation.

ON THE DEATH OF A LITTLE BIRD

By HARINDRANATH CHATTOPADHYAYA

I saw thee on thy bed of hav at dawn A little lifeless body cold and stiff, And seeing, felt within my heart as if A crystal part of mine own self had gone

Beyond the glimmer of the growing morn
I stood and watched thy tiny, feathery form
Deserted by that Something live and warm
Which throbbed in thee like flame when
thou wert born

For two short days thou wert my weary guest Wing-wounded, blind and sick with pain and strife

My feeble pity strove to give thee life And pour reviving vigour in thy breast

I sought to give thee comfort but in vain For face to face they stood, my mortal hope Which yearned to hold ther and thy horoscope Planning thy body's perishing in pain

God's ways are infinite, no power dare come Between His perfect purpose and its goal For He, the age-long Lover of the soil, Subjects all form to endless martyrdom,

Who knows why thou wert chosen for a fate Of such deep sorrow? Or is sorrow but. A figment that with inward vision shut. We, in our blind unvisionment? create?

I almost hear thee chuckling at my tear Crying in joy, 'Now that my soul is fr And I unbodied of the slavery Of form that caught me in the groove of

Perched on the Maker's hand so soft, I seem to see the world of mortals pla Where thirst and hunger, love and your above

Are unsubstantial phantoms of the mind

I see the forests full of struggling flight And birds with bodies panting wearily Some yearn for skies, while some it:

Do flit for fruit in morning's purple !

But these are ghost-creations of a drawllhusion fashious in her narrow sleep. To us unbodied beings who gladly be Past earth-captivity, these only seem.

Dim shades of ignorance that close to Upon God's ancient knowledge, shape Which narrow heaven to a span of "And bind the Spirit to the Wheel of L.

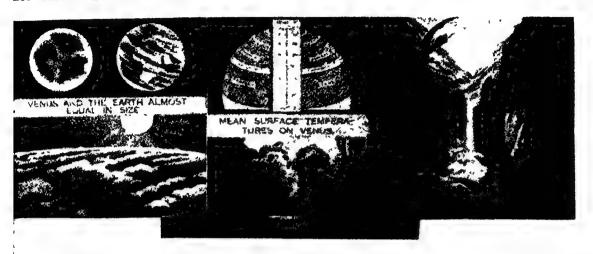

Rejoice, my friend! for I am now a "6" of the great Silence that for ever \$1.25 Go, let the loose earth cover up my " And close around the memory of the " " "

Lifting the Veil from Venus

seent observations with telescopes and spectros at Leeds, England, have established new nee concerning the length of the Venutian

Venus is nearly a twin sister of our Earth in size and mass. She also is the nearest to the Earth of the large planets—her average distance from us is 67,000,000 miles. Yet we have been able to learn comparatively little about her. This is because

avy clouds, 80 miles high, shield the Surface of Venus

An Inhabitant of Venus.

hey have led also to fascinating new on concerning the life on this comparatively lanet—a planet that we may very well dominated by grotesque and ferocious—hugo reptiles and winged dragons such on earth five million years ago.

Tropical Venus Full of Vegetation and Monsters

the surface of the planet is concealed by a thick cloud veil extending to the astonishing height of 50 miles.

The recent observations indicate that this outer canopy completes one revolution in about 20 days. From this fact we may believe that the actual surface of Venus completes a revolution in about the same time our Earth does. This assumption is substantiated by the fact that in 1881 dust from the volcano. Krakatoa thrown to a height of 70 miles took 20 days to complete a revolution.

Death Rocket Rains Fiery Metal

Rivaling the widely discussed 'death ray' of II. Grindell-Matthews, a terrific new weapon of offensive and defensive warfare recently has been developed in the form of a "death rocket' designed to throw out a flaming shower of molten metal miles above the earth's surface. The inventor is Ernest Welsh of North Ferriby East Yorkshire, England.

The inventor's recent experiments with medium-sized rockets is said to have proved that each shower, bursting high in the air can cover an area of 100 square yards and can ignite any object within that region. The experimental rockets, it is claimed, can climb to a height of five miles.

The rocket contains a destructive charge of 700

cellets, a regulating charge, a detonator, and a propelling charge. When it is to be sent aloft, it rests in a diagonal launching cradle, somewhat similar to those used for ordinary sky-rockets. When the fuse is ignited, the propelling charge sends the rocket soaring out of its cradle. There-

The artist's conception of how batteries of the rockets might be used effectively against the enemy

fter, at regular intervals it is given fresh impetus ttet, at regulal intervals it is given fresh impedia y the binisting of additional successive charges. For use as defense against raiding aircraft the ventor says that batteries of the rockets could be hot upward in the form of a barrage. The pellet-uickly burn themselves out he adds, so that the ockets could be used over a rity.

Mr. Welsh is at work on a modification of the

ame weapon that can be fired from airplanes or rships, falling about 300 feet before bursting

Electric Drills for Planting Grape-Vines

One of the most ingenious uses for the portable

extrac drill was demonstrated executly in the at-growing territory of California, where a pair of

automatic augers operating from one motor mound on a small truck bored holes for 60,000 grape-til in 10 days, resulting in a saving of \$400 n over hand labor.

over hand lator.

Six thousand holes three inches in diameter a

18 inches deep were dug each day. Each drill
required seven seconds. It was said the auger
a crumbled the earth in a most satisfactory man
for filling the holes after the plants were set

By this new method only two men were required to drill the holes, while eight men followed with the plants, and the cost and time were greated accordanced with the previous method.

World's Largest Steer Weighs 2834 Pounds

A steer taller than a man, and said to be largest in the world, was one of the interexhibits at the British Empire Exhibition Wembley, England

The Giant Steer

The steer is a pure Durham, and was rata ranch in Alberta Canada. He stand high is 10¹² feet in girth, and weighs 2831 is eneally a ton and a half

Amazing Adventures in Guiana Jungles

ham Beebe honorary curator of ornithology at ew York Zoological Park, known more ply as the "Bronx Zoo," and director of the 1 station of the New York Zoological Society, at returned from a five-month expedition into ilds of British Guiana, South America, in

at-toothed Dog-fush-inhabits the waters of Brittsh Guiana

if zoological specimens to add to the Bronx n He had brought back innumerable cages ath queer jungle creatures, some of which store had been seen in this country. Among dents, and vellow headed vultures

I is a very tall, very slim man of 17 who

ie a scholar and talks like one—in precise uttered softly and rather diffidently. His hands and forehead have been burned to

of mahogany by the tropic sun on his peditions into the wilds Otherwise in piediance not manner does he suggest his ous calling. Yet on more than one occasion that ked and subdued some of the thereest of the jungle with no weapon more than his bare hands and his courage.

expedition from which he just returned in his cabin one night and permitted a bat to creep over his body, hoping that the would sink its teeth in his flesh and hit him to disclose to science for the first sensation of having one of these strange reanimals suck the blood from his veins-

the most disquieting time we had on the Beebe fold "came one night when we ing nothing but a breath of air Several e wandering about in the jungle, picking mong the enormous trunks of the giant is, and little thinking of any danger in

als one of the party gave an involuntary pointed toward a pool of moonlight that filtered through the trees not 50 feet away center stood a full-grown jaguar, glaring inquisitively at us with furtive, glowing eyes!

An exciting moment-two women catching a Boa-Mr Books seen at the right

We stopped abruptly. There wasn't a thing we could do save to stand there. In the whole party there was it a weapon of any kind—not even a pocket-knife and then a most extraordinary thing happened. The jaguar turned about, as if bored,

and marched calmly and lesurely away! We had our headquarters in a large bungalow in a clearing at the edge of the ningle at Cartabo in a clearing at the edge of the jumple at carand a point of land at the junction of the Mazarum and Cuvum rivers. The whole party was in camp one afternoon when I happened to note a what appeared to be a large stick protruding from the water at an angle and floating down the river toward us.

An ant-eater Let's get him I shouled to?

the others of the party

Head of the iguana lizard six feet long

"We got nets and oars together numbed into two rowboats and started down the stream. We caught up with the beast and entangled it in our note. The ant-eater threshed the water, slashed the air with its long nose splintered the cars we

thrust at it, and fiercely fought off our attempts at capture. And at last it hooked its big curved claws over the gunwale of my boat, and climbed aboard.

Miss Isabel Cooper making a portrait of a jungle snake-would you date to do this

"Fighting an enraged ant-eater in the cramped quarters of a small boat is about as thrilling an undertaking as I can imagine. Let we went about it calmly and cerefully. I was nearest to the animal, so I engaged its attention with an oar while the others worked the boat ashore.

"When the boat grounded we drove the animal out, surrounded it and kept it at bay with sticks and clubs, seeking to prevent it from clawing its way through us to freedom until some one could obtain a box or crate in which to imprison it. One of the women members of the party, without pausing for order, busied herself about providing this, to find that the only crate we had large enough to accommodate an ant-cater was already occupied by a boa constrictor that had been captured a few days before!

"Some women may be afraid of snakes, but this one isn't. She reached down, picked up the boa, and without any hesitation thrust it into a smaller

box while the two other women members () expedition rushed down to the shore with packing-case. At last we succeeded in driving infurated ant-eater into this. Then we were aid take a calmer view of our captive

take a calmer view of our captive,

"It was one of largest ant-eaters I have seen. Its eight feet of length included a palmost two feet long. This is what we had in the water, for the rest of the animal's body submerged when it swims. The body was conwith long, coarse black hair, and it had a pushy tail. The claws were fully three inches more than twice the size of a hon's claws curled backward and upward so that the proposed the size of a lon's claws would not become dulled in walking

A devil-headed jungle bat from the tree

There was another afternoon of e-when the women members of our party wer in camp. Suddenly some of the natives starting that hubbub, shouting that an enormous was approaching in the underbrush. Runnaward it, the women saw that it was a runbimore than nine feet long and several indiameter. This snake is beautiful and not pass they deeded to capture it.

"One of the women made a dive for to seize it behind the head, but the snak ""
quick, and a real battle was on

"Several times the women barely escale encoded. At last though, they managed to boa to an empty packing-box and to dumbar This snake is now housed at a Zoo.

This snake is now housed at a Zoo.

"The wonders of the wild life of the furnish much more interest to a scientific of course, than do the possibilities of advision."

INDO-CHINA AND THE FAR EAST*

(A REVIEW)

is a literary and artistic review of Indouna and the Far East It was started shortly the war, but it ceased to appear from 1914, terary circles, in Indo-China, France and elsehave deplored its discontinuance. The motto paper, if a motto were required to indicate n and scope, is, in the words of M Pujarniscle, ido-China, with the help of Literature and the The writers and artists, struck by beauty,

The writers and artists, "struck by beauty, nate admirers of their adopted country, have d to create a bond among all the artists and teurs who look to the colony (Indo-China) for ource of their inspiration and in working c literature and arts of Indo-China, they have inclousness of working for Indo-China." It is paper pre-eminently for Frenchmen sojourning-indo-China, with leanings towards literature rt, to enable them to explore the artistic possess of the life, native and colonial, around

lo-China the name describes the land and its e French Indo-China consists of Annam and odia Cochin-China and Laos Cambodia is a India transplanted so far away and Annam inferior copy of China, and Laos is more In-than Chinese Three civilisations now meet rench Indo-China, the Indian, the Chinese and rench. The first, most glorious in its architec-and artistic achievements which excite our er in the ruins of Angkor and in the art of hmers and the Chams. Is now found only the 3 milhons of Khmers who are confined dependency of Cambodia, and this culture with a state of general decay. The Annamite e, a replica of the Chinese, embraces 8 milhons ople in Tonkin, Annam and Cochin-China, and with this that the average Frenchman has to in touch in Indo-Clina French writers, with mick sympathy and imagination which charactheir race, are sure to reveal to the world the soul of the Indo-Chinese peoples The a are a more sociable people than their neighon the other side of the Channel, and we nd a number of writers on native Indo-Chinese shose works will have a permanent value if own Undoubtedly a great many of them rate from their own experiences. But some will be whose ideas of "life" may not be uniquely accepted, and whose way of appreciating auty and the picturesqueness of Annaunte of life may be looked askance by overy self-ling native of Indo-China; writers who are imple, indifferent comes of Pierre Loti narrationally apparese experiences. We are spared all India, our Indian social alcofness frequently as a protective barrier, but also to a great nd a number of writers on native Indo-Chinese as a protective barrier, but also to a great by our masters living entirely in their own and by Mrs. Grundy being a power with here more than in England: and Mrs. Grundy fortified by a sense of presture which en-detached existence from the native, and she supported by the Missionary.

The French people have an instinctive appreciation of the good and great and enduring in life. They have marvelled and enthused over the ruins of Angkor and the vanished glories of the Khmers they have sought to understand the Annanite and the Lao and the Khmer they have the cultured man's curiosity for the strange and the outwardly alien things of life as well. If we do not have a Nivedita or an F. W. Bain an Edwin Arnold or a W. V. Pearson a Macauliffe or a Growse or even a Kipling (in his "Miracle of Purun Bhagut") or a Meadows Taylor, among French Indo-Chinese writers it will certainly be not through the want of French power of appreciation or French sympathy for the truly admirable in native life and ways

This appreciation and sympaths from the very nature of the case is bound, at least at times to be a little detached, a little superimposed, but we can at least be sure to have a French Kipling from Indo-China, (if he or she has not come already) painting a narrower world, but painting it truly and well. Already there has grown up a mass of literature in the French language of Indo-Chinese inspiration apart from the archaeological and scientific works of savants like Pelhot Finot, Coedes, Maspero and others, and M. Charles Patris has written a valuable study on this by way of French literature.

The two numbers of the Pages Indo Chinoses

under review have quite a varied range

In the first number we have a short statement of the aims of the paper. M. Pujarniscle in an interesting article Colonius and Colonical Literature indicates the difficulties and the advantages which a Frenchman of literary tastes and aspirations can meet with in Indo-China. Evidently most of the contributors to the Pages are French officials, colonists and others. We have four sonnets by Edmond Blangueron. Then follows Jean Marquet's Plants of Old Thai—the musings of an old Annanute scholar living a retired life with his two wives on the top of a hill (would that be a nife of peace?) and who had loved from a distance a white woman died of the climate. The Plants opens beautifully, but finishes in a gruesome manner, when old Thai goes to the grave of the white woman in the deserted cemetry and "leans over the grave and inhales with full nostrils the sweet stench which the rotted flesh exhaled from the ground. Old Thai is apparently a case for the specialist in pathology, and I suspect he is a pervert from Paris, who in the hands of his creator M. Marquet masquerades as an Annamite and sentimentalises and wags his head and chatters about the Masters of the Unknown Forces and ancient sages in what would be regarded in the journey-man literature of the West as the most approved oriental

• * Les Pares Indo-Chinoises New Series, Numbers 1 and 2 (September and October 1923):
Hanoi, French Indo-China. Annual subscription,
12 dollars.

tyle. M. Marquet is a well-known French writer of Indo-China; his works on Annamite life show a good power of observation, and a certain amount of natronising sympathy for the simple-minded Annamite villager. Witness, for example, his De la laziere a la Montagne; Moeius, Annamites—a little novel of Annamite village lite which has obtained wo official literary prizes. This sympathy has its counter-part in the benighty of the Salub in India who is always (modestly) conscious of the White Han's burden that he is bearing. M. Marquet's nelodramatic creation in the Pages is not at all so nleasing as his version of Annamite life in his De la Riving a la Montagna which we have read with pleasure. Pieue Foulon's Buffalo is quite good a picture of village life in Annam. The Occulental by Marcel E Chevalier which is reprinted here is a poignant poem, the thoughts of a young Frenchman in Indo-China who live— with a native grillinks absinthe, spends his afternoon with his friend, an old native Goldsmith garrulous like all old men, and knows he will die young

I would like to be good, to forget the tuneral Which I have conducted just now. I have thrashed my cooles The great Sun renders proper all these madnesses And I have a great wish to become Myself once more

I have called my great friend, the old goldsmith He is a wise tellow—he knows marvellous tales. He conceals an entire age within his eyes. Which are checked like a mocking smile of hips. He is an old man, very dignified—and queer withal He narrates the past with words that dance in the subtleties of subtle cadences—drink absinthe and he drinks light tea.

Ic will live old I shall die voung that is life. It is a whole age while I am only passing someone weary with a vague sadness sut now, now I feel quite odd in thinking of it.

This poem seems to be quite popular with renchmen in the East Probably it expresses the cellings of many of these exiles from home who ind themselves in a strange situation amidst a arbarous civilisation with which they can never eel at home. And vet, one is sorry for them still fore when they say

Le grand Soleil est propre a toutes les folies

nd seek to find excuse for a life of dissipation he absence of restraining influences of kome-life fithe zest in life that is derived from contact with indred soils and the presence of a general epression of spirit which overweighs all amenities erived from wealth and power sometimes embitter ne more sensitive among those whose lot it ecomes to live away from home. Yet it is not ir to lay all the blame upon the climate and freently upon the people as well. Such self-excuse is at its basis the old lie about the moral.

superiority of people of cold climates. Sun or be Sun, human nature and human society is more bess the same everywhere.

The section on Literary and Artistu Chronici giving a list of works (in prose) in French on Indi-Chinese life, art and literature published from 19 1923, with comments by R Crayssac, is sure to procuseful. There are close upon a hundred works in magazine articles which are mentioned Judention the names, however it would seem that the are only two works by Annamite initions a French are now two works by Annamite initions a freehouse adaptation of the Kim-Van-Kien, a famous Annamite poem, by Thu Giang (is it a French are masquerading as an Annamite?), and a now Le Roman de Mille Lys by M. Nguyen-phan-Log This list, of course, includes only works of a literal character. The last item in this number is a non-Annamite Art in connexion with the Exhibition the Decorative Arts in Paris, by Maurice Koch

In this number there is a full plate print of an original woodcut by E. Defert, The Head of Forest, a powerful, impressionistic study of the most of old Khmer temples, covered up, by the tropingle with the faces of the Gods show themselves through the roots and foliage,

The second number opens with a prose slow Mine Jeanne Leuba La Routa de Migda There is an appreciation by E. Pujarniscle of literary work of Mine Leuba. Her books on Chains—the ancient Hindu people of Chang. Cochin-China-once the rivals of the Khmers now dving out—and their art and history are standard works on the subject. She is also a word great power. Henry, Daguerches contribute poem Repudation addressed to Indo-China type French, but in the Land of Reputs spirit. It follows an extract from the French travelle inaturalist. Monthot describing the runns of Mina Monthot in a way discovered these runns in and he was profoundly impressed, like all a visitors after him by this stupendous more a good the Hindu civilisation of the country continuistatic description of Monthot available. English translation would stir the image of any Indian and fill him with a series of any Indian and fill him with a series the same time with feelings of gratefulness for a French curiosity and French science while lifted the veril of oblivion from this magnificant less on French Indo-Chinese Laterature of Annamite Art

This number is illustrated by a woodcut by A Fauter cau-Vassel the Payoda of the Ruce at Payoda

The Journal is printed beautifully. It is extra a welcome addition to the high class journals in French. It shows the active and the active and the spirit under novel conditional gives us occasional glimpses of native Indo to life, and it reflects for us the intimate thomas notions of a France which governs alien in the vet strives to remain human and French.

gious Experience of the Vaishnava and the Christian

. MT Kennedy writes in The Young

religious experience of the Vaishnava s of le order as the Christian. The note of joy is

a true mark of bhakte whether Christian or Hindu It is not by accident that both are rich in a great hymnology. The famous live stages of blighte already mentioned are all found varied in the language of Christian experience The santa is the quietism of Christian invisiosin. The dasya or servant attitude has been the natural Cypression of devotion from St. Paul to our own day Indeed this aspect of devotion is much more righly illustrated in Christian than in Vaishnava devotion because Christ made it fundamental for us while in the Vaishnava scale it is subsidiary. The salting stage expressing devotion in terms of friendship, is familiar enough with us. Its fountain source is in our Lord's beautiful words. Nolonger do I call you have the bar I has called you friends. The servants but I has called you friends. The batsalya or fourth stage expressing levotion in the terms of parent and hild relation ratural e ough to Christian thought is of coarse absorbt's central in Christian worship To the Vashinga Lowever the idea is of the tenderness felt toward a nittle child, and is exercitated in the tremendous power the worship of Krishica's a fittle culta has over the minds of Indian women. An almost exact parallel is the adoration of the Wise Men and the worship of the Buntano in the Roman Unrich The highest stage the sweetness and passion of the lover relation or ingriage relation is an imagery that has been sparingly used and wiselv so in Christian experience. The parallel here is confined almost entuely to medieval monasticism and to the Roman teaching that the nun is to look upon herself as the bride of Christ

This leads to a final word on the investicism of the two religious and the ideal of santliness. The mystic experience is deep set in both And that experience is largely of the same order that is it conceives of Heality as personal and of the quest along lines of ever closer personal relations. characteristics of the mystic experience are strikingly similar both in thought and physical accom-painment. The great mass of Vaishnaya, lyrics are classified according to the phases of the Radha-Krishna story of which they treat Some of these almost exactly parallel the stages of Christian mystic experience as developed through the centuries. The physical manifestations that accompany the mystic experience we would expect to be similar from the wealth of new insight that modern psychology has brought us Religious emotionalism produces the same results in all countries From the records of the great recivals of the last century in the west, vivid parallels can be found for the most grotesque of Chaitanya's wild excesses. The difference to be noted here is that Christian thought has come to look upon these things as suspect, evidences of hysteria, and therefore as unhealthful. To the Vaishnava devotee these phenomena are evidences of spiritual afflatus and signs of communior with the divine. The trance was the supreme experience to Chaitanya In all the literature there is no critical attitude toward these things, but rather the fullest acceptance of them as of value in themselves. The Chaitanya movement lacked a St. Paul to apply to its excesses the principle applied to the Corinthian church namely, that emotional gifts must minister to the edification of the brotherhood or be excluded, and that the final test of religious experience is ethical

"The Barbarit y English Life" a Century Ago

In the same magazine Mr J S Hoyland continues his article on "The Civilizing of England." He holds that

"There is nothing more glaringly indicative of the barbarity of English life during the first two generations of the Industrial Revolution than the manner in which little children were exploited to the benefit of the propertied classes

For concrete examples of this barbarity we have no space, but the following extract will give some general idea

In lace mills, for instance, work went on from 4 a.m to 12 pm. For these hours two shifts of adult workers were employed, but only one shift of children Although the children's work was intermittent, they could not leave the mill but lay down on the floors when not needed. There were some mills where the children never went home

during the whole twenty-four hour-

In worsted spinning mills the conditions may be judged from the evidence given by Joseph Hebergam before the Select Committe on Factor; Children's Labour in 1831. At the age of seven he was working from five in the morning till eight at night, with a break of thirty minutes at noon. All other meals being taken in snatches without any interruption of work. Did you not become very drowsy and sleepy towards the end of the day and feel much fatigued. Yes that began about three o'clock and grew worse and worse, and it came to be very bad between six and seven.

In flax spinning mills the conditions may be estimated from the evidence given by an overseer to the Select Committee of 1831 to the effect that to the Select Committee of 1831 to the effect that there were nine workers in the room under his charge who had begun work before they were nine years old, and that six of them were splay-footed and the other three deformed in other ways. In another mill there were three girls of one family, the youngest of them when years old who worked for six weeks at a stretch from three in the morning to ten or ten-thirty at night "It was near eleven of lock before we could get them." was near eleven o clock before we could get then into bed after getting a little victuals, and ther father in the course of his evidence we have often cried when we have given them the little victualling we had to give them we had to shake them, and they have fallen asleep with the victuals in their mouths many a time

In cotton mills, where the hours were also shamefully long it was discovered from actual experiment that the factory child walked twenty miles in following the spinning machine during the course of his day, work in the mill

The Rose-ringed Paroquet.

The rose-ringed paroquet would seem to be a great pest, as the following extract from an illustrated article on that bird in I'm Agricultural Journal of India shows :-

Wherever it occurs, however, in its wild state the Rose-ringed Paroquet is an unmitigated nuis. In as its diet is wholly vegetarian and it feeds large on cultivated grains and fruits. When a large of descends on a ripening crop of yuar (sorghum) of the control of the co sumilar cereal, a great deal of damage is done, on the the actual grain that is eaten, but far more the extremely wasteful method of feeding of the bud, which often breaks off a whole head, delu deselects one or two grains, throws away the mand breaks off another head which is treated in the same way. When fruits are ripe, these birds and them out and play havoc with them. When no cultivated fruits or crops are in season, the is consists of wild fruits (wild first, Zizyphus, etc. at seeds. The late Mi. C. W. Mason examined in three birds at Pusa and Mr. D'Abreu three more Narpun, and in all cases the stomach-confer consisted entirely of vegetable matter—muster wheat, maize, paddy, litchi and wild fruits at seeds of Dalbergia vissu. When the silk-cet trees are in flower in February, these parrots a amongst the crowd of birds which congregate imbibe the nectar. We have not yet had a complaints of its attacking sugarcane but, with increasing cultivation of this crop in Bihar, it " perhaps discover that it is edible and attack it in a same way as another Parrot has damaged sugara in Assam, by gnawing large holes in the stem-

Religious Transmitted by Tradition

The Light of the East holds that-

Whether we reserve the name of relige-theistic behef, and practice or extend it to athesystems and James Buddhism and to panth be Hinduism one point remains clear. That accepted it lengths whatever may have been a origin, have been and still are transmitted tradition.

To some this will be an unpalatable assigned that it is true. The Protestant who maintained that his whole faith is based on his individual terpretation of the Bible, has first admitted a tradition that the Bible is infallible and the saves. The modern Buddhist who probable that his creed is merely rational, forgets buddhism could never have arisen outside hand that the mind of its founder was soaked Hindu traditions.

Hindu tradition-

Catholics Jews Mahomedans, orthodox Had Buddhists, Jams and Parsis are frankly and re-traditionalists. They hold and profess the religious tenets which guide their lives a exceptations of their own individual minds beliefs handed over from some wise Tradi-tirough the medium of a parampara or tradition written or oral. Thus the great religion to that have held, and still hold, sway over the of nations, and generations of men—and hold. of nations and generations of men-and better few out of the way souls only-are traditional

Appealing to tradition. For, to become not religion must unite men and not separate the It must also gather into its fold not only the but the many. Now, nothing unites sem-common beliefs and practices individual than

If tends only to divide. And the many mot think out one, will have no religion at s they are taught.

do not think it is quite correct tracterise Jainism and Buddhism as c, and Hinduism as pantheistic.

Fresh Fruit as Food.

Mysore Economic Journal prints an by T. A. J. Hargreaves, M. R. C. S., C. P., in which it is stated

people have noticed the marked benefit e use of acid fruits and the nature of the l effect is that the acids stimulate the to produce gastric juice, which is absoluteto produce gastric juice, which is absolute-ntial for good digestion, and second, that s of fruits are able, to some degree, to take s of the natural soid of the stomach when absent. These facts emphasize the import-fruits as an aid to digestion especially in persons suffering from a deficiency of the oric acid of the gastric juice. One of the trunctions of the acid of the gastric juice ctivate the pepsin and the acids of fruits an proved to be to some extent capable of s. In such cases fruit of some sort should at every meal.

popular idea that the acids of fruits are ome for persons suffering from gout and ome for persons suffering from good and it acid disorders is a very mischievous ientists have pointed out that fruit juices kaline substances such as potash and soda in the elimination of uric acid from the So that instead of being harmful, fruit e very excellent for one who needs to ic acid poisoning.

nc acid poisoning.

Index and sugars of the "berried" fruits the intestines to activity without irritation one would recommend the natural properties of such fruits in place of rugs which are without exception irritants, their use is long continued the common pronic infection and injury of the bowel.

SWALLOWING SEEDS.

stion is sometimes asked. "Is it danger-allow seeds of fruits, such as grape seeds, and other seedy fruits?" In the case all seeds no harm whatever is done and st to some degree beneficial through he bulk of the foods, because seeds of taken in a considerable quantity, burdensome to the bowel and on this part to be discarded. It should be mentered, that the danger which many people from the entrance of seeds into the from the entrance of seeds into the wholly imaginary. When found there, accidental and not a cause of the sequence, s and seeds of grapes have no nutritive fer and should be discarded.

CLEANLINESS KRIEFFYAL

of warning is necessary in regard be article of diet. Fresh fruit should before being eaten by being washed

thoroughly in clean water, better still, with water to which peroxide of hydrogen has been added, one part to twenty of water.

The Hindu Civilisation of Java.

Mr. C. F. Andrews says in Current Thought:

There are clear and convincing proofs that the connection between Java and India was of the the connection between Java and India was of the most intimate character from the very earliest times. Probably, navigation was developed most rapidly on the eastern side of India. We find mention of ships voyaging down the coast both on the eastern and Western sides of the Bay of Bengal. They went down the Madras coast reaching at last the Island of Ceylon, and down the east coast as far as Java. The centre of this navigation was Bengal and Orissa. Evidently these voyages had a great significance for the people of the Malayan coast of the Bay of Bengal and the islands further south. We can be certain of this latter fact because the common name for 'Hindus' throughout the whole of this region, far very many centuries, if not actually for millen-'Hindus' throughout the whole of this region, for very many centuries, if not actually for millenniums has been 'Kling.' I have, myself, heard this word 'Kling' used by the inhabitants of Java for Indians. I have also heard it used as far east as Hong Kong, and it is still a common word along the Malay coast. To-day the word has fallen into disrepute, and Indians do not at all like being called "Klings'; they even resent it most bitterly. But originally the word had no sinister meaning at all. It was simply a shortened form of the word 'Kalinga'. Kalinga is the old historical name given to the area on the north ened form of the word hallings. Railings is use old historical name given to the area on the north coast of the Bay of Bengal, which now includes a part of Bengal and a part of Orissa.

The island of Jawa-Dwipa, which is now called Java, was first of all civilised and made habitable by the inhabitants of Bengal and Orissa,

who came from the Kalinga coast.

The Masses of our Country.

Prabudhha Bharata rightly holds that

At this critical stage of our national existence the problem of our masses—the teeming millions, should primarily receive our serious consideration. Political emancipation or advancement after which Political emancipation or advancement after which we are striving, is out of the question unless and until there be an awakening of the masses of our country, for they, and not the middle class or the aristocrats, constitute the bulk of our population. Truly speaking, the Indian nation lives in the humble cottages and not in palaces or stately mansions. The strength and vitality of our national being is in those who are called 'depressed' according to our social phraseology the masses. It is the masses who undergo all sorts of hardships and add to our national wealth and prosperity. They are the tillers of the soil raise our crops; they work as labourers and runs our industrial concerns. Again, it is there who form the billwark of the country in the soil and their interests should be so mach mach matter. and they should be looked down upon? They are pouring out their hearts' blood for the national well-being, and what do they get in return? The deplorable condition in which they are beggars all description. Deprived of the light of education and all the amenities of his, they drag on, from day to day, a miscrable existence. Poverty, starvation, disease and suffering are their lot. Added to these, social tyranny and injustice is crushing them like a dead weight, suppressing all individuality and growth Worst of all is the dehumanising and debasing effect that continued misery has brought upon them and their mentality. They have lost self-respect and forgotten that they too are men and are entitled to have their God-given rights. In the face of this discouraging state of things is it not strange that most of our social, political or religious movements are not concerned with the mass problem as they should? It is only lately that the Indian National Congress has taken up, in its programme, the question of removing the han of untouchability. The removal of this social iniquity alone will not solve the matter. The condition of the depressed classes should be so improved by an all-round, sustained propaganda of help and service that they may raise up their heads and lead decent, worthy lives.

A Pleasant Proposal.

Dr. Dhan Gopal Mukherjee asks in the same monthly —

Why do we shed so many tons of crocodile tears on a cow when there are thousands of Panahs who are our brother men and yet are treated worse than dogs? Is the holiness of a beast superior to the sanctity of Man in whom we perceive the largest magnitude of Brahman? Imagine also those religious Mohammadans whose meditation on God can be interrupted by music. Pretty poor meditation! God does not want such cheap religious and so deeply given over to praying that no sooner he hears some music than he runs out to kill men who are images of God on Earth? What an application of the teachings of a religion! Such a cheapening of the messages of Jesus, Buddha, and Mohammad is a spectate over which one should laugh, were it not for the fact that at present it makes the very angels weep.

Then he proposes "that we should start to ridicule it."

If we discuss the Hindu-Mohammadan tension seriously, it will become grammer than ever. It is a disease that must be more than cured—it must be killed. And nothing can kill it so surely as ridicule. Let us level the heavy artillery of laughter against all theologies and the doctors thereof who preach killing men in order to abolish ansiet-processions going by a house of God. Let pulverise with laughter those unctuous persons a cow is more sacred than their fellow-later. Let us mock into self-criticism and self-dontrol those who think lip-service and don't-trackism to be the acme of religious life. Let us, the word, laugh at the whole crew of officials, the holders, self-seekers, and misleaders of men, the self-seekers, and misleaders of men,

of Truth. In this grim hour of India's retion, let us call upon that gracious God of had who kills evil without destroying the evil we have had enough of weeping and they have borne fruit. Now let us see who done by ridicule. It, too, like the thunks a weapon of the Lord.

We welcome the proposal, particular neither the Hindu nor the Moslem "Rei in-dangerists" are likely to go the leng undertaking a voyage' to America to the head of the proposer, who himself give effect to his proposal.

The Greatest Achievement of the Bhik

According to Mr. Doongersee Dhan (in the Maha-Bodhi),

The greatest achievement of the Bhikh, the conquest of the hearts of the people. A harbarian became a civilized man under influence, the ferocious warriors were committed the citizens. The tyrants became mand just. The proud turned meek, and the man became the most humane and compassioned, lust, jealousy, passions and unrighter were recognised as sins and vices to be complete or ecognised as sins and vices to be complete or ecognised as sins and vices to be complete or ecognised as sins and vices to be complete or ecognised as sins and vices to be complete or ecognised as sins and vices to be complete or ecognised as sins and vices to be complete or ecognised as sins and vices to be complete or ecognised. The strong doned the inclination of attacking the weak powerful kings renounced the desire of many that a continue of the works appreciately appreciately that a continue of the works are the continue of the works. Buddha and contentment reigned supreme we learn in terms of severity, that a continue of the works are the developes its material side only, and

which developes its material side only, and a corresponding degree its spiritual side, is man with one leg unable to run. In cenable hun to walk straight, the other leg is gion of the noble eightfold path, is urgentive in Europe to permeate the atmosphere whealing peace. The present European atmosphere whealing peace, the spirit of that Great Teacher whealing peace, lealousy, invasion and walk-requires the spirit of that Great Teacher whereathed for the benefit and wolfare of goafter generation the higher and nobler are compassion and mutual forgiveness, rather most mischievous code—"one hundred black teeth for the teach facts under the guise of civilized is which go to show the urgent necessity for the enthusiasm of the disciples of the Buddha spiritual regeneration of the present-dat Let now the spiritual message of Gautama be brought home to Europe, especially to the and conscience of the statesmen, nobles at the only by good.

by evil, but only by good.

"Let a man overcome anger by kindness.

Let him conquer evil by good.

Let a man overcome greed by generosity.

Let him conquer falsehood by truth."

ilizations of India and China 7. B. Metta says in The Indian Re-

cient Oriental civilizations like those of China life was harmonious. Religion was the lives of the people, and was not some-e cast aside in favour of science. Science dered a child of religion and a servant of those countries. The various classes of Hindu or Chinese society co-operated with er in keeping their society healthy by their duties, and therefore there was kee in them. But in modern western his feeling of harmony and peace is Religion and science are at loggerheads. ism laughs at religion. And the various people in it are competing with each are consequently continually at war with ir. Therefore how can national culture eds peace and harmony devolop in these

The Census

e Hindustan Review Mr. Thakorelal thus concludes a survey of the f India, 1921:-

arten complains that the public were indifferent to the census. He is really brit at heart because they stopped short ference and were not positively hostile, is that the general public or even the rion of it for the matter of that knows the about the census operations beyond hat it is for calculating the population atry. It has no proper appreciation of of materials thus collected and seeing Census Reports both of the provinces and of India are published in English and stination in Government offices and the elves of the public libraries, this want on and the attitude of indifference are on and the attitude of indifference are be surprised at. I do not mean to the Reports should be published in vernaculars, but why could not the rernments make arrangements to get ditions in the vernaculars of the lich might exclude all purely technical many tables, and which would appeal in the street at general reading. I me one such small but excellent Gujarati, prepared at the instance of ment of Baroda. In this volume, in cold octavo pages, the translator has in Gujarati the standard English grup more than four hundred foolscap very homely style. The relucion g up more than four hundred foolscap. Very homely style. The volume is and is calculated to have a much ecity than the standard report. The was first made in 1911 and it was cessful that it was repeated in 1921. We if any other local government issue deditions in the vernaculars, but if they might take a leaf from the Baroda Government, and so might the baroda Government, and so might the baroda Government, and so might the baroda Government and so might the baroda Government and so might be desired change in the attitudes.

Bengalee Postal Officers not to be Posted in Tibet.

We read in "Tourist Notes" in Labour :-

"We cry ourselves hoarse when we are not allowed to live with self-respect in a foreign allowed to live with self-respect in a foreign dominion, but we do not utter a single word in protest when we are insulted in our own mother-country. For the last few years the Bengalee Postal officers are not allowed to work in Post Offices in Tibet. This is a gross insult to the Bengalee Postal Officers in particular, and to the Bengalee Postal Officers in particular, and to the Bengalee Postal Officers in general. But strange to say that not a single voice has yet been raised in protest from any quarters, nay, not from the persons directly affected! Do you know the rers in why the Bengalee Postal Officers are not allowed to cross the threshold of Tibet? That timsworn, hazy, elastic phrase for political reason is offered as explanation. But what is the implication?

"Was it not a Bengalee gentleman who risked his life to explore the secrets of Tibet and thus paved the path for the Tibet expedition? It was the Bengalee postal officers who helped the Government in establishing post offices in Sikkim and Tibet, and were honestly and faithfully serving there for years together. Suddenly one administrator awake and found after righting his eyes that there for years together. Suddenly one administrator awoke and found after rubbing his eyes that the Bengalees were not trustworthy! They were trusted in a troublous time, but after their continued faithful and honest service for years they have now been found untrustworthy! The other day the Bengalees were entrusted with responsible duties in different departments of Government in distant warfields: even today the Bengalees are heads of responsible nation-making departments in the administration of the Government. If the Bengalees are taken into confidence in the administration of administration of the Government. If the Bengalees are taken into confidence in the administration of the India Government everywhere, why then are they stigmatised and insulted with a refusal to work in the post offices in Tibet? If there be any specific charge against any of the Bengalee postal officers who worked in Tibet, let it be impartially enquired into and exemplary punishment be inflicted on him, but why a stigma on the whole nation? Nothing incriminatory against any Bengalee Postal Officers in Sikkim and Tibet has yet been heard of. On the contrary a rumour is affoat that some Bengalee sub-postmaster at Gyantse objected to some On the contrary a rumour is afloat that some Bengalee sub-postmaster at Gyantse objected to some high Government official's opening the mail bag in midway and taking out his letters; and in consequence of this that 'aggreered' high Government official managed to pass the order that the Bengalees should not be posted in the Post Office of Tibet for 'political reasons.' The Head of the Postal administration in India should make a searching enquiry into the the matter and publish if there is any truth in this rumour so that the public mind may be swept clear of all untrue notions. As there is a well-organised Postal Association, it should start an independent enquiry and collect evidences from every source without delay.

"It is true that our Tibetan and hill brethren cannot bear the hot climate of the plains. There therefore, should be preferred—if that can be done without lowering the efficiency—for postal working if that is the real motive then that can be easily done without branding the whole people without lowers."

was justified in doing anything to "pave the path for the Tibet expedition." But that Bengalis have rendered faithful service in Tibet to the British Government is clear also from the following passage in an article entitled "Youth and the East" in Blackwood's Magazine for August, 1924:—

"And those obscure Bengali surveyors of the secret service who penetrated forbidden Tibet, counting their paces by the rosary, deserve the Indian Order of Merit. They carried their lives in their hands."

Englishmen and Indians.

Mrs. M. R. Harding writes in The Vedic Magazine:

Another thing we need to realise is that when we go to people of other nations as friend to friend, with no air of superiority, they are willing to consider and meditate upon whatever may prove helpful to them Particularly is this so in the case of the Hindus, who are more tolerant of other people's religious convictions than any people in the world.

India with its riches is indeed a jewel in the crown of the British Empire, while she holds it, and surely this is all the more reason why Indians, particularly those of high education and unsurpassed ability in learning, perhaps on account of their wonderful power of concentration, should be treated at least as equals in every way, instead of receiving such treatment as makes one blush to be called English.

Laws and Ideal Freedom.

In the Mangalore Government College Miscellany, which is handsomely got up, Amy D. Carter observes:

We are surrounded on all sides with pictures of an ideal community, we are moving rapidly to a time when all things will be directed and controlled, even to minuteness, by a providing state; life will be so exquisitely ordered that there shall be no crowding, no disease, no profiteering nothing, but peace, equality of opportunity, honourable labour, well-organised pleasure, and so on Now, excellent as this may be, let us beware of lingering too long in this Lotus Land, for such it is Its elaborate laws may prove a menace. Laws at their best should be as scaffoldings, necessary to the erection of the edifice and no more. When their office is ended they should be removed; if not, they creep insidiously from the position of servant to that of tack-master, they act. like all effete matter, in poisons in the blood of the race. The grace of tack-master, they act. like all effete matter, in poisons in the blood of the race. The grace of tack-master, they act. like all effete matter, in poisons in the blood of the race. The grace of tack-master, they act like all effet matter, in poisons in the blood of the race. The grace of tack-master, they act like all effet matter, in poisons in the blood of the race. The grace of tack-master, they act like all effet matter, in poisons in the blood of the race. The grace of tack-master, they act like all effet matter, in poisons in the blood of the race. The grace of tack-master, they act like all effet matter, in poisons in the blood of the race. The grace of tack-master, they act like all effet matter, in poisons in the blood of the race. The grace of tack-master, they act like all effet matter, in poisons in the blood of the race. The grace of tack-master, they act like all effet matter.

the means of his destruction. This is true bever elaborate the bath-chair may be. It is not perfect government we need, but the perfect in dual,—we all know this, but we are apt to he that it concerns us personally. We must he unceasingly to discover the best possible mean evolving him; for, if we succeed in doing so government or those few broad precepts a may one day serve as a government, will have nobly; if we fail to evolve him, the estimable government will be of no avail. I unlikely that he will be produced by the intricately devised law, but rather by the grapossible freedom. Law makes contented he laws are inefficient. It is ridiculous to produmb man because he does not use foul him It has been said that "Opportunity makes thef," it also makes the honest man. More Authority, whether it be practised by one may a thousand, has much the same effect. It ach weight placed upon a number of springs, he when in place for a time, but should it be made ently removed, the springs will rebound Germany has proved to us. No country has been more keenly, more minutely lawed, with result that, brought face to face with extraord circumstances in the shape of the Great the repression of years found vent in unby ferocity. The therman atrocities were due is much to inherent savagery, as to the next under which the country had laboured for solutions.

reaches the straint is good, but it is the restraint which comes from within, not be the restraint which comes from within, not without. This does not imply the whole ale ing back of impulses and desires, but the are and controlling of them, their transmitate means of some definite creative work, of the service, until bit by bit we are able to the all which cannot stand before the bar of the peerless altruism. We crave for freedom for freedom, due for freedom, though, when we we are not strong enough for it, and fall privilege is for a time misused, still they be granted, we grow through our mistake only thus shall we triumph, not over stretches of territory, rich in mineral works.

India's Goal-Independence

Mr. C. F. Andrews has for years held we have done, that the only satisfying rousing goal which India can have is pendence. This conviction of his held rates in *The Hindu* Annual Supple with following prefatory words:

well-knewn. I am not a politician, and hate taken up in this country any purely politicity, not even the Congress itself, though I had often asked to do so. The reason for this is fold. First of all, my whole interest lies in the part of the study of politics only interest for as it becomes an integral part of all therefore the study of politics only interest for me.

ly. I am more and more convinced every at the political future of this country must ped out by Indians themselves, and that the re, in every single movement forward, must entaken by Indians without the help of Euro-This does not mean that English friends a can be of no assistance; but their own part rive and not to dominate; to help and not to a word, to be of service to those who are ural leaders of the country. In no single should they take the initiative or lead in action.

reasons for holding that India's goal to be independence are :--

of all, I have felt for a long time past that an never permanently belong, either to the Empire, or to a British Commonwealth of The very fact that the word British stands eginning of both these phrases appears to me ultimately to entire Independence as the ther than what is so often called Dominion For a great people of 320,000,000 cannot by be dependent upon the civilisation of anotis quite possible for India in the future, ledging the debt of many benefits received estern culture, to become an Indian nation adan Commonwealth of Nations, friendly to ish Nation or the British Commonwealth of

ish Nation or the British Commonwealth of But I do not think that, ultimately, it can an integral part of that British Common-of Nations itself. It will be seen that I have his academic position as frankly as possible, een of great interest to me to find, that H. s, the English writer, has for some time d the same ultimate conviction, and has very much on the same grounds. I would state that my own views were formed entiremendently of his. I have also reason to behat very many other Englishmen, and even number of Irishmen, hold the same view, and to spread in Great Britain and Ireland goes on. In the United States, there can be non that the idea of an independent India by held, as the only natural one, by almost nost liberal and broad-minded thinkers. On inent of Europe, the same thought is cher-

Andrews believes

every year that passes makes the number of to regard Independence as the goal greater ther. Practical statesmen and leaders will, a declare in all honesty, that the time has to look so far forward; but every idealist as younger generation has become tired and eath of the 'Empire' idea, and the thought an integral part of the British Empire' to enthusiasm whatever. Time therefore, wholly on the side of Independence and a side of Dominion Status. I have declared as possible, at the outset of this article, a neither a practical politician nor a member elitical party. I am an idealist and educate humanitarian. From all these three view, I have no hesitation whatever in the ladia. In this independent India, the indian and the Indian culture should be addressly represented in the administration of China.

"Shall we Commit Suicide t"

We read in The Oriental Watchman :-

Under this thought-provoking heading the Rt. Hon. Winston S. Churchill tells some plain if unpalatable truths in a recent magazine article. He begins by the surprising revelation that when the Armistice came in 1918 the nations had already perfected means for destruction during 1919 of which few of us had dreamed. But although not used then, they are being developed and perfected for the next war. These "agencies and processes of destruction will be wholesale, unlimited and perhaps once launched, uncontrollable." He says further, "Death stands at attention, obedient, expectant, really to serve, ready to pulverize without hope of repair what is left of civilization." He then gives details of electric beams and their destructive energy, of bombs no bigger than oranges, capable of great devastation, of poison gas and chemical warfare much worse than in the last war, which was but the opening chapter. It has intherto been the teaching of evolution that the fittest survive. But now, says Mr. Churchill. "There is no reason why a base, degenerate, immoral race should not make an enemy, far above them in quality the prostrate subject of their caprice and tyranny." Surely not an encouraging picture When the outlook is bad, let us try the uplook. The Word of God is optimistic, but the basis for its optimism does not rest on the unregenerate hearts of men.

Occasional Fasting.

Dr. H. C. Menkel writes in the same magazine:

Most individuals would profit physically, mentally, and spiritually by an occasional fast for at least one day, drinking freely of water during the period. There is a plan of modified fast which gives most of the advantages of a complete fast without the disadvantages. This is obtained by limiting one self for one or more days to only fruits and fruit juices. By this means a desirable period of rest is given to digestive, nutritional and eliminative organs.

It is now becoming well known that in fruits we have a desirable intestinal disinfectant and blood purifier due to the action of the fruit acids. These fruits also contain base or alkaline-forming salts by which the essential alkaline reserve of the body is maintained and built up. Another advantage of fruits is that they contain nourishment and cleansing properties in a form requiring little or no digestive work. Thus it is evident that an exclusive fruit diet for one or more days frequently repeated, would be of incalculable benefit. Abstemiousness in diet is rewarded by mental and moral vigour.

Indian Railway Workshops.

The Indian Railway Magazine says :

One of the discoveries of the war was the case, sity of India to produce her own articles required for Railways with purely Indian labor. The old

teston that all important engineering work should a stained from Great Britain has been exploded. the Tata Company producing steel, it ought to be possible to manufacture the whole waggon that the possible to manufacture the whole waggon that the manufacture of engines and rolling stock in India has been successfully carried out in the R. M. Railway workshops at aimere. Railway workshops should be directed by covernment to take a certain number of educated indians to be trained in every branch of electrical and mechanical engineering in their workshops and and mechanical engineering in their workshops and if any contract has to be entrusted to any private firm, it must be a firm that entertains a certain number of Indian apprentices.

We hope the Government will see that suitable facilities are given in these workshops for training educated Indians. We should also consider it eminently desirable that Government should attach Mechanical Engineering schools to these work-hops with a riew to develop attention a feetily of with a view to develop ultimately a faculty of Railway Engineering.

Improvement of Cattle-breeding in India.

Mr. M. Jamaluddin observes in The Indian Veterinary Journal :-

Some very fine breeds of both draught and dairy cattle, still found in different parts of the country, reflect credit on the knowledge of Cattle-Breeding of the ancient people of India, which even now is not very far behind the so-called modern investigations in the science. Cattle like Nagore, Cattle of Rajputana, Nellore Breed of Madras, Gujrat Breed, Amrit Mahal Breed of Mysore, Dhanni, Sanhiwal and Mariana Cattle of the Punjab, Panwar Breed of U. P., Karachi Cattle and many other breeds of cattle suitable to the different conditions of India could not have come into existence, and Some very fine breeds of both draught and dairy of India could not have come into existence, and could not have been evolved to the present stage, without strictly observing the laws of Cattle-Breeding and without the fullest knowledge of different lines of cross-breeding

The history of the ancient cattle breeders, wandering in search of good pasture and water for their cattle, shows that they were not unware of the importance of feeding their cattle in as good and economical a way as possible. But the circumstances and the economic conditions of India have changed. The reservation of forests and the still increasing extensive cultivation, the extension of roads, railways and canals have limited the natural pasture area and pushed back cattle-breeding to a

somewhat difficult and different situation.

For these reasons he makes various suggestions for the improvement of cattle-breeding in India.

Medical Education in Bengal.

Dr. B. N. Ghosh says in the Indian Record that as the question of medical diction looms large in the minds of medical present, he has discussed subject in its different bearings, especially in colation to the following :-

1. The General Council of Medical Education and Registration.

 The general standard of medical education.
 The present medical curriculum.
 Appointment of examiners and the system of examination.

General observations.

The Desire for Foreign Medical Degrees.

Dr. A. C. Ukil, M. B., writes in the Calcutta Medical Journal :-

There was a time when our students went to Great Britain to qualify themselves, i.e., to get some degrees or letters attached to their names, when such a recognition was perhaps a necessity. But the time has come when we are appreciating that the genus of our people must be preserved in at lines of national evolution. The writer had a opportunity of quite recently coming in contact with students and graduates of medicine from almost all parts of the world and of observing medical education in some of the most advanced counting of Europe. We do not remember to have noticed any foreign student on the continent craying to any foreign student on the continent craving for degrees. They come to the best centres of leaning to supplement their knowledge of the medical scients with a view to do good to their country and removes the stock of human knowledge. We were so glad to see Japanese students (including service) ladies) working in almost every important laborates in England, France, Belgium, Germany and Denmark and, so far as we remember, they never cared get foreign degrees. We consider this mann is getting foreign degrees as a morbid expression its slave mentality. We ought to be proud of our to versity and if she has any defects we ought; make them up. Our relations with the best century of learning must be one of mutual co-operaton at exchange and not of subservience. To bring any such a state we may do two things-(1) to so mod the teaching of our Univesties as to make it can pare favourably with that of the most advance countries of the world, and, (2) to discourage manua for passing examinations during study in the countries of the world, and, (2) to discourage manual for passing examinations during study in the case of the countries of the countrie foreign countries.

Again,

I'p till now our l'niversities have not taken part in the post-graduate teaching of suiding Special chairs may be created for research work such subjects as Experimental Medicine, Experimental Therapy, Tropical diseases, Pharmacola Bacteriology and Medical Bio-chemistry in universities ought no longer to continue microscopic bedding in medicine. A time has all examining bodies in medicine. A time has when they should take up in right earnest graduate medical teaching and research work whi should be looked upon as important factor, contributing to the sanitary and economic well of a nation.

Humour and Inter-communal Unity

All those who have been cudgelling the brains to discover means and methods bringing about unity between the differ refigious communities inhabiting India without exception, bent on prescribing sand dies. We have seen above that Mr. Gopal Mukherji would prescribe ridi-Mr. Fredoon Kabaji, in his article on itman, Humour and Swaraj," in the e of India, indirectly suggests the cultin of the saving grace of humour as a for severe attacks of "communalities." 1 he :--

mour is a deep-rooted instinct—as deep as er and thirst and sex. "Peace on earth, good-mong men" in whatever measure history has n it—might be traced in the last analysis to inborn humour. For what, indeed, does r bridge the hundred differences between neighborn humour hard much how in the last measure him. and neighbour but—in the last resort—hum-How often friction is avoided by a timely

People would for ever be flying at each is throats if it were not for their normal human tof humour. Good health good humour, and a gitten to fatness seem to go together Ill-health mour, and a disposition to learness and melan-also seem to go together Indeed, humour is ich an obvious saving quality of all sane, human beings that it seems absurd for me to riting a sort of school-essay on it. But then. common frailty of the same dear, sane, sound telligent human being we have been speak-if to be blind just to the most obvious things auch of the best humour of life is in the obvi-is of things which needs to be pointed out

Peace and the Spirit of Islam.

a paper written by Mr. Mustafa Khan printed in the Islamic Review, we read:

is a fact that Islam has come to establish tace in the whole world. In every Islamic tion, whether it is associated with the life or public, the chief object aimed at is ig about the efernal peace between man and iker, or between man and man."

e are quite willing to believe that the of Muhammadanism is peace, as we so willing to believe that the object of tanity, whose followers have called their the prince of peace, is also peace pistory records that no two other ns have caused more wars and bloodcan these two Semitic faiths. It may the faiths have not been to blame. it their followers have been to blame. would it not be better for these rs to practise peace, instead of or in n to continuing to preach peace? ak. o.

Agricultural Education.

Gundappa S. Kurpad, B.A., Vice-al, Mysore Agricultural School, obn the Journal of the Mysore Agricul-ed Experimental Union: institution for the teaching of agriculture must have a definite aim in view, and must devote all its energies to attain that end. It is only when it concentrates its attention on a certain definite line of work that it can hope to attain satisfactory results. It can either train young men to become practical farmers or train them for research work in agriculture and to man the various departments of agriculture. Both of these can be done side by side, but they should never be mixed. The kind of training involved in these two cases, and the level of general education necessary in the case of students taking up these two lines of work are so different that to combine the two in a compromise course' seems to be an unwise procedure. It will then be a compromise between two divergent courses and cannot, in the very nature of things, he thoroughly efficient for either of the purposes. For the training of experts and research workers more attention will have to be paid to the theoretical portion and to the technique of experimental work of all kinds. For the training of farmers on the other hand, stress will have to be laid on practical work in farms of various kinds in different condition. Extensive approximation for the continuous f localities. Extensive opportunities for touring and continuous work on a farm run as a business proposition will be absolutely essential. It is superfluous to sav that those who are in training to become farmers and who wish to have training in the research line can be allowed to have it if they have the requisite general knowledge for it, and see

Whatever purpose the institution is to serve, it seems to be a mistake to have it as an adjunct to a

purely experimental farm.

Iqbal's Philosophy.

The philosophy of Iqbal is thus summerised in The Aligarh Magazine:

The philosophy of Iqbal may be epitomised in know they self and assert they self. Self realisation is the secret of the rise of a race. Not only should it essay to gauge its weaknesses but its potentialities as well. If it is instinct with life and a desire to live it is capable of doing anything and everything. It is only an inert mass which falsifies all hope of progress. Nothing is impossible in this world, and what a man has done a man can and must do. Hence the ideal of our great poet to develop the latent forces inherent in man. They may be dormant for certain reasons, but if an efficient is made, they are sure to be roused and put into action once more. The duty of a man is, therefore, to unravel these, and realise the stumbling blocks which preclude their development. What was possible for our ancestors is possible for us as well. provided we exert in the same way as they did. Honest efforts never go unrewarded, as good trees always bear luscious fruits. So if we make up our anways bear luscious fruits. So it we make up our mind for advance, all obstacles, whether natural of created by others, will vanish as if they never existed. An avalanche carries everything, great a small, before it. 'We can't' is to be eliquinated our vocabulary. Diffidence is to be extinated to the carrier of the latest and the carriers of the carriers of the carriers of the latest and the carriers of the ca our character, and self-confidence, which in the indefatigable spirit, to be substituted in its . This is the belief and the noble teaching of Ia.

The Marathi Novel.

In an article on modern Marathi literature The Allahabad University contributed to Magazine it is said of the Marathi novel:

The novel is not yet evolving out of its former The novel is not yet evolving out of its holds.

Type of a story of action, rather than a psychological study of the character that acts, and the subtle play of sentiments. Mr. Apte's novels lean on this side rather than on the other, but he cannot be said to have led the way. Such novelists have yet to come into prominence, and it is hoped not long after. The short story is as popular as ever but there is soarcely a variety of types. Mr. Gurjar's stories may represent the general type.

Ancient Public Works in South India

An article in The Central Hundu College Magazine gives a brief account of works of public utility in ancient India. The following is part of what has been said regarding South India :-

The whole of early Tamil literature of the third academy, is full of references to the anxiety of the state's ruler in promoting the interests of the subjects. It is recorded of Karikala, the well-known Chola-ruler that noticing the annual ravages of rich harvests by the floods of the river Kaveri, he undertook and completed the huge task of building embankments to the river and by this step put an effective stop to the recurrence of annual damage to large areas of cultivated tracts. Karikala who flourished about the first century of the Christian era was only one among a host of Chola julers who nudertook huge irrigational works by digging branches of the Kaveri in various parts of South India. The name of some of the branches of Kaveri such as the Mudikondan, and the Vira Solan, indicate clearly that they owed their origin to these Kings.

Not only the Cholas, but the early and later Palisva sovereigns who ruled a good part of the Tamil Country for many hundred years bestowed great attention on matters of irrigation by the academy, is full of references to the anxiety of the

ent attention on matters of irrigation by the diaging of lakes and tanks in areas where rainfall was sparse, and rivers absent Among these, we may mention Mahendratataka, Paramesvaratataka, and Vayiramegatataka, all of which have survived to the present day after more than thousand years in the Chinglepet district. The responsibility of in the Chingleper district. The track the will ag-maintaining the tank intact was left with the villag-maintaining the tank intact was left with the villagers through their committee and the charges for annual or periodical repairs were drawn from a permanent Royal grant,

Lassen's History of Indian Commerce.

Messra K. P. Jayaswal and A. Banerji-Sistri have done good service by offering in the Bihar and Orissa Research Society's Journal a translation of Lassen's History of Indian Commerce. In their introduction to the translation the learned contributors state : The subject of Indian commercial history has

become a popular study. The translators, havinoticed that the researches of Lassen, the finwriter on the subject, were not, as a rule, availed by Indian writers, and students felt the necessity giving an English translation of Lassen's chapter, the subject. In the translation, they have endeavour the subject. In the translation, they have emerging to adhere to the original more than to the elegant of language which has to be sacrificed more or lost in almost every rendering of a scientific nature.

Since Lassen's time, Indology has progressing the lassen can never be superseded.

much, but Lassen can never be superseded. Lass is classical in the field of Indian history. With Lassen, for generations after, no one could have easily conceived of producing an Indian Heto of Hindu times dealing with political, social a intellectual development. The wonder is that other author, except Duncker on a much small scale, has since attempted a comprehensive we like Lassen's *Indische Alterthumskunde*. The the volume of this work which forms one of greatest monuments of untiring industry and cinescholarship" as the Encyclopædia Britannica (17 236) has rightly put it, was published in 185% first chapter deals with the history of commendation of the contract of the co bis auf die spatern (fupta) from the time of Vikran ditya up to that of the later Guptas.

Charka and Increase of National Income

Mr M.N. Roy's second criticle on Economics of Charka", published in a December number of Welfare is a wareasoned contribution to the subject have space for only one extract from it

Dr. Ray's theory is that khaddar product will increase the national wealth, and the malluring part of this theory is that this increase. national wealth will be equally distributed postulates that if one fourth of the popula spins two hours daily, the national income be increased by 90 crores of rupees a year I will mean an additional half-anna per capita discounted to the form of the second of the sec income. In view of the fact that average de ncome of an Indian is one anna and a quat Dr. Ray considers this additional half anna it relatively not negligible. A forty per cent, not income is certainly not to be trifled with let us see how it will happen.
National wealth is increased when the

production of a given country is augmented. Saf in a certain item of expenditure does not necessify cause increase of national wealth. It is an that if the import of cloth is stopped, 60 cross rupees annually paid by India on this act will remain in the country. But it is formal that these 60 cross are not sent out in many that the bind India has corrections to sail that these 60 crores are not sent out in mobut in kind. India has something to sell. The countries which buy what India has to will not and cannot make the purchase if are required to pay in cash. They must their goods to be exchanged for our goods ladisadvantage lies in the fact that at present has to exchange her raw products for many tured goods. Her economic welfare unders not alter the fundamental law of mindings not alter the fundamental law of mindings commerce, that export will always be not in ready money. but in the same of money is the same of money and in the same of money in the same of money is the same of money and the same of money is the same of money and the same of money is the same of money and the same of money is the same of money and the same of money is the same of the same o

and vice verss. Now it can be replied:
re quantity of Indian export is in food
reople will have more to eat if these
he country. The case, however, is not
Firstly, less than 30 per cent, of our
sists in food-stuff. The rest is nonmittend reoduce rear materials minerals cultural produce, raw materials, minerals

etc. Secondly, if the export is stopped, the prices of these will go down and it will be the peasant who will ultimately get less money for the product of his land. On the other hand, suspension of import will force the prices of manufactured articles up; so the peasant will be required to pay more for his necessities.

FOREIGN PERIODICALS

"Youth and the East"

arkable series of articles has reppeared in Blackwood's Magazine caption "Youth and the East".

T's name is not given. We shall e extracts from it. Of the Gurkhas. r savs :---

d been a soldier, or a forest officer in h primitive hill-folk, the memories of w years in India would be happier. hing ulterior at the back of his mind, spend one's life among Asiatics, the ing is that one should feel at home I do not wish to minimise the tie the British officer to almost every n sepoy, but this attachment is not me thing. Under exceptionally happy rhaps, it may be, or nearly so, but eral rule. The officer commanding sealmans, Sikhs, Dogras, Mahrattas, one might say, Madrasi Christians, one might say, Madrasi Christians, this. Still, I have seen a good deal and if I had to live my life over is. I should choose to serve with to be quartered at Abbotabad, on the Lashmir, or at Dharmsala, or Bukloh with the say had a serve with the say

riter's lot was not cast among He had to serve as a professor a troublous period.

s not a soldier, or the next best ian in charge of a district but an My work was almost entirely with ia, and at a period of growing race when our relations with the politicare becoming less and less genial. A menda. Still, it is never agreement who regard you, though

it may be perversely, as one of a party who has

wronged them.

"My first charge of a college was in Bengal; we will call the place Mantkpur. It was in the period of the "Golden Bengal" movement, and I, as the hated Mieccha, was unpopular. Politics were officially banned in the student world, and it fell to me to see to it that the due restrictiona were observed. My students were not allowed to attend political meetings; above all, they must not disgrace the college by public demonstrations. I had to expel one or two for this. Politics were the breath of life to them, and it was inevitable that I should appear to them as the ghoulish impersonation of the foreign incubus.

"I'nul I found myself at Manikpur I had never tried to put myself inside an Indian's skin. When I came to think of it, my students' prejudices appeared very natural. If I were born in a subject country of an indigenous but "inferior" race, I should not love my foreign teachers or their textwronged them.

country of an indigenous but "inferior" race, I should not love my foreign teachers or their text-books about liberty. I should distrust their liberal ideals, and no doubt I should think my own people every bit as good, and perhaps a little better, than theirs. If I were a young Bengali, I should frequent the shrine of Bande Mataram. I should revel in accret societies and feel myself exalted if any self-denying patriot spoke to me. My dreams would be of liberation, independence, sacrifice. And the more these visions were discountenanced by my foreign masters, the more ardently I should consecrate myself to them." myself to them.'

His observations on Nationalism noteworthy.

"But I had been brought up to regard nationalism—a virtue in my own people, or even among foreigners in history books—as a disease in subject races. It was only at Manikpur that I began to realise that there might be a generous side to the revolutionary spirit in Young India, yet I do not know how it was, but somehow these young dissidents failed to engage my sympathies. To begin with, their heads were stuffed full of lies, and there was no truth in them. I got hold of some of their revolutionary literature and studied it. It was poisonous stuff. The venom in it made me feel physically ill. Malice in misrepresentation—some expects, but clear-seeing malice deliberately, islaifying things is not so repulsive as malice, fortified by an incapority to concave of the deconding observed by the other side. It would be a "But I had been brought up to regard nationalism

just Nemesis if the goddess of Liberty; invoked with so little understanding, were to turn on stoppliants and cast them into chains. Garibaldi and Nana Sahib, Indeed! What profanity of association! No, I still belonged to the school who believe that Liberty is not intended for all sorts and conditions of men, but only for those who deserve it. And these people, subject to my people, did not deserve it. That, frankly, was my point of view."

The writer confesses that he came out to India quite ignorant of the history of the beginnings of British rule in India. That is perhaps the case with most Englishmen who come out to India. But such ignorance is inexcusable in those who came out as Let us, educationalists and missionaries. however, proceed with our extracts from Youth and the East."

Then among those poisonous vapourings I would stumble on half-truths. Our hands were not altogether clean. There was Clive, for instance That dirty trick he played on Omichund was worse than a forgery. It was the first I had heard of it, and I was incredulous. I did not believe that an English sahib could be capable of such a salete I must saddle the neglectful X with my ignorance, for we were not taught English history at school, and if we had been, it is doubtful if we should have been if we had been, it is doubtful if we should have been told the full enormity. All I know of Clive was the duel story in Browning's poem.

"...the man Clive--he fought Plassey, spoiled the clever

Conquered and annexed and Englished."

"Clive had been a beacon of chivalry. And now I learnt that he had behaved like any Bow Bazar Vakil. And Clive was not the only one [Pacs the writer, our Vakils, of Bow Bazar or elsewhere, are not as a class like Clive. Ed. M. R.]

"It is true that these things happened a very long time ago, that they were reprotated at the time, and that a century or more of straight (sic) dealing has done much to wipe out the stain; yet after reading the story of Clive and Omichund I have never felt the same cocksureness about the racial question. No doubt it is the privilege of the weak to be ruled by the strong, but the older and wiser one becomes, the more one lacks the and wiser one becomes, the more one lacks the courage to tell them so. I suppose this weakness is a reaction from the age of cant. One suspects one's motives when duty and interest and inclina-tion march together; and when the spectre of altruism joins the band, and one is not quite sure that it is not funk, one suffers a kind of moral paralysis. If only we could put back the hands of the clock to the pious, confident, unquestioning days of John Lawrence, we should all be much

The writer then takes refuge in John Lawrence and Carlyle.

"When I am distrustful of my judgment of nationalism in subject races, I fortify myself with good old John Lawrence. "We are here," he said the force of circumstance, and by the will of Providence. These alone constitute our Charter of Government. And is doing the best we can for the people, we are

"Carlyle wrote that to Thomas Erskine when I came across the passage at Manik; Froude's volume, I was heartened. But the E man's conscience was not so robust as it 'No doubt it is good for them,' he says, would one like it oneself?' That ought beside the point. Yet in our humanitarian a have made it the whole point. The ultimate qui has been solved. We have given India he decorate. dependence. Our dissidents have brought that And all that is left for us to do is to the sanest of the emancipated in averting

the sanest of the emancipated in averting a diate catastrophe.

"I have a great admiration for the landministrator who has stayed behind to help he might have come away. The Juggernant of Laberty is on the edge of the cliff; the have been flung to the self-devoted character but he can still poke stones under the wheels at the brake, and be called for his pains the of the recycle. All this means dalay are the of the people. All this means delay, and in meanwhile the wheels of the car may be turn hittle off the direct incline, and a sort cornuch may be engineered which leads at a less sugradient towards the goal—or abyss, shows say—to which we are pledged. So long as the no upward curve in the track, theoretic idea. and practical humanitarianism will be recon And we shall have been true to our pledge

In the writer's opinion, Indian-

already got independence!

He then proceeds to make some obse tions on the Bengalis in a patronising spi

"But to return to my Bengalis. Much as disliked a just but alien domination, there are doubt that they preferred it to the rule of or Pathan. Generalisations as to racial change ics are, as a rule, only partially true, but I mais safe to include the Bengalis among the military races of India. Not that they are we in courage. The Bengali Police and the Reanarchists have proved themselves very individually quite as brave as the police and are individually and ar ists in other provinces. And those of Bengali surveyors of the secret service who is trated forbidden Tibet, counting their partitionsary, deserve the Indian Order of Menticarried their lives in their hands, Kims Babu is not idealised. But, collectively, the magnitude is wanting. I met the regiment who is the regiment.

the war.
It was in Baghdad where they were for garrison duty, though they were very to get to the front and prove that the bloculd fight as well as other races. In spite of keepness, however, I was not convinced that were a martial breed, though I could believe, they were leady to suffer death to prove it were braver, that is to say, than sepon signuinely military stock.

After Bengal, the writer served !! Puniab as a professor. He speaks d precipitate flight to the Funjab." He rives us his opinion of some other peoples than the Bengalis.

mmitted imprudence of throwing up nent service for a native State with my ee-quarters open. Naturally I was made for it in many ways, for imprudences leir Nemesis too; but taking all things I have never regretted it. For eight years over as jolly a crowd of students as a l of a College can hope to collect, northlads—Sikhs, Muhammadans, and Hindus equal proportions. They played football re conviction, though with less dexterity, a Bengali, and with a great deal more in adversity, though not quite enough for the John Bull standard. But when re winning they were magnificent.

has, however, more to say of the s, though he evidently does not like But let us hear what he condescends as a patronising critic.

less to say, the enigmatic heart of the was never unlocked for me. Like most glishmen, I was blind to his spiritual and ic. Rabindranath Tagore was hardly known side his own province. Englishmen did not nkimchandra Chatterji. It is only in the years or so that the subtle genius of the las found expression in fiction. If I could atchandra Chatterji or the sisters Santa Chatterjee at Manikpur, I should have lore about my students. No confidences, and been obtainable, and no observation, we given me a like clue to the world they red into when they left the lecture..."

w-a-days contemporary Bengali literature a in good translations, and a great deal genous underivative stuff, and obviously thus from being the most inscrutable of a Bengali has become the most intellise he is the most articulate, and the have portrayed the inarticulate. And think. Santa and Sits Chatterjee write se and grace, and even the humour, of actised women writers. They may be may ladies: they are certainly social but they write of all classes with eviplace; they have nothing to learn in this respect from our roman a these. And they tell us what the Bengali feels and thinks, and what he suffers, and how hog-ridden he is by his traditions......"

In connection with the British educational system in India, the writer pays some left-handed compliments to the Bengalis.

handed compliments to the Bengalis.

"...I have joined in the derision that has been heaped upon our educational system in India, and deplored and commisserated its hybrid products, but I am now honestly persuaded that it is the best thing that could have happened to Bengal. Hardier races, I admit, have been spoiled by it. Take the young Jat from the plough and turn him to Pope's 'Rape of the Lock' or Shelley's 'Adonaia,' make a comfortless harumphroditic amphibian of him. Probably an agitator: almost certainly a malcontent. Compare the clerkly Sikh with the agricultural Sikh. The Sikh in the office appears witted, almost denationalised by contrast. He will probably think and talk a great deal more about his birthright as a Sikh, but it is his uninstructed brother who lives the part. The thing we have put into him is not half so wholesome as the thing we have taken out. Still, I suppose we cannot help that now. If the Sikh wishes to be babuised, babuised he will be. The loss is his and ours too. But in Bengal the case is different. We spoil nothing there. It is all nonsense to argue that a subtle, intelligent, inquiring, assimilative race like the Bengalis could have escaped Western influences. The impact of the two civilisations was bound to come, and it seems to me that the more sudden and staggering the shock, the better for the Bengali.

"After all, how much of their tradition is worth."

"After all, how much of their tradition is worth keeping? And it cannot be said that we have put nothing in its place. There must be at least a million Bengalis who know what is rotten in their social system, and who are in revolt against it; and even if they dare not to live up to their convictions—and some of them dare,—this at any rate is a start. The Bengalis have become the most literary people in the East; they are unsparing critics of their own society; and their novels, plays, and poems are read in all the bazars and villages. We should have no more regrets for our part in this than the Calcutta Improvement Trust in driving wide avenues through the slums of the city."

Freedom or Authority in Education.

Mr. Bertrand Russell has contributed to the Century Magazine an important article on "Freedom and Authority in Education." He is not, of course, for absolute freedom.

Freedom, in education as in other things, must be a matter of degree. Some freedoms cannot be tolerated. I met a lady once who maintained that no child should ever be forbidden to do anything, because a child ought to develop its nature from within, "How if its nature leads it to swallow pins?" I asked; but I regret to say the answer was mere vituperation. And yet every child, left to itself, will sooner or later swallow pins, and principle of the child out of any other window, or otherwise bring itself to a had any other window, or otherwise bring itself to a had

the opportunity, will go unwashed, overeat, smoke that they are sick, catch chills from sitting in wet feet, and so on, let alone the fact that they will amuse themselves by plaguing elderly gentlemen, who may not all have Elisha's powers of repartee. Therefore, one who advocates freedom in education cannot mean that children should do exactly as they please all day long. An element of discipline and authority must exist; the question is as to the amount of it, and the way in which it is to be exercised.

Education may be viewed from many points of

Education may be viewed from many points of view; that of the state, of the church, of the schoolmaster, of the parent, or even (though this is usually forgotten) of the child itself. Each of these points of view is partial, each contributes something to the ideal of education, but also contributes elements that are bad.

According to him, "the main reason for adopting universal education was the feeling that illiteracy is disgraceful." The State favoured this step because,

This institution, once firmly established, was found by the state to be capable of many uses. It makes young people more docile both for good and evil. It improves manners and diminishes crime: it facilitates common action for public ends; it makes the community more responsive to direction from a center. Without it, democracy cannot exist except as an empty form But democracy, as conceived by politicians, is a form of government, that is to say, it is a method of making people do what their leaders wish under the impression that they are doing what they themselves wish. Accordingly, state education has acquired a certain bias. It teaches the young (so far as it can) to respect existing institutions, to avoid all fundamental criticism of the powers that be, and to regard foreign nations with suspicion and contempt. It increases national solidarity at the expense both of internationalism and of individual development. The damage to individual development comes through the undue stress upon authority. Collective rather than individual emotions are encouraged, and disagreement with prevailing beliefs is severely repressed. Uniformity is desired, because it is convenient to the administrator, regardless of the fact that it can be secured only by mental atrophy. So great are the resulting evils that it can be senously questioned whether universal education has hitherto done good or haim on the balance.

He dwells in detail on the motives which govern those who want the child to be educated, and summarises his observations thus.—

Anthority, if it is to govern education, must rest upon one or several of the powers we have considered, the state, the church, the schoolmaster, and the parent. We have seen that no one of them can be trusted to care for the child's welfare, since each wishes the child to minister to some end which has nothing to do with its own well-being. The state wants the child to serve for national agrandizement and the support of the existing form of government. The church wants the child to serve for increasing the power of the priesthood. The schoolmaster regards his school as the state regards the nation, and wants the child to glorify the school. The parent wants the child to glorify the family. The child itself, as an end in itself, as

a separate human being with a claim to whe happiness and well-being may be possible, doe come into these various external purposes to a limited extent. Unfortunately, the child the experience required for the guidance of its life, and is therefore a prey to the sinister int that batten on its innocence. This is what the difficulty of education as a political problem

Mr. Bertrand Russel does not favour teaching of any orthodoxy.

The habit of teaching some orthodoxy, pol religious, or moral, has all kinds of bad e To begin with, it excludes from the teaching fession men who combine honesty with intellevigor, who are just the men likely to have best moral and mental effect upon their pupil I come now to the effect upon the p which I will take under two heads, intellement moral

Intellectually, what is stimulating to a man is a problem of obvious practical import as to which he finds that divergent opinions held. A young man learning economic example, ought to hear lectures from individuand socialists, protectionists and free-trainflationists and believers in the gold stand He ought to be encouraged to read the best of the various schools, as recommended by who'believe in them. This would teach his weigh arguments and evidence, to know this opinion is certainly right, and to judge may their quality rather than by their consensuity produced by their consensuity from the point of view of ones country, but also from that of foreigners. If his were taught by Frenchmen in England Englishmen in France, there would be no agreements between the two countries, large and would understand the other's point of A young man while he is at college should be think that all questions are open, and the argument should be followed wherever it is all too soon when he begins to earn his but until that time he should be encouraged speculation.

Morally, also, the teaching of an orthodow the young is very harmful. There is not at the fact that it compels the abler teachers in hypocrites, and therefore to set a tad is example. There is also, what is more importing the fact that it encourages intolerance and had forms of herd instinct. Edmund Grad has "Father and Son." relates how, when he aboy, his father told him he was going to is again. The boy saw there was something father was ashamed of, so at last he asked accents of horror, "Father, is she a pardulage And she was. Until that moment he had last Catholic schools believe that Protestants are will country believe that atheists are wicked. So childred country believe that dermans are wicked. Children in Germany believe that Frenchings wicked. When a school accepts as part of its the teaching of an opinion which cannot be tellectually defended, as virtually all schools it is compelled to give the impression that who hold an opposite opinion are wicked.

elling the assaults of reason. Thus for the orthodoxy the children are rendered unble, intolerant, cruel, and bellicose. This is lable so long as definite opinions are preson politics, morals and religion. Ily, arising out of this moral damage to the ual, there is untold damage to society. Wars lly, arising out of this moral damage to the ual, there is untold damage to society. Wars secutions are rife everywhere, and everythey are rendered possible by the teaching in ools. Wellington used to say that the battle orlow was won on the playing-fields of Eton. In have said with more truth that the war revolutionary France was instigated in the ms of Eton. In our democratic age Eton ome unimportant; now, it is the ordinary ary and secondary school that matters. In ountry, by means of flag-waving, Empire urth of July celebrations, officers' training to, everything is done to give boys a taste icide, and girls a conviction that men given icide, and girls a conviction that men given ride are the most worthy of respect. This side are the most worthy of respect. This ystem of moral degradation to which innose and girls are exposed would become de if the authorities allowed freedom of to teachers and pupils. nentation is the source of the evil. Educa-horities do not look on children, as religion sed to do, as human beings with souls to l. They look upon them as material for e social schemes, future "hands" in factor-ayonets" in war or what not No man is neate unless he feels each pupil an end in with his own rights and his own personality, alyea piece in a jig-saw puzzle or a soldier ment or a citizen in a state. Reverence in personality is the beginning of wisdom social question, but above all in education.

Adult Education in England

there is very little illiteracy ind, mere literacy has not sufficed to I the people educated. The Adult n Movement has stepped in to hat object. The extent of illiteracy is comparable to the extent of n Englaud. Hence there is a greater an Adult Education Movement in ut let us hear from the New Republic been accomplished in England.

the social history of England during the of the present century comes to be to fits most important chapters will be got its ducational reconstruction, and in a prominent place will belong to the devoted to adult education. In the course there have been several indicates nt year there have been several indicathey have reached, in not maturity, at in their career from which it is possible the ground which has been "traveled. the ground which has been traveled.

g, the Workers Educational Association, in this field, has just been celebrating its anniversary. For another, the Board as which has always been both intelligations in offering financial assistance, the considerably increased the grants obtained by classes of adult students.

In the third place, there is a growing educational ferment in the labor movement, and the Trade Union Congress has recently appointed a committee to make recommendations as to the provision of increased educational opportunities for Trade Uniquiety. Adult advention box in fact, cought the residuation of the cought t ists. Adult education has in fact caught the public imagination. Naturally, there is still an immense field which has not been cultivated. But the idea has come to stay, and the organization needed to give it practical effect is steadily developing.

In its present form the movement is the product of the last transfer and when it first regarded.

In its present form, the movement is the product of the last twenty years, and when it first started scepticism was common. The students, its pioneers were told, did not exist, and such as there were demanded popular lectures, not continuous and intensive work. To the first criticism the growth of the movement is a sufficient answer: to the second, the verdict of almost every educationalist who has been brought into personal contact with it. The Workers Educational Association, though the largest, is merely one of several bodies concerned in the work. But in the tutorial classes lasting for three years merely one of several bodies concerned in the work. But in the tutorial classes lasting for three years which it organizes in conjunction with the universities there are at present some 8,000 students, and in the shorter classes, lasting for one year, there are over 1,500, while if courses of lectures and study circles be included, the total number of persons who come under its influence is probably not far short of 50,000. Apart from the Workers Educational Association, there is Ruskin College, which was founded in 1899, and which does valuable work in providing education for trade unionists and cooperators who come into residence there for from one to three years. There are several more recently established colleges for adult students. There is the educational work of the Co-operative Movement, which from the very beginning has had an educational side and which has recently developed it with renewed vigor. There are the classes conducted by the Council of Labor Colleges. And there is much miscellaneous work carrried on by bodies such as the Adult School Union and the Association of University Settlements. versity Settlements.

The causes which have made all this educational activity possible cannot be reduced to any single formula. Lord Haldane spoke of the movement in his presidential address to the Adult Education Institute, as the product of a new demand for liberty and equality.

World-News About Women

The following items of news are taken from The Woman Citizen:-

The English election is over, and generally speaking women candidates for Parliament met defeat. Of the forty-one candidates only four women candidates only four women constructed that sat in the last Parliament. The conservatives re-elected Lady Astor, the Duchess of Atholl and Mrs. Hilton Philipson, and Labor put in a new candidate, Miss E. Wilkinson, of the East Middleborough division of London. Five women who sat in the last House have disappeared: Margaret Bondfield, secretary to the Ministry of Labor and the first women to occupy such a post; Susan Lawrence and Dorothy Jewson both Labor; Mrs. Wintringham and Lady Terrington both Labor; Mrs. Wintringham and Lady Terrington on the Labor ticket, six on the Liberal.

and the second of the second of the second of the second

The new reformer presented himself as a second prochet. Aliah alone is worthy of worship. Motioned, Jesus, Moses, Abraham—they were mere star who at times erred. To pray to them is to blaspheme God; to worship their sepulchres is to worship idols. Wine, tobacco—whatever deceives and intoxicates the senses, and leads men astray from the knowledge of God—are forbidden. Vice must be extirpated; its servants and its instruments must be destroyed. This explains the hostility of the Wahhabis to cities, especially to Mekka, which is a den of all vices'

Ul-Wahhab, driven from his tribe on account of his doctrine, found refuge with Mohammed Ibn Sand, Sheik of Dara-iyya, an ancestor of the present ruling Sultan of Nedjed. Ibn Saud, and after him most of the other sheiks of Nedjed, espoused the purified faith. Other Mohammedans call the

the purified faith. Other Mohammedans call the time before Mohammed the age of ignorance. The Wahhabis call the time before Abdu'l-Wahhab the age of ignorance. He maugurated a new era—not only a religious, but also a political era.

South America

The November number of The World Tomorrow is a Latin America or South The first article, on "Our America number. Neighbour, to the South," tells the reader, in

South of this country there is a geographical expression called "Latin America." Within its bounds lie twenty republies Their area combined is nearly three times that of the United States, and more than twice the size of Europe Into Brazil alone our land could be put entire, and still leave room enough for a commonwealth as big as Texas.

When these nations started on their career of

when these nations started on their career of independence a century and more ago, they may have had twenty million inhabitants, about double the population of the United States at the time. Today they have upwards of eighty million. Most of their people are "real Americans," their original ancestors were born in the New World and not in Europe. They happen to be called "Indians," because Columbus mistook those forefathers for a folk hving in southern Asia. Blended with Europeans, and in costain regions with Africans, the bulk of the population is composed of a mixture of races.

Though they differ among themselves in many matters, there are things upon which these Latin

Though they differ among themselves in many matters, there are things upon which these Latin American republics and people are agreed. Regardless of the dimensions of their respective states, whether great or small, they believe themselves to be free and independent sovereign matters. In that capacity they have been recognized by the nations of the world at large. They matter themselves, accordingly, placed on a stocker of equality in rank, dignity and privilege with other states. This entitles them to the latter of themselves.

It there are rights that the Latin American

If these are rights that the Latin American publics possess by virtue of their official inter-tional standing, logically they ought to be allowed work out their own destines as they may see and better than some European countries have the Any limitation imposed upon them in the service of their rights would wound and possibly

destroy their consciousness of nationhood. in case their behavior at any time were square with the rules of conduct laid do international understanding and practice, the remedy in abstract justice applicable to would be to subject them to an economi political boycott until they had mended

Women or Pseudo-Men ?

In a syndicated article Mr. H. G. declares that women want to become ps men. The drift of his article may be u stood from the following extracts:-

As the life of man becomes more civilized mental, his need for an adequate helpmoet inc He can no longer get along with a woman or captured and set to her special business harem. But while his need for a free and v helpmeet increases and his demands upon expand, we find no corresponding disposite able women to co-operate with men.

They seem to want to drop their sex and up as imitations all the successful male. They become a new sex of little aggressive pomen. They want to wear the way of the judge. the dressmaker adapt soldier's uniform and the djibba of a dervish into a coquettish gar. They want to substitute great women for great in our histories and turn out Buddha and Mal

and Christ in favour of feminine equivalents

They will presently want a lady God in a
in which the male will be a fading memory.

To discuss the possible treaty that may at end this instructive breach between the sexes v take far beyond the limitations set to new-articles, Mr. Wells concludes.

A French Rival to Luther Burrban

We read in Current Opinion:

Luther Burbank has a rival in Professor la Daniel, of the University of Rennes, France, has performed grafting operations on cable lettuce, beans, potatoes and various flowers such results that new species have been are the life of plants prolonged and the perfumflowers intensified. One of his first operation corded in Science Service, was to graft the life perfumble Belgian bean on a large white Soissons bean taining seeds of an entirely new variety of which has remained fixed. He took a bitter tall of cabbage unfit for food, but which resists and grafted on it a variety having a good flavor being sensitive to cold. The seeds of the his yielded a new variety that is said to taste; and to resist cold. Further:

Some of his most sensational grafts were mean the family Solenacese to which belong such to

on the family Solanaceae to which belong such ful plants as potatoes, tomatoes, tobacco and plant. Sections of egg-plant have been grafted tomato vines, the first grafts producing the region ovoid egg-plant fruit and later on the same law yielding other truit resembling tomatoes. Finally true hybrid, round in these, was egitained.

"Professor Daniel has also grafted tomato brand

ladonna on potato vines, and potato stems ly swollen steins or tubers which develop bund He was curious as to what would when he grafted a potato stem on another Would tubers continue to be produced? were, but not underground. Large beautis hung from the branches hae fruit. These bers when planted yielded a new kind of and potatoes which were more resistant floped more quickly than those of which te the offspring."

I more fantastic discovery was the finding. n more lamastic inscovery was the inding, hese second-generation hybrids, of three buch bore both aerial and subterranean the same time. These tubers being hard planted yielded a stable new variety. ie in developing, but delicious in flavor.

ge in size and very hardy.

he World's Most Insured Man

the West Has Really Done to China"

Buck asks in an article in the Review of Missions what the ally done to China Part of her with other questions, will be extract given below.

avasion of a foreign civilization a or this ancient and honourable race? of denationalizing them with the brilliant, effertescent life? I do not commercial pacts and treaties by

which we have blackened ourselves in many ways. I mean that subtler touch of personalities, the dominating airogance of the Angio-Saxon upon the apparent passivity of the Oriental How is it working out, and what have we to fear for the

Chinese?

Well, many things, superficially. I think first of this freedom of the sexes which is sweeping over us. It is an intoxicating think to young men unaccustomed to even casual contacts with erstwhile shy and modest maidens to find themselves in the co-educational codeges which are springing up in the large centres in China. Girls are boo-bing their hair and with their shoul locks are dis aiding the old downcast eyelds and ready blushes I saw to-day a brilliant young woman, married by her parents against her will, who camily wrote to her husband saying she no longer desired him. With which informal divorce she is going her way and making a remarkable record for herself in college. Of course the conservative folk are holding up their hands in right-ous horor and we hear a great deal of the sanctity of the home to be preserved at all costs. What if there never was any sanctity? Said the young woman granty. Some one has to be the varguard of the com agons young against old and criminal so tal usages. I datesay she is right Answay, right or wrong I place my vote of confidence in the young of any the and age. Their frank eyes are ant to see more freshiv and clearly than our old ones cautions and belogged with years

Intoxicating 308 80 intoxicating that some of them are being swept off their feet into the intre-bende the road. That is mexicible. The weak heads will have unstady feet. But the strong ones will march on to force a better order, I beheve so that in the end even the weak will be stronger To be sure, they do strange things,

these boys and girls. Where is Miss Warg?', I asked my class yesterday missi g her k en young tace Oh, her hance is here, and she went to see

What " I cried aglast, 'Why, no western gui would do that She should wait for him to

come to her

When he has come so far already? Are not men and women copid ' - was the stanne answer. Old half-forgetten process of my young days rose to my type, but on second mought let them do Who and to superompose my ideas of a mediacyal western chiralry upon these clear-headed voung times? Let them work out their own salvation freely.

"Like a Red Rag to a Bull"

The following note is taken from Psyche:-

Proverbs, tags, and saws which have long been accepted by the layman are constantly being discovered or reliabilitated by the expert, and in Psychology this has been puricularly the case. It would be interesting to collect examples and at the same time to compile a list of those exploded. A few months ago the successful mixture of cil and water was a hieved, we understand, by an ingenious machine, but the latest casualty is the result of a psychological constatation and is due to Professor G. M. Stratton. "Like a red rag to a bull" should, it is now claimed, mean "treated with indifference." The Professor endeavoured to interest various bulls, and a variety of cattle, tame and wild, in the colour problem. While bright and moving objects attracted a certain amount of attention among the beasts, Red, as red, failed to arouse their ire or to produce a rush Moreover, 66 California cattlemen were searchingly interiogated on the subject, and their replies confirmed this negative conclusion. On the other hand, the smell of blood does, in their opinion, create 'excitement," or at least curiosity and distrust, which need surprise nobody. What the historian may now profitably attempt is to discover the origins of the "red rag" legend, if legend it be In general, too, the range of colour-vision in animals is still an almost untouched field

Materialism

Mr Bortrand Russell discusses, in the same quarterly, materialism as a theory of the world. Says he.

Materialism as a theory of the nature of the world has had a curious history. Arising almost at the beginning of Greek philosophy, it has persisted down to our own time, in spite of the fact that very few eminent philosophers have advocated it. It has been associated with many scientific advances, and has seemed, in certain epochs, almost synonymous with a scientific outlook. Accusations of materialism have always been brought by the orthodox against their opponents, with the result that the less discriminating opponents have adopted materialism because they believed it to be an essential part of their opposition. At the present moment, the official creed of one of the largest States in the world is materialism, although haidly any one in the learned world explicitly adheres to this theory. A system of thought which has such persistent vitality must be worth studying, in spite of the professional contempt which is poured on it by most professors of metaphysics.

His conclusion is

That as a practical maxim of scientific method materialism may be accepted if it means that the goal of every science is to be merged in physics. But it must be added that physics itself is not materialistic in the old sense, since it no longer assumes matter as permanent substance. And it must also be remembered that there is no good reason to suppose materialism inctaphysically true it is a point of view which has hitherto proved useful in research, and is likely to continue useful wherever new scientific laws are being discovered, but which may well not cover the whole field and cannot be regarded as definitely true without a wholly unwarranted dogmatism.

Karma and Transmigration

In the same quarterly, Professor A. K. Sharma gives an interpretation of transmigration distinguishing it from the doctrine of Karma in the following way

ally mixed up, and confused, with another mg doctrine, that of Karma. The latter is in character; it is bused on a theory of involves questions of merit and demerit, of and punishment, it is, above all, an attempress the way in which divine justice is in human deeds, it is, in short, a phil formulation of what St. Paul meant when as you sow, so you shall reap." The forme other hand, is the statement of a nat That the soul has the tendency to pass certain experiences, under certain circums as much a law of nature, as that a body to move in a straight line, unless interfer by some other body. The two doctrines tinctive, and belief in one does not no involve belief in the other As a matter there are people who believe in Karm there are others who believe in transmigration. there are others, again, who believe in he there are still others who believe in neith followers of Buddhism, and to some ex Christianity believe in Karma, while not in transmigration Yet confusion is pos-even likely Both the doctrines have a factor, viz, action, as one of their four elements, it is, therefore, natural for an in mind to consider that there is, somehow, an connection between the two. When, furt discovered that the doctrine of transmig probably the psychological basis of the do Karma, and, conversely, that the latter is the cation of the former in the sphere of m the confusion becomes more ustural

Airplanes for Afghanistan

The transfrontier "semi-independent' tribes manage somehow to procure the improved rifles and fight with them have, however, been at a disadvantage the British from bombed by overhead -And now their kinsfolk the independent people of Afghanistan har also getting a supply of airplanes " Pathans now be between the devil deep sea, or will they be able to: airplanes in the same way as they rifles? We were led to this train of " by the following piece of news in the Age -

Last September a party of Soviet as a from Tashkent to Kabul in two days, for pose of delivering a consignment of all the Afghan Government During this planes crossed a part of the Hindu has which attains a maximum altitude of matchine and feet. Naturally there was no sale place in this rugged, remote, and spirst lated country in case a machine was first the trip was made successfully via a possible trip was made successfully via a possible mountains some twelve thousand first the planes and their supplies were during at the Afghan capital. Pravia, communities fights of the foreign press make such ado are the foreign press make such ado are the

efence of the Labour Premier's Russian Treaty

Outlook contained the following of Mr. Ramsay Macdonald's treaty shevik Russia in a recent issue:-

ad that by making a treaty with the the Prime Minister has betrayed an towards Bolshevism. Lord Curzon with the Turks, is he thereby conhankering after a harem? It is said uaranteed loan is a peace of folly Yet ted, on the one hand, that the resources are infinite, and on the other, that they turned to account except by means of a salso admitted that Russia, like Austra connot take the first sten towards recons also admitted that Russia. Ince Austria cannot take the first step towards reconvithout the aid of some external guarnesses, we are urged to wait until some other nt is set up in Russia. That means that lefinitely turn our back on Russia in her a Government which has overcome en rebellions and has survived the shock death must be regarded as firmly in death must be regarded as firmly in mally, it is objected that the Bolsheviki proper security. On the contrary, they itely admitted the principle of debt-repayare ready to accept conditions as to diture of the proposed loan. In fact, political and on financial grounds the ie treaty is thoroughly sound

The Fight against Opium

bllowing petition, for presentation pium conference at Geneva, was ly signed in India and elsewhere -ersigned, viewing in the growing addiction drugs a deadly menace to indivio nations, an insidious, rapidly spreading of the human race, which can be ally by cooperation among all nations, petition the International Opium Conmbling in November 1924, to adopt equate for total extirpation of the plants they originate, except as found necessary e and science in the judgment of the opinion of the world

ference to it, The Nation (New York)

nce below a single page of the great th will be presented to the optum (leneva this month. This page in-mes of several of India's most noted ng them Mahatma Gandhi, Rabindra-R Chatterjee, editor of the Modern R Chatterjee, editor of the Modern cutta, and K T. Paul, President of the istian Council. The signature of C. F ter and friend of India, whose opini are printed elsewhere in this issue hi are printed elsewhere in this issue. m are printed ensewhere in this issue m, appears below that of Gandhi. cotic Society and the American re-tat the Geneva conference will fight tion of narcotic drugs except in a for strictly medical use.

Chicago also prints an article

entitled Opium and the League of Nations from the pen of Mr. John Haynes Holmes in which the same petition, with some of the signatures, is quoted. Mr. Holmes adds:—

The names attached to this petition as thus received from India have great significance. Gandhi and Tagore are known to all the world-Mr. Chatterjee is the Editor of the Modern Review (Calcutta), Mr Paul the President of the All-India Christian Council, Mr. Andrews the saintly Englishman, trusted and loved through all India; the others are men of importance and influence in the Eastern world Together their names constitute a leadership in the question of opium reform of enormous moment. mous moment

The attitude of these men is of course the attitude of India herself. All responsible men in that country backed unantmously by informed and unprejudiced public opinion, demand the complete suppression of the opinion menace. They are agreed that the only effective way in which this can be done is to secure an international compact binding all articles without a compact that more agreement of the course of all nations without reservation to restrict the production of opium and other habit-forming drugs to medicinal and scientific purposes, exclusively. They look to the League of Nations as the body which

can accomplish international action to this great and beneficent end Opposed to this attitude is that of England or rather of the British Government in India. The established policy is to allow the people to continue onum-eating and thus not disturb the huge revenue acquired from this practice. Nay, the Government actually encourages the business by advancing money without interest to Indian farmers who cultivate the poppy, and thus much the first transfer to the poppy. supply the traffic. In different provinces of india. the authorities allow individuals to keep in their possession 300 to 500 grams of opium apiece. These can be freely purchased at opium stalls been sed by the Government which number about 7 (60) in India to-day According to Sherwood Eddy the poor Indian women working in Bombay mills give opium regularly to their children when they go to factories and mills to work. This is only one little instance of the drugging of an entire nation. And of course what begins of the drugging of the dru here does not end until it reaches the horizon of the world. All countries share in greater or less degree the misery and enslavement of this great people of the East

India, fortunately is awake, and is now calling to other nations, particularly America to help her. The All-India National Congress, the supreme political organization of the Indians, a lopted the following resolution at its recent meeting at Ahmedalad

In the opinion of the All-India Congress Committee, the opinin policy of the Government of India is altogether contrary to the moral welfare of the people of India and other countries. The Congress Committee is further of the opinion that the people of India would welcome the total aboli-tion of opuum traffic for purposes of revenue and is also of the opinion—that the production of opium is out of all proportion to the medical requirements of India •

Now comes the remarkable petition quoted above. It should be answered by Americans with one voice and one heart. The cause is here, as well as India's, and, greater still, the cause of all humanity. Says Mr. Taraknath Das, a distinguished Indian resident

in the United States

'The opium monopoly of the British Indian Government is the major factor in diagring the world. The people of Inlia, devoid of the power of controlling the finance and government of the country have no authority to stop this monstrous crime against humanity and explication although they are most anxious to do so. It is the British Indian Government and the British Parliament which can stop the present opium policy of Great Britain. India appeals through America to all nations and particularly to the British people to stamp out the curse of opium from the world."

India has reason to be grateful to Dr and Mrs Taraknath Das for keeping the opium and other questions before the American public.

Refuges for Non-Smokers

Special rooms, compartments or regions where one may smoke must now be replaced by refuges where one must not smoke suggests. In John H Kellogg editor of Good Health (Battle Creek, Michigan). Smoking is now the rule and the inhalation of smoke from the surrounding atmosphere is compulsory if refuges are not provided. He writes "A hundred years ago smokers were still so

"A hundred years ago smokers were still so much in the minority, and smoking was so little popular, that smoking upon the streets was not allowed in Boston. Violators of the law were arrested. Even smoking on the Boston Common was not allowed, except on the top of a certain mound southwest of the music field, a place known as 'Smokers' Circle.' The Smokers' Circle was still maintained as late as the middle of the last century, but now

the situation is reversed. Smoking has be nearly universal among men, the few non-are practically ignored and their rights are tupon. Even in our institutions of learning students should be trained in correct bodily as well as in sound mental and moral labiting has become a veritable institution, and strongly entrenched that college authoritifor the most part, abandoned all attempt at One college president has recently publicappealing little tract entitled, 'Why I am a to Commisory Smoking'

to Compulsory Smoking'
"It seems to be high time that educator ally the ruling authorities of colleges and unishould take a stand against a practise we recent years has come to be a menace plamentally and morally, to American manhos even threatening an attack upon Americanhood. We are glad to note that a few still maintain a defersive attitude against. We find in the Bulletin of Taylor University of the still maintain and the formula of the still maintain and the following paragraph with reference to the

"The tobacco habit being such an ubique condoned in so many schools, Taylor has forced to fence against it with an inflexible exceptions are mide. Students who claim vilege to attend Taylor and use tobacco of during vacation or holidays are not described in its retirement on first violation of the use of tobacco is not since the average school admits tobacco-us are simply permitted to withdraw. You, who have formed this habit should question and thus avoid falling under a twice would have themselves out a few months before. Taylor and thus avoid falling under a twice would have them and embarrass to Literary Digest.

ANATOLE FRANCE

By ASHOKE CHATTERJEE*

THE history of human civilisation is the history of reason, knowledge and consistency struggling against man's instincts, emotions and sentiments. Man's reflective power has livery stood in the way of his blind attachment to social training, faith, preferences and superstitions. Reason has slowly come to the front during a period stretching from the dawn of civilisation to this day

* This paper was read to fore the Anatole France momorial meeting held at the Calcutta University Institute on the 19th of December 1924 in which the Consul General of France prouded and many admirers of the great master and the second many admirers of the great master and the second many admirers of the great master and the second many admirers of the great master and the second many admirers of the great master and the second many admirers of the great master and the second many admirers of the great master and the second many admirers of the second many admirers of the great master and the second many admirers of the great master and the second many admirers of t

The army of Reason which has for the hordes of blind belief has belioutstanding general and we have a here to-night to honour the menwho, pethaps, was the greatest of Reason of his time

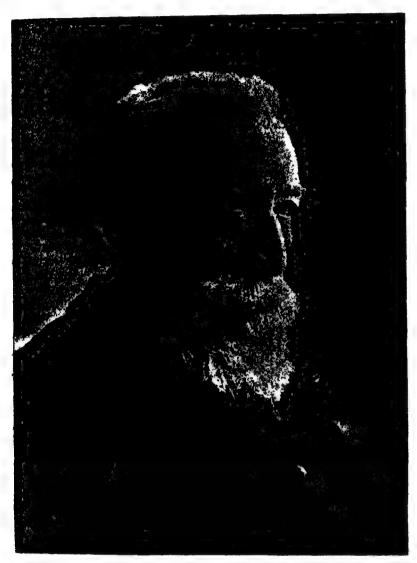

It was in France, that La E raised to the dignity of a godde it also in France that Anatole it. Logician of Life was destined to

Anatole France lived during the which knowledge and reason group prominence in the life of man had there been an another as many life.

r I am referring to the universal of learning and the daring rationalism ics in every field of thought and convho subjected all that had ever been to mankind to a merciless dissection id bare for inspection things which always been a sacrilege even to touch. the age in which stories of the most

fied as "useless", "for the benefit of vested interests," "illogical" "relics of the dead past" and so on.

So far as the theoretical development and reason went of knowledge days could hardly desire any improvement. But when we turn to the application of knowledge and reason to life and conduct

Anatole France

ing manifestations of divine agency anded as the product of hallucination hd had to relinquish for ever its right apricious. Moral Codes were reclassi-

we find a state of affairs organised along lines and based upon ideas traceable far back into petion and in which divinity was driven "the middle ages. In the days when people nowledging defeat to its own laws and . had faith to full back upon and more principles to live up to, they lived a more consistent life and were more true to their

selves than the theoretical rationalists of the days in which Anatole France lived. The people of former times were often checked in their evil thoughts or sinful deeds by an extremely wholesome emotion, known everywhere as the Fear of God. This fear of God though backed by nothing so solidly intellectual as the reflective procedure in modern brains, served, nevertheless its social purpose In modern times, we have acquired some knowledge and got rid of much of our fear of God But our knowledge and reason have not become perfect, nor have we developed a Fear of Reason to substitute our lost fear of God. As a result, modern life is fauly choked up with unreason, inconsistency and insincerity We find people doing things because they are done, we find people advocating causes which they know are evil, we find people preaching democracy, civilisation and and liberty while all that they are seriously attached to may be summed up in the one word Pragmatism in its worst sense. If the gods were ever made slaves of men, it was in the days when Reason and Learning were desfied in order to overthrow established morality and religion and to be used as instruments of the grossest anti-social crimes and inhumanities. In the days of faith and religion men suffered and often gave all for what they cherished; but now-a-days we do not find that deep attachment and lovalty in people who profess Rationalism They sacrifice reason whenever it involves some petty

gain. This has caused much of the degenetion we find everywhere to-day.

Anatole France was one of those who professed reason and stood by it always knew what he was aiming at with the help of his vast scholarship and splendid logical machine, his intellect, never swerved from his path. Thus well him subjecting all things to a keen and and separating reason from folly everywh Let me illustrate my words: You want to b. the picture of Saint Catharine. Then why w. your energies and talent in giving promine to the Physical charms of your Saint 1 the saintliness that you want to get at don't be a fool and end up by creatin study in womanty perfection. Such is Anato advice to artists who go in for painting in and cannot give up their obsession for to

His cutting sarcasm and terrible pressiveness has often made me think the day is not far off when Reason we put on the clothes of an avenging and people would start trembling with Fear of Reason in their heart Anatole has done much to restore to Reason Learning the respect which man had do them. We look forward to the day of they shall completely get back their for the spirit of Anatole is not dead is slowly developing into a force we will in the near future dominate the soft mankind and guide human endeavely attain the Truth.

NOTES

Military Training for Students

The Universities in India which have been established by the Government or have received charters from the government are going in for compulsory military training for their students As we write, one University has already adopted a resolution in favour of such training, and others are likely to follow the same course.

We do not know in what sense those who are for military training, want it. The ultimate object of military training is to till or disable the largest number of one's

opponents in the shortest possible spin fine Is it the object of those who such training for our students to make the experts in the science and art (13) slaughter?

War is a relie of barbarism and in epitome of all crimes. Disguise at a plantary in the habiliments of heroism and a war is helf.

A cry has been raised in many could demanding the outlawry of will nations are also discussing proposals disarmament and the settlement of interestional disputes by arbitration. It may

hen such is the case, are those among to are interested in the proper educational pouts, in favour of the adoption of an, barbarous and immoral methods good health, physical fitness and of discipline are all that are sought had for our young men, we do not; on the contrary, we are entirely ch arrangements as would ensure these igs. But we are not for compulsorily be anybody the science and art of men. It is no part of a liberal edular if any one wants to have such for and training, let him join the

know we shall be called cowards and rian" patriots, and that by even some who are or profess to be followers dherents of Mahatma Gandhi. We told that we stand in the way of obtaining Swaraj,—for do not Englishit us with a desire for being masters intry whilst it is to be defended

our conviction is that it is Englishselves who have deprived India wer of self-detence and it is they I in the way of her acquiring that that we cannot defend ourselves hypocritical excuse on their part their witholding political power

not mind being called cowards; ill wait to see whether the mere resolutions by the Universities to arrangements being made for ng of our young men, invespective ace, caste or province of birth, in and art of war on land, on the in the sky Will our boys have practice? Will they have any a naval warfare? Will there be for teaching them aviation and how the sky? Mere military drill and

the handling of rifles do not mean much of military training in these days

But supposing our young men had a complete training in killing men quickly and became soldiers of some sort, under whose orders would they kill? And whom would they kill? It should be borne in mind that the soldiers who were obliged to carry out General Dyer's order to massacre the crowd at Jallianwala Bagh were Indians,

Assuming that no questions of humanity, morality and spirituality were involved in soldiering, it would still be a question whether our young men should go in for military training before or after winning Swaia.

Compulsory military training for young men is advocated, because it would enable them to repel possible future invasion. Those who object to compulsory military training are called fadists, idealists, dreamers, etc., and those who are for it have a good opinion of themselves as practical men

Now in all matters practical men pay at least as much attention to the actual problem that faces them as to future problems.

lem that faces them as to future problems.

The British occupation of India is a standing, actual, present invasion. Practical men will, we hope, admit that it would not be possible to repel this standing invasion by means of a body of militarily trained College students. For we are all non-violent in practice and thought and intention, you Moreover Englishmen are not such know fools that they would allow a sufficiently large number of politically-minded young Indians to receive such effective military training as to enable them to exert pressure (of course, in a non-violent way '/ for disposing of the standing British invasion of India

If the present standing British invasion of India can be effectively disposed of in a non-violent way, without the help of our anarchists (whose existence in menacing numbers is guaranteed by Lords Reading and Lytton) and our would-be militarily trained youngmen, is it not just possible that some similar non-violent means may be found to dispose of future possible invasions? In any case, we are against war, and

In any case, we are against war, and we are faddists, idealists, dreamers and vegetarian cowards "We" here means only the editor of this **Review**;—for we have no right to brand any other Indian with any kind of infamy.—We do not want anybody

to be unlicensed or licensed murderers or

super-muiderers.

As for the defence of our country, we have no plans ready. We have no right to say that just as in the past India has been victimised and martyrised by foreign invadets, so in the future it would be better for her to undergo voluntary martyrdom than even in self-defence to go in for all the crimes and barbarities which constitute war; though we think that as such martyidom would help in the ultimate outlawiv and abolition of war, it would not be in vain, but would be worth undergoing for the salvation of humanity But so far as we individually are concerned, we would prefer the pusillanimous course of being killed to the heroic one of killing

We do not want to discuss here the question of conscription in times of emergency, though even in such times conscientious objectors have preferred imprisonment to enlistment. Nor do we want to discuss here the broad question of freedom in education in all its aspects. But we do say, that in times of peace in its ordinary sense and when there is a question of humanity and morality involved, young men ought to have the right to decide for themselves whether they would learn to kill, and it so, under whose orders they would want to kill and whom they

"Baboo English" and Japanese English.

would not want to kill

We are all familiar with specim us of "Baboo English', for the most part invented by Anglo-li dians. These gentry do not seem to be aware of the atrocousness of Anglo-Indian Urdu However, as we are not an independent and politically important people, Anglo-Indians have been free to poke fun at us But in presenting some specimens of Japanese English to its readers, The Living Age, while saying that 'Japanese Inglish has a quaint and curious quality entirely its own", admits that "it is probably not half so quant nor half so curious as English Japanese must sound" The American paper then proceeds to describe the experiences of one. Mr. E. V. Gatenby, an Englishman who teaches English in Japan, as recounted in T. P's Weekly

On one occasion he asked for a prose paraphrase of Tennyson's Break, break break! From fine replies that came in he has preced tog their this version which, it is only fair to say! is a combination of mistakes of vertical pupils.—

low temperature, colored like ashes, I say, wish to voint out all thoughts which come How happy it is for the boy supported by a who lives by hishing—the piscatory child a with his sister at play I Ah well, the naryouth sings in his boat on the inlet. The covessels advance to their paradisiacal debeneath the eminence less than a mountain long for the touch of a dead man's hand—that it vanished when I touched it—and the pissage of water of a voice that is quiet spray, become discontinuous at the lowest your chils, O Ocean! But the tender grass grows at the seashore is withered, so the never grows at the seashore."

Here are the replies in English of variou

to questions asked in English

Q What do you light a cigarette with A (1) Yes, I like it very much. (. hand Q What is the last letter of the alphidet?

A The legs are comparatively soft Q What metre is Tennyson's Ulysses' in '

A (1) In diameter (2) Thermometers written in meterphor?

The Cry for More Universities

There is a civ in various parts country for more universities. The notion of Universities can be justified one or both of two grounds. (I) it such multiplication more students, the would receive higher education, (2) is such multiplication the quality of convoid improve and there would be additions to human knowledge. We to say a few words on the ground.

control the improvement of the queeducation and for making additions to knowledge, the professors would be be men adequately equipped for such the first their already engaged to their efficiency as teachers necessed them university professors instead of the professors? If as college professors and golf called university professors and

NOTES 97

was a student, and again, when he professor, college professors had less than now. They have more leisure But the mere fact of having more has not made any college professor archer who would not have been one it it. On the other hand, Sir P C. Ray, ample, did most of his research work he had to do much teaching work also ollege professor. It would be invidious he persons (though we are in a position so) who did more research work as professors when enjoying less leisure by than now when they enjoy more and higher salary.

seems to us that the quality of educamot improve by merely renaming as universities and giving the college jors the name of university professors, higher salary and plenty of leisure ant high-grade men. If our present professors are such men, they ought ble to give good education, although not

university professors

k supposing we have not got in India fliciently qualified to give real universcation and have to import them, it ssary to see whether we can pay for It is wellknown that en from abroad professors whose intellectual equipnot greater than that of many Indian rs, have to be paid much higher than the latter So, if we want professors of higher qualifications, we prepared to pay salaries higher still i a position to do so? It is admit-'alcutta University has done more work than any other Indian universyet done But Calcutta has been al straits for years. Are the pro-w universities likely to have more

new university means some new for a senate house, a convocation is, etc. It also means much recurditure in the shape of salaries for e-chancellor, a registrar, office staff, the case of any new proposed only an old college or colleges are to university and the present College are to be called university professaid higher salaries, is there any astification for incurring the capital e and the additional recurring

ing no doubt has to be said for hods of teaching, etc. But if nen are to work a university as are now working the colleges, is there any insuperable difficulty in the way of these men doing their work according to the im-

proved methods in question?

We must not be taken to be hostile to the establishment of new universities, or to the conversion of any old style Indian university into a teaching one. What we want is that poverty-stricken India should not be made to incur additional expenditure merely for the sake of some high-sounding names. We want the thing, not the mere name. If we can have the thing, let us pay for it by all means, if we can.

If by the establishment of any proposed university more students can be educated than now, there can be no objection to its

establishment

In the Bombay Presidency there has been some discussion about starting new universities according to linguistic regions. If the promotion of the philologies and literatures of the vernaculars of the areas in question be the object in view, cannot this object be gained equally by spending the sums required for the new universities, in the foundation of chairs for these philologies, etc., in giving to advanced students and others research fellowships, in the publication of journals relating to such subjects, and in such other ways as may be considered desirable and necessary.

Fasting and "Indirect Pressure".

In Mahatma Gandhi's history of Satyagraha, of which an English translation has been appearing in Current Thought, we find the following passage

"The fourth struggle was that of the mill-hands of Ahmedalad Still I hold the victory in this case was not quite pure, as the fast I had to observe in order to sustain the labourers in their determination exercised indirect pressure upon the mill-owners."

We do not know whether Mahatma Gandhi intended to win or actually won any victory by means of his latest fast, which extended to twenty-one days. But there is no doubt that it "exercised indirect pressure upon" the public. What was the character and what the result of this indirect pressure?

The man who in India sits dharma, or the man who in Japan committed suicide when the American immigration act, shutting out Japanese among others, was passed, may be credited with the intention to exercise indirect pressure. What is the character of this sort of pressure?

"Anti-Christian."

More than one Christian person has written to the editor of this Review asking complainingly why it is or has become anti-Christian. We do not feel called upon to answer this question. But we have some counter questions ready. The editor of this journal is not and never has been or pretended to be a Christian. This journal also never was, nor was ever intended to be a Christian journal. So we do not see why it should be expected to be pro-Christian or even neutral ;--hair we have always tried to be. We will take it for granted that this monthly is anti-Christian. and on that assumption ask, are Christians pro-Hindu or pro-Muslim? On the contrary, if they are pious Christians, are they not anti-Hindu and Anti-Muslim, at least to the extent that they want all Hindus Muslims to become converts to Christianity? Do they not want that Hindus and Muslims should, in any case, give up what Christians consider errors, and accept Christian truths? Similarly, is not a non-Christian to be allowed to desire that Christians should give up what he considers then errors? May he not point out these errors? Of course, Christians will protest that these are not errors and will also criticise the method of pointing out these errors. But so may Hindus Muslims protest that what Unistians consider errors in the beliefs of the former are not eriors, and that Christians also adopt wrong methods in pointing out non-Christian errors It is strange that having a thousand and one means of criticising all non-Christian having criticised faiths, and them centuries, Christians should feel aggreeved when their faith is subjected to criticism.

Mahatma Gandhi's Congress Presidential Address.

There is one ment of all literary productions of Mahatma Gandhi which its Congress Presidential address also possesses It is brevity. This will be particularly appreciated in this season, specially by editors, when there is an avalanche of addresses, resolutions and speeches.

For one who has for so long a time con-tantly written and spoken on topics of public interest, it would not be possible to say much that is new or strikingly new. It is not a matter for surprise, therefore, that there is not much in the address which is

what Gandhiji writes and hear what he concause he is so sincere and so earnest

Ma'natma Gandhi began by payin well-deserved compliment to Shrimati Sil Naidu. In his opinion, the unique honomelection to the presidential chair should been bestowed upon her, "who did wonderful work both in Kenya and Safrica."

The address proper begins with a history of the non-cooperation movement

From the September of 1920 the Congress been principally an institution for developing sit from within. It has ceased to function by h of resolutions addressed to the Government redress of guevances. It did so because it i to believe in the beneficial character of the assisted of government. The breach of tack the Musalmans of India was the first road to the people's faith in the Governman Rowlatt Act and O'Dwyerism culminate Jallianwalla Bigh massacre, opened the eyes people to the true nature of the system (same time it was realised that the case of the system depended upon the co-q whether conscious or unconscious, and vonuntary or forced, or the people. With the voluntary or forced, of the people. therefore of mending or enoung the system decided to try to begin withdrawing v-co-operation from the top. At the Special of the Congress at Calcutta in 1920 th Government titles law-courts, edu institutions, legislative bodies and foreign (resolved upon. All the poycotts were more taken up by the parties concerned. This could not or would not, retire from the I do not propose to trace the chequeret of the non-cooperation movement. In the a single boycott was anywhere near (o). every one of them had undoubtediry to of diminishing the prestige of the pr institution boy cotted

All this is true history. The f passages on the boycott of violence a adoption of non-violence are no less to

The most important boycott was the of violence. Wanst it appeared at one to entirely successful, it was soon discothe non-violence was only skin-deep 1 is passive non-violence of herpiessnes collightened non-violence of resource law result was an exuption of intolerance againwho did not non-cooperate This was a of a subtler type. In spite, however, of it defect I make bold to say that the pronon-violence checked the outbreak violence which would certainly have broket not hon-violent non-cooperation come to 11 is my deliberate conviction that non ' cooperation has given to the people a constraint of their strength. It has brought to be the hidden powers in the people of the through suffering. It has caused at any among the masses which perhaps no o' or " quid have.

Though, therefore, non-violent net call has not brought us Swars), though it has about certain deplorable results and the

NOTES

tions that were sought to be boycotted are flourishing, in my humble opinion, non-non-cooperation as a means of attaining a freedom has come to stay and that even tial success has brought us nearer Swaraj. Is no mestaking the fact that the capacity iffering for the sake of a cause must ad-

e think that even the opponents of noneration will admit that "non-violent nonbration has given to the people a coneness of their strength. It has brought be surface the hidden powers in the b of resistance through suffering. It aused an awakening among the masses perhaps no other method could have." "the capacity for suffering for the sake cause must advance it," is also an

regards the boycott of foreign cloth, Gandhi says that out of regard for the pent of an English friend, the word ott" has been changed in the agreement the Swarajya party into refusal to use n cloth, as "there is no doubt a bad "It usually about the word Bovcott." s hatred" But it is so convenient and a word that throughout the section of dress devoted to and entitled "Foreign Boycott," the hoycotted word has been again and again! Mahatmaji savs, "so I am concerned I have not intended ord to bear any such meaning," namely, inplying hatred. That is undoubtedly But when British cloth was frequently of by non-cooperators as impure and n and was burnt, there was perhaps natred.

raw material and can produce more, with regard to the boycott of cloth, Mahatmaji is right in observ-

poveott is not merely a right but a duty, inch a duty as hovcott of foreign waters if they were imported to substitute the the Indian rivers.

regard to the results which the to use foreign cloth is intended to Mr. Gandhi says:—

thonary crime is intended to exert pressure, the insane pressure of anger and ill-will, that non-violent acts exert pressure far etive than violent acts for that pressure im good-will and gentleness. Boycott of oth exerts such pressure. We import the nount of foreign cloth from Lancashire, by far the largest of all our imports, ag next. Britain's chief interest centres. Lancashire trade with India. It is the x more than any other that has ruing the asant and imposed partial idleness upon

him by depriving him of the one supplementary occupation he had. Boycott of foreign cloth is therefore a necessity if he is to live. The plan present to therefore, is not merely to induce the refuse to buy the cheap and mee-looking foreign fabric but also by teaching him to utilize his spare hours in carding and spinning cotton and getting it woven by the village weavers to dress immself in khaddar so woven and thus to save him the cost of buying foreign and for that matter even Indian mill-made cloth. Thus boycott of foreign cloth by means of hand-spinning and hand-weaving, i e. khaddar, not only saves the peasant's money but it enables us workers to render social service of a first class order. It brings us into direct touch with the villagers. It enables us to give them relipolitual churation and teach them to become self-sustained and self-reliant. Organisation of khaddar is thus infinitely better than co-operative societies. or any other form of village organisation. It is fraught with the highest political consequence, hecause it removes the greatest immoral temptation from Britain's way. I call the Lancashire trade immoral, because it was raised and is sustained on the run of millions of India's peasants. And as one immorality leads to another, the many proved immoral acts of Britain are traceable to this one immoral traffic. If therefore this one great temptation is removed from Britain's path by Indua's vol-untary effort, it would be good for Indua, good for Britain and, as Britain is to-day the predominant world-power, good even for humanity.

With what has been quoted above, we are in general agreement. We may, however, be allowed to point out that the Indian peasant (of the male sex) was not generally a spinner far as we are aware;—his womenfolk were. In drawing attention to this fact, we do not mean to say or suggest that spinning is an undignified occupation for the male sex or that men should not or cannot spin. We simply state a historical fact. There is also another fact which requires to be borne in mind Owing to the decay of the hand-weaving industry, large numbers of weavers have been thrown entirely upon the land. their case, it is quite correct to say, that the Lancishire textile trade with India has rumed them and imposed partial iddleness upon them by depriving them of the one supplementary occupation they had. In the case of other peasants, such an observation would not be quite accurate.

As regards the immorality of the Lancashine trade, there would be general agreement, at least among Indians and other non-British peoples who do not exploit India that the Lancashine trade having been established by wicked methods upon the ruin of the Indian spinning and weaving industries, was immoral in its origin and progress. It is also correct to say that as the cotton excise duty has to some extent hampered the growth of the Indian mill industry, Lancashire

has been to blame. But as it is always profitable to look at matters from the angle of those whom we criticise and to find out to what extent we and not these others have been to blame, we should try to imagine what Lancashire may have to say Lancashire may say. "You have had some four years at least-if the period were reckoned from the days of the Swadeshi agitation consequent upon the partition of Bengal, it would be well-nigh two decades—to show what you can do to clotho yourselves by handspinning and hand-weaving with which we have not interfered in recent years. But we do not see that you have made much headway we may claim that we are supplying a real need. But if you think that hard words will clothe you, you are welcome to use them'

The coucluding portion of Mahatman's observations on the refu-al to use foreign cloth are worth quoting and pondering upon, particularly on account of the principles, enunciated by him, which ought to govern international trade relations

I do not endorse the proposition that supply follows demand. On the contrary, demand is often artificially created by unscrippilous vendors. And if a nation is bound, as I hold it is, like individuals to comply with a code of moral conduct, then it must consider the welfare of those whose wants it seeks to supply. It is wrong and immoral for a nation to supply for instance intoxicating liquor to those who are addicted to drink. What is true of intoxicants is true of grain or cloth, if the discontinuance of their cultivation or manufacture in the country to which foreign grain or cloth are exported results in enforced idleness or penury. These latter hurt a man's soul and body just as much as intoxication. Depression is but excitement upside down and hence equally disastrous in its results and often more so because we have not yet learnt to regard as immoral or sinful the depression of idleness or penury.

BRITAINS DUTS

It is then I hold the duty of Great Britain to regulate her exports with due regard to the welfare of India, as it is India's to regulate her imports with due regard to her own welfare. That economics is untrue which ignores or descegards moral values. The extension of the law of non-violence in the domain of economics means nothing less than the introduction of moral values as a factor to be considered in regulating international commerce and I must confess that my ambition is nothing less than to see international relations placed on a noral basis through India's efforts.

There is no doubt that

The fruition of the boycott of foreign cloth hrough hand spinning and khaddar is calculated not only to bring about a political result of the list magnitude, it is calculated also to make the corest of India, whether men or women, conscious of their strength and make them partiakers in the struggle for India's freedom.

But it is a pity that this fruition been long in coming, and there is no known when, if at all, it will arrive.

So far as we are concerned, the follows words spoken by Mahatma Gandhi with releasence to some of his critics—we do not king who they are—have no application, though they are true.—

To say that it is merely an old woman's original tion is to ignore facts. Spinning mills are multiplication of spinning wheels. They are mining by men it is time that we got out of prospections that some occupations are beneatly adjustly of men. Under normal conditions not dispitly of the State of the future will always have keep some men at the spinning wheel so do make improvements in it within the limitate which as a cottage industry it must have a long inform you that the progress the mechanism of wheel has made would have been impossible, it is of us men had not worked at it and had not the about it day and night.

As regards civil disobedience, Mr. Gaig

I swear by Civil Disobedience Bur of Disobedience for the attainment of Swar ii is impossibility unless and until we have attained power of achieving boycott of foreign cloth

Gandhiji's views on Hindu-Moslem are wellknown, but some of them, reper in the address, will bear reproduction bet

Hindu-Muslim unity is not less important the spinning wheel. It is the breath of coal I do not need to occupy much of your to this question, because the necessity of it for so is almost universally accepted I say it because I know some Hindus and some Musawho prefer the present condition of dependent Great Britain it they cannot have either a Hindu or wholly Musalman India. Happily number is small.

There are also others who, like ourse would rather not have Swaraj if its unition be that "concessions" would have to always and permanently made under the threat of the Musalmans walking out and buttiessing up or founding some raj and the covert menace of "religiousts"

Mr Gandhi adds --

Interested persons who were disappoint of the palmy days of non-cooperation, now that lost the chaim of novelty, have found opportunity and are trading upon the personal property of the self-shiess of both the common the result is written in the history of the of the past two years. Religion has been may of the fanatics claim must be observed the fanatics claim must be observed any cost. Economic and political causes been brought into play for the sake of said trouble.

All this is true. But did not the hall

NOTES 101

at itself, and did not also the appeals to the religious sentiment by peration leaders revive and strengthen is bigotry "?

are glad to find ourselves in comreement with Mr (fandhi with regard

goal."

roal must be removal, at the earliest moment, of communal or sectional ation. A common electorate must y elect its representatives on the sole i merit. In other words, even where the are in a minority, they are not to any of those concessions which are ade to the Musalmans where they minority And of course the Hindu is also are nowhere to have the

ges of a majority

this is not so serious a difficulty The sacrifices which are to de for conciliating and allaying of the Musalmans ought ry and impermanent in picions temporary But we have not yet seen any proceeding from Muhammadan n which any time-limit is set to the nd separate communal treatment claimed on behalf of that communirently it wants communal represenminunal apportionment of the servof educational facilities, etc. for pr at least for an indefinite period equited is some arrangement, agreeonstitutional device (such as that led in the Mysore Constitutional mmittee's Report) by which comresentation may automatically be or come to an end when no long-

andhi's views on untouchability wn, but we will note some of

an essentially Hindu question and pt claim or take Swaraj till they have liberty of the suppressed classes sunk with the latter's suppression.

Historians tell us that the Aryan invaders treated the original inhabitants of Hindustan precisely as the English invaders treat us, if not much worse If so, our helotry is a just retribution for our having created an untouchable class. The priests tell us that untouchability is a divine appointment. I claim to know something of Hinduism. I am certain that the priests are wrong. It is a blasphemy to say that God set apart any portion of humanity as untouchable

This is quite true. But untouchability has arisen out of and is only the worst fruit of the Hindu caste system and the Hindu caste spirit. So untouchability cannot be totally eradicated so long as its roots in the Hindu caste system and the Hindu caste spirit are not destroyed.

Those who use the word shuddhi and perform the shuddhi or purification rites, should bear in mind the following words of Mahatma Gandhi —

The purification required is not of untouchables but of the so-called superior castes. There is no vice that is special to the untouchables, not even dirt and insanitation. It is our arrogance which blinds us superior Hindus to our own blemishes and which magnifies those of our down-tradden brethren whom we have suppressed and whom we keep under suppression. Religions like nations are being weighed in the balance. God's grace and revelation are the monopoly of no race or nation. They descend equally upon all who wait upon Coil. That religion and that nation will be blotted out of the face of the earth which pins its faith to injustice untruth or violence God is Light, not darkness God is Love, not hate God is Truth, not untruth. God alone is tireat. We his creatures are but dust. Let us be humide and recognise the place of the lowhest of His creatures. Krishna honoured. Sudama in his rags, as he honoured no one else.

We are glad to find the Mahatma repeating his conviction that

Whether we win Swaraj or not, the Hindus have to purify themselves, before they can hope to revive the Vedic philosophy and make it a living reality

We reproduce below in full Mahatmaji's points for a Swaraj scheme

1. The qualification for the franchise should be neither property nor position but manual work such for example as suggested for the Congress Franchise Literary or property test has proved to be clusive. Manual work gives an opportunity to all who wish to take part in the government and the well-being of the State.

2. The rumous military expenditure should be curtailed to the proportion necessary for protection

of life and property in normal times.

3. Administration of justice should be cheapened and with that end in view the final court of appeal should be not in London but in Delhi. Pagties to civil suits must be compelled in the majority of cases to refer their disputes to arbitration, the decisions of these Panchayats to be final except in cases of corruption or obvious misapplication

The Eight-Hour Day

Shorter working hours for labourers all over the world is an ideal against which we have nothing to say. On the contrary, we consider shorter hours to be essential in view of the great nervous and muscular strain involved in modern industrial life, the cultural value of leisure and the growing prosperity of the nations of the world.

It is well known that specialised work done under conditions of factory discipline causes more fatigue than work of a general nature done in the household, or in a small cottage workshop. Fatigue, in most cases, is fatigue of the nervous system, and routinised and monotonous work causes more of it than work which gives the nerves variety

and occasional rest

As to the cultural value of leisure, we hardly need say anything If all one's time were used up in production of wealth and in rest for giving the fatigued body a chance to regain its working power, the quality of human life would be considerably lowered and democracy would become practically meaningless "Idling", if properly done, is the most elevating thing that man can do

Then we have to consider the reward that man has earned from nature by ceaseless thinking and activity during thousands of years. Man has not created machinery and method as his harness. It is but natural that man should look forward to days when his wants will be removed more easily than has been the case so far, for has not man done sufficient in the past to claim a little more lessure in the future?

The above are in short the arguments in favour of shorter hours The International Labour Organisation which works for "labourers" all over the world is attempting to get all the nations of the world to sign the Eight-Hour Convention which has been in existence since 1920, in which year Greece ratified it The Political Science Quarterly for September 1924 says regarding activities of the Organi-ation

The direct and visible result thus far has been that five States have ratified the Eight-Hour Convention—Greece in 1920, Rumania India and Czecho-Slovakia in 1921 and Bulgaria in 1923.

The countries mentioned above are by no means the most industrially advanced countries in the world. With the exception of Czecho-Slovakia, they may be classed, rather, as backward. What forces made them ratify the Convention before Great Britain, France. Germany, Belgium, Holland and the United

States had done so, are not known to the case of India, of course, we kno the ratification had little to do w Indian nation.

Industrially backward nations are the times in education and other arrangements. Their people are less ac to strict discipline and working at pressure. So that shorter hours i workers of such nations will mean, no fitable idling but waste of time and productivity Until it so happened the workmen were brought up under training and discipline since their ch and arrangements were made for using lersure to any good, any shortening o ing hours will mean less production degeneration Should such a state of come about the employers would have to lower their wages or increase the p their goods. In the first eventuality, or is not necessary, and in the secon ability of such goods to find a in the face of foreign competition wor greatly diminished

We think that as factory labourers: are not subjected to the extreme spe tion and strain which the workers of trially advanced nations have to u they do not require as short how the latter to keep up their efficiency they want just now are higher wages dwellings, cleaner factories, purer of food, facilities for education and other things and not more leisure ! in the grog shop or the gutter. By hours they are bound to suffer one " another, either through lower was through unemployment due to the : market at their produces will surely as a result of paying them, the same for working less hours. The chances of keeping intact or bettering their profe are little, for they will not, with the si ing of the working hours, automo become more disciplined, more skile. more honest

In some of the industrially are countries we already find the bunt Day in force, not through rather? International Conventions, but threamore rational means of Collective Bard by working men. In Great Britain ninety peracent, of the industrial works in only eight hours a day. But the others who work longer hours, because do not require more leisure or cannol ' to produce less for the wages the ! "

NOTES 105

a decent life. We think that the hould, after paying proper attention to al conditions, fix some sort of a maximum of a maximum should not be on an International basis when all do not show in their industrial life conditions of specialisation, factory ine, speed and efficiency, honesty and ional and other welfare institutions.

he Opium Conference at Geneva.

vate letters, which I have received from during the Opium Conference, have he a lamentable story concerning the taken up by Mr John Campbell and ayton, representing the Government of before the League of Nations. Everythat was possible has been done to t and impede progress. The American presented a clear-cut formula, that ium cultivated should be restricted to dicinal and scientific requirements of rid This has been stoutly opposed by ternment of India on the ground that nvolve a great hard-hip on the Indian who need the opium for their own uses and know well how to handle ut causing any serious harm to themr their children. All this has been done. of the fact that a thousand times e people of India have protested such an attitude in the columns of ss, and in spite of the fact also that en proved by verifiable figures that m opium addiction of a very serious has prevailed for generations past, still prevailing to-day. Nevertheless ernment of India has continually on this outrageous misrepresentation shes of the Indian people Up to the be greater powers of Europe have the side of Great Britain and the nt of India in objecting to the proposals. On the other hand, the ers of Europe and of other conthose interests are not directly by the opium traffic, have stood America. The final session of the has been postponed till January se who were there, representing of humanity, have told me that greatly disappointed and have very of a satisfactory settlement at the n at Geneva on January 20th. It

is encouraging however to note that the Draft Report of the Opium Enquiry in Assam, carried out by the National Congress, has proved of very great service indeed during the Geneva Session

C. F. A.

The Last Straw

The Governor General of the South African Union 'as now himself certificated the Natal Ordinance depriving Indians in Durban, of the municipal franchise, and thus making them without any citizenship rights at all. There can be no doubt that that will soon ne in the deprivation of citizenship rights to all. Indians in Natal. Thus only the few Indians in the Cape Province will have any citizen rights in the whole of South Africa. This new act, which has now been sanctioned by the Governor General, is the most flagrant breach of the Smuts-Gandhi agreement, which has yet been recorded. It is surely "the last straw which breaks the camel's back"

C. F. A.

The Assam Government and Opium.

It came as a great shock to me to learn from Mr Rohmi Kanta Hatibarua that the Assam Government has in reality never pledged itself to abolish the sale of opium in Assam (except to registered addicts) within ten years. A resolution demanding this was passed in the Assam Legislative Council by 26 votes to 13 Among the thirteen, who voted against the resolution, were official members and title-holders The vote itself was a clear expression of unanimous popular opinion in Assam The resolution demanded the abolition of opium sales in Assam within ten years at the rate of 10 per cent per annum, making at the same time allowance for the registration of those who had contracted the opium habit. The Key. Herbert Anderson of Calcutta and many others have again and again congratulated the Government of Assam and Government of India heartily on the fact that this resolution, which had commanded such popular support had been accepted by Government. I have never seen in the press any contradiction of all these congratulatory statements. I was actaally present in London when Mr. Anderson

the Government of India on commended this forward step which had been taken by the Reform Councils Though there were those who were in close touch with the Government of India present on that occasion there were no contradictions offered to this statement thus made in public in all good faith by Mr Anderson Yet now a question recently asked in the Assam Legislative Council has elicited the fact, that all these congratulations are vain, and that the Covernment of Assam has done nothing of the kind, but is holding on to its opium revenue to the very end, just as the Government of India itself is holding on to its opium revenue policy at Geneva Whon I heard this for the first time, it came, as I have said, as a great shock I had rientioned myself several times to Government officials my own satisfaction for what I supposed to be the step taken by the Covernment of Assam, and I have myself spoken in public congratulating that Government just as Mi-Anderson has done, It this question had not been asked in the Assam Council if I had not received a copy of their answer from Mr Hatibarna I shall have been under the same misapprehension to-day Campbell, at Geneva itself, has spoken again and again of opium in India being a transferred' subject, yet we find out from this one vital instance how absolutely futile the Reform Councils are whenever they are met by the Government of India's executive opposition

German Efforts to Regain Her Colonies in South-West Africa

Mr Scholz, a proneer German Chemist in Africa, has recently presented a memorandum to the League of Nations suggesting recovery of German Colonies in Africa for Germany

Scholz submitted a written memoran lun, to the Commission and interviewed personally the juincipal members who received him controlly. He contended that the successful working of the Dawes plan obligated the return of the treman colonies because the plan emphasized the necessity of Germany's economy freshom. Voicing what he said was the opinion of the German people and the German Government he insist deconomic freedom involved economic colonial liberty.

Oermany Scholz declared should be allowed the possibility of growing her own raw materials to feed her industries since the value of German money would be decreased if Germany were obliged to purchase her raw materials elsewhere. Contending that conditions in the Germanies were not nearly as bad as they had represented at the Peace Conference, he a that the mandatory powers had not crented conditions affecting the welfare of the na regard to education, samutation, labor, land rand construction of railways. Moreover, he differmany had had no multarization of natives aid, now existed in West Africa. Under time there had been a policy of absolute frewhereas now free trade was restricted to root the League of Vations.

The German representative further p

The German representative further p that six years after the armistice Germa were excluded from all of the former colonies except South-west. Africa. He sai sinds of German colonial pioneers, who be cated their lives to the development of ne in Africa. New Gumea and the South Section were unable to return there.

Scholz was informed that the Manda mission had no power to intervene in the and no authority to grant his request that mit his appeal for the convocation of a col-

from a to the Council of the League. The Council representative said that not about unit hope that the council was special surseonmittee to stady the quest declared that it the return of the form trivious was found impossible the example of the council would take to some equivalents for instinction. Thus in that if lind in the heart of Central Arms

Repression, a Symptom.

the first reading of Mahatma Gandhi's bal addres—at the National Congress agraph—has struck me—with special its cogeney—and exactness—It is opiession a Symptom' There he has whole issue between Britain and India matic conciseness

38 European dominance and Asiatic 18 the formula for the new represgives the examples of Kenya and 19t and Bengal

rarge thing to me is this It is cealised, that the phrase, which is the kings Proclamation of 1917, it India shall remain 'an integral e British Empire' is tainted with civil formula of European domina-Asiatic subjection. Canada may integral part of the British Empire, because Canada is British and and Canadians are imperialists

But India cannot,—first of all, because India is not British or European, and secondly, because India is not in percent

CFA

Egypt and Britain

Mahatma Gandhi's words about Egypt are fully justified. Anarchical crime is no less detestable in Governments than in individuals and it is a crime of anarchy to tear up solemn treaties of obligation under the cover of resentment for a murder. The worst sign of all is to find that such an act has called forth practically no protest from the civilised peoples of the West because it is done against an Lastern people.

(F A.

The Motive Behind British Imperia Preference and Indian Merchant Marine

The result of the corporate was corporately stops to the Brit, by we come and and the theorem may be of their members of their record of their record of their was a second of their was a surface of the record of their was an expension of their second of

the Atlantic Meantle of April 1924. Undoubtedly the metry beyind the British scheme of Imperial Protective is to have the monopoly of the trade and artere annaimeations. India is to be sacreced to British interests, by making ner a party to Imperial preference. It is time now to denounce any and every suggestion of Imperial preference so far as India is enacerned and take steps so that India may be able to develop her own merchant marine with will be adequate to her own needs and national commerce. The first step, to see ite, this is to have the coast-wise trade of Iedia so regulated that the Indian ships will have preference. Second thing that is essential for India is to have proper training of Indian young men in all branches of naval engineering and the trovernment should be induced to make suitable arrangements for this It is desirable to have an Indian National Naval College established at the earliest opportunity.

TD

Civic Righteousness among Canadians

We have been often told that the Indian people are not capable of self-government and civic righteousness is the exclusive viitue of the so-called white-people if not the superior Anglo-Saxons The Canadians have been enjoying self-government for generations, like the people of the United States of America We often hear of whole-sale, graft in the United States, and the following news-item, published in the New York Times, throws some light on the spirit of civic righteousness among the Canadians

SEXATOR TAYIOR OF VANCOUNTER SAVE THERE IS ORGANIER RASCHILL' IN RAIL DIPARTMENT.

Succeed to The New York Times

Ottawn Out Wir 9-"Organized member 'exists in the National Ruly as and Steamship Duratments on the Pacific Coast declared Senator I D. Taxlor of Vancouver in the Senate to-day. He preferred three charges

That the Government merchant marine was

used for rum-running on the Pierfic Coast

That Government officials conspired to defraud marine insul mee compinies

That the rulway department at Vancouver was recting with grift

That honest employes who protested against the graft and frand were dismissed,

That dishonest employes were retained and promoted

That Sir Henry Thornton head of the Vational Railways and the higher officials has bucked or negatived all imprimes

Sonator Tivlor claimed to have affidivity supporting all his charges and assumed full responsibility for them. He read a mass of correspondence extending over a vent with Sir Henry Thornton and other officials in which he had sought a searching inanirv

In support of the churs of graft in the Railway Department he quoted from a document which he claimed was a copy of a private memo-randism made by the acting national investigator

to Sir Honry Thornton
So serious are the accusations regarded that
Senator W. H. Bennett gave note of that he would move for a special Senate committee to investigate them.

This proces that neither the spirit of civic righteonsness nor "rascality of high officials" is a special trait of any nation Indian people should take notice of it and do their best that they may surpass other nations in matters of "civic righteousness."

Degeneration of India's Building Art

We publish elsewhere an article by Srish Chandra Chatterjee A M A. E on the

Revival of Indian Architecture. Mr. Cha is an architect and a civil engineer of perience and ability. His reflexions of sad state of our National Architectur coloured with genuine feeling and a to revive in Indian Architecture it spirit and grandeur. We have often note sorrow growing ugliness of modern They remind one of 1 buildings accommodation or floor space, but no beauty or of the vearnings in the 1. the architect. Worked out like formul soulless usefulness, modern buildings ... aesthetics by the faultless precision of construction; by their agreement with ciples which have hardly anything with beauty. We invite the attention thinking people to this article

Can Untouchability be Defended

One Babu Kalishankar Chakia i Chittagong has addiessed a letter to M Andrews which appears in the You | of December 11, 1924. In this let Kalishankar Chakravarti attempts ! untouchability on sociological grouaccuses Mr. Andrews of agnorance r "our social customs" and challe Andrews' statement that there is "o and practical serfdom" in India In-Babu kalisharkai has not made e he accuses Mr Andrews of 1900 r garding India's social customs. His may be due to his enthusiasm? untouchability to be a marval of s acumen He calls this system a system elsewhere, but idealises system " he finds it absent in Jagannath, \ and Chandranath It is a bit jet find Babu Kalishankar going into over the fact that Hindus occasregard the implications of social la in the opinion of Babu Kalishanke the purity of the nation" and so corruption and destruction. He one or two instances of low-caste in ande good in life, in order to case. It is certainly for the sake that Baby Kalishankar reframs " the millions of instances in whi ability had made life perfect hell ! He concedes, however, that unt 1.1 "vicious" "when attended with Pi" oppression, but with them very g 2

whose character, habit and intellect similar, and this kept the society in id contentment for thousands of years, id it from corruption and destruction be to British immorality and comments, oner you remove the restrictions of ibility the sooner you can expect to lose scenes (of immorality) enacted

pems that in the opinion of Babu kar Chakravarti immorality must of be inter-caste. His other contenalso equally alive with subtleties in everywhere that untouchability is with hatred, contempt, oppression, and inhumanity; then what good ay that it would be an ideal thing these? So would small-pox without less, misery and fatality. He says that ast contentment and peace were due system If it is so, why are we miserough we still have got the caste Moreover Indian History does not e same story as Babu Kalishankar n have Indians bled and suffered to ay from the torture of Varnasrama-

tma Gandhi commenting upon this tes

primon Wr. Andrews is over-considerate dishanker Chakravarti. Whilst the consumouchables in the south is no doubt attain that of the untouchables in Bengal, tough in Bengal and admits of no detence ican to terspeak of the effect of untouchables the simple fact that the oppressors the enormity of their own misdeeds habity of Hinduism is probably worse if the modern impendists. We have bottle with a rigidity not yet observable operal edition. Will Babu Kalishankar inher that the English Impendists offer touchability the same defence that he Hindu untouchability. The safer course not to find out which is worse, but to be evil of our own system and endeavour

ronouncement on General Dyer

not know exactly the aims and e Royal Asiatic Society, but we that it takes only a severo erest in things Asiatic We do t there is anything to prevent

the Society from adopting a point of view somewhat different from that of cold-blooded scholarship. This idea has recently been stimulated by a review which appeared in the Society's Journal of October 1924

Sir Verney Lovett K. C. S. I. M. A., has written a book on India which has been reviewed in the Journal of the Royal Asiatic Society by R. P. Dewhurst, who credits Sir Verney with achievements which any author might envy. We have not read Sir. Verney Lovett's New History of India and are not in a position to offer any opinion on the quality of the book It however appears from the review that the greatest triumph of Sir Verney is in his treatment of the period of India's history between 1914 and In dealing with this period, we are told, he has displayed wonderful judgment, The reviewer impartiality, and fairness says, "As a typical example of the judicial spirit which characterizes the book, a few sentences dealing with the thorny Amritsar question may be quoted?" And he quotes the following fair and impartial lines.

It appears that all through those terrible minutes his (General Divers) mind was filled to over-flowing with three considerations, the futility of all previous measures the continuous attempts to isolate his force the certainty that if it were swept away massa ie and destruction would reign unches ked far and wide. We must deaply regret that the thoughts which possessed him left no room for cooler diservation or for the natural compassion which must otherwise have interposed. But there can be no doubt that he was confronted by a terrible and highly critical emergency and try a wide impression that the arm of the Government was paralysed.

The reviewer was so deeply moved by this keen and impartial analysis of Tiyer's psychology at the moment of wantonly shooting down inoffensive and helpless men, women and children that he could not help commenting "It would be very difficult though these words were written before the recent ventilation of the Amritsar affair in the law courts, to improve on them as a final pronouncement on the matter."

The Amritsar affair was no doubt "ventilated" artificially in the law courts to make things sanitary for dame Prestige to live in, but will rentilation ever remove the steach?

We congratulate the Royal Asiatic Society on its endeavours to carry on the work of ventilation to a successful end Ventilation works wonders !

A C

Lord Haldane on Indian Philosophy.

In the course of a private letter to Professor Surendranath Dasgupta, Haldane, whose right to speak on philosophica matters is admitted on all hands, says

"You have done a great piece of work. Nowhere else. I have seen such a systematic review of the Indian systems simultaneous as well as successive And you have brought to your endeayour not only great knowledge of Fistern Idealism but also a wide acquaintance with the idealism of the West The result is a view of development which is riesh at all events so far as I am concerned

But we are more concerned with Lord Haldane says of Indian plalo ophy than with his pronouncement on Prot 11.1gupta's book Says Lord Haldane

Indian philosophy has a longer lesson than that ever of tries an thought which it pres do I am struck at the series time with the way an which senie let the most compute develop of post-Kantian objective alegasys in Europe of of post-regularly object to advantage of the property anticipated in social of the Indian systems, which you dose how When the West however appears to have been stronger as in the treatous start which in has midden to the dose of the dose of Beauty avoid forms to think for most in that the stronger treating the Barrier and the or Viets Barrier and the stronger to the treatous and the stronger treating the stronger treating the stronger treating and the stronger treating treating the stronger treating trea

reological Discoveries in Sindh and the Panjab

ogists may be left to discuss and sultural and historical affinities ople tokens of whose civilisation unsearthed by Rai Bahadui shiii in the Panjab and Babu Anciji in Sindh. These prove that, t than has hitherto been supposed, of civilisation had been reached some Indians—no matter whether Travidians or belonged to some patters.

resting to learn in this connecmore than twelve years ago, wadatta Bhandarkar concluded that the ruins at Mohen-jo-Daio, where in Sindh such remarkable things have been dug out, were of comparatively recent date The Professor wrote --

Balon Rakhaldas Barengee

I also visited what is called Military and the open miles south-east of Dekti in Larkana district: We hid received glowing accounts of this spot and I had great hopes of finding it to be as interesting as the runs of the Mirjan Klas stupin before they were diag out. But he visiting the place I was greatly disappeared. Here are spread the remains of an old place for about three-sfourths of a mile. Year the western edge is a tower an amound nearly seventy feet high from the ground-level from which the mound gradually rises of the top portion only the inner core has remained consisting of sunsdinsh brick work. The bottom of it appears to have been reached most proadly by treasure-hunters who I was told frequently excavated the most promising spots here those by towards the west and south are six mounds, but of a far less height and there seems to have been a river once running between the tower mound and the other heaps. On the north side of the tower again are vestiges of an old brick rival running up. The bricks as a rule are of modern type and are not of large dimensions like the old. There are no doubt some here which look old but they are few and far between. Not a single carved moulded brick I was able to discover here. What a confrast to the Marpin Khas stupa where cart-loads of such bricks, were found before it was

It is admitted by all that Mr C R Das made a very great sacrifice by giving up his practice as a lawyer. And the legal tratermity are certainly in a better position to appreciate the extent of this sacrifice than the lay public Yet we find that the High Court Vakils' Library has paid only Rs 77-89, the High Court Indian Barristers ml, the Attorneys mil, the Small Cause Court Rs 164-9-0, and the Alipore Bar Labrary Rs 199-7-0 We do not know why there has been this poor response from the lawvers. Perhaps most of them do not believe in the bona fides, or the soundness, or the practicability of the Swarai Party's village reconstruction and organisation scheme or perhaps these hardheaded men know better how to receive than to give or is it that they did not believe in the miraculous powers claimed for the scheme in such big-type mountebank cries as, 'You may be the next victim of the ordinance. Pay to kill it,' "Yie you for repression? Pay to destroy it ">

There are two big items. One is Mr C R Das's personal collection, from various wards of Calcutta and Howiah, amounting to Rs. 141,945, 2-9, and another, Mr. A. N. Mullick's contribution of Rs 10,000 Deducting these from the total sum of Rs 2.25 000 we get a sum of Rs 70 000 in round numbers which represents the total collection of all of Mr Das's followers. As we have been told that only or mainly poor men have paid, Mr C R Das singly must have asked doubte as many men' as all his followers put together, for a rupee or so each. The mere physical energy and activity which this feat implies, must excite the envy of even champion Maiathon junners

"In Mother's Memory."

Maulana Mohamed Ali has been publishing in The Comrade a series of articles with the caption "In Mother's Memory". These articles are so good that we do hope they will be published in book-form with as many good portraits as car be produced of the revered lady whom the Indian public called Bi Amman. If for no other reason than simply being the sons of such a mother, Maulanas Shaukat Ali and Mohamed Ali would deserve to be held in high respect.

It is difficult to choose any passages from these articles for reproduction. But we will give one long and one short extract. We will remind our leaders by way of preface that Bi Amman became a widow when she was a young woman of twenty-eight

During her last illness, and only a couple of weeks before her death mother was asked if she would not prefer to get shorter kurtus or shirts made for her now that she was not moving about, and the many creases of the long khaddar kurtas she wore had to be smoothed away every now and then to make it comfortable for her to he in bed But she refused, and the refusal brought to light an incident that had happened just when father had died. In those days it was the fashion for Muslim ladies to wear kintis which were short slow bees shirts or rather blouses, and it was only old ladies who had been on a pilgrimage to the Hejaz that would occasionally substitute for these garments and the voluminous bifurcated skirts of La know the long kurtas and trousers in imitation more or less of the lashions of Mecca and Medina-Mother who had not ver been on a pilgrimage to these holy places had got a couple of these hintus made some one ago, but had never worn them. On fathers, death, she took one of them ont when she we about to put it on an old lady of her family asked her to consider the implications of this charge of garnents. It was all very well for old women who had lived their lives, and had gone for the Hij almost as the list great event in all their existence and had practically renounced the world. But for a voing women of eight-and-twenty who would in all probability marry again it only for the sake of her children's upbroaging it was a foolish fancy So the old lady tried quietly to dissuade mother from adopting a fashion in dress that she could not keep up for long. What was mothers answer, it was our sister who was privileged, the other day to hear from mothers own hips she told the old laby. This long whete kinete dear mother would now be taken off only on the takhta' the wooden bound on which a Muslim's corpse is washed for the buril. That is why she preferred her long kinetes of khodan with all then rough creases, which built her frail bedridden body, to the shorter ones suggested by our states and it was only on. ones suggested by our sister and it was only on the takhta almost half-a-century after father's death that this tashion had to be discarded for the shroud

The Prophet had hunself always married widows—except once when he married Haziat Ayesha no doubt to establish the humane custom of widow remarriage, and good Musalmans always recommend to the young ladies of their finity who are unfortunate, enough to become widows so early in life to marry again. Mother's relations also pressed a second marriage upon her and many of thos who had seen her almost teacess on father's death felt sure she welld remarry before long. But she herself knew better than that The cholera that had taken father away had not spared, her son, our eldest brother hving. The minute father passed away mother left his bedside, and went over to tend and nurse her son because, as she used to tell us herself, she had done her duty by the dead and she must thenceforward do her duty by the living. The loud Limentations in which the women of her time indulged on such occasions, and in which, in fact, many to this day indulge, did not seem to accord well with a sorrow, that was too

NOTES 115

deep for such outward expression. Besides, she was anxious to spare as much sorrow as possible to her children, and so she kept her own feelings in leash. That is why she appeared callous to those who remarked only her retreence, but who could not not peep; into the heart that was bursting with grief.

The next passage which we are going to quote gives us a glimpse of the good lady's sudhana (spiritual discipline) in invitationing (the path of self-restraint and renunciation), as Hindus call it

Maulana Mohamed Ali says that, being accustomed to meat diet, even the servants of his family turn up their noses if they get did too often. Chandar being a vegetable which grows wild, even they would not touch it. But for the sake of 'simplicity and studied economy," Bi Amman would sometimes pluck some chandar leaves and prepare blungar for herself.

But on one ocassion I found that mother who had been thinking for some days just of plucking choular from the terrace, and had at last prepared it herself, in oil for choice and with heighs of chillies did not turn up at dinner and even her favorities did not turn up at dinner and even her favorities did not fould not feel inclined to eat anything and beyond feeling concerned a little about her indisposition, as we thought we would have taken in further notice of it. But a few days, liter, she told us she had simply yearned for that bluom. Then why didn't you have first we all asked adding. 'It couldn't have hunt you much after all. That's all right, she told us, 'for I was not indisposed,' "Then what else was the matter with you, we asked in inter surprise.' An circultum was the matter with me. It heart was so set on it, and it smelt so savoury when I was preparing it. But them I said to-myself. What does it matter if thy heart so yearns for it? Wilt thou satisfy thy hearts of tivings if tomorrow it yearns for a husband.

Prof. Benoy Kumar Sarkar's Return

We extend a cordial welcome to Professor Benoy Kumar Sarkar on his return to India after an absence of nearly eleven years comes back well equipped for promoting the cause of culture, and of the study of ecowante development and political science and iffied branches of knowledge. His travels and investigations comprise Egypt, Figland. Scotland, Ireland, the U.S.A. Hawan Islands. 1 quan, Korea, Manchuria, North China, France. bermany, Austria, Switzerland, and North Halv His literary output during this period his been enormous, being five thousand pages 46 Bengali and three thousand in English All this was printed in journals. A small portron remains yet to be published in book-form.

He has contributed to the following journals among others Journal of International Relations, International Journal of Ethies, Political Science Quarterly Scientific Monthly, School and Society Revue de Synthese Historique, Scances et travairy de l'Academie des sciences morales, Deutsche Rundschau

He is an elected membre correspondant de la societe d'economie politique of Paris

For the last rew years he has been studying the methods and problems in economic development with special reference to postwar. Europe

A Limit to 'Ahimsa.'

So far as individually a man is concerned, he may be a thorough-going Ahraesaist he may refuse to strike down even the man who attacks him with murderous intention

But a woman cannot and ought not to be an Ahimsuist in all circumstances—she should kill, if need be any one who tries to dishenour her. That sets limit to her non-violence. Similarly if a man sees any one attempting to dishonour a yoman at is his bounden duty to prevent the cutrigo even at the cost of his own and the assailant's life, if need be

Such being our conviction we ite glad the find Mabatna Garolla writing as follows in Young India for December 18, 1924

My allowing to a less me for the sake of ethers to give my life without even after place to kell. But my allowing else craftes me to say that who is choice has between rinning away to the region of ones charge and killing the would-be my shee it is ones duty to kill and be killed never to desert a post of duty.

· Prof Thorpe on Chemical Research

Professor Joselvne F Thorpe, F R S, has contributed to Nature an article on chemical

research in India. It deals with such chemicresearch as would be calculated promote the development of chemical industries. He begins the article by saying.

The Indian Industrial Commission, presided over by Sir Thomas Holland issued its report in 1918. It had been formed in 1916, and was "instructed to examine and report upon the possibilities of further industrial development in India, and to submit its recommendations" with special reference to a number of specific questions of which two only concern us here. These were h to ascertain whether and if so in what manner, Government can usefully give direct encouragement to industrial development. -

i. By rendering technical advice more freely available.

ii, By the demonstration of the practical possibility on the commercial scale of particular industries"

The Commission made a number of recommendations It recommended, for example the formation of several scientific services built up on lines which, it was hoped, would give an impetus to the development of industries based on the great

natural resources of the country
Among the services the formation of which was
recommended was one dealing with chemistry, and
as this subject was rightly regarded as one of the
foundations of all industrial development, the first
effect given to the Commission was to amount a effect given to the Commission was to appoint a committee with instructions "to formulate proposals for the organization of a Chemical Service for India and for the location and equipment of research laboratories." I was asked to act as chairman of this committee, and with the object of obtaining an insight into the actual conditions. I toured through India during November and December of 1919 and January and February of 1920. In the course of the tour I visited all the important centres and was able to discuss the problems involved with many prominent officials and business men. I saw all the leading educational institutions and noted the facilities for research present in the chemical departments attached to them. effect given to the Commission was to appoint a

His conclusion was that

"India is at present poorly equipped to meet any demand for properly trained chemists, and cannot be expected to supply recruits for a chemical service unless the service itself can act as the research trainer."

This conclusion is quite correct, if by properly trained chemists" Prof. Thorpe means chemists with proper training in industrial chemistry; otherwise it is not correct. He then passes on to observe -

"The scheme suggested by the Industrial Commission was a comprehensive one, and well fitted to meet the immediate industrial requirements of the country. It provided for the establishment of a central Government research invitity where both fundamental and practical research would be corried out to serve as a nucleus from which chemists could be drawn to fill the various chemical poets throughout the Empire."

The history of industrial chemistry says something quite different. More fundamental and important research work and training in industrial chemistry has been done enterprising firms with capable and alert directorates than by any Government institute in the world. Government departments of this nature as a rule lack in enterprise and tend towards stereotyped routine work There is nothing, however, to prove that such a department as is proposed is an impossibility

The provinces, however, were not in favour of a central Government research institute. They wished to do things on their own behalf, "unhampered by any restrictions which might be exercised by a central Government institution such as that suggested by the Industrial Commission The Provinces were quite right in fearing that work might be hampered by such a contral Government institution Government work in this country usually means very discouraging red tape and hombast, both deadly poisons for the spirit of research

The writer then proceeds to say:-

Still, a modified scheme by which each province Still, a modified scheme by which each province would have its own research institute seemed practicable and indeed, even an improvement on the original idea, provided that each provincial institute undertook to confine its activities, both fundamental and practical, to its own local immediate industrial needs leaving a central institute under the Government to carry out those fundamental researches which underlay the industries of the countries as a whole of the countries as a whole.

This appears to be more practicable. Professor Thorpe observes :-

There are very few consulting chemists in India, most of the consulting advisory work, where such exists, being carried out in the Universities.

In this matter the Professor appears to have been misinformed No University in India has the necessary equipment for consulting advisory work in industrial chemistry. We do not know of a single competent industrial chemist in any one of the Indian Universities. Of course there may be some unknown to us.

The writer holds out an expectation regarding the proposed research institute which would be very difficult, o say the least, to fulfil. Says he:--

The chemist or chemists who had solved prob-lems in the revearch institute submitted by a manufacturer would be loaned to the manufacturer for a sufficient period of time to enable him to place the new process on a working basis in the factory.

Part of the same o

NOTES 117

If chemists are to be loaned out to factories for the purposes mentioned above, then their supply in the research institute would have to be enormous.

Dehra Dun was recommended as a "convenient central place" for an industrial research institute by the Industrial Commission, and the recommendation was endorsed by Professor Thorpe's Committee, he says. The idea is quite exquisite!

In the following sentence what the writer calls the final problem is really the main and the most vital problem —

It is the final problem, that is, how to supply the training in works practice, and what is still more important, how to pick out the men most suited by temperament to profit by this training, which has to be solved not only in India but in Great Britain also.

But we do not agree with him in what he says in the next sentence, quoted below

In the proposed chemical service this very real problem of type would be met by a frequent interchange between the individuals comprising the junior personnel of the research staffs of the various institutes. Each man would, therefore, obtain his training in works practice

We fail to see where in this proposed system the men comprising the junior personnel would acquire training in works practice. Works practice cannot be got in any research institute whatsoever unless it is part and parcel of an industrial concern. I'rof. Thorpe is absolutely wrong here. We doubt whether he can cite one single instance of any industrial man who has been trained thus and has shown efficiency in practice.

When the writer says that

These proposals imply that, besides the main chemical staff, each institute would have to be provided with a suitable staff of engineers, whose main duty would be to act as instructors in general engineering practice

he is quite right.

In the opinion of the writer, "the proposed scheme for the establishment of a chemical service would have to start in a small way." This is easier said than done. Can he formulate any scheme which can show any usefulness commensurate with its cost, that can be regarded as comparatively mexpensive when considered from the view-point of provincial finance?

Prof. Thorpe concludes his article thus:

No doubt, in many of the provinces use could be made of some existing institute to act as the provincial research institute, until funds were available for the erection and equipment of a building especially

大学のようを変す にからい

designed for the purpose. The chief initial cost would be incurred by the erection and equipment of the new Government Research Institute at Dehra Dun, but it is understood that some money, at any rate, has been allotted for this purpose. Indeed, it is likely that a large capital expenditure and a considerable income would be necessary in order to start the scheme and to place it initially on a sure financial basis, because it is not proposed that any attempt should be made to make the service self-supporting and the equipment of the new laboratories would have to be completely upto-date. If the service is to succeed the Government must take the long view, and bear in mind, chiefly, the increase in wealth to be obtained by the development of the natural resources of the country. The opportunity is a splendid one, but to take advantage of it effectively requires courage and vision.

It is not only "likely" but certain that the expenditure would be very very large, and most of it useless expenditure on costly buildings, designed by expensive British architects, erected by costly British firms, etc.

"The increase in wealth" promised by the professor would mean in Indian parlance the draining away of wealth by foreign exploiters. Would Indians benefit in the main? Or would vested British interests gain?

The whole thing has been considered from the standpoint of a man of science of vast and deep erudition and brilliant research capacity, but of no experience of the problems which beset industry in this country and possessed of only a rather detached knowledge of the industrial problems of his own country. In short, it is a professor's solution of a business man's problem.

Is there any necessity for such services as have been proposed by Sir T. H. Holland? Industries of the kind that would be helped by the proposed services are of two classes: (a) those that are owned or controlled by Briti-h interests; (b) those that are owned and controlled by Indians. Of these, the first do not need any help. They are as a rule well able to afford and conduct the necessary research work. Their own means, added to the Bank support invariably given to them, obviates the poor Indian tax-payer being bled to serve their purpose. As regards the second kind, Indian owned and controlled concerns, their difficulties, taken in order of importance, are as follows:-

1. Difficulties of finance form approximately forty per cent, of the sum total of difficulties. Private capital is shy as regards such concerns, and as most of the banks are foreign, bank facilities are practically will.

2. Lack of experience and training in management may be said to form twenty-five per cent, of the difficulties. Directorates in such Indian companies are generally composed of incompetent and ignorant persons devoid of directing capacity.

3. Fifteen per cent. of the difficulties of such concerns may be said to spring from absolute disregard of their needs by British monopoly interests such as Railways, Electric Works, Gas Works, etc., and scant and tardy

attention from state departments

4. Ten per cent, of the difficulties are due to public apathy, as shown by lack of sympythy of political bodies and the tendency towards victimisation of Indian products evinced by Indian selling organisations and middle men.

5. The remaining ten per cent may be said to be due to want of research facilities

In our opinion, unless remedies are found for the first four and major evils, there is no necessity to combat the fifth and minor one.

In case of government help being given to Indian technical concerns, the line of work

should be as follows in our opinion.

I Establishing technical libraries (of the same type as at the Patent Office, Chancery Lane, London) at all provincial headquarters, with a staff of translators available for work at very moderate charges, and a Central Library, fully stocked with scientific and technical literature, situated, say, at Delhi, having the same kind of translating staff. Translations not only from the languages of all the leading industrial countries into English but into as many leading Indian languages as possible should be done at the Central Library.

II. Establishing a fully equipped central technical laboratory at a place where the minimum amount of expenditure is needed for the provision of gas, electricity, water, staff quarters, etc. Expenditure on buildings should be as small as possible. A good library should be available. The staff should be just sufficient for direction of work, but the work should be done mostly by men deputed by industrial concerns, jointly or separately, and there should be adequate arrangements for such men to carry on their research work ediciently and economically. In case of such concerns being in need of help but being unable to pay for it, the work is to be done by the staff with the help, if necessary, of earch scholars temporarily engaged. These scholars can be got and should be got-from the various Indian universities, and arrangements should be made for their work at the central technical laboratory to be recognised by the university concerned as work for a degree or doctorate.

III. The giving of government help to industrial concerns in sending out men for

special training abroad.

IV Establishment of provincial laboratories, as in II, only when the demand justifies it, and then only in the department of

industry in demand.

V The staff at the central laboratory must be composed of experienced and efficient men And they must be taken from countries where the line of industry concerned is most progressive. The Japanese system of getting specialists for terms of three to five years on high salaries would be the best.

VI The entire department must be under non-official control A new "Heaven-born" service would be worse than useless.

INDUSTRIALIST

A Chair of Municipal Government

As the Calcutta Municipality is under the control of the Swaroj party, it can and should make arrangemnt for contributing, say Rs ten thousand per annum to the Calcutta University to found a chair of Municipal Government and a Bureau of Municipal Research. We need comparative knowledge in the field of Government in general, and Municipal Administration particular ın Calcutta Municipality can do great and permanent good to India by creating facilities in connection with the Calcutta University for training experts in municipal govern-

Contract for Foreign Coal

The Indian Mining Federation has in the course of a letter to the Secy. to Government of India, Department of Industries and Labour, refers to the recent announcement in the press of a contract having been placed for the supply of South African Coal for the Sukkur Barrage requirement for one year. The letter states.—

The action of the authorities in purchasing foreign coal to the extent of some 60,000 tons, at a moment when the Indian one industry is on all

NOTES 119

admission passing through a period of grave depression is fraught with important considerations of public policy. As the Government of India are well aware, one of the most decisive elements in the present depression of coal industry is the serious competition which Indian coal has had to face with foreign, particularly the bounty-fed South African coal in both the home port markets and the neighbouring foreign ports which until a few years

ago were its legitimate overseas markets.

The Legislative Assembly by a resolution passed on the 7th of February last urged a countervaling duty on South African coal and the Honourable Commerce Member speaking in the Assembly on the 15th March last declared the intention of the Government to refer the question of an increased duty on foreign coal to the examination of Tariff Board has been deferred owing to the appointment of a Coal Export Inquiry Committee, the Government of India nevertheless stand committed to this reference. At all events, the attitude of the Government was sufficiently pronounced that nothing would be done meanwhile to directly stimulate foreign coal gaining an additional ground in the Indian market. The present purchase of 60,000 tons of foreign coal by the Stores Department gives, however, the hie direct to such an expectation. The Committee venture to think that the action not only constitutes an outrage on the Indian legislature and is, further, a flagrant violation of the Government's own declared intention.

It will, also be recalled that it is only three years that Government in violation of their definitely pledged stores purchase policy purchased one mill in tons of British coal, thus eventually involving the Indian taxpavers in an avoidable loss of seven crores of rupees. It is needless to stress on the obvious truism that a Government Department is not as free to arrange its purchases as a private buyer. If the actual stores purchase policy which your Department control is at variance with the assurance of the Commerce Department, a declaration of the confidence. If despite a serious depression in he Indian coal industry, the Stores Department would extend its custom to South African coal, the lamilited mockery of a Coal Export Committee might as well be avoided and with it the produgious waste of the tax-payers' money.

l am next to examine the transaction in question on its own ment, considered as a business proposition. The Committee have in their possession complete analysis of the coals of the various. Transval mines and they are, from these materials, in a position to assert that they are in no way superior to 11, 12 seam Jharia coals, which were tendered by at least half a dozon parties at Rs. 4 to Rs. 5 F 1) R. ton for thus exhibiting an under-quotation of the accepted rate of the South African coal by at least Rs. 5 to Rs. 6 per ton, if sea-borne, and by a higher figure, if carried by rail.

In the circumstances, I am desired to express a hope that the Government of India will still find it 1008 libits to regarded the contract already entered.

In the circumstances, I am desired to express a hope that the Government of India will still find it possible to rescind the contract already entered into for the supply of South African coal on weighty considerations of public policy indicated in the previous paragraphs.

No elaborate comments are needed on the facts revealed in this letter.

As South Africa discriminates against Indian human beings, the Government of India's discrimination in favour of South African coal, even at a pecuniary sacrifice, is only too logical and legitimate. It also shows in quite a delightful manner that the government of India thinks that what hurts the self-respect of India enhances the selfrespect of India's government. Finally, it demonstrates irrefutably that the government of India is a Christian government: for does it not offer the right cheek of In his to those who have smitten her on the left cheek repeatedly, and does it not also offer her cloak of State pationage to those who have already taken her coat of private custom by means of bounties?

Tagore on the Moscow Stage

The Bombay Chronicle states:-

A recent issue of the 'Prager Presse' gives an interesting account of the popularity of Tagore's plays with the Russian actists Madaine Germanova, the queen of Russian trace'ly, who was the 'eading lady at the Moscow Art Theatre is now at Prague, where she is celebrating her twenty years activity on the stage by appearing in the 'Brothers Karamasoo' the play based on the famous novel of Dosto-ieffyski. She says that as a change from the usual repertory, her troups of objects decided in the year 1918, the darkest period of the Russian Revolution, to produce a play which would give the audience a higher vision of life than the drab atmosphere which surrounded them Rubindranath Tagore's 'King of the Dark Chamber' was selected, Madaine Germanova portraying Sudarshana. The play was a tremendous success, and since then the Moscow Art Theatre and other insututions interested in putting on the boards plays which will give the audience something different from the typical problem play of western life, are exploring the works of Eastern dramatists. India naturally feels proud to find that Tagore is selected with universal approbation in Germany, Denmark and Russia by a number of enterprising producers.

As Rabiudranath Tagore's "King of the Dark Chamber" is a symbolical spiritual play in which the King is God and Sudarshana, the Queen, is the human soul, the popularity of the play shows that the Russians have not become rank atheists and materialists, as we have been repeatedly told they have: a sufficiently large number of them in any case retain their primeval spiritual instincts to be able to appreciate a play like the "King of the Dark Chamber."

Evidence on the not totally unsatisfactory religious condition of Russia comes from a

different quarter also. In the December num-The Socialist Review Major D. Graham Pole quotes the following from a letter which appeared in the press in Eng-

land on 29th September last .-

Our Baptist Churches commonly report increases of membership in the past five years or so of 500 or even 1,000 per cent, and the total membership of our churches in Russia is now probably second only to the United States of America. There are evidences that this is only the small beginning of a recognitive to the states of the control of the states of the states of the control of the small beginning of a recognitive that the states of the control of of small beginning of a movement which may be of greater historic importance than the Protestant Reformation itself"

Lala Laipat Rai's Suggestions

Lala Lajpat Rai has thus summarised the suggestions contained in the series of plainspoken letters contributed by him to various dailies .-

(1) Free your minds from the permissions doctrine of absolute rights

(2) Purge your politics of "religion" (dogmatic

(3) Rationalise religion as much as possible, and

lay emphasis only on essentials
(4) Remove social barriers which separate and estrange one community from another

(5) Love India above any other country in the

world and be Indians first and last

world and be Indians first and last

(6) Concentrate all efforts on improving conditions at home That does not debar you from
sympathising with your fellow-religionists abroad
and helping occasionally provided that your duty
to your own countrymen permits of it. In this respect follow Turkey and Egypt

(7) Don't fret at Shuddhi. It has come to stay
(8) You can try "Sangathan" and "Tanzim", if

you can purge them of Anti-Muslim and Anti-Hindu feelings, which, in my opinion, is very difficult.

(9) Have proportional representation in Legislatures, if you may, but do not insist on separate electorates

(10) Divide the Punjab into two Provinces to

make majority rule effective
(11) Don't insist on population being the rule
of representation in local bodies But if you must,

you may.

(12) Have Public Services Commissions to regulate the filling of Government posts on certain

general broad principles.

(13) No communal representation in Universities and educational institutions But special facilities for backward classes many be provided with special grants from public revenues for their benefit.

Compulsory Education for Muslim Girls Demanded

It is a healthy and significant sign of the imes that

At an extraordinary meeting of the Mohamedan Educational Association of South India under the presidency of Dr. Syed Abdul Khader Saheb Jelani, M. L. A. a resolution to address the Corporation of Madras and the Government to include the Muslim Girls under their scheme of compulsory elementary education in the city was passed.—(A. P. I.)

Riff Relief Fund.

The Associated Press of India has sent the following message from Lahore to the press .-

In response to an appeal to His Highness the Aga Khan and Syed Ameer Ali, on behalf of the women and children of the Muslim Riff, the Muslim women and children of the Muslim Riff, the Muslim Outlook Lahore opened a subscription list and has already remitted to England three instalments of subscriptions received from all parts of India Responses are now being made by Muslims of all shades of political opinion. The Provincial Khilafat Conference of Amritsai collected a sum of money in response to appeals endorsed by Maulyi Zafar Ali Khan. President of the Conference. The Punjah Muslim. Lagraga, singliformed a subscription to the Muslim League sunctioned a subscription to the fund and the Anjuran Islamia has done likewise and has also formed a Committee to collect further and has also formed a committee to collect further subscription from the Mushims. Nawab Sir Zulfikar Ali, khan a no me's that he is appealing to his friends to support the Mushim Outlook Riff Relief Fund as he has received a special appeal personally from the Aga Khan and Sved Ameer. Ali, Many Mushim ladies of Lahore have already subscribed to the Fund for relief of their sisters wounded in Morocco. The Outlook urges the Governments of India and Britain to discountenance French intervention in the Riff country.

Whether our fellowmen abroad are coreligionists or not, help should always be given to them when in distress, they stand in need of it After the terribly destructive Japanese earthquake India, along with other countries, sent a little help to Japan in token of her sympathy Though we are not Moslems, our sympathies are wholly with the Riffs in their struggle for liberty against Spain. They, therefore, deserve all the help that can be sent from India.

What is deplorable is that though Bengal contains more Musalmans than any other province of India, than in fact many independent Mælem countries, yet on no occasion when these Bengali Musalman millions have been stricken with famine, flood, earthquake or epidemic, have the Aga Khan, Syed Amir Ali (who is himself a Bengali) and other big leaders opened a relief fund for them, of themselves contributed a pice to the relief funds opened by non-Muslims. What is the explanation? Non-Muslims are to keep alive KOTES

the occasionally starving Muslim peasantry of Bengal, and the big Muslim leaders are to exploit these co-religionists of their for their own purposes—does the division of labour run along these lines? If so, one must admit that these big men are very cute and

Abolition of Slavery in Nepal

We rejoice to learn that the government of Nepal has arranged for the total abolition Though it was only of slavery in Nepal. like domestic slavery, not the slavery whose horrors were exposed in Uncle Tom's Cabin, yet, as it clashed with the ideal of human freedom, it deserved to be destroyed root and branch. The Nepal government will have to pay the owners of the slaves forty lakhs of rupees as compensation

Pandit Sivanath Sastri's Vows

The following is taken from a report of Babu Bipin Chandra Pal's speech on the late Pandit Sivanath Sastra :-

A cry for political emancipation was but the inevitable consequence of this idealistic realisation of the spirit of freedom. The ideal government in our estimation was the government under which the people had the capacity of making or unmaking laws of the land. And from this point of view Sastri used the word Swayatta-Sasan (self-government) in one of the items on which we took our oaths. The sentence ran as follows;—"We recognise Swayatta-Sasan as the only divinely-ordained govern-ment". Mr. Pal said that according to Sastri a Government not influenced by divine laws could never have the bundings of religion. But from this, the speaker said, the audience mucht conclude that Sastri was a revolutionary and an anarchist, which he was decidedly not. Then he drew the attention of the audience to the next sentence, which run as follows:—But in the present condition of the country and for its future welfare we shall be guided by the prevailing laws of the established flovernment." Then came the last and the most thery of all the oaths and it was this:—"But if we be even racked with pain, poverty and misfortune, we shall never accept any kind of service under this tiovernment." The debt of bread, Mr. Pal sud, was the worst kind of indebtedness, and the great Bhisms of the Mahabharata fame had to fight accurat the Fandavas even knowing for certain that the Kanjavas were in the wrong simply because he was in debt of bread to the latter. The speaker them releared to the unique performances conducted under the inspiration of Sastri and said that this was celebrated lang before Binkim Chandra could conceive of his Anandamath". The genius of follows:-"But in the present condition of the

Sastri, Mr. Pal said, was all-comprehensive, and he enlogised the whole-hearted devotion of Sastri to Truth and Freedom, the catholicity of his nature, his imperturbable patience, his simplicity and liberality.

State Help Again for Tata Iron and Steel Works

The duty levied on certain classes of goods imported from abroad not being sufficient to keep the Tata Iron and Steel Works. on its legs the Tatas again applied for State help; and on the recommendation of the Tariff Board, the Government of India has screed to help them with bounties not exceeding fifty lakes of rupees per annum. It has been computed that consumers in India of the class of goods produced by the Tatas would have to pay per annum one and a half crores of rupees more than before owing to the increased duties. The addition of the bounty of fifty lakhs to this huge sum makes up total of two crores per annum.

What are the advantages which the Indian nation would derive in exchange for this large sum? India ought not to be taxed merely to enrich the Tata shareholders and their foreign fat-salaried employees. Arrangements should be immediately made to gradually but rapidly Indianise the concern from top to bottom, the necessary facilities being provided for the training of specialists and experts. Even the labourers should share in the profits and the management.

From what appears in the press from time to time, it appears that the concern is not managed economically but with extravagance. Even for effecting économies a very high-salaried European has been or is being imported.

As specimens of what appears in the press, we quote below some passages from a letter signed "B. R. S. Bhalla" and published in The Bombay Chronicle.

Many suitable and qualified Indians (who qualified in this branch of the trade in America) are working their way at the lowest rung of the laider as compared with their European contemporaries who are not only paid handsomely but are actually their Masters and the former have of necessity to look to them for their future prosperity.

Besides, whenever there are any vacancies, advertisement to fill up the same is leaved in America and England, India being totally ignored, the intention to monopolise this firm for foreigners against the wishes of Indians is therefore too clear to used any elucidation.

This understood that 60 Europeans are being recruited from America on monthly salaries varying from Rs. 600 to Rs 1000 P. M. for New plant coniffting Merchants Mills etc., galvanized sheets and iron sheets" (a branch of the Tata Iron Works) they have executed a three years' agreement and will share the profit as well, which may go to any extent. In other words they will draw a part of the profit which must otherwise fall to the share of Indian Shareholders.

It is a rity that in an Indian Factory like the

Indian Shareholders.

It is a pity that in an Indian Factory like the Tata Iron Works a foreigner should control the establishment and its capital to the best advantage of his own nation. In the Railway Workshops and Government Factories etc., Indians have already met with their fate very miserably and if in Indian Factories they have to come across a still worse fate, it is clear that the Indian must go to the

Burman Students' Protest against Bible Teaching

A Rangoon telegram, dated the 17th December: states that

Some Buddhist Burman students of Cushing Some Buddhist Burman students of Cushing High School, managed by the American Baptist Mission went on strike as a protest against Buble teaching and religious exercises. The Education Minister convened a Conference of school authorities, the Director of Public Instruction, leading non-official Buddhist Burmans, including the editors of the Burmase newspapers, with the object of making efforts for arriving at an amicable settlement to end the strike and to acquaint the public with steps taken in that direction by the school and the Hovernment. Hovernment.

The statement made at the Conference by school authorities showed that the school authorities would exempt from religious teaching those pupils whose parents so desired.

In Calcutta, the Bharat Dharma Maha-mandal at its last session passed a resolution against the compulsory study of the bible in achools and colleges. Now that Sir Asutosh Mookerji is dead, the Mahamandal has mustered courage to raise its voice against com-pulsory bible-teaching! To understand why this protest has been thought necessary, the Assem, where the majority of the inhabitants Musalmans and Hindus, all candidates the matriculation, intermediate, and B-A. me marriculation, intermediate, and b-A.

Accordinations of the Calcutta University have

a stand 'neither' the Keran nor the Hindu

indicate but selections from the bible. In

line piston of the Calcutta University, the

line paint. Buddhist, Zoroastrian, Moslem,

and other settifitures are worthless, and

a set settifit to be read even by Hindu,

that Buddhist, Zoroastrian, Moslem and

Sikh students respectively! But the bild must be read. No wonder that padres gen rally voted with Sir Asutosh Mookerii.

Sir J. C. Bose's Panjab Convocation Address

At the last convocation of the Panjab University, Sir J. C. Bose delivered a very heartening address. The whole of it deserves to be quoted, but we have space for only a few sentences. He said :-

The present crisis in human history is a call for all the idealism and strength of youth for ensuring the continuity and permanence of civilisation. You are seekers after truth; I will tell you of the discipline through which you must pass for the discovery of truth. In this, the heritage of the past will help you: but you are not to be a mere slave of the past but the true inheritors of its wisdom.

MAN, ARBITER OF HIS DESTINY

In regard to the pursuit of research, a complaint In regard to the pursuit of research, a complaint is often made that there is no sympathetic atmosphere, and that all activities are paralysed by adverse circumstances. It is not for man to complain of circumstances but bravely to confront and dominate over them. You have not forgotten the account given in our great epic, the Mahabharata, of the tournament that was held before the court at Hastinapura more than twenty canturies ago. Karna, the reputed son of a charioteer, had challenged the supremacy of Prince Arjuna. To this challenge Arjuna had returned a scornful answer: a prince could not cross awords with To this challenge Arjuna had returned a scornful answer: a prince could not cross swords with one who could claim no nobility of descent. "I am my own ancestor," replied Karna, "and my deeds shall win the patent of nobility." This is perhaps the earliest assertion of the right of man to choose and determine his own destiny. If you make yourself entirely dependent on others, you will merely lead a parasitic life. Strength comes only out of struggle and it is by your own efforts that you will win that for which you have set out. In the realm of knowledge also, some of the greatest contributions have been made by those who undismayed by difficulties had persisted in spite of repeated failures.

FAILURE AND SUCCESS

It is no easy life that lies before a scientific investigator. There is to be for him no life of case but one of unending struggle. He has to cast his life as an offering, regarding gain or loss, success or failure as one. But the flure that draws a heroic soul is not success which can be easily gained but defeat and tribulation in the pursuit of the unsatismable. Where lies the secret of that spoendy which makes certain efforts apparently defined to failure rise renewed from beneath the suscellering ashes? When we look deeper we strail find that as certain as is the sequence of variety and

123

effect, so inevitable must be the sequence of failure and success. We shall find that failure must be the antecedent power to he dormant for the long subsequent dynamic expression of that we call success.

Professor Bose concluded his address with the following inspiring sentences:—

It was a woman in the Vedic times, who when asked to take her choice of the wealth that would be hers for the asking, inquired whether that would win for her deathlessness. Many a nation had risen in the past and won the empire of the world. A few buried fragments are all that remain as memorials of the great dynastics that wielded the temporal power. There is, however, another element which finds its incarnation in matter yet transcends its transmutation and apparent destruction; that is the burning flame born of thought which has been handed down through fleeting generations. Not in matter, but in thought, not in possessions but in indeals, are to be found the seed of immortality. It is not through material acquisition but through active service and through generous diffusion of ideas and ideals that the true empire of humanity will be established

The Proposed New Howrah Bridge

An article on the proposed new Howrah Bridge by Dr. B. N. Dey, D. Sc. Eng'g-(Glasgow), etc., which appeared some time ago in Forward, has not probably attracted the attention that it was entilted to. Dr. Dey is a great engineer who practises in Britain and has made his mark there. According to him, the Sydney Harbour Bridge in 1924 would cost a little over £6 per foot super, but the new Howrah Bridge would cost about £20 per foot super! He gives all the figures in detail to prove his assertion. He says, in part:—

Without going into the merits of the Cantilever Type Scheme for the new Howrah Bridge and assuming same as necessary, one cannot help noticing glaring extravagance of the estimate. A cantilever bridge for the Sydney Harbour offered by Messrs. Dorman Long & Co., (the accepted designers and contractors)—having a total length of 2400 feet each), formed part of one of the total tenders (24,300,000) for the Sydney Harbour Bridge. This cantilever type is similar to that adopted for the new Howrah Bridge. Comparing the costs the new Howrah Bridge estimate is clearly 150 per cent. over the present day price as determined so recently by international competition held by the New South Wales Government. The Rengal Government counts to follow the example set down by New South Wales Government. The Rengal Government counts to follow the example set down by New South Wales Government and not try to rush a bill for a million ster-ling estimate for a bridge which could be built at much less than half the amount, by the boat bridge builders in the world selected by competition.

The Apotheosis of the Chimpanzee

They have succeeded at last in discovering their exact ancestor. It is the Chimpanzee. They have also discovered that they are fundamentally different from the coloured peoples of the earth. How they could wish that the discovery had been made before the abolition of slavery in Europe and America! Still it will render yeoman's service to Asiatic exclusionists and others of the same kidney.

We read in Psyche for October that Dr. F. G. Crookshank has started "the remarkable theory" of the "Correlation of the Chinese with the Orang, the White races with the Chimpanzee, and the Black with the Gorilla." We read in the same quarterly:—

Hitherto anatomical evidence has been scanty, for those who have had access to the skulls of the Oriental and the Orang have been curiously negligent of essentials. But m a number of the official organ of the German anatomists, the Anatomischer Anzeiger (Vol. 58), just to hand, independent and apparently conclusive tretumony is now available. For eight years (1911 to 1918) Professor Kurz, of Munster University, was on the look out in Shanghai for the chance of anatomical observations on the brains of Chinese (embryonic, infant, and adult, in whom the element of racial intermarriage was unlikely to have complicated the problem. On the basis of a careful study of sach brains he has reached conclusions which confirm those of Khatsch, namely, that the brain of the Yellow races shows marked differences from that of the White, and that the characters in question are for the most part distinctive of the Orang as opposed to the other types of Higher Ape. As a result he is led to adopt the view that the human race could not have arisen from a single prehuman stock (as Sir Arthur Keith and others still maintain), but that there are three distinct types of Man corresponding closely to the three main types of Higher Ape. In addition to Klastsch, he cites the authority of Arldt, Boas, Buschan, Horst and Sergi in favour of the polyphyletic view, though he seems to be unaware of the more recent work of Sera and other anthropologists confirming Dr. Crookshank's general contention.

The formula of white domination and coloured subjection is no doubt unalterable. But we hope it does not extend to and include every white man's theory. And, consequently, we hope, too, that though as many white men as are so minded are welcome to salute their father which is in the Central African forest, the non-white peoples of the earth will be suffered to disown their putative fathers in the jungles.

* Belgaum Congress not a United One
We are sorry to find from an Associated

Press message that the Belgaum session of the Indian National Congress has not been such a united Congress of all political parties as it was proposed to make it. "Although invitations had been issued to the Liberals, the Muslim Leaguers and several representatives of the Indian Christian community, there were practically none representing these organisations." Mr. Gandhi's complete surrender only to the Swaraj party may have been the main cause of this disappointing result.

Other Conferences, etc.

Not having received the necessary material in time, we are unable in this issue even to refer to the other public gatherings held during the last week of December. We propose to do so in the next issue as far as practicable.

Protection.

The dictionary definition of Protection is preservation or shelter from loss or injury. In Economics this term is specially applied to the doctrine of fostering the industries of a country by means of imposts upon the products of such industries imported into that country thereby hampering and discouraging foreign competition.

From the point of view of an Industrialist, it is self-evident that no infant industry can grow in any country without the help of some such measure The additional help of a bounty is also required in certain cases, otherwise it becomes impossible to face the flerce competition from powerful and well-organised foreign rivals.

Protection for industries has become the order of the day now in India. There is a lot of talk and a lot of resolutions etc., fixing about.

Therefore it seems to be fit and proper that a few points about this question of projection be put forward for the consideration of the readers of this Review. The welfars of India is wrapped up in the development of its national industries, specially of the regarded as essential or "key" industries, being who is worthy of the name of officer should give such matters of national material as Protections due and careful atten-

tion and do all he can to see justice done. The nations' representatives at the legislative bodies should also be warned to watch and guard the country's interests. If they fail to do so it should be made plain to them that they shall have no further chance of being returned country's nominees.

The points to be remembered are:

- 1. That Protection is a measure, to help a struggling infant industry, that is doing its best to stand on its own legs, and as such should not be utilised for.
- (a) Increment of the profits of the industry concerned.
- (b) Making good the losses due to the incipient inefficiency of the organisers and the conductor of the industry, unless they are willing to lay themselves open to control and correction.
- (c) Firmly establishing foreign vested interests in the country.
- 2. That Protection is always a burden to the consumer, and therefore can only be justified if it has sure promise of future benefits for him or his kith and kin.

Therefore whenever any industry asks for protection, the points to be considered are as follows.

- 1. Whether there is any likelihood of the industry being reasonably successful from the economic point of view, under the local conditions and with local resources.
- What are the reasons for the industry, in its unprotected state, being threatened with failure. Is it due to any of the following causes?
- (a) Ignorance or inefficiency of its present controllers.
- (b) Lack of natural facilities available to its foreign rivals.
- (c) Unfair foreign competition by means of "dumping" etc.
- (d) Unfair treatment at the hands of vested interests, native or foreign, inside the country, such as unfair treatment at the hands of Railway, electric and other companies.
- (e) Any special artificial barrier towards success such as inconsiderate legislation, taxation etc.

- 3. Who are the people likely to benefit most by a Protective measure? And who are to bear the burden of increasad costs?
- 4. Whether the contemplated Protective measure adopted for the sake of one industry and likely to be so injurious to another so as to kill it or to permanently stunt its growth. In the case of such an event taking place what is the net loss or gain to the nation.
- 5. Whether the industry is really a national one as shown in the concerns asking for protection. One should enquire:
- (a) Who owns the greater part of the capital invested in them?
 - (b) Who are the people in management.
- (c) Are Indian interest fully looked after in the directorate and the management?
- (d) Whether there is any attempt at paying just and fair wages to Indian labour employed in it.
- (e) Whether there are any Indians in the higher Staff. If so what is the percentage in the total number of men in the higher Staff.
- (f) Whether there is any attempt at Indianisation of the Staff and management, that is to say, are the highest posts open to Indians and is there any real attempt at training up proper candidates.
- 6. Whether the concerns asking for protection encourage Indian concerns by placing orders with them. And do they give any facilities to Indian businessmen?

All evidence obtained in the search for answers for the above questionnaire should be tested for accuracy. Mere statements do not constitute conclusive evidence, no matter whatever be the source.

Then comes the question of suitability of Indian conditions for the industrialisation of the country. There are factors both for and against the success of industry in this country. They may be stated in short as follows—:

FOR-

- 1. Plenty of raw materials of fair quality, available here for most "Key Industries".
 - 2. Labour electiful and obean.

- 3. India itself a very big market for the producer.
- 4. A substantial customs barrier (7 to 30 p. c. against most imported articles. A higher amount of Protection against a few such as 15 p. c. against matches)!

AGAINST-

There are two classes of such factors.

A. General.

- 1. Raw materials inaccessible under present conditions in many cases and very costly due to the exacting of heavy freights by Railways etc.
- 2. Labour inefficient due to poverty, want of education and lack of training.
- 3. Transport rates are as a rule favourable towards imported goods. This arbitrary ruling is most frequent in lines owned by Monopolist foreign concerns.
- B. Special for Indian owned and Icon-trolled concerns.
 - 1. Lack of financial help.
- (a) Private Indian capital is shy, partly because there is not much capital available and partly because Indian capitalists are not remarkable as a rule for enterprise or far-sightedness.
- (b) British capital is not only not available but is decidedly antagonistic in most cases.
- (c) Bank help is not available. Indian banks are mostly not in a position to help. Foreign banks are the reverse of helpful.
- 2. It is very troublesome for an Indian group of industrialists to acquire and work any source of raw materials be it a forest or a mine. The laws of the land are supposed to be impartial, but it would be ridiculous to think that there is no discrimination made by the powers that be between the British and the Indian. The Arms Act as it is administered is an additional source of difficulties for an Indian concern if the raw material has to be worked for in any place where there is danger to life or property.
- 3. Properly trained and experienced Indian manager and technical men are very rave. Cost of foreign experts (usually British) is so high as to exclude possibilities of profit in any modest concern. Foreign experts are

- as a rule out to get all they can and have neither sympathy nor consideration for Indian concerns.
- 4. Powerful and subtle opposition from vested foreign (mostly by British) interests
- 5. Lack of sympathy from Middlemen (mostly Indians to our shame)
- 6. Ignorance and in some cases actual dishonesty on the part of the promoters

It can be easily seen from the above, that Protection is no remedy for the B group of disabilities which affect all Indian concerns

It is equally evident that no industry has much of a chance unless the B group be eliminated

Finally a few words about the results of Protection without specific help for Indian industries

A sufficiently high wall of Protection will foster an industry in the beginning but it will soon result in the foreign concerns coming over and settling inside the barrier And once they come, with all their facilities for capital and trained and experienced men, and also without being hampered by the artificial difficulties created for Indians by discrimination on the part of officials and vested interests, Indian conerns are bound to go to the wall

In the case of Match Industry, a huge foreign combine, engineered by the Swedish Match Trust and capitalised partly by the British and partly by the Swedish people have come over to start work in India.

NET GAIN TO INDIANS THEREBY .-

- (a) A high price for matches, the market being ruled by the price of the imported match.
- (b) Establishment on a firm footing of a group of foreign interests who will see to it that no Indian concern ever gets going in the same line after the few sickly young concerns now in existence are killed out.

There will be the same result in the case every other industry unless Protection spans special help to genuine Indian contens in the shape of bounty, monetary aid, iscriminative excise duties and similar MAGNITOS.

K.

The National Flag of India.

The following letter addressed to Mahatma Gandhi has been published in the Young India of December 11, 1924:-

We are grateful to you and other leaders for giving us that great symbol of self-respect, a national flag Our Swara, colours are now red, white and green Various interpretations are given of these colours. One popularly accepted is that red represents Christianity, white Hinduism, and green Islam. It has also been suggested that red stands for Hinduism, and white for religions and cultures of India other than Hindu and Moslem.

India other than Hindu and Moslem.

We beg to approach you with a suggestion about the proper colour to represent Hindu or Indo-Aryan culture and religion. We suggest the other colour (Gairika Geru or Gerua) It is the colour of sannyasa, of tyaga of ahimsa, the highest ideal of our Indian civilisation. It is the colour of most Hindu sects—Brahmanical, Buddhistic, Sikh, Shivaji's flag, the Bhagwa Jhanda, was the Gairika Utariya of Sri Banadasa, Rahindrinath in many a magnificant Ramadasa. Rabindranath in many a magnificent poem has sung of Gairkia Uttariya of Bharata, who is the great Tapasa, the great Ascetic. We suggest that in India's national flag, the Gaurika of the Brahmachari and the Rishi, of the Bhikshu and of the Yati, of the Sadhu and the Vairagi, and also of the Indian Darwesh and Pir, be given its proper place

Red is a colour we do not usually associate with Hinduism. In Bengal and elsewhere, red is used by certain Hindu sects, the Saktas specially. The red Jawa flower and red sandal paste are sacred to

by cerain Hindu secis, the Sakias specially. Intered Java flower and red sandal paste are sacred to Kali and red silk garments are worn in Sakia ritual Red or saffron is the colour of war with Hindus It does not strike the Hindu note of ahimsa.

White, again, is not specially associated with Hinduism. Further, red, white and green are already the national colours of some other countries, Italy and Portugal for instance.

Could we not have red, other and green for our "Hindusthan-ka-tiranga Jhanda" the tri-colour hanner of India? If the colours do not harmonise, we could have other, white and green, other for Hinduism, green for Islam, and white for other faithand cultures of India. Or we can have a "Chauranga Jhanda"—red, white, other, and green?

We respectfully request you, revered Mahatmal and also other leaders of the country, to give your opinion on this suggestion of ours, and if you think fit, the matter may be brought before the coming Congress at Belgaum, for discussion and final acceptance. Opinion from Hindus and others who have brought about this question is respectfully

Yours Most Respectfully Dwijendranath Tagore Vidhushekhara Bhattacharya SUNITI KUMAR CHATTERJI Kalidas Nag Nepal Chandra Ray BHIM RAO SHABTRI J. J. VARIL PREM SUNDAR BORK Marichi N. Aiyaswani

A national flag for India should represent something that symbolises the

NOTES 127

idealism of India, something which will enable those who shall stand by the flag to forget their narrownesses and their individuality and merge their beings into the National Being. The flag must express something for which individuals will gladly give all, suffer all and fear nothing. We think that if in human history there has ever been anything which elevated men to the plane of ideals, it is the spirit of renunciation. It is something, before which high finance seems too 10w to be touched, pompous self-display too insignificant to be thought of, earthly power a frailty and luxury a burden. Garrika stands for renunciation. If we are going to have a national flag, let it not be a catalogue of our religious or such other characteristics. A poor, suffering nation needs sacrifice from everybody high or low. Gairika will fire our hearts with the spirit of sacrifice, wash away our sordid desires and purify our souls. Let it be Gairika!

A.C

A Circulating Library

The authorities of the Madaripur Sevasram (Fandpur Dist.) have just organised a free circulating library with the object of disseminating modern thought and culture throughout Bengal. They intend to organise a sufficient number of libraries for a proper realisation of their ideals as soon as the necessary books and funds are procured.

The libraries will be organized on the lines of the Baroda Ribraries and properly

managed they have every chance of doing great good to this province.

The organisers have already been approached by the people of districts other Faridpur to start libraries in their districts also. At Madaripur the library has been welcomed by one and all and attempts are being made to start further libraries else-Many well-known publishers and where individuals have helped the library with books and the organisers will be grateful to sympathetic ladies and gentlemen if they would help the movement with either books or donations or both A card to the Circuculating Library, Madaripur, Dist. Faridpur, Bengal would get further information.

A. C

A New Brahmacharya Vidyalaya

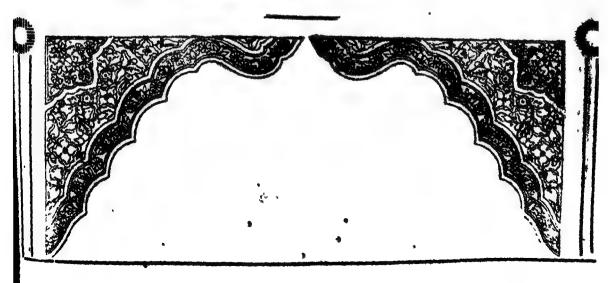

The Bharat Sevasram Sangha has lately started a Brahmacharya Vidyalaya at Madaripur. Here they want to train up boys into disciplined and cultured manhood by manis of reviving the ancient system of Brahmacharya and combining it with up-to-date and scientific teaching. Every attention will be paid to all-round cultural development.

No tuition fee will be charged as a rule, only a charge of Rs. 10. p. m. will be made

for boarding and lodging.

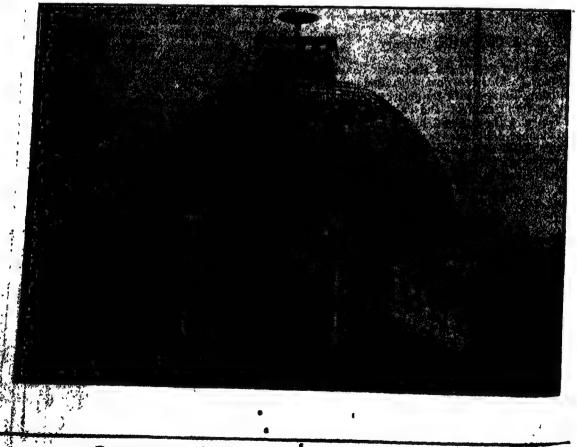

The organisers are appealing to the public of Bengal for supporting their institution with donations. All sums, however small, will be gratefully acknowledged by the Scoretary, Brahmacharya Vidyalaya, Mislaripur, Bengal.

A. C.

The House for Books-Or

To be had of: THE MODERN REVIEW OFFICE. 91. Upper Circular Road, Calcutta.

NEW INDIA, Edited by Dr. MRS. ANNIE BESANT, SAYS:

We read them with immense interest and pleasure, for they are well put together fard presented in a form that makes the rading delightful it is of course an extensive history of modern ledia, a history of wars, bitternoss, oppression, bloodshed, transp, and hate An adequate review would take far too much space in a daily paper and one hesitates even to suggest that this is a review, but we would like to call it simply a Book Notice, for that is all that can be attempted in these pages

that can be attempted in these pages. Taking it as a whole, it is a history that he been oft repeated, a story of high-landsdiness, is pastice and tyranny, showing a rete of domination and power which has been to still, a characteristic of the world in day, hence the tirest War. These thinnes are, in fact, the story of minor wars but on the same scale in other ways except that they did not represent so many Nations of the world, wars do not differ panch in here whether it be twentieth captery were in addition to the world, wars do not differ panch in here whether on the true seems to have been lift variety during the pasted that these particular volumes cover.

We know assesshed of the history of these times and it seems sections to red the mitiations of the East India Company from the other, in speaking of Warren Hastings, the author says tree.

His diplomatic transactions were meant to weaken the country's powers and the fast India Company gained strength in proportion as they weakened."

In speaking of Lord Cornwalite' administration to says:

that for the test botamed terrinar and and an inch and an inch and an inch and and an inch an inch and an inch an inch and an inch an inch and an inch and an inch an in

The state of the s

by the East Inida Company in India were by means of diplomacy, freed and surpation Cornwalls was the first Englishman to obtain land in India by conquest." The suthor goes on to say "The States under the rule of Indian Princes presented a scene of prespectly which one would have looked for in vain in the territories owing allegance to the rule of the British But Cornwallis thought otherwise. He found his Christian countrymen, in high offices of trust and responsibility, corrupt and toompetent. The Christian Civil Servants of India in Cornwallis' times were a diagrace to any Government,"

'bir Philip Francis stands out as a man of very exceptional character, a man of justice, a lurer of peace, canadie, generous and possessing a nebellty of soul which the author speaks of ungrudenighy in Volume IV. Major Bassa claims to record facta gattered from the records of Buttishers facts which he says have not been recred to in any work on Indiana History by foreigners or Indiana.

'This hattery should prove a most useful work, and it should be read by all airho We hope that it may have a wrie sale us England sepecially at this crusis in the history of the world

"We are struck by the very fair way in which the whole has been treated by the author, for in the volumes that have come to our hand there has been so word of condensation for sufferings ampound. It is a fair history of events, sparing the faults of some and expressing afmiration where admiration was due and commending actions when these nations were distincted and done for love of truth or justice.

"In oneclading this "flottee" again say that the short sole is a of these columns, and we hope the larry write have a wide circulation.

RISE OF THE CHRISTIAN POWER IN INDI

BY MAJOR B. D. BASU, I. M. S. (Red.)

Complete in 5 Volumes Rs. 25 for the Whole Work For Subscribers to "Prabasi" Rs. 18-12. Postage Extra.

PRESS OPINIONS:

THE "LEADER" Says-

"As we said at the time of reviewing the first volume, a chief morit of the book lies in the fact that it is a listency india written from a fresh point of view. British written of last fliatory are so often influenced by what floriert Spencer at the patriotic bias--Sir William Hunter said in one of his histen that thintish patriotics prefers to call the bettle of Chilliantia a drawn battle--and books written by them are often so examen ing to the Indian student, both 'a account of supersation ing to the Indian student, both 'a account of supersation in the Indian student, both 'a account of supersation in the Indian student, both 'a account of supersation in the Indian students of Major Basu is to be welcomed as a wholseome covered the past them on their defence and childenge them to give relation the hope that is in them. And in justice to Major Basu it may be said that in most cases be quotes firstish authorities. In any of his anti-British statements. We do not agree with those said so his anti-British statements. We do not agree with those said so in the ground that they rake up old antiputations and predicted the case should be stated and in justice to Indians the side of the case should be stated and in justice to Indians the side of the case should be stated and the mindeads of the of party, should be expected in British histories the Indian in always an accordance in twe mays verned by its kings and the heavest British astroneer of the bish leaders had turned traitors. And so en a forth, And hence without agreeing with all that Major Basys in the six volumes, we frankly say that it is right and per that the other side of the picture should be shown."

FORWARD says in a LEADING ARTICLE:

"Major B. D. Basu, I. M. S. (retired) has laid all publiciets of India under a deep debt of grati India under a deep deep to the tude by writing a book in five volumes entitled the "Rise of the Chambian Power in India." Christian Power in India In the light of our present know-ledge, the materials contained in this important book may be regarded as disclosures of a careful plot among text-book writers of part among sext-cook writers of British Indian History to conceal all real facts about this most important period of our national evolution. It will not do for anybody writing after him to string up all the governor-general ships and vicerovalties of in one common story of bene-volence and good-will towards: the Indian people. Our estimate of each of them must needs the revised----

"Major Basu's book will take the same place in the historical literature of our country which Mr. R. C. Dutt's famous "Economic History of British India" has done in economic literature. We hope to utilise his book in future for discussing problems and dangers against which our author has warned us."

FOR 1 SHORT TIME ONLY. VALUABLE ARTICLES GIVEN AWAY FREE. lew Year's Presentation Lever Watch

SITA CHATTERJEE

Authoress of the Cage of Gold etc

THE LEADER Says :-

It is a story of Bengali life old and now in town and country and a story that is well told in sample and excellent English. An interesting couple of hours can well be spent over the book.

THE RANGOON MAIL Says :-

"This is the first work of the famous Boncaice authoress in original English who has already made ber mark in the vernacular literature as a pact graster in writing short stories, and as the writer of the famous popular need. "The Care of field", the English translation of which has bett so lightly praised in the literary circles of Oxford and Cambridge, she has appeared in the work also-swhich is but a fitting joint in the long and yet to be longer chain of her over glorious literary career-another feather to her splendid cap of literary success.

her ever gionous interary career- another feather to her spiciatic cap or impression excess.

"The plot is simple but grand. The authoress has painted very artistically the home life of an calightened Hengali family the description of the young bridter and interest-colour-ed all slike by innocent love--is indeed pictureagus. The last scene whise the inversa are united at last is very charming. The authorise has introduced an opposed into the main story viz, that of Analia a count instea of himbits depicting a brate of a husband and a simple devoted limits wife. Hendes the two mans characters, Purns who broke off his cugacement in a manner which he schileman would approve descrive alone hotics. We are not cortain if the authorous has done him full justice which he perhaps has no right to espect. He gave up Anisdita not without a pane, but it is cureumstances that often make a man. He sught not have the mobal courage of an absolute standard but surely he had no been motive in winning her lors. An educated lady like Anistia of her mother could perhaps show him a bit more in found courtees, in his last interior. Anistia herself is atsunch and has great confidence in herself the is rather grave for her years, which is due to her promature disappointment. Debaprica is also the first appointment it may seem that the authorous starts with the viscot of records.

"At first appearance it may econ that the authoress starts with the object of recealing arous of the injustices done in the Hindu Society in the name of orthodoxy, but that it not her real object. The is an artist and in ever for the perfection of her art. And art is no respective of conventions. An angulate remance, is characterised all throughout by a grandour a influence of decrease, but the perfect on the perfect of the characteristic of the characteristic of the characteristic of modern fiction.

"The English style is delightful and grave, a calm near flow, and can compare alone with the authorem" own inimitable resuscular style. As a true observer of nature she has depected the heattins of Bongal villages most vividly. A student of human character, she has analyzed carefully and invested the secrets of the human heart in a way worthy of the psychologist. The English reading public who reliabled 'Bongal Life of old will have nonther opportunity of having another gluspes at another appect of Bongal Life and old will have not have all reason to be gesticial to the authorem. The authorem has wen her laurely and it is sure 'The English Erranh' will rank with her linest trophics. We wish her still granter successes."

Be 18 6-A Comparative River Re. 1-8 6. A Comparative Hindu Materia It contains the botanical description of about more than 800 Indian medicinal plants, their indian and European names, their chemical shalves and their therapeutic uses. 198 pages. "A most crudite treatise and contains a vast amount of information regarding Indian drugs; some of which are of real value. We recommend this book to all those interested in Indian drugs." —The Medical Times. London (April 1994) discourse on food are well-written and they large amount of useful information regard-linds of our daily food. The essay on the Glands" will amply repay perusal." The Modern Review (Sept. 1922) Frinciples of Education Re. 1 The book is worthy of being in the hands of educationist in the country." The United India and Indian States (Jan. 1723) The theoretical and practical aspects of education ably and analytically treated in the book by me author." —The Mahratta (Dec. 9, 1923) -The Medical Times, London (April, 1924) "This book will be useful to the Indian botanists and medical practitioners interested in the indigenous herbs" —Indian Medical Record, (April, 1924). 7. Infant Feeding and Hygiene As. 8 "We recommend it to the English knowing Indian parents."—'the Indian Medical Record, (April 1924). The book deserves well in the hands of the Education Department." — The Indian Daily News. (Sept. 5, 1923) "This little book is well-written." — The Modern Review. (Dec. 1922) National Problems "The book is ably written and carefully arranged and is sure to make an interesting reading for all well-wishers of the country, who must devote special attention to the useful suggestions made."—The Muslim Outlook (August 16, 1924). Dyspepsia and Diabetes Re 1 "The book is written by the author for the eduinted middle-class brain-workers who generally suffer from dyspepsia; it deals with prevention and treatment of Dyspepsia and Diabetes and will prove usefull to the public"—The Indian Medical Journal (Sept. 1924). Endocrine Glands Rs. 5 Malaria Rs. 2-3 "The writer has written comprehensively on the subject. The book will prove useful to medical students and general public".—The Indian Medical A Study in Hindu Social Polity Rs 3-6 Journal. (Sept. 1924). This is a book which may interest Ethnologists. Philologists, Sociologists and students of comparative Religion. It is a store-house of historical materials." — The Modern Review (July, 1924) The United States of America Re. 1-8 "The book is worth reading. It is written out of an enormous amount of knowledge nearly all of which is singularly accurate. The interpretations of various phases of our national life are mostly true—unexpectedly so. He sees and reports with less prepossession and more truth than do most of the Europeans, British included, who visit this country and then write about their observations. An Interpretation of Ancient Hindu Medicine "In the present volume of 625 pages, he (the authour) has made an attempt to place before the medical profession and the general reader carefully and then write about their observations. And his 200 pages are remarkably comprehensive."—The New York Times Book Review (Oct. 19, 1924). selected materials for a comparative study of the ancient Hindu and Greek systems of medicine in the light of modern knowledge. His contention that the ancient Greek Schools of Medicine were indebted Race Culture to the Hindu system deserves careful consideration the Hindu system deserves careful consideration and the proofs adduced in its favour are not without thindation. The subject-matter of the book deals with different departments of medicine, such as Anatomy, Physiology, Pathology. Diagnosis and thindation studies of diseases. Therapeutics, Surgery, Instetics and Hygiene. These have been dealt with the point view of commenters study and Contents, Racial Elements in India, Principles of Heredity, Selection of mate, Sexual Hygiene 100 pages. "It is a well-executed piece of work and would amply repay perusal." The Modern Review (Sept., 1924) The Origin of Christianity "The author reveals an extensive scholarship. The treatment is fairly exhaustive and in the chapter on Relationship of Christianity with Buddhism he is thorougly convincing."—The Vedic Magazin. (Sept. 1924). There was a time when Christian missionaries the point view of comparative study and the point view of comparative study and the point view of comparative study and the point of his views. He has successfully that not an inconsiderable part of our presentthat body and of the nature and methods of the art of surgical diseases were known to ancient physicians of India * The author that a service to his country by writing this a lock. The Modern Review (August, 1924) used to hunt after the weak points of popular religion and their preaching meant nothing but vilification of Hundursm. The Christian missionaries always acted on the offensive and the Hindus were on the defensive. But now the tables have been turned. —The Modern Review. (Dec., 1923). "It is a profoundly interesting book—illuminating elevating and thought provoking."—The Servant (Oct 24 1924) has compiled a fascinating and informative at 400 pages, which cannot fail to appeal stidents and others who are interested in Madical lore." The Matical Times, London, (May, 1924) elevating and (Oct. 24. 1924). 14. The Origin of the Cross recommend its use to those who are the revival of the indigenous system in inches and to research scholars who is sood food for reflection." The Assisperie, (March, 1924) Rs. 3 This is a book of permanent value." The Truth Sesker, New York (March 8, 1924).

ISWAR GITA

Translated into English for the first time by L. KANNOO MALL M.A., Judge. Price Re. 1-8-0

"The chief subject of the book is the knowledge of Brahm. This teaching is based on the Vedanta, Sankha and Yoga philosophies which seems to have been melted down into one harmonious whole. Nevertheless, the Vedantic thought predominates and the oneness of Atma and Brahm has been brought out in a lucid, bold and intrepid manner."

Wonderful Discovery in the Medical World!!

for some Obstinate and "Incurable" Diseases

Secured from the hidden stores of Great Lamas and Yogls of Tibet Burma and Himalayan Hills by Mr. P. C. Mukerjee, B.C.E., MISCE FTS Vidvabhusan (late Resident Engineer Calcutta Corporation) during his tours and travels in the obscure regions of these mysterious lands while Engineer to P. W. D. of Burma and Personal Assistant to the Chief Engineer of Kashmir State

The fruits of many years' hard researches in the Himalayas and 25 years' successful experiments by the founder and 12 eminent Physicians of Calcutta and elsewhere are now placed before the public for the relief of suffering humanity in general

Since 1918 the founder has been practising in Calcutta as a SPECIALIST IN LEPROSY, LEUCODERMA and DIABETES and has cured a good many serious cases successfully

THE HIMALAYAN REMEDIES GUARANTEE CURE OF

I Leprosy, Leucoderma, Gangrenes and all incurable types of Sores, Skin-diseases, and of ulcers within or outside also sinus, and fistula in ano etc.

If Obstruction of urine and all urinary troubles du = G Gravels, stone, dv = (a) Renal volv = (b) Gall-stone - No operation or eatheter-passing is necessary

III (a) Diabetes of all stages, (b) Pulmonary Pthisis up to the stage when the patient has not been bed-radden and reduced to skeleton but has vitality enough to dig sector; includings

Cure is effected by regular and scientific treatment with these and one mediums under the founder, assisted by an able Medical Board who help the founder so for is the gross of any critical case is concerned.

For an experiment we request the sufference to try any of the follows a cheap left would aful medicines—for serious Malaria (Special Preparation) painful Asthma and discipling Dysentery of all stages. He 1-S eich. Scorpton Bite as S. Extreme Dyspepsia and hopeless Nervous Debutty. Ro. 2- cach. Gastric Colic, obstinate Eczema, all eye complaints except cataract as we so long-pending. Rheumatism of all stages. Ro. 2 each.

Medicines are Free from any Injurious Substance.

All confidential Letters are to be addressed to Mr. P. C. ROV was Secretary to the Medical Board.

UNSOLICITED OPIMONS A FEW OUT OF A LARGE NUMBER

LEPROSY CURFD In A P Bageloft in respect to the Calcuttal writes (5-7-18) ** You have successfully cured a femile relative of mine of her laprosy. Here ase was of 14 years—standing and was fined by most of the well-known Physician and Kavirajes of Calcuttra's well as of other places of India but with no effect. Prior to your treatment six used to suffer from severe attacks of fever. Here sensation of skin was paralyzed in many places and he had sores and swellings all over the body and willy lost there foces ** But under your marklous freatment for the last 9 months—she has an completely circular for allneuts.

CURE OF EXTREME DYSPEPSIA Mi-Manufor Mukerji wa et ett the late renowned Pome Minister of Kashmir State and Vice Chairman (Joutta Corporation writes (1-6-5) ** suffering in a long and confirmed Dyspepsia torpidity of historiand extreme nervous debility. I did not seest to live long. But now under your excellent a duent I find that normal tone has been restored

to the almentary conducted the peristate action so revived executes the tender scale and time experience day and I feel stronger delte with the experience of a further less of life.

Major-General A. W. Hybrids, writes from Daries line (15-16-15)—I am abold man of 72 year mode are concrets need no years use of 32.

The S. K. Launa M. We to State The After sufficient time I have four Laurer (D.H. malling (Norvous Denotes at Hundre Sud), and (D. Zerula) of the S. to the A. Tout meliones and undoubtedly as above to know specific for diseases in which your Reportes for diseases in which your Reportes are annual to I am sure that will do rungense good to the public.

Mic R Mixim on a late Chool instance of the High Court Kashuni State writes (9-4-15).—The case of Kyys-yyak which occurred in my house and was declared as nopoless by all doctors has been completely cured by your lever-end. (Hir alayan Remedies.)

SRI AUROBINDO GHOSE

YOGIC SADHAN, Third Edition, As. 10.

This Booklet is a practical funds to the integral sevieus of Yugan propounded by Sri Aurolopde (those. The lengths processes of the Halbargeins and Haja Yugins have been shandood and the Khadhaku starts directly with the Will, which purified and irreducible swriting transforms the human nature—his mind, Chitta, Prana and the physical body—rendering it a fit instrument for the unhampered play of the Divine in mass.

ISHA UPANISHAD, Revised and Enlarged Ed. Re. 1-8, Foreign Edition Re. 2.

The central idea of the Lyunished which is a reventilation and harmony of fundamental opposites, has been worked out in four revenuers movements of thought.

- In the first is laid down the basic of Council Editiones and upon it is founded the Bale of a Divine lafe and the justification of works.
- 2. In the second, the one stable Lord and the maitiple movement, are identified or one Brahman, and the method of Self-reals
- 2. In the third there is a return to the justification of life and works and an industries of their divine fulfillment.
- 4. In the fourth moreover, the relations of the Supreme Truth and Immorality, the activities of this lafe and the state after death are synholikely indicated.

RS. 2-8.

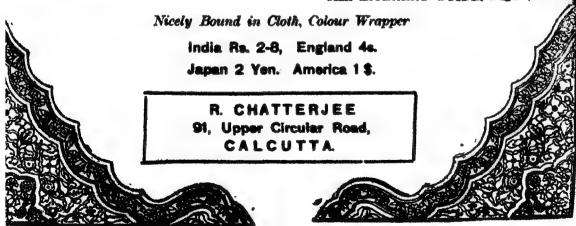

"A story of Bengali life, old and new, in town and country is well told in simple and excellent English" -THE LEADER.

"... ... The plot is simple but grand. The authoress has painted very artistically the home ife of an enlightened Bengali family picturesque ... The English style is delightful and rrave, a calm easy flow, and can compare alone with the authoress, own munitable vernacular style. The English-reading public will have another opportunity of having another glumpse of another aspect of Bengal life-modern Bengal life. The Knight Errant will rank with her -THE RANGOON MAIL. lnest trophies. We wish her still greater success."

THE CAGE OF GOLD

"The Cage of Gold Out of its Calcutta cage this pleasant love tale by a Hindu Lady omes flutterng to our window-sill. A touch of Western style lightly marks the story which yet Indian in atmosphere and heart and is superior to a good many European novels."

-THE LITERARY GUIDE, August, 1924.

WURAS DE LIE BIMALIA UHARAN LAW, M.A. B.L., Ph.D. Pholishers: Messis. Thacker, Spink & Co., Calculto.

I. Some Ksatriya Tribes of Ancient India. Price Rs. 10

The Times Literary Supplement, 28th August 1924:—In his search for material for the history of Ksatriya class in early India, Mr. Law has, one would think, very nearly exhausted all the available records. He claims to have studied not only the European and Indian scholars who have made researches but also to have ransacked an immense quantity of Hindu and Buddhist literature. Mr. Law has however succeeded in showing that many of these ancient class were exceedingly prosperous, and that they were for the most part a cultivated and manly race. The section on the Lacchavis which occupies more than a quarter of the book is very well done, and Mr Law claims no doubt rightly that he has added much to the information already available. The description of Gandhara is particularly interesting to European scholars because of its connection with Alexander and beacuse Archaeological research has enabled us to supplement literary remains.

Lord Curxon of Kedleston:—I am very glad to possess your learned book and I rejoice to think that Indian scholars so learned and competent as yourself are devoting themselves to researches in the Ancient History of India, one of the most interesting subjects

in the world.

Dr. A. V. Williams Jackson of Columbia University:—Valuable work...I know its worth because I know your previous publications on Indian subjects that are of keen interest to me. As I turn the pages from Licchaus onward, I see how much is in store for one who is a student of the History of India, upon which I have long lectured at Columbia University... such researches as indicated by this, and your previous work, are sure to prove an asset to scholarship.

II. Ksatriya Clans in Buddhist India. Price Rs. 8,

Young Men of India (September, 1924):—It is the fullest account as yet published of the important subject of the ancient republics of India. No less than nine clans have been treated and their history supplied and customs and manners described. The author has also successfully refuted many wrong ideas, and shown how scholars both Eastern and Western often put the cart before the horse in trying to explain the origin of the largest and the most powerful clan. Most careful and detailed account has been given of the Licchavia the Videhas etc.

S. M. Edwards, I. C. S. (Retd.).—It is to be regretted that I had not seen your Ksatriya clans at the time of my actually revising Smith's Oxford History of India. It came into my hands later. Otherwise I should have modified Smith's view as to the Tibetan

affinities of the Licchavia.

III. The Life and Work of Buddhaghosa, Price Rs. 9 (cloth), Rs. 7-8 (paper)

Dr. Geiger:—An excellent monograph. All the questions connected with the date, the life and the work of Buddhaghosa are discussed in a most methodical and exhaustive manner.

Dr. Carpenter:—It is very important to have such a collection as you have gathered of the various data contained in his great commentaries and your additional illustrations are full of interest. Your chapters on the origin of the Commentaries and the Interpretation of Buddhism by Buddhaghosa bring many valuable side-lights on the history of Buddhism ...your excellent volume will be a great help to future students.

IV. Ancient Mid-Indian Ksatriya Tribes, Vol. I. Price Rs. 8. Contents:—The Kurus, The Panchals, The Matsyas, The Surasenas, The Cedis, The Vasas or Vamsas, The Avantis, The Usinaras.

Dr. Barnett writes in his foreword:—Dr. Law's work will be welcome. He has spared no effort to make an exhaustive and careful collection of the materials that Indian tradition offers, together with many relevant data from other sources that will aid in the construction of a critical history. By his carnest and energetic puratativanusandhitsa he has laid students of history under a considerable obligation.

V. Historical Gleanings. Price Rs. 6 (cloth), Rs. 5 (paper).

The Young Men of India:—This is a collection of essays. The several pieces are all historical in character. They make pleasant reading and open out vistas' into the dim past. The book, will undoubtedly repay perusal by adding to one's stock of historical information.

To Our Advertisers

The Modern Review is India's greatest advertising medium. It circulates widely in every part of India, Burma, Ceylon, F. M. S., S. S., South Africa and all over the world wherever Indians and people interested in things Indian are found. That it is a paper well worth advertising in is proved by its long list of advertisers who have used its columns for giving publicity to their wares for years without a break.

Of late the Modern Review has improved its printing, paper, get-up and has made an all-round advance in popularity, circulation and quality of articles and pictures. This has meant extra expenses to the Modern Review and extra profits to its advertisers. In view of the above facts, it has been found urgently necessary to slightly increase the advertisement rates of the Modern Review. This increase shall not affect existing contracts till their expiry.

TO THORIES OF PROP. JADUNATH SARKAR M. A.

AURANGZIB,

Vol. V. (1689-1707) Rs. 4.

Orders registered. The completion of a tite's work and of 50 years' eventful history.

First 4 vols., Rs. 3-8 each / Sold Separately).

Vol. I. Reign of Shah Jahan

Vol. II. War of Succession

Vol. III. Northern India 1658-1681, 2nd. ed. Vol. IV. Southern India, 1646-1689

Based mainly on original contemporary Persian sources, e.z., the Mughal States Papers, daily bulletins of the Mughal Court, the letters of Averangerb and less contemporaries, incre than 5.000, Marathi bakhars and letters and the Assamese buranus, besides contemporary Factory records of the English, French and Portuguese.

H. BEVERID(i.E.—"Jadunath Sarkar may be called *Primus in Indus* as the user of Persian authorities for the history of Indus. He might also be styled the Bengalee Gibbon."

VINCENT A. SMITH—"You are doing first-class work. I have the highest opinion of your learning, unpartiality and critical ability."

W. FOSTER, C. I. E.—"It is easily the best authority on the period with which it deals."

Studies in Mughal India 320 Pages. Rs. 2.

Contains 22 Historical Essays, on India. in the 17th century and Mughal civilisation in all branches.

ASIATIC QUARTERLY REVIEW —"A series of essays of the most entertaining description."

INDIAN ANTIQUARY.—"All the essays are brightly written and several contain information not hitherto svailable in English."

Anecdotes of Aurangzib

(Persian tout, with an English stranspile)
and a long hije of Auranguile
Re. 1-8.

The work is exceedingly interesting and valuable, as it throws much new light on Auranguib and exhibits his pithy sayings, and his principles of government.

SHIVAJI

Second edition revised & enlarged, Rs. 4.

PIONEER.—"Probably the only really first-class piece of work in English on Maratha history published during the present century"

H. BEVERIDGE—"Jadunath Sarkur.....All his works are good, but perhaps the best of them as Shiraji It is full of research and gives a striking meture of the birth of the Mahratta nation. Based on an exhaustive use of all the available original materials—Persian, Marathi, Hindi, Dutch and English—most of which were unknown to Grant Duff. Shivaji's character and schievements, and the Maratha institutions and system of Government are discussed in two long chapters (45 pages.)"

Mughal Administration
Second edition, Size more than Doubled

A study of the administrative system of the Mughal Empire, the Departments, the functions of the chief officials, the provincial administration, its influence on the peasants, the legacies of the Mughal Empire, the causes of its downfall,—Emperer—aristocracy—State factories, farmans.

Chaitanya

Do you wish to propitiate the nine planets which regulate and influence human fate? Use, then, Brahms chary's Nabagraha Kabacha. This Talisman has extraordinary power to undo the evil influences of all the planets and to bring you all success, peace and happiness in life. It is purely and sacredly made in the Shastri form. Thousands of unsolicited letters testify that this Talisman is wonderfully and verily efficacious for:

Success in Business, Trade, Commerce, Agriculture, Examination and Litigation. Cure of all sorts of diseases, Aversion of worldly troubles, Premature death, Dangers at every step, Pecuniary distress, Quarre with friends and relatives, Mental disquietade, Loss of wife and children, Increase of the number of enemies Service, Promotion, Increment of pay, Suitable marriage, Conjugal love, Honours from Government Longevity of life. In a few words, Health, Wealth and Prosperity.

It acts marvellously on the body of men, women and children, either Hindu, Mussalman, Christian, Parce Rs. 3 ans. 4. Postage Extra.

A FEW TESTIMONIALS.

1. Raja Sreenath Roy Bahadur, Bhagyakul, Dacca,-I have used your Talisman; its effects are undoubtedly wonderful.

2. Prof. A B. Bhattacharya, M.A., Rajshahi Government College,—I had no faith in any Kabacha but Brahmachary's Kabacha's miraculous effects have astonished me.

3. Mr. P. C. De, Well-known Detective Novelist, Calcutta,-One of my relatives, suffering from chronic diseases, has achieved great benefit by wearing your Talisman.

4. Mr. R. C. Guha, Dacca,—Just after using your Talisman I have secured a good service. Its prompt effect really reminds me of Aladdin's Wonderful Lamp.

5. Mr. Raicharan Mistri, Khulna.—Rabu Harimohan Roy, a neighbour of mine, by using your Talisman comes out successfully in every Latigation He instructs me to wear your kabacha Please send me one.
6 Mrs. Kusumkumari, Dacca.—Weering your Nabagraha Kabacha I have gained a new life. I am now out of diseases, mental disquietude and pecuniary difficulties.

7. Mr. M P. Pradhan, Craddock Town, Nagpur,—The Nabagraha Kabachas I ordered, were put on by myself, my brother and my daughter. I got my increment, my brother also got increment and my daughter came out successful in Matric., quite unexpectedly.

Agricultural, Trade and Statistics of Railway Traffic. Cost of Railway Operation and Operative Statistics, Railway Finance, etc.

Introduction to Adwaita Philosophy (ENGLISH EDITION)

BY PANDIT KOKILESWAR SASTRI, VIDYARATNA, M. A. Post-Graduate Lecturer in Indian Philosophy, Calcutta University. Demy 8vo. Pp. 194. Cloth. Rs. 4.

"The work is a brilliant exposition of the Sankara-School of the Vedanta Philosophy. The most striking feature of the work is the full consideration of various altogether new issues such as (1) whether Sankara has denied the reality of the objects of the universe, (2) whether individuality has been resolved in and his system of Philosophy into mere relations and actions and whether the Ego cannot be held to be an active power, (3) whether Vedanta advocates inertia emptying of the human mind rather than its expansion, (4) whether Sankara's Theory can be called Pantheism, and so on. The work will prove an indispensable companion for the thorough and correct understanding of the great Maya-Vada in its various aspects. Copious authoritative quotations from Sankara's commenturies on the 10 Upanishads, Brahma-Sutra and Gita have been given in the footnotes enhancing the value of the work, which are an invaluable mine of information, on the subject. The author attempts also to clear up various misinterpretations and misrepresentations of the Sankara-Vedanta, giving a correct and right exposition.

System of Buddhistic Thought

BY REV. S. YAMAKAMI. Royal 8vo. Pp. 371. Ra. 15.

The book presents in a comprehensive though short form a complete view of Buddhistic Philosophy, both of Mahayana and Hinayana Schools.

H. E Lord Lutten, the Covernor of Scudel Saus: "I was very interested to see this remarkable factory which them its success to the energy and enthusiasm of its proprietor, Baba Mathura Mohan Chakravarty. The preparation of indigences trugs of so large a scale is a very great achievement. The factory appeared to me to be exceedingly well managed and well equipped, and hope that it may continue to prosper? 11-8-22.

E. E. Lord Remaidshay, cx-Governor of Bendel Says: "I vanted the Sekti Oushadhalaya (Dacca) on July the 17th, and was shown everything by the proprietor Babu Mathura Mohan Chakravarty, B. A. I was very much interested in all that I saw, and was astonished to find a factory at which the production of medicines was carried out on as great a scale Babu Mathura Mohan Chakravarty seems to have brought the production of medicines in accordance with the prescriptions of the ancient Shasiras to a high rite efficiency." 17-7-20

E. Z. Sir Henry Wheeler, the Governor of Behar and Crissa says: ... "I had no idea that the manufacture of indigenous drugs was carried on upon so large a scale. The whole thing bears marks of enterprise and success. ... "120.7.25"

Beshahandhu, Sj. C B Das 2405: "I desire to place on record my high appreciation of the work of this factory. The business is carried on in an orderly and organized manner. Supervision leaves nothing to be desired. I congratulate the Proprietor on the success which this business has already attained." 24-10-22.

THE MODERN REVIEW

VOL. XXXVII. NO. 2 FEBRUARY, 1925.

WHOLE NO.

POVERTY AND PROGRESS

By MANU SUBEDAR,

B.A., B.SC. (ECON., LONDON), BARRISTER-AT-LAW

ROM the time of the Greek philosophers the idea of money has been held in contempt and decried by those who dwell on the higher aspects of life. Somewhere it has been called "filthy lucre." In India the first place was assigned to spiritual and moral guides, and next to that to the warrior class or the defenders of the race. Trade, commerce, industry and other economic pursuits were placed next and well below, and there is every indication that the distribution of social honour and prestige did not depend on the idea of money, but was determined by notions of service. Wealth was not, therefore, the most desirable of all possessions and there were at least as good other fields for satisfying man's ambition as the possession of jewels and other valuables offers. are few records to show how far this attempt to give the third place to wealth succeeded, but it is not improbable that the lower side of human nature broke through on many occasions the moral fabric which had been with great forethought and skill built up. The precedence of wealth has been resented by cultured men and Sanskrit Subhashit abounds in cynical references to Gunah Kanchanam Ashrayante." Mussalman era there was no marked condemnation of worldly things as such, and as a matter of fact there would be found by various poets verses praising wealth as such. In recent times the widespread boast of India about the possession of spiritual merit as a justification for the digregard of business and other enterprise securing economic advance has not in reality prevented serious efforts

being made. Schemes of social alleviation programmes of political parties and the place in the hierarchy of power of different class: have been made or marred by the financial resources available to push them forward or otherwise. The estimation of the in dividual amongst fellowmen has also bee growing in proportion to his bank balance. In this connection, it is indeed sad to reflect that neither skill in handicrafts nor th possession of considerable learning in an direction secures that degree of precedent or honour which they should secure in an properly organized society. The possession of wealth undoubtedly dominates the considerations and the search for high it comes has absorbed the best talent of ti country. Ideals of service, which ought the prevail, do not supply the same incentive because the stage on which an individu works out his life's activities, does not provide the necessary background, and a peverted public opinion makes it impossible secure whole-hearted devotion to the fine side of life. It was the late Mr. Gokhal who deplored the absence of "full tim workers" and predicted that political advance of the country was not possible until suc men were forthcoming. The India of to-da can boast of more than one full time works in every province and in every class, an yet so long as the centre of social though is misplaced in Society (spelt with a capital 8) guided by second-hand notions emanating from Government Houses, these patriotic me do not command either universal respect (ollowing. To the extent, to which the

incentive is weakened, their task is made more difficult. How to bring back pursuit of social service including in its fold search for knowledge, art, literature and music, would be one of the problems for those who devote their mind to the evolution of schemes

of social reconstruction.

Taking the world of India, therefore, as it is to-day, it is obvious that the fact, which overshadows every fact is that of general and universal impoverishment. There may be differences of opinion between the official school of thought and non-official economists as to the origin of this malady, but evidence of such poverty is staring one in the face everywhere, and if some of the consequences of this condition were clearly understood, it will soon appear that almost the only problem that needs attention is to stem the advancing grip of this disease. All advance in science or art and in the things, which are sometimes regarded as constituting civilization, has to be financed from the surplus left to the community after feeding those who are engaged in productive activities. The reflex effect of all such advance on future production may be great but at any particular moment it may be a burden on the community which the community may be unable to bear. Then they incur the reproach of being "backward" and incapable of looking after themselves. In the philosophical theory of history there is one school, which maintains that political revolutions are brought about more often by communities that have prospered than by communities that have been impoverished. It would be hardly disputed that a variety of accomplishments, arts and useful knowledge at one time in vogue in India have been lost, because the community was unable to make any continuity of effort or contribute towards it. There was much that was beautiful which has been thus destroyed,—much that was fiveienic and much that went to relieve the bardens of life at negligible cost.

The problem of poverty has not been anthoritatively investigated. The demand The demand for this investigation has been resisted in a manner which must provoke considerable menicion, and results of even partial enquiries held through official agencies in the past nave been in most cases suppressed, but it s obvious that production in India in any direction is not going up either per man or per acre. In many parts of the country, it ins been remarked that the soil is being mpoverished, because manure materials are

being exported from this country and some of the elements taken from the soil are not returned to it. An expensive Agricultural Department has been running model farms for some years without being able to show a single acre of ground under any crop, which can compare over the same outlay with land under similar cultivation in European countries or in Canada. The efficiency, which the British Government have aimed at is purely negative. The outlook of the average British statesman is that of the policeman, whose interest in the life of the humanity around him is that of mere curiosity, and his aim is not to advance things but to prevent any disturbance of the present While the bulk of the people have order. no opinion except on subjects immediately affecting their daily activities, those who have cultivated the reflective faculty are being deluded and misled by an enumeration of false symptoms of prosperity such as the increase in Government revenue, the increase in export and import trade, the increase in railway traffic, the increase in bankers' clearing-house return. No attempt is being made even in these directions to show the increase per head of population. On the economic side, India as it is administered to-day, presents a picture more like the shop of a huckster dealing in old iron than anything else. There is a lot, which may have been valuable and which may be useful, but there is absolutely no connected line of activity directed to secure a continuous and constantly improving state of prosperity.

Since wealth is a surplus, it is quite as important to scrutinise consumption as to increase production. Are we using as a community the purchasing power available to us to improve the productive capacity of our own people? A temporary period of price comparisons favourable in the purchase of imported article in preference to an article of local manufacture leads to the shortsighted policy of destroying local industries and with them the savings of the community invested in those industries. It is almost like a thirsty man giving a kick to the pitcher which contains life-giving fluid, and the irony of the situation is that foreign firms established in India and British Chambers of Commerce and English officials come forward to defend the interests of the Indian consumer against what they call the exploiting tendency of the Indian producer, as if there were no consumers in any other

country and as if the producer is somebody lifferent and apart from the consumer. Leakages of wealth and savings in other lirections may have been noticed by many leaders. The nett result of all this is that the country becomes poorer and incapable of holding its own on common ground in industry or trade, in art or science or politics. The French Finance Minister, Monsieur Clemental, indicating French Government's attitude in the matter of public debt and general economic situation said, "Government must do its utmost to develop France's productive capacity while diminishing purchases abroad". India, which has not a twentieth of the recuperative capacity of France, finds little effort from the top in these directions.

It is impossible to indicate in a short pace the harm which financial maladministraion can do to the wealth-producing capacity of a country. Those, who are familiar with he currency and exchange policy of this country would know how the ruinous policy of securing a high exchange cost India crores of rupees in 1920 when the Government old Reverse Councils and how for years on he entire crops of India the farmers have been receiving less through an artificial era of high exchanges, which simultaneously rippled capital and labour devoted to proluctive work in industries by making it possible to put down foreign products the aper in the Indian market. The grip, which the shipping interests have got on overnmental and banking machinery, is esponsible in no small measure for this tate of affairs. Because they have no incenive for serious effort. Government officials in harge of finance are unable to resist the lemands made upon them for endless multiplicaion of offices and of administrative machinery eading on to larger and larger demand being nade from the people just when their re-ources are on the decline. While the cost of Government is growing heavier, the taxable apacity of the country has long been xceeded and every symptom of the evil nown as over-taxation with deterioration of hysique and the standard of life is to be een in most parts of the country. More realth can be produced from industry only inder the law of increasing returns, but the ttitude of the Government towards industries n India can hardly be characterised as ncouraging. Unemployment is on the increase verywhere, and yet the savings of the counry lured into Government coffers by attractive terms are being spent in more and more labour-saving devices, which add to the army of the unprovided.

The late Mr. Gorhale wanted a modest loan of three or four crores of rupees for the introduction of compulsory education. If that had been done fifteen years ago, there will have been no room for the complaint that India could not have a properly representative constitution because of the paucity of voters. If it had been attempted after the war when crores of rupees had been borrowed. there would have been at all events a genuine step taken towards drilling a much larger section of the community for disciplined work in productive fields. This has not been done. On the other hand from more than one sign it is evident that the investment of foreigners in this country is on the increase, and the amount of vested interests does not represent altogether new capital brought to this country but in many cases capitalised profits and in still others capitalised goodwills and concessions. There is no doubt the increase of foreign investments in India may be in the same (if not greater) proportion as the increase of the public debt of the country and this increase is actually comparable to the increase in some belligerent countries which were engaged in war.

INDIA'S PUBLIC DEBT

,	(In crores 31st March 1914	of rupees.) 31st March 1924
Total funded debt in India (rupee loans) Total funded debt in England	145'69	360 '93
(largely sterling loans) Total unfunded debt (Post	265.60	395'70
Total unfunded debt (Post Office, etc.) Total unfunded debt (Capital value of terminable an-	34.10	72*21
value of terminable an- nuities)	105 90	90'14
Total debt	551:29	91898

In this debt a sum of Rs. 49½ crores of Indian Treasury Bills held in paper currency reserve is not included. According to Government themselves, the unproductive debt went up during this period from 2658 crores to 24352 crores. In the last ten years, the total increase of indebtedness was 36769 crores, or including the Treasury Bills referred to above, 41719 crores. India has thus been adding to its public debt at the rate of 40 crores of rupees a year, of which more than 20 crores have been for unproductive purposes. This is hardly the

his money has been properly spent. The najor question, which arises, is, will India to able to repay these large vested interests at the end? Should she not be able to repay, her entire future is irrevocably mortgaged.

-The argument for increased wealth in a community does not necessarily mean more sities and more factories, though the growth of these is inevitable. The trouble arises, because the population moving towards the nity comes while there is as yet no preparaion for absorbing them in industry. Prosperity would be equally well indicated by nore prosperous farms, homesteads and ottage industries. The increase of these conditions is not possible without a more ntelligent application of labour to the conwithout more litions of production and strenuous exertion than hitherto. It would be disastrous if this incentive for more work were prematurely weakened by ideas of communism, which as a doctrine could be spread in India, if desired, as swiftly as fire

would spread in a mass of dried leaves. The socialisation of wealth, while it offers morally a sound principle for adjusting personal outlook towards humanity, should be only secured after there is considerable wealth to socialise. Money, which has been regarded as an order on the community for commodities and services, is really a medium which is abused when it is unfairly secured, when it is secured not in return for actual service rendered to the community or when it is disproportionately to the function performed. Some day, perhaps, India may reconstruct economic life, in which service would be the standard for distribution of wealth. In the meanwhile the actual situation in the country with low physique, low wages, with overtaxation, with enormous public debt and very extensive foreign investments is enough to merit an immediate and close examination at the hands of all who desire some kind of future for India.

A MEMOIR OF OLD DELHI

By C. F. ANDREWS

CHAPTER III.

ZAKA ULLAH'S EARLY LIFE

7AKA Ullah, when quite young, was a very beautiful child and a great fovourite among the ladies of the Moghul Palace ithin the Fort. When he was six or seven pars old, he used to be taken, on festival casions and at other times by his father, 10 was Tutor to the Royal Princes and incesses, within the Palace in his embroired dress and gold-laced cap to see the eworks and to be welcomed with little esents by the ladies who had asked for s attendance. He had very vivid recollecn, in after years, of those occasions and to describe the splendid illuminations the Palace. His grandfather used, from ne to time, to exhibit his grandson's nderfully bright intelligence, and the royal ies used to admire him and ask to have

him brought to see them. He would go back home to his mother very excited and show the presents that had been given him. In our conversation, he would sometimes refer to those very early days, and contrast the Delhi he saw then with the Delhi of later times

was impossible for him ever to forget the indness of the royal families to him.

There was a fund of personal loyalty which formed a very strong side of his character and had a beauty of its own. In later life, he was able to transfer this without any conscious effort to Queen Victoria, whom he idealised in his Urdu History, called Victoria-Nama. This loyalty to those whose salt he had taken was undoubtedly a family tradition inherited from many generations of ancestors. It has a singular value of its own, and it will be a sad thing, if the modern world can find no place for it.

There can be no doubt that his father,

Sans Ullah, acted wisely in sending him at an early age to the daily discipline of school and college. Too much of the court-life might soon have spoilt him and enervated him with luxury in his childhood itself, while the atmosphere of the Delhi school and college, together with the daily companionship and bracing rivalry of his equals. gave him exactly the stimulus that was needed to develop all his talents. Yet the effort that had to be made and the opposition that had to be overcome, before he was able to enter the new English school, were by no means negligible factors. We can only with difficulty realise today what a struggle it must have been both for his grandfather and for his father, men so deeply and punctiliously religious in their characters, to give up their child, of whom they were both passionately fond to the new education, which was already being openly called 'Kafir' or infidel and was said to produce 'atheists'. On the mother's part also, it showed great strength of mind and firmness of purpose. No doubt, they were helped in their decision by the famous words of the Prophet: "Get knowledge wherever it 18 to be found, even as far as China." These great words have been the means in every age of breaking down the barriers which separated Islam from alien cultures, and they account for the fact that assimilation of knowledge has been one of its distinguishing works throughout the course of its long and varied history. It is evident to me, from all that I have seen of the family, of which Zaka Ullah was a member that there was a true family tradition of liberal culture, which went back to the remote times when their ancestors lived in Central Asia where Islamic learning flourished.

Zaka Ullah was only twelve years old when he entered the college, and his faher from whom he inherited his brilliant intellect used to go over his lessons with him each afternoon, when he had returned from his classes bringing with him some new wonder of modern science to disclose with all the excitement of a child. Concerning his professors at the college, he used to speak with the greatest reverence and affection in after years especially of his Persian and Arabic teacher, Maulvi Imam Baksh, whose nom de nlume was Sahabi. This Maulvi was a distinguished gentleman of Delhi, a man of high moral character and liberal culture. He gave help to Sir Syed Ahmed when he was writing his Archaeology of Delhi. No pro-

The state of the s

fessor was more greatly loved by all his pupils, and his personality made such an impression on young Zaka Ullah, that thirty years after, when he himself was lecturing as a Professor of Persian literature to the students of the Muir Central College, at Allahabad, he used to say to his pupils that he felt as if the presence of Maulvi Imam Baksh was with him as he spoke.

In the terrible scenes which followed the capture of Delhi, during the Mutiny, when the wildest passions were let loose, some military firing took place in that quarter of the city, where this old professor lived and his house along with others was rased to the ground. The Maulvi himself and most of his relatives, were killed and now his family is almost extinct. Zaka Ullah used to mourn deeply his loss. It was one of the bitterest memories to him of the Mutiny itself.

As Zaka Ullah grew older, he specialized in Mathematics. While engaged in that study. he became the most brilliant and promising pupil of Professor Ramchandra and a warm affection sprang up between the two. intimate companionship in study led at one time to a painful misunderstanding; because the rumour got abroad that Ramchandra's own favourite pupil, Zaka Ullah, was about to follow his tutor's lead and openly profess himself a Christian. But this was not the case. Their friendship was one of the intellectual type, common among scholars who are solely devoted to learning and engaged in the same search after scientific truth; and to both Ramchandra and his brilliant young companion, the first approach to western science and mathematics was full of excited interest and wonder. It did not mean in this instance religious discipleship, although religious questions must have been discussed between them. No doubt, this early and intimate companionship with a non-Musalman gave to young Zaka Ullah a width of vision in religious matters and a spirit of tolerance which made his character so beautiful in its powers of sympathy in later years.

Professor Ramchandra was a man of fearless sincerity and very strong convictions. The fact that he had been obliged to break with all his Hindu relations, and to undergo much persecution when he became a Christian, had made him somewhat stern and abrupt in manner and often harshly controversial towards others; but he had a deeply affectionate heart and was upright in his actions. His love for Zaka Ullah was very deep indeed in .

and there was no sacrifice he would not have been prepared to make for his young friend.

At the time when the Mutiny broke out and the city of Delhi fell at one blow into the complete possession of the mutineers, Professor Ramchandra's life as a Christian convert was in the greatest possible danger. Dr. Chimman Lal, a fellow Christian, a man of sincere piety and given to good works, was at once killed by the rebels. Rai Piyare Lal Sahib, of Delhi, one of the very few survivors has told me how on the morning that Delhi was occupied by the mutineers from Meerut at about ten o'clock he met Zaka Ullah hurrying towards the Delhi College, at the imminent risk of his own life, to endeavour by some means to save Professor Ramchandra. He reached the college, but found that the Professor had already been warned beforehand by another of his pupils. After remaining for some days in hiding in the heart of the city he managed to escape in disguise to the open country and got safely away, enduring in the interval terrible anxiety and suffering. the Mutiny was over, Professor Ramchandra was able to return some of the kindness of his young friend and pupil who had saved his life by his timely warning. He obtained military passports both for him and for his family to enable them to come back into the city and did him many other acts of service.

To return to the pre-Mutiny days. Zaka Ullah's college friends at this time were Nazir Ahmad, who has written the preface to this memoir, Maulvi Karim Baksh. Piyare Lal, Chandu Lal, Kanhya Lal, Mir Babar Ali, and Zia-ud-din. Each one of these has been in some degree famous in his day. Nearly all of them passed away before Zaka Ullah

himself.

His closest friend, however, though not a contemporary at the college, was Maulvi Sami Ullah Khan, who in latter life was made C. M. G., for distinguished services in Egypt. He retired from Government Service when he was District Judge in Oudh. This most intimate friend of all died some three years ago; and Munshi Zaka Ullah spent his own closing days of literary activity in writing, in Urdu, his friend's memoir.

Some three weeks before Munshi Zaka Wilah's death, another life-long friend, Khwaja Altaf Hussain, one of the greatest of the band of poets in the Urdu Renaissance of the Nineteenth Century, came over from Panipat to visit him. Zaka Ullah embraced him and treated him with the utmost affection and the

two old friends sat Iong together side by side. While they were talking, Zaka Ullah presented 'Hali' (to use his literary title) with a copy of his own momoir of Maulvi Sami Ullah Khan, who had been a friend of both of them. Turning to Hali he said: "Writing this has been my last work: it has killed me." What he meant was that it had so pained him to revive all the memories of his old friend and had so exhausted him that it had brought on his final illness. When Hali was taking his farewell, Zaka Ullah said to him quietly: "This is our final meeting in this life; may

God keep you in all your ways."

The two old The prophecy became true. During friends never met again on earth. that last fatal illness Dr. Nazir Ahmad. his other life-long friend, was lying on his own bed of sickness, enfeebled and often tortured with rheumatism. He used to send almost daily messages to Zaka Ullah by me and I used to carry back messages in return. Thus I was able to see personally how very deep and strong these great friendships were which Zaka Ullah made. It would be impossible to judge truly his character and life without taking into account the remarkably large part that was played by such friendships. As we shall see later, he was a very domestic man, devoted to his wife and children and home But almost equally strong with him, right up to his closing years, were these affections towards his friends

The more one realises the situation of Delhi in those days, one thousand miles from Calcutta, with no connecting railway at all, the more remarkable appears this sudden outburst of brilliant intellectual life, which came with the establishment of the Delhi College. No such period ever came again III the history of the city during the Nineteenth Century. For many years, I had to teach there, at a still later period, from the year 1904 to the year 1913. My own experience of the intellectual life of the city of Delhi was utterly unlike that which we read about in these early days. The commercial atmosphere of the whole district today lies heavy upon it. The old culture and refinement and intellectual alertness now appear to be rapidly passing away. We have had no brilliant array of students, in modern times, such as existed in Zaka Ullah's days. contrast is so great, that I used to ask him about this very point. He would tell me that what I said was correct. There had never been anything like it again. He put down a great deal of this extraordinary

efflorescence in the early Nineteenth Century to the newness of the English learning. It was, he told me, like entering some magic and enchanted land. No one could tell what would be revealed next. The scientific experiments, above all, held their imaginations spell-bound and the anticipation of new knowledge was always with them. They felt themselves to be pioneers of a new age and dreamt dreams and saw visions.

Among his own contemporaries, Zaka Ullah had a great reputation for being able to solve all mathematical problems that were set before him. It was quite a common experience to find that he alone had been able to obtain a correct solution to some questions which had been put before the whole class. While he was still a student, at the early age of seventeen years, he had brought out his first mathematical work in Urdu. The Delhi people were greatly surprised and delighted at a mere lad undertaking such a difficult task, and the first edition was sold out in three or four days. Zaka Ullah took the whole of the profits, amounting to thirtytwo rupees, the first sum of money he had ever earned by his own writings, and purchased some gold ear-rings for his sister. One of the uncles of Sir Syed Ahmad, a Nawab of Delhi, whose house was looked upon as a strange place of mathematical and astronomical learning, full of scientific instruments with pulleys hanging from the roof and astral globes and charts and astronomical tables scattered about, sent for the lad who had dared to bring out a book on Mathematics at the age of seventeen. He said to him: "Well, young man, I hear that you are a second Euclid." He then added: "I will give you three days to solve a mathematical problem for me." At the end of the three days Zaka Ullah came back to him and said that the problem was insoluble, because at the final stage it was necessary to trisect an acute angle, which no one had yet been able to do geometrically. The Nawab was greatly surprised and pleased and said: "My dear lad, you have solved the problem, because you have arrived at the final stage beyond which there is no solution".

The whole atmosphere in those early days was electrical. Stories like those which I have just told were passed on from one house to another and treasured up in the family. The Urdu literary Renaissance at Delhi gave a sudden illumination to the age, before it sunk back into duliness. There was also the great tradition of the past glory and lustre of the Moghul rule. The light flickered and leapt up for a brief momentum before it died out. More than any other single cause, the Mutiny killed it.

(To be continued)

SOCIAL LIFE IN THE BUDDHISTIC AGE-III*

W E have already in the previous articles dwelt on the morals of the people in the times of the Jatakas. Further glimpses on the subject may be obtained from Vols. V & VI, from which mainly we shall cull the materials of the present article. In V 512, we are introduced to five hundred women of Sravasti, drinkers of strong drink, at a drinking festival. The evils of strong drink are here dilated upon, e. g., he who drinks falls into a pit, is lost to decency and will talk of things that are obscene, it proves

*The second article of the series appeared in M.R. May, 1924.

the second to account them " we

the ruin of wealthy homes, &c. In V. 537, we read of a young Brahmin drinking strong drink in the company of other young men. The king of Benares, surrounded by 1600 dancing girls, and his ministers and other officers, held a drinking feast for seven days (VI, 543). In VI, 546 we read of soldiers become angry because they who 17 the chance of a free drink. In lost 547, the king proclamied a festival by beat of drum: Procure garlands, scents, and perfumes, and food and drink, and keep seven days' holiday. Let the people stay where they will, drink deep, sing and dance and make merry. In the Vidura Pandit Jataka (VI, 545) the king celebrated a festive occasion

by setting free his captives and ordered the people to hang up their ploughs and have a month's holiday.—'Let them drink in private and still seem total abstainers with their cups flowing over.' These extracts prove that drinking was condemned by public opinion though very prevalent, and not only among men, but the gentler sex as well. From the same story we find that Brahmins ate flesh, to which indeed there are many other references in the Jatakas, (e.g., V. 547) some of which have been quoted in the previous articles of the series.

The laxity of sexual morals and the low opinion of women already referred to may be further illustrated from the following: In the Kushavati Jataka (V. 531) we read that the king of Kushavati who had no sons, desiring to have one, sent out to the streets a band of his dancing girls, then a company of other girls, of good, and next of the highest, rank, and last his queen consort Silavati, so that they might take their fill of pleasure and conceive and bear him a son. The queen conceived and bore two sons. The Kunala Jataka (V. 536) is intended to illustrate the vices and follies of womankind, their lust, unchastity, and immoderate passions. The queen of Benares, seized and married by the king of Kosala, misconducts herself with a Brahmin youth. Ox, cow nor car to neighbours lend, nor trust a wife to house of friend.' Poverty, sickness, old age, and drunkenness are among the eight grounds on which women despise their husbands. All women are equally immoral, they are all sinners alike; they are poor fickle creatures ungrateful and treacherous; no trust should be placed on them; one might as soon catch wind with the net as hold women in sway; for the sake of money they will run after vile outcastes; they are unrestrained in lust, common as a landing-place on the Ganges; women, like kings and Brahmins, can never be sated. 'Women like flames devour their prey, women like floods sweep all away.' 'Women are pests, like thorns are they, women for gold oft go astray.' And all this stuff, rising in a crescendo of vile abuse to the shrillest pitch of coarseness imaginable is put in the mouth of the Master who, in the guise of the bird Kunala, expounds the fellies of women from the heights of the Himalayas.

As we have said in our previous articles. prostitution had a recognised place in ancient Indian society, as also in the royal courts, and processions of prostitutes graced every festive and oeremonial occasion, from birth of a prince to the celebration of

birth of a prince to the celebration of victory. The same was the case in Eurin the Middle Ages. Says Karl Pearson The Ethic of Free Thought (1901, p. 402):

"Prostitution began to play a great part in social life of the mediaeval cities..........The p titute in the mediaeval city played a sing part; she was alternately honoured and content She was used to grace the banquet of town-council or the reception of the emperor; she was often compelled to wear a distinctive d or was deprived of all the legal rights. Not is more characteristic of the absolute subjection woman than this treatment of prostitutes..." woman than this treatment of prostitutes... In V. 522, king Dandaki deposed fr her position a courtesan whom he gree honoured and afterwards he restored her the same position. In V. 525, we read the seven hundred royal wives of the k of Benares and sixteen thousand courtess These numbers are frequently repeated other stories (V. 531, VI 538, 543, 544, 54 and, somewhat reduced, might serve as true picture of some princely courts modern India.

The monastic order founded by Bude soon lost its pristine purity. In V. 523, read of a Brother tempted by the wife his unregenerate days. A backsliding Brotl going his rounds for alms at Sravasti, me a fair lady and falls in love with her first sight (V. 531). In the Kunala Jat (V. 536), a white nun, Svetasramani, be the worse for liquor, misconducts her with the goldsmiths.

To the numerous illustrations of a voyage already given, the following may added. In V. 518, we read of five hund trading folk of Benares who took ship a set sail and on the seventh day they w out of sight of land and were wrecked mid-ocean and all but one, who by favour the wind reached port, became food for fish In the Mahajana Jataka (VL 539) the of the king of Videha got together his sto in-trade and put it on board a ship carry some merchants bound for Subarnabhu There were seven caravans with their bea embarked on board.

Allusions to charitable institutions numerous. The son of Sankhapala, king the Nagas, had alms-halls erected at four city gates and by his almsgiving my a stir throughout the land (V. 524). 'treasures of the king of Benares had all houses built and practised almsgiving on grand scale (V. 535). The evils befalling cmiser who does not give alms are narra in the same story.

Literacy prevailed among women, though to what extent cannot be ascertained. In VI. 546 the queen writes a letter with her own hand. A sixteen year old daughter of a rich merchant, very handsome but still unmarried, (V. 527) warrants the inference that child-marriage was not prevalent in those times. The longings of a pregnant woman were carefully attended to (V. 534), as we know from the more familiar story of Sudakshina, queen of Dileepa, in the Raghuramsa of Kalidasa. In the Kunala Jataka (V. 536) it is mentioned that in Kapilavastu women married their brothers This kind of marriage, we know, was not confined to ancient Egypt, but everywhere preceded the more developed form of marriage in which certain prohibited degrees in order of propinguity were recognised. The Kusa Jataka (V 531) relates the story of the family at Benares with two sons, of whom the younger, being unmarried, continued to live with the elder, which would seem to suggest that as a rule, married brothers set up separate establishments. It would appear that widow marriage was not unknown. In the Bhuridatta Jataka (VI 543) a Naga widow is married to the son of the king of Benares. In the Vessantara Jataka (V. 547) among the ten boons prayed for by the princess, we find the following: (1) to be chief queen, (2) to have a son, (3) to have a slim figure, (4) to have firm breasts, (5) not to become grey-haired, (6) to have soft skin. How little has female human nature with its instinctive hankering for beauty, changed in these two thousand years and more, and how the customs and ideas of those days, e.g. polygamy with its natural concomitant, jealousy of co-wife, and preference for male progeny, persist to this day! from the same story we learn that the feelings with which an old husband is regarded have not materially changed since Buddha's time.

William Con

"A hateful thing your life must be, as youthful as you are, with an old husband to be wed; nay, death were better far. Painful a spear-thrust, full of pain the serpent's flery bite; but a decrepit husband is more painful to the sight."

But the picture of widowhood, as painted in the same story, is the most harrowing of in its realistic detail, showing that her condition in our society has been the same through the track of centuries.

bout, she cats the leavings of all; a man may do ser any hurt, unkindly speeches never cease from rother or friend; a widow may have ten brothers,

and yet is a naked thing; oh! terrible is widowhood."

Though the lot of a woman was thus anything but happy on the whole, still henpecked husbands were not wanting who were so much under the influence of their wives as to be ready to kill their parents at the bidding of their spouses (V. 522; see also IV. 446). Even a maid-servant used to put shoes on (cobblers were a recognised caste, though among the lowest-VI 542) which she had to remove when sweeping her mistress' chamber (Kusa Jataka, V. 531). And yet so simple was the organization of society, that in the same story we find the princess Prabhavati, daughter of the king of Madra, going to fetch water with eight slave girls, each carrying a waterpot. Disputes over the waters of boundary streams which irrigate the lands on either side were not unknown (V. 536) Indeed, the need for irrigation was as great then as now, for there are allusions consequent to famines upon prolonged droughts. Once for a period of three years there was no rain in the kingdom of Kasi. the country became scorched up, and people under the stress of famine crowded the palaceyard and reproached the king, as they did Louis XVI at Versailles on the eve of the French Revolution (V. 526) It would appear that when people were overtaxed, they would emigrate In the kingdom of Kampilla, there was a king named Panchala, whose subjects being oppressed by taxation took their wives and families and wandered in the forest like wild beasts (V. 520).

The different kinds of slaves are described in the Vidura Pandit Jataka (V. 545):

"Some are slaves from their mothers, others are slaves bought for money, some come of their own will as slaves, and others sre, slaves driven by fear. These are four sorts of slaves among men."

In VI. 547, the prince gave his son as a slave to a Brahmin, and told him that if he wanted to be free he must pay the Brahmin a thousand pieces of gold. The grandfather intervened at this stage and said: 'Come, my boy, I shall buy you with a price, and you shall be a slave no more'.

Characteristic Buddhist teachings emphasising the ethical aspect of life occur here and there. 'By knowledge, justice, self-restraint and truth, a man at length achieves his high purpose.' (V. 518) Power is fivefold,—power of limbs, power of wealth, power of counsel, power of caste, and power of learning, each succeeding one being higher than the one preceding and the power of learning being.

THE MODERN REVIEW FOR FEBRUARY, 1925

the highest of all (V. 521). Learning was greatly honoured, and learned men abounded. In the city of Champa, for instance, there dwelt a northern Brahmin of high family, a teacher famed far and wide, having 500 pupils (VI. 539). Even kings' sons became the pupils of such teachers, and paid the usual teacher's fee (VI. 537). A treasure-trove as in modern law belonged to the king. How true is the observation that a mother loves her son most in the hour of anger and what her mouth speaks she does not want at all (VI 546). In the same story Senaka and Mahosadha had a discussion among themselves as to who of the two is to be preferred, the wealthy man bereft of wisdom or the wise man devoid of wealth-a subject which has not lost its practical interest to this day—and Senaka supports the rich, whereas Mahosadha supports the wise man. The arguments advanced by Senaka would go to show that wealth was always a mighty power in human society.

Of royal courts and courtly ceremonies, the Jatakas give occasional glimpses which are often highly interesting. At the Kartic festival, the king marched in solemn procession round the city at sunset, when the full moon had arisen in the sky, and torches were blazing in every quarter of the city, which was decorated as if it were some city of the gods. The king, mounted on a magnificent car drawn by thoroughbreds and escorted by a crowd of courtiers, made a circuit of the city (V, 528). The feeding of Brahmins formed part of the kingly duty. King Kusha of Kushavati fed twenty thousand Brahmins (V. 531). There were well-bred dogs in the king's palace (V. 536). The naming day of the king's son was evidently fixed within a month of birth. On that day great honour was paid to the Brahmins who read the different marks. Brahmins skilled in signs and omens were consulted when the boy did not cry for play-things, such as figures of elephants and the like (V.538). The civilization, as we see, was entirely Brahmanic. and the customs and traditions of the later Vedic age continued in full vigour, and toleration of Brahmanic supremacy was the rale. In the same story we read of the four castes and eighteen guilds, fair women skilled in dance and song, and troops of slaves. The king's five counsellors used to sit in judgment in the king's court of justice, but they were often corrupt (V. 528; VI 542). Here is a description of the king's court.

"The crowd of king's ministers sat on one side, on another a host of Brahmius, on another the wealthy merchants and the like, on another the

most beautiful dancing girls. Brahmin panegyrist skilled in festive songs, sang their cheerful ode in loud voices and hundreds of musical instrument were played."

Then follows a description of Mithila:

"Videha's far-famed capital, gay with it knights and warrior swarms, its Brahmins dresse in Kasi cloth, perfumed with sandal, decked wit gems." (Mahajana Jataka, VI. 539).

In the same story, we have mention o slaughter-houses, and we find that elephants were killed for ivory, and the panther for his skin. In VI. 545 the drinking shops and taverns, the slaughter-houses and cookshops the harlots and wantons of an imaginary city are mentioned. Before the royal couch five hundred women performed all kinds of dances on their different musical instruments In the Maha-Ummaga Jataka (VI. 546) the Great Being so arranged the hall that one part was set apart for ordinary stranger, one part for stranger Buddhist priests and Brahmins; in another there was a lodging for the destitute, in another there was a place for the lying-in of poor women, another place was reserved for stowing away the goods of foreign merchants and all these apartments had doors opening outside. There also he had a public place set apart for sports, and built a court of justice and hall for religious assemblies. When the work was completed, he summoned painters and having himself examined them, set them to work at painting beautiful pictures, so that the hall became like Sakka's (Sakra-India) heavenly palace. Then he constructed tank with a thousand bends and a hundred bathing ghals. On the bank he planted various trees and had a bark made like Nandana. And near this hall he instituted a public distribution of alms for holy men, whether Buddhists or Brahmins, and for strangers and for people from the neighbouring villages. In the same story not only slaughter-houses, but a piece of flesh from the slab of a slaughter-house, are mentioned Here we read of a tunnel, lined with chambers, each of which had the statue of a woman, very beautiful, so much so that without touching it no one could say that it was not alive. In the tunnel on either side, clever painters made all manner of paintings. In the next story (VI 547) mention is made of a necklace, beautiful as if drawn by a painter. All this shows that the arts of the lapidary, and of painting sculpture, architecture and horticulture were well developed, and poor houses, maternity hospitals, sporting clubs, orphanages,

'arehouses, assembly halls, and caravan-serais (ere in existence.

We shall now deal with the institution f caste as we find it in the age of the atakas. We have already seen that the ower of caste was reckoned as next in imortance only to the power of learning (V. 21). We also find everywhere in the atakas that gifts to Brahmins and Sramanas, nd the duty of feeding them, were enjoined n the king and the commoner alike (IV. 450. 84, 489, 497, 498; V. 528, 540; VL 545) nd even the Bodhisattwa is himself reported have said, I have given manifold gifts to lonks and Brehmins, (Kunala Jataka, V. 36). But while Brahmins as a rule were hus honoured, as a result of Buddha's aching, a rationalistic view of the caste-systm came to prevail by and by, which underuned the whole institution and led to a more emocratic organisation of society among large umbers of the people who embraced the new uth. In the Nimi Jataka, Sakka (Indra) says king Nimi (VI. 541).

"Caste or no caste, the upright man I would atnd at need, for every mortal man is bound by his
an act and deed. Apart from righteousness, all
stes are sure to sink in hell, all castes are purified
they are righteous and act well. Although holy
long is more fruitful by far than alm-giving, yet
th these are the thoughts of great men. Do you
watchful in both, give alms and practise virtue."

There is not a line in the above injunction ith its preference for righteousness to birth, hich one would expect from the mouth of its Pouranic Indra familiar to Hindu mythogy. In VI. 542, Khandahala, the corrupt hahmin judge, having induced the king to ider his relations to be sacrificed at the actificial pit (which, however, did not appen), the king's son Chandra Kumara adjected his royal father thus:

"Kings give these Brahmins villages, choice cities e their appendage, on every family they feed, and in a goodly heritage, and it is these benefactors, re whom they most readily betray. The Brahmin der, take my word for it, are always faithless id ingrate."

The minister Khandahala was then made an utcaste and relegated to the outcaste settlement. Elsewhere the Brahmins are held up to ontempt and represented as proverbially leady and masterful. 'Kings in their kingom, and Brahmins in their work, are full of teed' (IV. 496). However powerful Brahmins and priests may be, womankind is lighter far. (III. 433).

Brahmins seem to have followed the most-

the same with the same with the same that the same to the same that the

Brahmin husbandmen, who ploughed their fields with oxen (V. 516; IV. 467; III. 354). Brahmin farmers cultivated their lands with hired labourers (III 389). Brahmin villages are sooken of (III, 402). Brahmin carpenters gained their livelihood by making carts (IV. 475). Wealthy Brahmins managed their own estate (IV. 477). Rich Brahmin merchants traded in ships (IV. 442). Elsewhere we read of a Brahmin millionaire bearing the significant name Mahakanchana (IV. 488). There were even Brahmin goatherds (III. 413) and snake-charmers (IV. 506). The Kshatriya caste, in which the Master was born, is represented as the highest of Kshatrivas are always mentioned before the Brahmin order in the Jatakas, and this is intended to convey that they take precedence in the hierarchy of castes. Buddha is made to speak of a Brahmin who had showed him disrespect as a low-born fellow as compared with himself, who had sprung from an unbroken line of nobles (V. 529). At the same time, the Bodhisattva is not ashamed to have been born in the family of a man of the lowest caste, as in Satyadharma Jataka (II. 179). A Brahmin, Satyadharma, travelling together with him, and being short of rations, ate of the leavings of the latter, and bitterly repented of it thus. How have I disgraced my birth, my clan, my family! In III, 309, we have Bodhisattva as the son of a pariah woman, but so pleased was the king of B nares with his exposition of the law, that he made him king by night, himself remaining king by day. The object of these stories is apparently to show that low birth does not matter, and a man's a man for a' that' Brahmin ladies were not immaculate by reason of their birth A young Brahmin of Benares acquired the liberal arts at Takshashila and attained proficiency in archery and having married his professor's daughter set out for home with his wife when he was for his attacked by a robber whom passion, and who conceived 8 wife his killed the Brahmin with dagger placed by her in her lover's hands, who then carried her off (III. 374) Brahmins were not however to be treated Elsewhere a Brahmin is mentioned alike. who was regarded by the king with especial honour, beyond what was paid to other Brahmins. This worthy member of his caste placed virtue above learning and birth, and was of opinion that men of high caste and low, if virtuous here, would be equals in heaven (III. 362).

As a rule, however, the Brahminic order was proud of its high hirth, and treated the low castes with great contempt. There were proud Brahmins like Swetaketu (III. 377) who, ging a Chandala and fearing that the wind biowing from his direction would contaminate him, broke out; 'Curse you, you ill-omened Chandala, get to the leeward,' but the Chandala took him by the shoulder and forcing him down, put him between his feet. We need not be surprised that the rationalistic spirit of Buddhism was already at work, and the lower castes were beginning to assert themselves. The king's priest, of all persons, is made to say in the same story; "A thousand Vedas will not safety bring failing just works, or save from evil plight." Then the Vedas are a useless thing?—naturally questioned the orthodox Swetaketu. To this a somewhat evasive reply is given, and the Vedas are not absolutely condemned in view apparently of the respect universally paid to them, but emphasis is laid on conduct, self-restraint, and good works as the true means of attaining bliss. In the same story, false penances so common among sadhus to this day, e. g., hook-swinging, lying on thorn-beds, enduring the five fires, practising mortification by squatting or diving, are mentioned. The story of Uddalaka the bastard, (IV. 487) like that of Swetaketu, is intended to emphasise the superiority of self-control and right doing over the study of the Vedas and it lays down the remarkable dictum that all castes, including Chandalas and Pukkasas, can Nirvana; saints are never asked their birth. Below are given some instances to show with what utter contempt Chandalas were treated in Buddha's time; they had to live in settle-ments resembling the Ghettos of the Middle Ages and the Indian locations in South Africa and were subjected to unspeakable ignominies. If corroboration of these Jataka accounts is required, it will be found everywhere in the Yogavasistha Ramayana, that compendium of the Vedanta where the divinity of man and the equality of all souls as so many emanations from the Absolute are taught in popular language, to a people whose contempt for the lower castes it does nothing to mitigate (see, for instance, Book III, chapters 106-9). The effect of the revolutionary prononpoement that even Chandalas could attain the highest beatitude open to man, on a society founded entirely on the aristocracy of birth, can be better imagined than des-cribed. It was the first occasion in the history of caste-ridden fadia on which the outcaste

was placed on a footing of equality with the Brahmin in regard to the supreme goal of life. This great message of hope, this glad tidings of great joy, was the secret of the phenomenal success of Buddhism when it

7 , 600 mily 2 "

first appeared on the scene.

Pride of caste is deprecated in IV. 453. In the Amba Jataka (IV. 474) we have a Chandala village, Bodhisattva, a learned sage, being one of the caste. A young Brahmin learnt a charm from him, by which he could make a mango-tree yield fruit out of season. The Brahmin thought, "if I say a low caste Chandala taught me, I shall be put to shame and they will flout me. Be it Kshatriya, Brahmin (note the order of precedence), Vaishya, Sudra, Chandala, or Pukkasa, a teacher is always regarded as one's superior." In IV 497, we have a graphic account of the social gradations of the times and see how the Buddhist birth-stories made light of the pride of birth. The Great Being (Bodhisattva) was born outside the city of Benares in a Chandala settlement and was known as Matanga Dittha-Mangalika, daughter of a Benares merchant, coming to disport herself in the park with a crowd of companions, saw the Great Being from behind her curtain as he was coming to town, and learning that he was a Chandala, said, 'I have seen something which brings bad luck' and washing her eyes with scented water she turned back. The people with her cried out, "Ah vile outcaste, you have lost us free food and liquor to-day!' They then pummelled Matanga and left him By the force of his will, Matanga sen**se**less. caused Dittha-Mangalika to marry him and by him she had a son Mandavya, who learnt the Vedas and became a great king. As Mandavya was once giving a great feast to Brahmins, Matanga arrived and was accested by his son as a low-caste churl; whereupon he preached to his son the king the evils of pride of birth, and collecting a quantity of mixed victuals, ate it. In the sequel, Matanga's wife Dittha-Mangalika arrived on the scene and the Brahmins were made to taste rice-gruel sprinkled by her, as a result of which they were put out of caste by the other Brahmins. In the same story mention is made of another Brahmin Jatimanta who was inordinately proud of his birth and abused the Great Being as a vile outcasto, but the latter put down this pride by performing a miracle. In the next story, we have a Chandala village outside Ujiayini, where Bodhisattva and his mother's sister's on were horn and were named Chitte and Marshuta. born and were named Chitta and

11× 1

As in the last stery, they were seen by a merchant's and a chaplain's daughters, and were belaboured by their attendants as evil omens. So they thought, 'All this misery has come upon us by reason of our birth', and disguising themselves as young Brahmins they studied at Takshasila. There the professor and his pupils were invited to a feast, where their origin was betrayed by the unguarded use of the Chandala dialect and they were turned out and became ascetics. Bowed down by grief, Chitta, baffied in his attempts to cross the bar sinister, cried out in the agony of his soul, "the lowest race are the Chandalas, the meanest of men."

One of the most important of the birthstories, from the point of view of caste, is the Dasa Brahmana Jataka (IV. 495). It purports to reproduce what the wise Vidura told king Yudhisthira respecting the presence in the Brahmanic order, of men possessing the characteristics of the different orders of society, following all kinds of avocations, the inference being that their claim to be regarded as the exclusive custodians of spiritual absolutely is untenable. Vidura is made to say that (1) some Brahmins are like physicians, who gather herbs and roots and recite magic spells, (2) some are like servants, driving chariots and bringing messages, (3) some are like tax-collectors, importunate for gifts, (4) some are like beggars, with long nails and matted locks, (5) some are like merchants, selling fruits, honey, ointment, &c., (6) some are like Vaishyas and Ambasthas, following trade and husbandry, keeping flocks of goats, and selling their daughters for gold, (7) some are like butchers, fortune-tellers, gelding and marking beasts for pay, slaughtering kine and bullecks, swine and goats, (8) some like bandits or herdsmen, guiding caravans armed with sword, shield, and battle-axe, (9) some like hunters, building huts and laying traps in woods, and catching fish and hare and lisards, (10) others are like barbers, lying down beneath the royal bed at the soma sacrifice, the king hathing above their heads (the Brahmin plays the scapegoat in this ceremony, the king's sins being washed on to the Brahmin, who receives the bed and the ornaments by way of incompense). Observe the veiled irony of the whole story, and the duties appertaining to the different occupations in those days. But in fairness to the Brahmin caste it is also mentioned that there are wise and good Brahmins as well, who are free from the

the state of the state of a comment was an a see .

deeds of evil lust, and eat an only meal of rice, and never touch strong drink.

The last story which we shall quote from is a long one, the Bhuridatta Jataka (VI. 543), in some ways the most remarkable as an emphatic and open protest against the honour paid to the Vedas and Vedic sacrifices. Aristha having spoken eulogistically of them, the Bodhisattva said, "He is telling a legend of the past—a false legend," and proceeded to set him right by uttering the following Gatha (verses):

"These Veds studies are the wise man's toils, The lure which tempts the victims whom he snoils......

Doctrines and rules of their own, absurd and vain, Our sires imagined, wealth and power to gain.
'Brahmans he made for study, for command the Kshatriyas,

Vaishyss plough the land, Sudras are servants to obey the rest,

Thus from the first went forth his high behest.
We see these rules enforced before our eyes,
None but the Brahmms offer sacrifice,
None but the Kshatriya exercises away,
The Vaishyas plough, the Sudras must obey.
These greedy hars propagate deceat,
And fools believe the fictions they repeat.....
If he who kills is counted innocent,
And if the victim safe to heaven is sent,
Let Brahmins Brahmms kill.....
These cruel cheats, as ignorant as vile,
Weave their long frauds the simple to beguile.
Offer thy wealth, cut nails, beard, and hair,
And thou shalt have thy bosom's fondest prayer.
The offerer, simple to their heart's content.
Comes with his purse, they gather round him fast,
Like crows around an owl, on mischief bent,
And leave him bankrupt and stripped bare at last.
The solid coin which erewhile he possesst,
Exchanged for promises which none can test....
And read the hymns, nor find his headpiece split.
The Brahmins made the Vedas to their cost
When others gained the knowledge which they
lost.....

THE MODERN REVIEW FOR FEBRUARY, 1925

the 'above extracts, long as they are, contain nost outspoken denunciation of the ritualism of the Vedas, and of the Brahminic pretensions to supremacy, that are to be found in the Jatakas, and their merculess logic reminds one of the rationalistic philosophy of the school of Brihaspati, where simi-

lar sentiments are to be met with.

From all that has been said above it will appear that while Buddhism attached no value to caste (Buddha himself being frequently represented in the Jataka stories as born in a low caste), it did not directly attack the caste-system, but preferred to weaken its foundations by the Master's own example, and by denouncing the pride of birth. Buddha's attitude towards the slaughter of animals at sacrifices was however, positively antagonistic and the whole theory of Vedic ritualism was subjected to the searchlight of national criticism and held up to scorn

As to the position of the different castes among themselves, we get sufficient indications in the Jataka stories to lead to the conclusion that 'cobblers, sweepers and outcastes, (VI. 542) ranked with Chandalas and Pukkasas

amongst the lowest castes of society. In regard to the position assigned to these castes or their prototypes, Brahminism seems to have changed little since those times. But the innumerable intermediate castes of which we read in the Census Reports are a comparatively recent creation, unknown in Buddha's time; had the caste divisions continued, on the whole, to be as simple as they were in the beginning of the Buddhistic period, all the complexities of our modern life, and the problems they have given rise to, such as those of intercaste unity and the reduction of the entire Hindu population to a homogeneous nation, would have been comparatively easy of solution, and they would not have presented the well-nigh insurmountable difficulties which now block our path. Buddha's rational code of ethics and his doctrine of the equality of man would now be of immense benefit not only to the social, but also the political regeneration of our country, and his teachings on the institution of caste have therefore a special value for us

X.

NIGHT

By J. VAKIL

The darkness throbs, the Unseen Heart, A Flower, bursts in the night, In sudden pain its petals part Out of a dream of light.

The secret rose of Beauty blows In flame through your deep eyes, Its odorous fire about you glows And dyes my heart's deep skies.

Rabindranath Tagore

RRIAGE CEREMONY AMONG MAHARASHTRA BRAHMINS

By V. G. APTE

T is well nigh a century since western education commenced to permeate the Maharashtra and it is interesting to notice if any reform has been achieved by the Brahmins in Maharashtra in respect of their

marriage ceremony.

There are three main divisions of Maharashtra Brahmins, viz., Chitpavans, Deshasthas and Karhadas. They interdine but do not intermarry. Intermarriages among them are not prohibited by Shastras. They are moreover sanctioned by their religious head—the Sankaracharya Yet such marriages have not become common

Thanks to the progress of education and of social reform early marriages are now things of the past. The marriageable age for girls has been raised from 6 and 10 years to 14 and 20; and boys are now rarely married

before 17 or 18.

Horoscopes of marriageable boys and girls are still consulted and if they agree, their marriages are settled upon But the agreement of horoscopes does not play the chief part in the settlement. The bridegroom's father has an eye to the main chance—the Ilunda or the sum of money the bride brings with her. The purchase money of the bridegroom will be a more suitable term for Hunda. With the progress of education and the growing poverty of the people, it was expected that the custom of demanding Hunda would receive a check. But strange as it may appear, it has received an impetus and it is ever growing though it has not vet assumed such alarming proportions as to drive grown-up girls to find relief for their parents by committing suicide. So there are not yet cases among them like that of Snehalata. Girls in Bengal may well envy the lot of their sisters in Maha-Lashtra

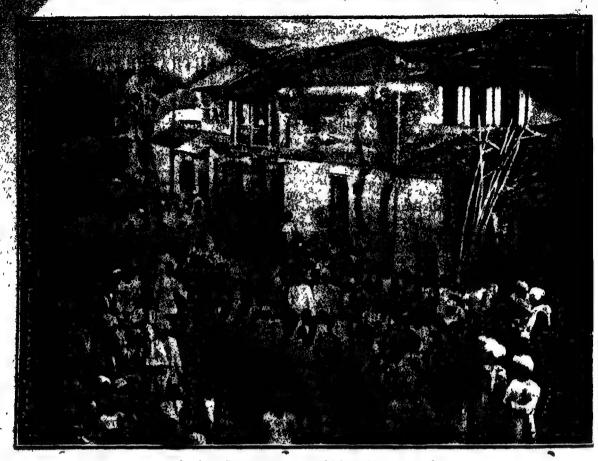

Faith or no faith in religious rites to be therved in marriage ceremony, they are i metiliously performed, such as, Akshat or lititation to the family and local deities, the Punyaharoachana or the giving of blessin s for the holy day, the Devaprotistha, the I ma Hom, Saptapadi, Nakshatra Darshang, the Many of these rites have no meaning

for the persons to be married, but still they are gone through by extremely orthodox people and the whole-hogger reformers alike.

When educated males find themselves unequal to fight the orthodoxy, it is vain to blame women for insisting on the scrupulous observance of several social and semi-religious functions, such as Ushti Halad, Amba Shimpane, the grinding of Udid pulse in a hand-mill by the father and the mother of the bride together, etc.—observances quite meaningless in these days of machinery. These only serve to prove that our womenfolk are not behind their Mahomedan and Christian sisters in their fondness for strict adherence to customs of by-gone days.

But even they are at times found amenable to reason in respect of the observance social functions and quietly of certain yield to the spirit of the time. When child marriages were in vogue, there was nothing wrong in the eyes of the people to make the married couple sit together at a dinner party wholly consisting of males and ask them to put morsels of delicious sweets in the mouth of each other, loudly announcing to the dinner party, the names of the opposite sex among the married couple—a custom called Ghas-Itene (giving of a morsel). It was a kind of exhibition of the literary wit on the part of the bride as she had to announce the name of the bridegroom, not in a presaic form but couched in a metrical banter, which often gave merriment to the dinner party and won their admiration for But this practice of Ghasher ready wit. Dene was in ill accord with the bashfulness of the grown-up bride, who felt it very un-comfortable to sit by the side of her partner in life in the full presence of male elders and strangers and so the practice is now gradually dispensed with. Vuli (chopping off by the bride with her teeth of the betel-leaf-roll held fast between the hips by the bridegroom and vice versa), Supare Lapavine (hiding by the bridegroom of a betel-nut in the folds of the clothes on the body and seeking it out by the bride and rece versa) these and similar pastimes, which excited mirth in

The state of the s

A Marriage Procession of the Maharashtra Brahmins

times of early marriages are now given the

go-bye they deserve

One important reform, however, is a crying necessity and it is scarcely heeded. With all lucubrations of our educated people condemning extravagance in expenditure, marriage expenses are going up by leaps and bounds. With the high rates of coreals, ghee, and sugar facing us, shears to be applied to ought unnecessary expenses, but this is hardly the case. The love of pemp and seeming grandeur is unconquerable. The marriage procession must be in right royal fashion, however low may he the pecuniary condition of the bride's or the bridegroom's father. Marriage procession is not a thing to be examined with an ecopoints or an artistic eye. The greater the hurlyburly and the incongruity, the greater the mirth. Here is a bridegroom dressed in a new turban with flower chaplets pending on both sides of his face, with his forehead

besmeared with red powder and his cheeks touched with lamp-black to avert the evil eye, riding on a horse, ever trembling with fear lest the animal may get frightened at the sound of the guns or the sight of fireworks and cause his fall. He is followed by a large galaxy of ladies richly decorated with ornaments and dressed in their best sarees, and a large crowd of men bringing up the rear. The procession is headed by a band of musicians playing Eastern tunes on their sweet-sounding flutes and by their side there are drum-beaters, who know only how best to make noise with their Zashav. the never-to-be-despised handwallaand dressed in second-hand worn-out military dress with their serpentine brass trumpetand big drums, making alternate rearing and shrill noise—all these are the necessar". though incongruous, elements of a marriage procession. But the greatest absurdity is with the Abdagir a circular flat is wooden

plank. covered with rich silk interwoven with gold threads, supported on a long pole and intended to serve as an umbrella to ward off the cruel hot rays of the sun from the face of the bridegroom and so useful in midday noon if held across the path of the sun. Is it not out of place when it is the cool morning or the dark evening when the procession sets out? But no, sun or no sun the Abdagir must be there. It is indispensable. It is an emblem of pomp and what is marriage without pomp and extravagance? To enhance the grandeur and picturesqueness,

there are Nakshatramalas or star-wreaths made of tinsel and coloured paper hanging from high poles, as if to show that the procession is marching through heavens studded with stars and to make up the scene of this heavenly sight there is an artificial moving garden of variegated flowers made of paper and tinsel, vying in richness the well-known Nandana-rama of Indra. Who can say after this all that Maharashtra Brahmins are wanting in love of gaiety and can charge them with parsimony in marriage expenditure?

CONSERVATISM

By ABDUL AZIZ, BARRISTER-AT-LAW

THE results of the General Election have just been announced, and although one could have foretold an easy victory for the Conservatives, after the gathering reaction against Labour and the long series of defeats (culminating in the dissolution of Parliament) which the Labour Government was heroic, or callous, enough to suffer, we must say that we were not prepared for such swinging Conservative majorities all around, nor did the country ever witness such a poor show of the Liberals, whatever the causes may have been

The present time is an important one in parliamentary history: A huge Conservative majority over all the other parties combined affords food for reflection. In fact, such an event at this time of day, beating as it does the great Liberal victory of 1906, induces us to re-read English History in the light of recent events, and ask fundamental questions about Conservatism—what it stands for its principles, its power, its possibilities and its destiny. Further we are tempted to study once more the English temperament and ask ourselves if we have not misread the British genius and character. Are the English people as a nation retrogade and to choosely, or else simply wise and self-confacent? But we must begin with Conservatism.

inservatism is an age-long creed; this

3 4

must not however, prejudice us in favour of Conservatism, for a persistent error with a long history does not become truth. So we should judge every tenet of the creed on its merits, and keep it apart from its ancient lineage on the one hand (which is no recommendation whatever) and from a long service to the cause of human progress on the other (which has at best only a historical value)

On the contrary the go-ahead folk are apt to think that Conservatism is purely a matter of horedity and tradition, and that an nonest conversion to such an "outworn" creed is impossible or extremely unlikely. But the late Election gives the he to this supposition. Nor have we any right to beg the question in that manner. Truth is never old, and we cannot imagine that a political creed which has supported the national existence of such a wise and successful nation as Englishmen for several centuries, and still commands so much influence in England, is really an outworn creed which has survived its utility.

We need not encumber ourselves with the historical antecedents of Conservatism, though these constitute a brilliant record, of which any party or nation may well be proud. But a certain amount of history is indispensable in discussing Conservatism.

Conservatism stands distinguished from

my other political creed in that it has a long edigree, and has stood the test of time. That precisely the first cardinal point in the conservative creed. What is tried is safe and miable. There must be a special reason for innovation. In science we don't freely experiment with the human body. It is more cangerous to experiment with a body of men. Not only are here a large number of men. but we are playing, with minds instead of bodies—a far more complex affair. Exploration and discovery will often be accompanied by disaster. Yet it may be said that conservatives are either shortsighted and unimaginative or indolent. For there is no denying the fact that with careful observation, patient analysis and comparative study of men and conditions one can introduce change and reforms without dangerous consequences. Moderation and prudence and care are all that is On the other hand if we are too shy we shall never take a step forward.

As a brief formula we can say that Conservatism stands for established interests and vested authority: this formula would include adherence to the Church and the Throne. advocacy of landed and hereditary interests, and even the ambition and programme of imperial expansion, including Protection in trade and Preference within the Empire. These constitute the main planks in the conservative platform, for one cannot concede that the conservatives are really earnest in their proposals for poor relief (which is inconsistent with their other principles) though they claim credit for the same, and connect it with their advocacy of Establishment and **Endowment**.

In the reign of Queen Elizabeth Conservatism was nothing. The Church-and-Crown party, from which modern Conservatism has descended, was nothing but a political move of the sovereign to gain secular power over the Church, and to Nationalise" and consolidate its authority. There was nothing noble

about this stroke of diplomacy.

But when we come to the real beginnings of Conservatism in the hands of Burke, we find much to admire. Perhaps we admire Burke more than the conservative policy which England espoused when the waves of the Brench Revolution lapped on English shores. Because while Conservatism only voted for a status quo, Burke, who had seen the wisdom of holding to his anchor in a typhoon, was yet ready to fight battles against the Crown if its conduct and procedure clashed with ,his ideal of a true democracy. One has no

hesitation in saying, however, that Conservat ism, as for as it was a reaction against the ferment of the French Revolution, was a expression of the nation commendable wisdom and sterling common sense, eminently justified by the results. But it must be admitted that here Conservatism was opposed to Revolution, not Liberalism. That is precise ly why Burke was both a whig and a tory There was no inconsistency in his attitude towards political affairs; it was the partie that were at fault: they placed wrong alter natives before the people. The parties wen by shibboleths and formulae Burke went by thinking and did not care if he cut across lines of cleavage between the parties. shows incidentally how factitious party distin ctions really are, and how the party system clogs the way to clear thinking and intelligen preference. Owing to historical accident certain lines of policy have come to be associated with one party, and have in many cases become a matter of prejudice rather than principle.

Burke's speeches and Reflections mushave come as a welcome revelation to many Conservatives of his time who probably con gratulated themselves on the unsuspected heanties of the creed which they had happened to inherit from their forefathers. Burke is al for heredity, stability, sanity, and sound sense Had it not been for Burke, England might have reeled, and the social ferment might

have courted a political disaster.

In the 19th century Conservatism had a rather bad time of it altogether. This was due partly to the rising tide of political thought and progressive echoes and indirect influences of the French Revolution and partly to the short-sighted and obstinate policy of Conservative leaders like Peel Any party or system with a shorter history or weaker foundations would have succumhed to the blows which fell successively Roman Catholic Emancipation (1829), Reform Bill (1832), Repeal of Corn Laws (1846). Household Suffrage (1867), and the Fiscal Controversy (1903)

The Accident of birth gave to Conservatism a tinge of religious sanction, which has been exploited by its exponents to the full It is difficult to see why there should be Establishment or Endowment at all. more difficult to see why there should be Establishment and Endowment on any other basis but that of numerical majority.

There is, of course, something conservative in Religion, but there is nothing essentially

· 100 ·

eligious in Conservatism. To mix up the confusion wo propositions leads to Conservatism supports only one hought. particular denomination in a conspicuously partial manner, and all attempts at justifying he Establishment and Endowment of the Church of England are futile. In case of Disestablishment and Disendowment other lenominations will have an equal chance. The conservative position in this matter seems o be even weaker than in matters of pri-rate property and taxation. If, as is alleged, he Church of England does no longer enjoy any real privileges, why fight over them? Why keep the semblance of preference—a hadow, when there is no reality? The fact that there is still considerable prestige ttaching to that Church, and privileges are not usually surrendered with readiness on wonders on what grounds the (Protesant) Church of Ireland remained established ill 1869! The Establishment of a religion. which is professed by an overwhelming najority is perhaps justifiable, though even hen it would handicap freedom of thought and is not fair to Science and Philosophy. litogether the conservative arguments for Establishment and Endowment are hopelessly anconvincing.

Nor is the Conservative position as regards Poor Relief any more satisfactory. The argument that Christian teaching as regards wealth is purely individualistic, and refers to puritual rather than temporal welfare, and herefore the poor need not to be made rich, can be met by saying that Liberalism in relieving the rich of their wealth aims at their spiritual welfare, and wishes to relieve the poor from their poverty in the temporal sense. To argue that because St. Paul allowed slavery, therefore poverty has Christian sauction, is fatuous.

Next we come to Property and Taxation. It is urged that (a) the community creates the value of land, (b) land is a monopoly, and (c) landholders are best able to bear taxes; therefore all kinds of rates and taxes should be shifted to the landowners. It must be said in reply that while (a) is in part at least correct, land is not exactly a in mopoly, and it does not seem fair to shift all the burden to the landowners. The burin must be shared between the landowner and the capitalist (or industrialist). The con-" 'ative arguments that there should be no tavation without representation and that one became should never be taxed for the benefit of abother, seem sound for practical application."

· According to the conservative principle that the State cannot inflict an undeserved injury (e. g., taxation) on any individual, the State cannot reward any person for good service either. This principle seems also inconsistent with the conservative claim for Government interference or authority. state which refuses to relieve the poor may be wicked, but is not unjust." This is not convincing, without some such doctrine as the exploded theory of "Natural rights". Nor does it prove the cause against poor relief by taxation of the rich Poor relief can really be defended on ground of morals, charity and expediency, and in a way also of justice. Conservatives can deny it neither on theoretical nor on practical grounds.

In Tariff reform policy, Conservatism cares for the land-owner and the industrialist, not for the consumer. The connection between protectionism and imperialism is obvious. The landowning classes are too effete to compete with the foreigner.

Foreign and Imperial Affairs: While allowing for the difference between individual and state morality (the state being a trustee), the liberal doctrine of a high international morality seems to be large-minded and dignified. An Imperialism based on an immoral and callous hankering for national self-aggrandisement is not an inspiring creed.

One wonders on what principles, conservative or liberal, modern Europe's land hunger is to be justified. Invidious and artificial distinctions between states of civilisation, the talk about "Missions" and "Vocations" is the most transparent twaddle Surely it ought to be possible to formulate a code with a decent approximation to definition of rights and obligations between class and class, and nation and nation. It may be a difficult task; but surely one cannot say that the subject matter is essentially, and will remain permanently, chaotic. An advance from individual to international morality is surely conceivable. Better education, wider sympathies, greater imagination will bring about a cosmopolitan morality. To hold any other opinion is to surrender this beautiful world to the force of evil

Parliamentary constitution.

(1) Aingship. Conservatism has decidedly lost ground as far as the principle of divine right of kings is concerned. A more modern position is that a king who is above party should take a more active part in the administration, and kingship should of course continue hereditary.

(2) House of Lords Conservatives of burse insist on a hereditary House of Lords. they say it should be made stronger on partisan lines, so as to represent all parties. This. House stands for service only for honour.

(3) House of Commons. Much of Consertive criticism against the representative character of the House of Commons is quite valid, though it really affects the party system of government. But that only exemplifies the imperfection and limitation of human institutions. It is worthy of note that conservatives are unable to suggest any better system of representative government than the one characterised by a more powerful second chamber and a stronger and more active sovereign than we have at present It is curious that the conversatives propose no substantial reform of the lower house, for the Referendum, in more important measures. is at best a clumsy, troublesome and unsatisfactory solution, and we have not only the House of Commons, which mirrors public opinion on all matters of importance fairly faithfully, but also the Press, which is a useful safety-valve when the Lower House shows sign of being arbitrary.

Perhaps one reform in the House of Commons is necessary, viz, that the franchise should be so distributed as to ensure ex-pression of as many free individual opinions as possible, not opinions of interests, the right of suffrage should be freely exercised without pressure from landlords and capitalists. Else the present House of Commons will one day degenerate into a commercial

cligarchy.

. In conclusion one may remark that Conservatism and Liberalism (unhappy as these terms are) are obviously both necessary to human progress, like analysis and synthesis in science. Pure Conservatism is stagnation, pure Laberalism is revolution. Conservatism is characterised by a certain kind of narrow-mindedness, which is perhaps inseparable from its historical antecedents But it is a useful check on the disruptive dencies of a socialistic and revolutionary specially when we are slowly realising the democratic form of government, the body challenge and extensive time, i has, not redeemed, and is farther than ever from redeeming, the generous promines it has always held out.

Having stoude this rapid survey of the main lines of Conservative thought, the question recurs: what about a nation that remains

a rigid adherent of this creed and continues withal to lead the world through war and vioissitude to its great destiny? For new there is no Germany to dispute either its intellectual political supremacy or its

hegemony.

The first idea that strikes one is the solidity" of character, if one may use the phrase. The more we think over it the more we are impressed by the fact that English Conservatism as an article of political faith is only an effect of an underlying cause, viz., the English temperament. The real "Conservatism" that is to say, lies in the English character We find abundant evidence of this temperament in the whole course of England's political history as well as in the history of her social institutions. It is not by chance that most of England's revolutions have been peaceful. We note that in England there have been changes, at times oven radical changes, but there was never a violent break with the past. There is always present a tendency to introduce changes under the name of some thing old and famihar theories are retained where practice has changed under pressure of new requirements. Stereotyped procedure continues even when new understandings are developed as a remedy against its undesirable consequences.

In the political field, the English have always wisely used the results of political experiments tried in other countries, such as France, Russia, etc. It is not by mere good luck that England has always escaped catastroples, which have befallen successively all the powers around her (France in 1789-1815, and again in 1871, Germany and Russia in the last war). These miraculous escapes are in large degree due to her sterling good sense, her imperturbable sanity and her phlegmatic temperament. The English genius, for instance, rebels against all kinds of socialism, because the experiment has never been successfully tried. Even her "Labour" is not really socialistic. Notwithstanding all this, conservatism has never stood in the way of England's progress.

We find the same principles abundantly illustrated in the development of English Law. from such nebulous vapour as the Common Law of England through a living growth of case-law and precedent to a remarkably wellorderd system, disguised under complicated theory and procedure.

We may wind up by remarking that although we join issue with most of the positions taken up by the Conservative no

English Conservatism, so far from being a sign of decay and ossification, is actually a sheet anchor, a guarantee against ill-advised changes and violent methods. No other nation

has had similar concervatism; no other nation could so use it if it had it.

EARLY BUDDHISM AND THE LAITY

By DR NARENDRA NATH LAW, MA, BI, P.R.S., PR. D.

ANY one who tries to acquaint himself with the process of spread and development of Buddhism from its earliest beginnings naturally asks the question whether Buddhism in its earliest stages had a lay society of its own to support it; if not, what was its position in regard to lay society, without which it is difficult, if not impossible, for a religion to flourish in the way Buddhism did. It has been aptly said by Carlyle that

"The Ideal always has to grow in the Real, and to seek out its bed and loard there, often in a very sury way. No beautifulest Poet is a Bird-of-Paradise, living on perfumes. The Heroic independent of bed and board is found in Drury-Lane Theatre only. Many an Ideal monastic or other shooting forth into practice as it can, grows to a strange enough Reality; and we have to ask with amazement. Is this your Ideal! To avoid disappointments, let us bear this in mind."

It must not be supposed that Buddha committed a mistake of this sort by founding his Ideal upon no basis of what Carlyle calls the Real. The paucity of details as to the lay community in the Digha and the Majihima Mayas lends colour to such a notion, but it should be noticed that though Buddha did not try from the beginning to have a stereotyped Buddhist community of laymen, yet his monastic system was broad-based upon the Real. The reasons why he did not care to have at first such a community of Buddhist laymen are:—

(1) He looked upon all men, irrespective of their religion or society as badly in need of initiation into the Truths discovered by him and whatever might have been their attitude towards him or his religion, they were never regarded as unworthy of his solicitude for their moral and appritual welfare.

Buchha where number of Hindus who were

not strong in their faith, or were not satisfied with the social status to which they were rooted by their birth. Buddha could have a sufficient number of these people to embrace his religion and support the Buddhist monks.

(3) It was not perhaps possible for Buddha with his wide catholicity and infinite fund of mercy for the suffering humanity to limit the benefits of his religion only to those who belonged to a particular lay community of . On the other hand, howhis own creation ever, the nirrana which formed the summum bonum of human existence could not, according to him, be attained except by the process of sadhana forming a part of the Truth discovered by him To make the benefits of his religion available to as many people as possible, he prescribed only the sincere taking of refuge in Buddha, Dhamma, and Sangha, and the observance of the five silas as the minimum requisite, and a sufficient indication of a mental attitude, which the followers of the Truth promulgated by him should have restriction of belonging to a particular lay community originated by Buddha for making them eligible to his spiritual ministration would have been to thrust into narrow limits a Personality that was yearning to rend asunder all limitations to uplift humanity.

(4) According to Buddha the initiation into the Buddhist order and the performance of the sadhana incident to it constituted the only door to mirrain. The laymen could rise higher spiritually by their moral ways of life but could not reach invain which, according to him, could be attained by the sadhana incident to the Buddhist order. It may seem to us that Buddha was very hard upon the lay sommunity who could not. In his view, attain nirvain, whereas the laymen belonging to other communities, e. g. the lay Hindus.

tould, according to their spiritual guides, itain salvation by their meritorious acts. Fit the reason for the holding of such an deinion by Buddha is not far to seek. Nirvana its attainable only by the Buddhist order over which he could impose the discipline through which alone a man could be fit for the same, while in the case of the laymen, over whom he exercised no such control for the reasons already stated, they could reach only stages of spiritual improvement lower than nirvana.

All these factors contributed to bring into being the following state of things, rez., that it was chiefly to the monastic order that Buddha turned his attention, because it was in his view the only effective means of attaining the highest end of human existence. He was no doubt compassionate to the householders but as mere meritorious deeds could not enable them to attain nirvana during their life-time as householders, his ultimate aim was to persuade as many of them as possible to renounce the world and join the monastic order, live the disciplined life of a mouk performing dhyana, dharana, samadhi, etc., and thus uplift themselves to the stage in which they could have nirvana Hence Buddha tried by his speeches and discussions to attract people with their worldly turn of mind many of whom were, of course, householders, to become members of his order and when they were unable to advance so far, they could perform the five or eight silas, and thereby rise to the higher rungs of moral and spiritual development attainable by a householder. He did not care therefore whether the candidates for admission into the monastic stage belonged to the Hindu, Jains, or any other community. What he pared for most was the entrance into the monastic order, which alone was the effective means of reaching the highest goal of life. There was, at the time of Buddha, a section of people opposed to Hindu orthodoxy, er marting under the invidious differential treatment meted out to them under the Hindu cottal system. These people were very prothe first to be impressed most by the doctrines preached by Buddha and be enlisted is followers; but yet there are evidences the Mikayas to show that the opposition est Buddhe had to overcome in the pursuit of his goal was strong and bitter on account of the presence of orthodoxy characterising, I think, the major section of the Hindu community. Just before the advent of Budthe Hindu society reached a time when a

reaction against the evils that had excheed up in it grew in volume and was seeking an outlet. The presence of so many sects on the fringe-area of Hinduism, or expressly opposed to it, testifies to the existence of this state of things. Mahavira had raised his flag of revolt, round which mustered perhaps a large number of adherents than round that of any other heretic sect of the time. Buddha came in the wake of these sects but with greater potentialities of growth and resistance than its predecessors. The opposition put forth against him from the strongholds of Hindu orthodoxy was naturally in proportion to the larger encroachments that this new religion threatened to make upon the domain of Hinduism. There are references in the Nikayas to the stigma attaching even to the paying of visits to Buddha not to speak of conversion to his doctrines or showing him marks of respect The learned brahmana Sonadanda was asked not to see Buddha on account of the loss of reputation he would incur thereby (D.N. I.p. 113). Similarly, the erudite brahmanas Kutadanta, Canki, and Pokkharasadi were reminded of the risk they were running by going to meet him. Instances of this sort may be multiplied. They show how difficult it was for the preacher of the new religion to win over to his side persons belonging to the orthodox community. But even this difficulty was overcome by him at times so easily that one may be led to think from such instanceof conversion as if orthodox Hinduism allowed these conversions to take place without any grudge. We see, for instance, Assalayana (M.N. II, pp. 147ff) coming to Buddha for defeating him in a debate, but is defeated in the end, and the very moment. takes refuge in Buddha, Dhamma and Sangha When renouncing the religion of which he was an adherent, he did not delay the least to think of the social disadvantages that might follow in the train of his conversion Such sudden conversions depended upon the deep impression made by Buddha upon the minds of the persons who came into contact with him and felt the magnetic influence of his pesonality. It would not, I think, he correct to infer from the examples of such conversions that these converts were ungrudgingly allowed by the Hindu community to be at liberty to embrace Buddhism in pursuance of their unfettered conviction.

During the life-time of Buddha, the mark sthat distinguished the Buddhist laster was the taking of relage in Buddha, Dhamas and

name and the observance of the five siles. is was, of course, the minimum requisite of Buddhist laymen. Those converts who wished be more advanced in discipline and to spare themselves for greater religious rit observed the eight silas, and tried to spare themselves for uld their lives as far as possible in accordce with the ideas set forth in several ces of the Nikayas. To these we shall ve occasion to turn later on. A Buddhist man who thus went higher up the ladder of igious discipline prescribed in the Nikayas the laity had naturally to come into the contact with Buddhist quent kkhus. discourses hear' their and all those beliefs and card gradually ctices which did not find favour with Buddhists. For him, of course, who had ssed the door-sill of Buddhism very ently, no other restriction than that of three refuges and the performance of five silas was imposed. This gave a good deal of freedom in regard the holding of beliefs and the performance rites and practices which might have n very dear to him before his conversion. would be apparent that the Buddhist y formed at first in this way must have sisted of people from whom uniformity beliefs, rites, and ceremonies could not If Buddha or his followers expected. ald have tried to have the minds of the r converts shorn of their cherished beliefs. their faiths in rites and ceremonies which e meaningless in the eye of the Buddhists, ir attempt would certainly have been le: for it is only the strong-minded people can free themselves from their former hs all at once.

An examination of the Nikayas shows though the laymen were declared incoment by reason of their mental and spiritual fit to reach the highest stage of spiritual elopment, viz. arhathood, yet it was open hem to attain to the three lower stages, sotapanna, sakadagami, and anagami. The hod by which these laymen were made petent for these stages would be apparent n the passages in the Nikayas, where the oval of the samyojanas has been treated M.N. I, pp. 462-8, D.N. I, p. 92). The five yojanas that the house-holders had to or, viz. sakka yaditthi (the view of the stence of individuality), vicikicoha (religidoubt), silabbutaparamasa (domination the ballet in ritualism) hama (bodily sions), and patiens (hatred). Of these kicche and elleibhataparamass are of

special importance, because by the first, very strong adherence to the Buddhist faith is intended to be developed, while by the second, the influences of the former faiths and superstitions of the converts are meant to be-counteracted. The development of the influence of these two factors on the minds of the new adherents of the Buddhist faith brings them more and more within the Buddhist fold and makes them out-and-out Buddhist. Implicit faith in Buddha, Dhamma. and Sangha gradually asserts itself to the exclusion of the other faiths that may be struggling with it for the upper hand, and beliefs in the efficacy of the rites and ceremonies are by degrees denuded of their strength by the stimulation of the constant endeavour on the part of the converts themselves to achieve this object, as also by the hearing of frequent discourses of the Buddhist monks at the monasteries or outside, and the carrying out of their directions as to the mental and moral discipline. There are rules in the Vinava providing ample facilities for the converts to come into frequent contacts with the Buddhist monks. They met at the monasteries on the 8th, 14th and 15th day of every lunar fortnight at gatherings in which the monks delivered religious discourses and dispelled doubts on the points about which questions were put to them. Every morning they came into contact with the monks begging alms from door to door. Though long religious discourses were not suitable to such occasions. they could have been easily utilized for imparting to them bits of teachings intended to wear off their attachment to worldly matters, and stimulate their eagerness to subject themselves rigidly to moral and spiritual discipline, -the path to salvation. The afternoons were allowed by the rules of the monasteries to be utilized by the house-holders by coming there. and having spiritual enlightenment from the monks through conversation and religious discourses. The householders were also permitted to invite to meals the monks singly or by batches. These were, invariably, occasions for delivering suitable religious discourses. The vassa (the four months of the retreat from the full moon of Asadha to that of Karttika) is a prolonged period during which the monks had to stay at a fixed place, generally a monastery. These four months afforded ample opportunities to the monks to mould the spiritual and religious life of the laymen as much according to the Buddhist ideal as practicable.

It was through these instructions and dis-

courses that the Buddhist house-holders could make moral and spiritual progress as idenced in the many narratives in the Nikavas. those relating to Anathapindika, Visakha, Nakulamata and Nakulapita. Some of the hy-devotees are mentioned with appreciation in the Anguttara Nikaya as adepts in dhyana: this shows that the house-holders were allowed much scope for self-improvement and spiritual eniture, though the passage already cited may give rise to the notion that they could not rise much in the scale of spiritual culture antil they joined the monastic order. That they could rise as far as the stage of anagami goes to show that the house-holders were given a good deal of latitude for improving themselves spiritually, not merely by the observance of the silas but also by the practice of dhyana, - a process of sadhana which may be misconceived to have been the monopoly With the lapse of of the monks and nuns. time there came into being a society of Buddhist laymen who could be distinguished from the laymen of other denominations not only by their distinctive faiths but also by their social and religious practices that became gradually stereotyped as Buddhistic. Marriage into such Buddhist families or perhaps commensality or mixing in other ways with the Buddhist laymen came to put the Buddhist impress upon the doers of these acts. ancient Hindu community allowed range of religious views to its members, but it was very touchy in regard to two or three points, viz. (1) the supreme authority of the Vedas, (2) the observance of the caste-rules bearing specially on marriage and commensa-Lity, and (3) the observance of at least one or two sacraments. In consequence, those who deviated from the groove laid down by the Hindu community had to remain separate from the community and could not hope to he rectored to their former status (which even was impossible in some cases) except by the falfilment of certain expiatory and stringent conditions. To the Buddhist community this was an advantage, because the way to join them was made very easy and attractive, but

the way to return to the community to which they had belonged previously, specially in the Hindu community, was not so easy an sometimes very difficult. Hence, though th distinctive external marks of the Buddhis laymen appear at first sight to be almost ni a closer examination shows that there wer such marks, some of which owed their origi not to the Buddhists themselves but to th peculiar social and religious environmer surrounding Buddhism and the Buddhist la society. At the time of Buddha, of which w are speaking at present, as the Buddhist la society was receiving immigrants from quit a number of other sects and communities it is difficult to find out at first sight it distinctive features concealed under its cos mopolitan character, but what I have said before will, I hope, show that though th state of things was nebulous at the time, th Buddhist society of laymen was not withou peculiar features of its own. It was more upon this society of laymen that the Buddhis monks could rely than any other help, patronage, and daily alms. It is natu ral that the Buddhist laymen should be more interested in the furtherance of the Buddhis ideals, and more devoted to the Buddhis monks than the laymen of other communities however great might have been the catholi city and the spirit of toleration that animated the people of ancient India. Narratives are found in the Nikayas describing how Buddhe himself could not get a morsel of food as alm in a village where the brahmanas predominated This gives but a glimpse of a state of things which could not but have prevailed at a time when the adherents of the diverse religions were struggling for supremacy in the religious struggle. It is therefore not an error to think that during the life-time of Buddha, there came into being the lay society of the Buddhists, upon whose help and co-operation the monks could rely with confidence in the midst of the stress and strain which they had to bear in their struggle with the supporter of the rival religious systems.

SHELLEY ON POLITICAL REFORM

A CONTRACTOR OF THE STATE OF TH

By D. V. GUNDAPPA

POETRY AND POLITICS

N the high summits of human life. Poetry and Politics, far from being the irreconcilables they appear to be in our worka-day world, are seen to dwell as comrades inseparable from each other. All great poetry 18, in truth, politics idealised; and all great politics is, equally, poetry realised. The poet is the eye through which men obtain glimpses of the beautiful and the good; and the states-man is the arm with which they strive to remove all that stands between them and the object of their vision. Or, to vary the figure, the poet produces the martial music which stirs and impels us to new and noble conquests, while the statesman supplies the leadership without which our hosts would be marching only to their ruin. Poetry not motived by politics is mere vanity of words, and politics not inspired by poetry is nothing better than blindman's buff.

This description of the alliance between the dreamer and the man of affairs will perhaps meet with readier and wider acceptance if we make clear what we mean by the words by which we designate their work. Poetry, properly so called, is the expression of a passionate longing for whatever is lovable and lovely in the thought and feeling, and aspiration and endeavour of man. In other words, its office is to induce us.—to empt us, as it were, by giving us a foretaste of the joy of the better world visualised by the poet—to strive for improvements in the onditions around us. Such striving, it is the usiness of politics to facilitate and direct. he poet stimulates thought and effort in the irection of the good; it is the part of the olitician to pave the way and provide the peans for that effort. Politics, in its highest ense, is the art of materialising the ideals of idividual and social welfare which are shioned and commended by poets and linkers. The poet and the statesman alike pacern themselves with the well-being and o well-doing of their fellow-men; the first utlines the plan and prepares the material hich the second takes into his hand in order leave behind a world better than the one

he first found. They are both collaborators in a large part of the same field. If the domain of poetry is much wider than that of politics which it includes, the dominion of politics makes itself felt more readily and more tangibly. Let us not then talk of the poet and the statesman as though they were

antipodes to each other.

Evidences of the intimate and profound connection between poetry and politics are abundant enough in history. We know that the Republic, the far-famed treatise on the ideal state, is essentially the work of a poeticmind;—that Plato the political idealist has indeed been the philosopher dear to the poets, a veritable poet among political philosophers. We also know that Milton did not despise, "forsaking the 'quiet air of delightful studies', to play a man's part in the confusions of his time;" that he was a passionate advocate of civil and religious freedom as well as of national independence and was the inspirer and assistant of Cromwell. Dante was not inconspicuous in the political affairs of his country; and Goethe was no stranger to politics. On the other side, one has but to recall the names of Pitt and Gladstone, Burke and Mazzini, and Morley, to realise what an ample and fruitful part poetry has played in. moulding the ideals and policies of great statesmen and political reformers. Indeed, to stand out as a reformer is to give evidence of an essentially poetic gift, namely, the vision of a society arranged better and a world made happier. The most important ingredients of the poet's mind and of the statesman's mind, are, in truth, the same, insight, imagination, sympathy, benevolence, though the proportions and the processes in which they are compounded in the two may be different. The material which both intend to handle is the same, namely, human life. They both have to deal with the passions, emotions, ideas and idiosyncrasies of men. They should, therefore, be both men quick to feel and quick to understand, with hearts and eyes ever wakeful to the possibilities of human nature as well as to the actualities of life around them. The same real for human improvement is the life-breath of both. What

34

through one takes the form of lyric and epic doung, takes through the other the form it law and court and council. Their means and methods of expression are different; but

their prime motive is the same.

It should thus be no transgression of the transgression of the transgression and the transgression of the transgre soncerning the practical affairs of the statesman of affairs to plead for a higher poetic inspiration for his age and country. Of course the poet's discourse on political or social reform can only be speculative in method and tentative in import; for he must necessarily be lacking in that knowledge and experience which can come only from the actual handling of affairs. Nevertheless, his political utterance is of value to us, because it is prompted and touched by the same vision as gives value to his poetry. It is a philosophical prose-version, so to say, of his poetic dreams. If that be so, it may not be unprofitable, amid the political excitements and distractions of our day, to turn to Shelley, the great poet of the Revolutionary Epoch, and take note of his views on the vexed subject of political reform.

THE REVOLUTIONARY EPOCH

Wordsworth, Byron and Shelley are the three great English poets who represent to us the epoch of the French Revolution and Shelley, the youngest of the three, is admittedly the most devoted exponent of the spirit and meaning of that epoch An aggressive intolerance of tyranny in whatever form was the gift bestowed on him at birth by the grim god of destiny. Every student is familiar with the story of how, while still at school, he made himself notorious as "Mad Shelley" and "Shelley the Atheist" by his resolute opposition to the odious system of fagging and by his cherishing what then were strange notions of justice and independence. A rebel at twelve and a heretic at nineteen, he braved the anger of his father and predecred to be banished from home and heritage what must have been to him the most the despotism of blind custom. Shelley in his twenty-first year when, in his first the portant poem, "Queen Mab", he declared:— Ridge priests and statesmen blast the human

lives in its tender bud; their influence darts like subtle poison through the bloodless veins of descripte spelest-led slaves cents to proclaim that man liberty vice and misery, when force

And falsehood hang even o'er the trailed lates Stifling with rudest greep all natural good.

The standard of revolt thus raised against "force and falsehood", with all the injudicious downrightness and the extravagant fervour of youth, was held aloft with unwavering seal throughout the remainder of Shelley's life. In poem and play and song, of wonderful variety of beauty and richness, he stood up for the "perfectibility" of man and against the tyranny of the Established Order of things. In almost every noteworthy poem, we hear the same sigh for freedom, the same cry against oppression. In the last and the longest of his poems, "Prometheus Unbound", we perceive the same passionate discontent with existing social arrangements, but expressed in more chastened and balanced phrases:—

Hypocrisy and custom make men's minds
The fanes of many a worship, now outworn,
They dare not devise good for man's estate,
And yet they know not what they do not dare.
The good want power, but to weep barren

Indeed, the whole drama may be taken to be an allegorical representation of humanity's emancipation from the clutches of man-made convention and soul-suppressing custom.

"PHILOSOPHICAL VIEW OF REFORM"

This impassioned and dauntless child o the revolution has left, as legacy to those wh care for him, a fragment of a prose essay of political reform which anyone today would readily acknowledge to be a sober enoug document remarkably sober indeed if w remember the constant and consistent icono clasticism of its youthful author. The war glow which the sight of the revolutionar fiame had brought into the youthful heart (Wordsworth was gradually rendered soft an mellow by the sixty winters that passed ove his head. Not so with Shelley. He was i the first bloom of manhood and at the ver height of his mental powers when he records his thoughts on political reform. He calle the tract a "philosophical" view of reform therein suggesting that it is a record of h deliberate and carefully expressed opinion In fact, he said of it in a letter to Lois Hant:-

"It is boldly but temperately within and

timeli products. It is intended for a kind of

The book is of much practical interest even today and it is particularly so for us in India. Let us therefore proceed to see what Shelley has to say on the many knotty points that try the skill of the political reformer.

The year (1820) in which Shelley wrote his tract,—which, let us not forget, was written solely with reference to his own country, was the year of the death of George III, the fifth year after the Battle of Waterloo. the year, we may also note, of the Cato Street Conspiracy. The shock of the great revolution in France was then still fresh in England. The Napoleonic struggles had brought about wide-spread economic distress everywhere. The middle classes were full of discontent and the upper classes full of apprehension and alarm. There was yet no sign on the horizon to announce the great days of Canning and Peel and Huskisson: and much less was there any pre-assurance of the great parliamentary reforms of a later day (1829-30). The whole atmosphere in England was one of profound and universal unrest, premonitory of change. It was at this juncture that Shelley, with the prevision characteristic of the poet no less than of the statesman, grasped the spirit of the times and sought to find proper accommodation for it in the institutions of his country.

He begins the essay with the remark that excluding those personally interested in the maintenance of power as it was, "there is no inhabitant of the British Empire, of mature age and perfect understanding, not fully persuaded of the necessity of Reform." Then, attempting a brief history of the movement for Freedom in Europe, he characterises the Roman Empire as a "vast and successful scheme for the enslaving of the most civilised portion of mankind" and adds that it was succeeded by a series of smaller schemes operating to the same effect up to the epoch of the French Revolution. Incidentally, he pays his tribute to the founder of Christianity; it is interesting and worthy of note. He writee :-

Names borrowed from the life and opinions of Jesus Christ were employed as symbols of domination and imposture; and a system of liberty and equality—for such was the system planted by that sreat Reference—was perverted to support oppression. Not his doctrines, for they are too simple and direct to be susceptible of such perversion, but the more penses. Such was the origin of the Catholic Christs, which together with the several dynastics than beginning to consolidate themselves

in Europe, means...... a plan according to which the curning and selfish few have employed the fours and hopes of the ignorant many to the establishment of their own power and the destruction of the real interests of all."

PROSPECTS OF REFORM IN EUROPE

After this remarkable acknowledgment of the value of the message of Christ, the peet sums up, in phrases not always judicious, the histories of the reformist movements in Italy and, in Central Europe, particularly Holland and Switzerland, betraying his republican proclivities in fugitive remarks. Coming to speak of the knglish Renascence and the Revolution of 1688, he exults over the establishment of the doctrine of popular sovereignty once for all:

"(William of Orange and Mary) acknowledged and declared that the Will of the People was the source from which their powers derived the right to subsist. A man has no right to be a King or a Lord or a Bishop but so long as it is for the benefit of the People and so long as the People judge that it is for their benefit that he should impersonate that character. The solemn establishment of this maxim as the basis of our constitutional law... was the fruit of that vaunted event (the Revolution). Correlative with this series of events in England was the commencement of a new epoch in the history of the progress of civilization and society......The Will of the People to change their government is an acknowledged right in the Constitution of England." (Pages 6 and 7).

After thus pointing to the Nation's inherent right of Self-Determination as regards the form of its government, Shelley proceeds to consider the philosophy of politics that grew up in England and in Europe through the speculations of Bacon, Spinoza, Hobbes, Montaigne, Locke and other thinkers, "Of this new philosophy, the system of government in the United States of America was the first practical illustration"...."It has no king; that is, it has no officer to whom wealth, and from whom corruption flow. It has no hereditary oligarchy; that is, it acknowledges no order of men privileged to cheat and insult the rest It constitutionally acknowledges the progress of human improvement, and is framed under the limitation of the probability of more simple views of political science being rendered applicable to human life. There is a law by which the constitution is reserved for revision every ten YORIN"

Shelley next has some words of sympathy and hope for the French whose Revolution he considers the second result of the new wakening of public epinion in Europe. He was by no means unaware of the imperies-

and the resultant reaction in the work of e Revolution; but reversing the proverbial the Revolutionists did leave after them, ills are interred with their bones."

we may note in passing, is a verdict we may note in passing, is a verdict has since been upheld by philosophical the speaks of Germany's "rising with the system of a vigorous youth to the assertion of these rights for which it has that desire aring from knowledge, the surest pledge of rickery." Having expressed his admiration for the intellectual tendencies and attainments of the German people, he observes:-

The treman people, ne observes:

The panic-stricken tyrants of the panic stricken to the panic stricken tyrants of the panic stricken the panic stricken the panic stricken the panic stricken tyrants of the panic stricken the panic stricken the panic stricken tyrants of the panic stricken

. The prophecy had to wait till our day to come true. After Germany, Spain has come in for the poet-reformer's attention. In phrases of characteristic power and pungency, he depicts the struggle between Despair and Tyranny that was going on in that country, and winds up his vehement denunciation of the despots of Spain with a note of optimism in behalf of the poonle :-

These events, in the present condition of the endestanding and sentiment of mankind, are the endestanding and sentiment of mankind, are the endestand passing shows, which forerun successful metrician, the ominous comets of our republican test. (Milton) perplexing great monarchs with the of change. Spain, having passed through an order severe in proportion to the wrongs and excess which it is kindled to erase, must of necessity the resovated."

After making a very sanguine reference to the prospects of republicanism in South America, Shelley turns to Asia and ob-SELVES :-

The Great Monarchies of Asia cannot, let us cannot, let us remained by the earth-subject which is shaking to dust the 'mountainous attentions' of the tyrants of the Western world."

REPORM IN INDIA AND THE EAST

And here follows a paragraph on India stricts is as critical in method as it is as import and is as full of deep thinking as of humanitarian fervour.

Revolutions in the political and religious state and indian poninsula seem to be accomplishing,

and it cannot be doubted but the sail of the missionaries of what is called the Utribilar will produce beneficial innovation there, even by the application of dogmas and forms of what is here an outworn incumbrance. The Indians have been enslaved and cramped in the most severe and paralysing forms which were ever devised by man; some of this new enthusiasm ought to be kindled among them to consume it and leave them free, and even if the doctrines of Jesus do not penetrate through the darkness of that which those who profess to be his followers call Christianity, there will yet be a number of social forms, modelled upon those European feelings from which it has taken its colour, substituted to those according to which they are at present cramped, and from which, when the time for complete emancipation shall arrive, their disengagement may be less difficult, and under which their progress to it may be the less imperceptibly slow. Many native Indians have acquired, it is said, a competent knowledge in the arts and philosophy of Europe, and Locke and Hume and Rousseau are familiarly talked of in Brahminical society. But the thing to be sought is that they should, as they would if they were free, attain to a system of arts and literature of their own."

The time at which this was written was, let us remember, the epoch of Raja Ram Mohan Roy, the first great nationalist and internationalist of modern India. That brave and puissant pioneer of social and political reconstruction as well as of rationality (which is not the same thing as rationalism) in religion, was a notable figure in the political and religious controversies of that time in England also; and reports of his work and opinions must, evidently, have furnished ground for Shelley's cautiously expressed

Shelley next makes a rapid review of the birth and working of what we may call the "New Spirit" in the other Asiatic countries. The Persians, "a beautiful, refined and impassioned people", "would probably soon be infected by the contagion of good'." The Turkish Empire is in its last stage of ruin". "In Arabia Wahabees, who maintain the Unity of God and the Equality of Man, must go on conquering and to conquer". In Egypt is beginning that change which Time, the great innovator, will accomplish in that degraded country". The Jews may reassume their ancestral seats." Lastly, in the West Indian islands . . . the deepest stain upon civilized man is fading away".

THE CRISIS IN ENGLAND

After this re-assuring "sketch" of the hopes and aspirations of mankind all over the world. Shelley proceeds to consider the crisis in England and cites two circumstance as evidences of it: first, the new literature of

不会可能

the times second. "a desire of change arising from the profound sentiment of the exceeding inefficiency of the existing institutions to provide for the physical and intellectual happiness of the people." He dwells at some length on the merits of the former, without in the least exposing himself to the charge of immodesty, and indicates the relation, that always exists between poetical tendency and political change, the intimate relation which we tried to explain at the outset. He writes:-

"The literature of England, an energetic development of which has ever followed or preceded a great and free development of the national will, has arisen, as it were, from a new birth. In spite of that low-thoughted envy which would underrate, thro's fear of comparison with its own insignificance, the eminence of contemporary merit, it is felt by the British that this is in intellectual achievements a memorable age, and we live among to battle and feels not what it inspires; the influence which is moved not but moves. Poets and fluence which is moved not but moves. Poets and philosophers are the unacknowledged legislators of the world."

This eloquent exposition of the mission of poetry, we may in passing note, is in entire accord with the Indian poet's dictum that the poet is the eye of the king. The Sanskrit word "Kavi" is the name not only of the composer of verses, but also of the seer, of the wise man. The poet has not only to sing and to delight the ear and through it the mind, but also to open the eye to unseen traths and unperceived beauties and thereby elevate the feelings and aspirations of man. That is how the miracle described In Bhavabhuti's epigram comes about: "The speech of the ordinary honest man follows an existing fact; but fact itself follows the speech of the poet-prophet".

We may now pass on to Shelley's replies "These persons" to opponents of reform. he says, "propose to us the dilemma of submitting to a despotism which is notoriously gathering like an avalanche year by year, or taking the risk of something which (it must be contested) bears the aspect of revolution".

The despotism he alludes to consisted in the Parliament's becoming the representative of only certain classes of the nation. As a result of the great economic prosperity which followed the political revolution of 1688, there was an increase of population; and there evolved out of the population a small class of comfortable capitalists and a large class of poor labourers. A vast "unrepresented multitude" had thus come into being: and it had made for an increase of the power of the rich. The despotiem that had to be subdued was thus of the aristocracy, not of the monarchy. "The name and office of king is merely the mask of this power, and is a kind of stalking-horse used to conceal these catchers of men' whilst they lay their nets. Monarchy is only the string which ties the robber's bundle." "An oligarchy exacts more of suffering from the people (than absolute monarchy) because it reigns both by the opinion generated by imposture and the force which that opinion places within its grasp." Shelley goes on to point out that the National Debt and the 'alloyed coin' and paper money were devices contrived by the rich to extort money and labour from the common people. "They have the effect of augmenting the prices of provision, and of benefiting at the expense of the community the speculators in this traffic." One need not be surprised if this lay criticism of monetary reforms fails to meet with the approval of the expert. Shelley spoke merely as any man of intelligence, with a distinct popular bias, would have spoken, and not as a scientific student of public finance. fact anyhow was there that a new aristocracy had arisen in the land, whether we accept or not the explanation offered as to its origin. Shelley had the moderation of temper to see that the aristocracy, "a prodigious anomaly in the social system," was yet an inseparable portion of it." "There has never been an approach in practice towards any plan of political society modelled on equal justice, at least in the complicated mechanism of modern life." Aristocracy is unavoidable; and "the object therefore of all enligtened legislation, and administration is to enclose within the narrowest practicable limits this order of drones." Aristocracy, in Shelley's reckoning, was of two kinds. He would not object to our acquiescing, like all other great communities, in the existence of one kind of aristocracy, that of the great land-lords and menebents; for they are distinguished by certain generosity and refinement of manners

nion" But libert is nothing to in our disapprobation of the other variety county, that of "attorneys and exciseand directors and government pensioners, stockjobbers, country bankers, with andents and descendants" who "eat and and sleep, and in the intervals of these performed with most vexatious cereand socompaniments, they cringe and Since the institution of this double correcy", the working-class people "eat bread, wear worse clothes, are more ignoman, immoral, miserable and desperate. is the condition of the lowest and arrest class from whose labour the whole erials of life are wrought, of which the chire are only the receivers or the consu-This degradation of the lower classes not without a reaction in the higher. The aristocracy reaped the bitter fruit of its in the loss of dignity, amplicity and energy and in the possession of all those qualities which distinguish a wave driver from a proprietor." This candid and unsparing analysis of the situation beings Shelley to an enunciation of the fundamental principle and object of political change. He puts the matter thus with admirable miniplicity:-

Right government being an institution for the so of securing such a moderate degree of sees to men as has been experimentally these to men as has been experimentally chicable, the sure character of misgovernment is the character of misgovernment is the character of misgovernment is the character, and if that be described in the content as the legitimate expression of the character. The public right to demand the character is a principle of nature; the labouring when they cannot get food for their labour, and courts of justice and delegated powers in balance and in opposition are the means in balance and in opposition are the means form, but public happiness is the substance and of political institutions."

A Reform in England is, therefore, most and necessary." But before setting forth proposals of reform, Shelley pauses to secures the doctrine of Malthus, "a priest, it course, for his doctrines are those of a secure and of a tyrant," that "the evils of repulation" poor arise from an excess of population"

that they should be required to abstain " marrying under penalty of starvation." shelley, should this restriction be again the poor while the rich are left to breed as ever? And here incimity he is led to state his view of the state and vexed question of liberty and

the lines of all men are intrinsically and they some the assertion of

all of them only that they may the more a

SHELLEY PLAN OF REFORM.

This shows that Shelley was not a slave to a shibboleth and that he had a full appreciation of the principle of limitation implied in the flaming gospel of natural rights, and of the consequent need for compromise, or accommodation, or adjustment, or the art whatever be the name by which we may be pleased to call it of securing some degree of actuality for what has been a large and fascinating dream of the heart. Shelley's plan of reform comprised the following items:-

"We would abolish the national debt.
"We would disband the standing army.

"We would disband the stanting army.

"We would with every possible regard to the existing rights of the holders, abolish sinecures.

"We would with every possible regard to the existing interests of the holders, abolish tithes, and make all religions, all forms of opinion respecting the origin and government of the Universe, equal in the are of the law." in the eye of the law.

We would make justice cheap, certain and speedy, and extend the institution of juries to every possible occasion jurisprudence.

Of these several measures of reform, the first naturally claims Shelley's attention most, because in his view the national debt was the origin of all the iniquity in the distribution of national wealth and all the resultant misery and degradation of the lower "The national debt was contracted chiefly in two liberticide wars, undertaken by the privileged classes of the country." Shelley therefore thought it just and proper that the rich alone ought to pay it. It would be a mere transfer among persons of property." Shelley is by no means an opponent of private property of all kinds. He makes a clear distinction between just and unjust property, and would make only the latter liable for re-appropriation by the state towards the adjustment of the national debt. "One of the first acts of a reformed government would undoubtedly be an effectual scheme for compelling these to compromise their debt between themselves."

It is interesting to note in our day, when the cry against private property and for the State-ownership or everything as and equali-insistent, that Shelley, republican and equali-tarian though he was, had deep and gamuine the individual's right of adjusting State-ownership of everything is so loud and respect for the individual's right of activities and possessing. He repeatedly says

"Labour, industry, aconomy, skill, any similar powers kenomerally, skill,

· 3 · Merling

erfed are the foundations of one description of operty, and all true political institutions ought to fend every man in the exercise of his discretion th respect to property so acquired."

How to Work for Reform

We now come to the crux of the problem reform: How is it to be accomplished? is satisfying to find that Shelley is not the octrinaire that a man of letters is commonly apposed to be. He is well aware of the fact lat politics know no laws immutable like those mathematics. "All political science", he rites while speaking of arrangements or the liquidation of the national debt, arrangements ahounds with limitations and The reformer who starts with this siom is not likely to be an extremist. So e find Shelley reproaching demagogues and mmending patience and reason. His ideal undoubtedly a democracy:-

"No individual who is governed can be denied direct share in the government of his country input supreme injustice.

he great principle of reform consists in every idividual giving his consent to the institution and it continuous existence of the social system which instituted for his advantage and for the advantage of others in his situation. As in a great ation this is practically impossible, masses of idividuals consent to qualify other individuals have delegate to superintend their concerns. These delegates have constitutional authority to xerose the functions of sovereignty, they unite in he highest degree the legislative and executive unctions. A government that is founded on any ther basis is a government of fraud or force and ught on the first convenient occasion to be overhown."

Though an adherent thus to the doctrine of popular sovereignty. Shelley was no admocate of universal suffrage. His moderation on this question is indeed noteworthy. He would only have gradual reform; he is keenly alive to the many evils of sudden social change.

"No doubt the institution of universal suffrage would ... immediately tend to the emporary abolition of these forms (monarchy, instocracy, inordinate wealth etc.): because it is impossible that the people, having attained the lower should fail to see, what the demagogues now inceal from them, the legitimate consequence of he doctrines through which they had attained it."

But this achievement, he notes, would haly be "temporary". And it would incident-lly develop a habit of mind in the people which can never be to their true and lasting tood.

"A Republic, however just in its principle and lorious in its object, would, through the violence of sudden change which must attend it, incur great risk of being as rapid in its decline

as in its growth. It is better that they (the people) should be instructed in the whole truth; that they should see the clear grounds of their rights, the objects to which they ought to tend; and be impressed with the just persuasion that patience and reason and endurance are the means of a calm yet irresistible progress."

In other words, reform should be gradual and steady—that is, proportioned to the sense of responsibility and political intelligence in the community. Its political constitution should keep pace with, but not be in advance of, its general education and civic capacity. If the pace of reform be unduly hastened by means of a revolution, a deadly evil is sure to creep in together with it:—

"A civil war, engendered by the passions attending on this mode of reform, would confirm in the mass of the nation those military habits which have been already introduced by our tyrants, and with which liberty is incompatible. From the moment that a man is a soldier, he becomes a slave. He is taught obedience; He is taught to despite human life and human suffering, this is the universal distinction of slaves; he is more degraded than a murderer, he is like the bloody knife which has stabbed and feels not."

This, by the way, explains why Shelley made the abolition of the standing army a cardinal point of his programme of reform. He was essentially a humanitarian, one who stood up for the high destiny and dignity of and therefore a pacifist in his inclinations. Reform bv means insurrection or a violent coercion of the existing Government being for the above reasons undesirable, Shelley looks to what we might call "constitutional action" for securing the desired reforms. His words have a peculiar force and appeal for us in India in our present political struggle:-

Shelley's faith in the influence of men of letters to persuade, or else to overawe, those who have political authority in their hands, must no doubt seem a little excessive in our day; but this is a fact that does discredit, not so much to literary advocates of political reform, as to successive generations of politicians, both official and popular. The average politician has always been a philistine: He has a cheap sneer for the man of visions. He scorns to open his heart to poetry and philosophy. If he did not despise idealists, if ministers and popular leaders were men with a cultivated love for the finer things of the spirit, if like Gladstone or Burke they were men whose minds and souls had been touched by the magic of great literature, the course of human progress should have been far more smooth and far less interrupted by unedifying incident. Shelley had not the experience we now have of the ways of politicians and his optimism was therefore only natural.

UTILITY OF INSURRECTION

But even he was under no delusions. If constitutional agitation failed to bring about the desired reform in some appreciable measure, he would not then hesitate to recommend insurrection. But mark it, he would not be in a hurry to employ that method. He knew that it would work surer and quicker; but he had a lively apprehension of its concomitants and its effects. His hope was that when constitutional agitation was intense and wide-spread,

"the oppressors would feel their impotence and reluctantly and imperfectly concede some limited portion of the rights of the people, and disgorge some morsels of their undigested prey. In this case, the people ought to be exhorted by everything ultimately dear to them to pause until, by the exercise of those rights which they have regained, they become fitted to demand more. It is better that we gain what we demand by a process of negotiation which should occupy twenty years than that by communicating a sudden shock to the interests of those who are the depositaries and dependents of power, we should incur the calamity which their revenge might inflict upon us by giving the signal of civil war."

But if those in power are obdurate, "we are to recollect that we possess a right beyond remonstrance. It has been acknowledged by the most approved writers on the English constitution, which has in this instance been merely a declaration of the superior decisions of eternal justice, that we possess a right o resistance. But Shelley feels compelled to repea his warning about the evils of an armed rising.

We who have had the opportunity o witnessing the ghastly orgies of militarism for over nine years continually in Europe are in a position to appreciate how profoundly true Shelley's words are. Civil war, which is another name for insurrection or revolt is not different from wars of other kinds it essence and in influence on national characte and is as such bound to result in endles anarchy. It would be rash easily to indulg the hope that when independence has one been won by means of an armed revolution we would be able to induce the peoplimmediately to convert their swords int ploughshares. The transition from war t peace cannot be so very smooth and certain Shelley's observation is truly philosophical:

"No fallacious and indirect motive to action consultation the mind without weakening the effect of those which are genuine and true.......Ti person who has been accustomed to subdue me by force will be less inclined to the trouble convincing or persuading them."

Such is the psychology of all Napoleot in history. Once in the seat of power, I more will the victorious leader agree come down and fraternise with his fellow in his old way. The era of triumph which helps to open for the people is inevitabled on to an era of despotism by his on

ergence of a new tyrant at the head of copular revolution notwithstanding, Shelley uld not hesitate to raise the hand to strike all other means of overthrowing, or at st reducing, present tyranny were to fail. imagine", he ruefully says, "that before English Nation shall arrive at that point moral and political degradation now occupied the Chinese, it will be necessary to

the Chinese, it will be necessary to real to an exertion of physical strength." dafter the success of the upheaval, he uld have the nation be careful to avoid a likely evils: first, a spirit of wanton tred of all the things of the old order, and sond, a spirit of ruthless revenge towards a old ruling class. He says:—

"When the people shall have obtained, by whatr means, the victory over their oppressors, re will remain the great task of accommodating that can be preserved of ancient forms with improvements of the knowledge of a more ightened age."

This is the principle of the reformer who mes not to destroy, but to fulfil. He would what there has been as the basis for ilding up what there should be. This ctrine, which we may call the doctrine of plutionary development, has received the upulous adherence of every great reformer m Buddha and Jesus down to Dadabhai d Morley, not excluding even the revolunary genius of Mazzini. Burke's "Reflectines" are an elaborate and impressive esentment of the same doctrine.

Of the second of the evils above mentioned, elley uses words that will by no means pear too strong if we remember, as indeed cannot with our present experiences help membering, how deep-seated and persistent d how very reckless class-jealousies always e. He writes:—

"There is one thing which certain vulgar agitas endeavour to flatter the most uneducated part
the people by assiduously proposing, which they
ght not to do nor to require: and that is
tribution. Men having been injured, desire to
lure in return. This is falsely called an
liversal law of human nature; it is a law from
lich many are exempt and all in proportion
their virtue and cultivation."

THE IDEAL AND THE FEASIBLE

Market Street

Shelley did not confound the philosophicand the practical, or the moral and the ditical forms of democracy. It is impossible could not have had a full sense of the featness of the ideal; but he was not at the time time wanting in the appreciation of the reumstances amid which the ideal would.

have to find fulfilment. His plan of work was not conceived exclusively from the point of view of the ideal; on the other hand, he gave to the ideal no more than its proper place in his scheme of practice, so as to find proper room in it for the other factors of the case. Speaking of the principle of equality which has in our day degenerated into a shibboleth, he says:—

"The first principle of political reform is the natural equality of men, not with relation to their property, but to their rights. That equality in possessions which Jesus Christ so passionately taught is a moral rather than a political truth and is such as social institutions cannot without mischief inflexibly secure. Morals and politics can only be considered as portions of the same science, with relation to a system of such absolute perfection as Plato and Rousseau and other reasoners have asserted...... Equality in possessions must be the last result of the utmost refinements of civilization it is one of the conditions of that system of society towards which, with whatever hope of ultimate success, it is our duty to tend. We may and ought to advert to it as to the elementary principle, as to the goal, unattainable, perhaps, by us, but which, as it were, we revive in our posterity to pursue. We derive tranquillity and courage and grandeur of soul from contemplating an object which is, because we will it, and maybe, because we hope and desire it, and must be, if succeeding generations of the enlightened sincerely and earnestly seek it. But our present business is with the difficult and unbending realities of actual life, and when we have drawn inspiration from the great object of our hopes, it becomes us, with patience and resolution, to apply ourselves to accommodating our theories to immediate practice."

Shelley's distinction between the moral and the political aspects of the equalitarian ideal brings to our mind the following penetrative and lucid remark of Morley:—

"Democracy is the name for a general condition of society, having historic origins, springing from circumstances and the nature of things; not only involving the political doctrine of popular sovereignty, but representing a cognate group of corresponding tendencies over the whole field of moral, social, and even of spiritual life within the democratic community. Few writers have consistently respected the frontier that divides democracy as a certain state of society from democracy as a certain form of government."

That Shelley, with all the imaginative sweep of his rare genius and all his burning sympathy for the oppressed and the inevitable seal for radical reform, had yet a constant and lively sense of the feasible and and that he believed the best chances of the ideal to lie in a compromise with the actual, are facts which prove to us the practical soundness in a very real sense of a great poetic mind and they are full of wholesome significance to those of us that are apt to be hasty in the choice

184

of remedies for long-persisting social and political ills. When voice so different in tone and timbre as Shelley and Burke speak alike about the legitimacy and the uses of compromise in practical politics, it would súrely be proper for us to guard ourselves against undue impatience in working and hoping. Shelley puts his argument pithily in the following words:—

"Any sudden attempt at universal suffrage would produce an immature attempt at a Republic. It is better that an object so inexpressibly great and sacred should never have been attempted than that it should be attempted and fail. It is no prejudice to the ultimate establishment of the boldest political innovations that we temporize so that, when they shall be accomplished, they may be rendered permanent."

We may note in passing that Shelley was not an advocate of suffrage for women in his day. "Mr. Bentham and other writers have urged the admission of females to the right of suffrage; this attempt seems somewhat immature." But in principle, he had no objection to that reform; he would indeed be "the last to withhold his vote from any system which might tend to an equal and full development of the capacities of all living beings".

Possibility of Passive Resistance

We may conclude this essay with noting what Shelley had to say about the imperative duties of a true patriot. He sees that long-continued oppression and the fraud and terrorism practised by its agents may have rendered the people utterly incapable of concerted and systematic action on a large scale for the winning of liberty. When such is the case, as, for whatever reasons, has been the case in India for a long time now,

"The true patriot, (says Shelley) will endeavour to enlighten and to unite the nation and animate it with enthusiasm and confidence. For this purpose he will be indefaugable in promulgating political truth. He will endeavour to rally round one standard the divided friends of liberty, and make them forget the subordinate objects with regard to which they differ, by appealing to that respecting which they are all agreed. He will promote such open confederation among men of principle and spirit as may tend to make their intentions and their efforts converge to a common centre. He will discourage all secret associations which have a tendency, by making the nation's will develop itself in a partial and premature manner, to cause tunult and confusion. He will urge the necessity of exciting the people frequently to exercise their right of assembling, in such limited numbers (let us mark this) that all present may be actual parties to the proceedings of the day."

And here comes a difficulty, one which

gives Shelley an occasion to recomme what we today call "passive resistance" as remedy for terroristic tyranny. If a politic gathering be very large, not only will it impossible for each and every citizen prese to be an actual and intelligent participat in the proceedings, but the suspicions a anger of the authorities might also roused. Then,

"if the tyrants command the troops to fire up them or cut them down unless they disperse, will exhort them peaceably to defy the dang and to expect without resistance the onset of cavalry, and to wait with folded arms the event the fire of the artillery and receive with unshring bosoms the bayonets of the charging battaly......And this, not because active resistance is justifiable when all other means shall have faulut because in this instance temperance and cour would produce greater advantages than the middle decisive victory."

Shelley's grounds for entertaining thope are that the "soldiers are men a Englishmen, and it is not to be believed the they would massacre an unresisting multiti of their countrymen drawn up in unarn array before them and bearing in their loc the calm, deliberate resolution to perish rati than abandon the assertion of their right If the soldier should observe "neither res ance nor flight, he would be reduced confusion and indecision". "This unexpec reception (of the soldier's fire by the crow would probably throw him back upon a flection of the true nature of the measures which he was made the instrument, and enemy might be converted into the all This optimistic view of the soldier's psyc logy may be tenable in a country like Engle where the army and the people are both the same nationality and are sharers in common patriotism. But such a hope we be entirely out of place in a country ! India where the ruling and the military cl happens to be of a nationality different fr the people's and where there is not a comn patriotism to bind the soldier and the citi together. This was proved three years in the Punjab on a colossal scale. That be so, peaceful, passive resistance as agai military terrorism can have but little cha of success in India. When national racial prejudices are at their worst, the app of our common humanity becomes too fee and obscure to make itself heard heeded.

CONSTITUTIONAL AGITATION

Shelley lays the utmost emphasis on

importance of energetic and persistent pro-

"The patriot will be foremost to publish the boldest truths in the most fearless manner, yet without the slightest tincture of personal malignity. He would encourage all others to the same efforts and assist them to the utmost of his power with the resources both of his intellect and fortune. He would call upon them to despise impresonment and persecution and lose no opportunity of bringing public opinion and the power of the tyrants into circumstances of perpetual contest and opposition."

Such are Shelley's views on the large and complex problems of political reform—its objects, its principles and its methods. Written a hundred years ago for the public of England. they are not without practical value to us in India today. That indeed is how the man of imagination and thought stands far, far above the mere political pamphleteer. The true poet and thinker sees into the very soul of things, takes his stand on the universal realities of human nature and speaks with a voice and a vision that time cannot stale nor geography restrict. Permanence and extensiveness of applicability are among the inherent marks of all great literature; and if Shelley of "The Skylark" and of the "West Wind" could be immortal and universal in his appeal, he could not possibly be altogether ephemeral and parochial on the subject of political reform. Nothing trivial could come from such a one. There is no necessary antithesis between the mind that can produce a sound political thought and the mind that can produce a sweet lyrical ecstasy. Reason and imagination may co-exist, and must indeed

co-exist in all great minds, the one or tl other faculty only taking precedence over t other, but never wholly divorced from according to the nature of the theme. Lar and clear as was Shelley's vision of t secrets of heaven, equally large and clear w his insight into the realities of the earth. elsewhere it is his imagination, it is here b rationality that pleases and strengthens u He took a broad and exalted view of t business of politics. It was to him no par feud cr scramble for office. It was t supreme question of securing the nation highest destiny. It was part of general ethic and it had a vital connection with the grow of poetry and philosophy He despised n politicians at all, but only demagogues. I set a sovereign value on educating and pr paring the public for political power. Whi he aimed high, he was not reckless in I programme. He did not confound hastine with enthusiasm and rashness with courage Progress he desired, but not by leaps a bounds, but by steady paces. Better the zigz path of compromise than the straight b precipitous road of revolution. By the oi we go safely, though somewhat slowly, fro power to power; by the other, we may doomed, like Sisyphus, to waste ourselves rolling the stone up the hill, with every ri of the huge thing rolling down upon time after time This is the lesson, let note, which a poetical idealist, and not a me political opportunist, has essayed to impri upon our minds.

THE LEAGUE OF NATIONS*

By Dr. M. AHMED, M.A., LL. M., PR. D., BAR-AT-LAW

THE fifth session of the League of Nations opened on the first September 1924 in the reformation hall at Geneva, in Switzerland, where the previous meetings have been held for the last four years. The Canton of Geneva has offered a site for the construction of a special suitable building for the meetings, but that building still awaits funds. The

reformation hall can however accommodative thousand persons, and therefore at present suffices for the meetings, which are open to the public. The League of Nations is divide into several committees which must be carriedly distinguished. There is in the firm instance the full assembly of delegates who meet only once a year, to deliberate on the great international questions referred to them for decision. There is secondly the

^{*} An adaptation from the French.

inent members, a French man, an Englishment members, a French man, an Englishmen, an Italian, a Japanese (the American having withdrawn) and six non-permanent and annually elected members. During the last year these six non-permanent members belonged to Belgium, Brazil, Spain, Sweden

Ezecho-slovakia and Uruguay.

The council which meets every three months is a sort of executive committee of the League. It undertakes to prepare the work of the League, and regulate certain questions within its jurisdiction, such as the general reduction of armaments, the control of international mandates, the administration of the territories of La Sarre, Dantzig, etc. In the same way as the work of the full League is prepared by previous discussion in the council, the latter makes use of the suggestions and deliberations of the consultative technical commissions which meet during the intervals of the quarterly sittings of the council, and the annual session of the League. The most important of these permanent consultative technical commissions is the one which deals with military, naval and air questions and is composed of the representatives of Italy, Great Britain, Czecho-slovakia, Sweden, Belgium, Spain, France, Uruguay, Japan and Czecho-slovakia, Sweden, Brazil. Besides these, the representatives of other countries can be co-opted questions directly affecting their interests are to be discussed by the technical commission. The permanent consultative commission for military, naval and air questions has lately been chiefly concerned with projects of treaties of mutual assistance, the control of the Commerce in arms, and of their manufactures in private. As may be presumed, the deliberations of these technical commissions are not published and are directly reported to the council of the league. These commissions naturally work in camera and with the single purpose of arriving at solutions that may be above all reasonable and efficacious and at the same time acceptable to all states and governments. is, finally, a permanent secretariat located at Geneva, which goes through an enormous amount of technical work necessitated by the periodical meetings. Although the fifth session recently commenced has to continue well-established tradition, it has nevertheless excited special curiosity, unknown in former rears. This is due principally to the presence of he three prime ministers of France, England. md Belgium, Messrs Herriot, MacDonald ad Theunis, who have thus testified to the

esteem, in which they hold the work of the League. The programme is no less interesting consisting as it does of 26 items. Among these are the protection of young women travelling alone, legal assistance to the poor, the demand of the Chinese Government for the reduction of its contribution, the control of armaments and the maintenance of peace in the world. The last two subjects are evidently the most important of all. It is necessary to determine the conditions under which, the League will proceed to control the armaments of Austria. Hungary and Bulgaria, and exercise its rights of investigation in these countries. Then there is the question of German armaments, which according to the terms of the treaty of Versailles, the League of Nations will be called upon to regulate as soon as the inter-allied commission now sitting shall terminate its operations. manner in which the League will deal with the Austrian and Hungarian armaments, will constitute a very important precedent to be subsequently applied to Germany. The league has also to examine the replies received from the different states, regarding the protocol or project for mutual assistance elaborated and submitted to them by the council. Thirty states have already replied, eighteen favourably with certain reservations. Among them are, France, Belgium, Italy, Czecho-slovakia, Roumania, Poland, Servia, Portugal and Finland. On the contrary, the United States, Great Britain, Germany, Russia, Australia Sweden, Norway, Spain, Holland Switzerland and Denmark, have rejected the project. The French delegates will support the amendments detailed in a recent letter of M. Herriot addressed to the general secretary of the League. A counter proposal has privately been presented by the United States.

The proceedings of the League commenced with the usual ceremonial under the chairmanship of M. Hymans, the Belgian minister of foreign affairs. In his opening address welcoming the delegates, M. Hymans enumerated, not without legitimate pride, the first fruits of the league's work, and indicated the lines on which its work has so far proceeded. The adhesion of fifty four states, and the increasing importance of the problems, submitted to its arbitration, give grounds for hoping, remarked M. Hymans, that sooner or latter, the League will be able to fulfil its raison d'etre and maintain the peace of the world. The League then elected by forty-five votes out of forty-seven, M. Motta, a former president of the Swiss Republic, as its chairman

for the present year. The delegates of the different countries then proceeded to nominate their representatives for the six subcommittees appointed this year for the consideration of (1) legal, (2) economic and financial and (3) peace and disarmament questions, (4) the budget of the League, (5) humanitarian and social and (6) political questions. Finally after the election of six vicepresidents, viz., Messrs. L. Bourgeois (France) Salandra (Italy), Lord Parmoor (England), Uruceia (Columbia), Skyzyenski (Poland) and Tang Tsi Fou (China) the League commenced its work of the present session.

The League has this year chiefly discussed the Polono-lithuanian conflict, the situation in Poland of the emigrants from Dantzig, the medical assistance to Albanions, the lot of Russian, Grecian and Armenian refugees, the financial relief of Hungary and the events in Georgia. But these comparatively un-important matters pale into insignificance when compared with the dominant questions of arbitration and disarmament and the signing of the protocol for the maintenance of peace which have throughout been the chief preoccupations of the League.

In the course of a recent letter to the London Times on the results of this year's Geneva Session, Lord Parmoor the British vice-president of the league writes:—

"I do not hesitate to claim on behalf of the British delegation (which acted throughout in close consultation with the representatives of India and the Dominions) that it schieved a notable success. The protocol which in no way interferes with the sovereignty of any nation as regards the use of its military, naval and air forces constitutes a great step towards the pacific settlement of all international disputes... I have endeavoured without success to ascertain a basis for the fantastic statement coupling the British navy with the League."

Among the Indian delegates to this year's session of the League Sir Muhammad Rafique, a retired Judge of the Allahabad High Court, delivered a fine speech on the 22nd Septem-

ber 1924 when the question of intellectual co-operation was under discussion. Said he,

'As an Indian I feel happy and proud to think that the culture of my country not so well understood in the West as it ought to be, will once again in the future, as by common consent it did in the past, contribute its own share to the attainment of the ideals on which the League is established. I have not the slightest doubt that by the efforts of this committee, the culture of India will be more widely appreciated and spread than it is to-day. I am here to proclaim the contribution which India is able and ready to make to the world's stock of knowledge from her own treasures, which are increasing every day through the labours of her devoted sons. I am here to declare the message which India has to give to the West from her deep and diffused spirituality, from her respect for ascetic ideals, from rare capacity for sacrifice and service, divorced entirely from material considerations. The East and specially my country, I may be permitted to remark, has many valuable thoughts to offer for the enrichment of the world's literature, science and philosophy, if only her sciences and institutions are properly understood and studied. Take for instance the Hindu culture, the proud inheritance of the vast majority of my countrymen, and you will find that before the dawn of history in the West it taught the lessons of universal brotherhood and universal peace for the acceptance of which this illustrious gathering is working to-day. The achievements of my countrymen in the past are beyond dispute. Their achievements to-day are worthy of serious notice.

As remarked by several European journalists, Sir M. Rafique's was the speech of the day. It was delivered in English and immediately translated into French, as French and English are the only two official languages recognised by the League.

The most recent proof of the real usefulness of the League is that Turkey and England have both agreed to refer back to the council of the League their acute dispute regarding Mosul. May the League's impartial decisions continue to command an increasing measure of confidence and thus ensure the peace of the world.

28th Octobor, 1924.

A CALL FOR ASIAN EMANCIPATION

ONE of the prime requisites for attainment of Swaraj in India is to create self-confidence among the people, particularly the leaders and the younger generation that they may control, and direct the destiny of the nation. This means that the people will

have to shake off their slave mentality. Certain Indians are singing the song that the people of India lack the experience of self-government and that they should wait and receive the instalment of self-government and the kind of self-government their masters

*Sogland will in good time decide to confer

The Anglo-Indian officials are loud to apound the theory that the inexperience of be Indian people in the field of selfovernment will be fatal to India's good. It muses many of us who note that only less han ten years ago, the Labor leaders in ingland like the Rt. Hon. Ramsay MacDonald dd others were charged with being wild reamers who would destroy the world-flung british Empire, if they were entrusted with ne responsibility of running it. More than wenty of the present members of the British 'arliament were put in jail during the world ar for their political and economic views ad the present Premier was held to be uite an irresponsible person; but these nen are now governing the country. This ict should hearten the Indian leaders and sould convince Anglo-Indian officialdom, if iey are open to conviction at all, that the opular leaders of India, especially those who e today victims of the lawlessness of the ritish Indian Government, which is ruling a country by enforcing the Regulation I of 1818, will be the rulers of India. zere is no power on earth to stop this stiny of the reassertion of India which will ain give a humane civilization to the ırld.

The people of India and those of the other arts of the Orient are often told by the estern people, particularly sperior Anglo-Saxons, that the so-called that there is no mmon honesty among the people of the rient in matters of Government. But the ople of India should not be discouraged out this allegation, as if corruption is herent in all the people of the Orient and nesty and decency is the monopoly of the est. In the face of the facts that have me to light regarding the cases of abominle corruption during the world war, in foremost western democracies such as eat Britain, France and the United States, can be safely asserted that the spirit of cency and civic righteousness is not a moroly of the West. There is a good al of lawlessness even in very high places the Governments of the western world. 5 story of corruption in British Air Ministry, lousy between Lloyd George and Sir uglas Haig (now Lord Haig) and the waste public funds in Great Britain by some of most prominent members of the British riament is not unknown to the people of in. The following story of corruption in

high places in New Zealand is an example of what can be found in other British dominions:--

EX-PREMIER ARRESTED AS THIEF

SIR RICHARD SQUIRES OF NEWFOUNDLAND CHARGED WITH \$20,000 LARCENY-OTHERS TAKEN.

St. John's. N. F., April 23.—Sir Richard Squires, former Premier of Newfoundland, was arrested yesterday charged with larceny. The charge was

yesterday charged with larceny. The charge was based on the findings of a commission which recently investigated alleged irregularities under the Squires government, which resigned last July. Dr. Alexander Campbell. who was Minister of Agriculture in the Squires Cabinet, also was arrested on similar charges, as were John Meaney, former Government liquor comptroller, and Whitford McNeilly, formerly a clerk in the Crown Lands Office All were admitted to bail.

Office All were admitted to bail.

Further arrests are probable, officials said.

The specific charge against Sir Richard Squires was larceny of \$20,000 of Government funds. Campbell was charged with larceny of \$400. Meaney with theft of \$100,000 and McNeilly with larceny of \$30,000. The former Premier, Menney and McNeilly were admitted to bail in \$40,000 each, while bail in the case of the former Minister of Agriculture was set at \$4,000.

It was announced that Alexander Rooney, Accountant-General in the Post Office Department, who is charged with larceny of \$3,000, had escaped to Canada two weeks ago, and that William O'Reilly former Magistrate at Placentia, would be brought to this city to-day on charges of obtaining \$12,000 by false pretences.

false pretences.

The Squires Government, which had been returned the Squires Government, which had been returned to power a few months before, resigned last summer after internal dissensions due to charges that there had been misuse of public funds. Attorney-General W R. Warren, on accepting a mandate to form a new government, promised an investigation, and when no Newfoundland jurist could be found to conduct such an inquiry, the British Colonial Office named Thomas Hollis Walker

recorder of Derby, England, to act as commissioner.

The charges, said to be the most serious that have been preferred against a government in British North America since the so-called Pacific scandal caused the fall of Sir John A. MacDonald's cabinet in Canada in 1873, fell into two divisions. It was alleged that Sir Richard Squires while premier had improperly received public moneys from the liquor control desertment and also preceived moneys from control department and also received moneys from the British Empire Steel Company at a time when this company was negotiating a new ore royalty contract with the Government. A second set of charges alleged that waste and corruption were practised in connection with expenditures made by the departments of Agriculture, Mines and Public Works for relief and other services in periods of unemployment.

unemployment.
Commissioner Walker in his report, made public a month ago, found the charges against Sir Richard Squires sustained by the evidence. Dr. Campbell was declared guilty of misconduct and extravagance in connection with relief expenditures made through the Department of Agriculture. The alleged misconduct was in paying personal expenses from public funds and using the patronage of his department to advance his political fortunes.

The Commissioner severely censured, various lic officials who received payments for alleged ra services on the ground that these payments re illegal. The report closed with the hope t "exposure of all these conditions may result he people taking steps to purge themselves from same and effecting much needed reforms.—
he Sun (New York) Wednesday, April, 23, 1924.

The French political world is ringing with cusations of all kinds of misuse of funds ring the world war and also of reconstructure in the devastated regions.

The United States of America is regarded the greatest of the western democracies. e people of the United States are surely greatest of the idealists among the westnations. It is said that the United tes entered the World War "to make the rld safe for democracy"; and certainly masses of this great republic did not e any other motive but to fight for the ise of human liberty, altho they might re been misled by the propaganda of the ied Powers against Germany. Today we i that many responsible businessmen of United States are charged with defrauding Government in war contracts; and the ount involved in these cases amounts to ions of dollars. The United States Senate now engaged in various investigations h as leasing of the oil lands reserved for needs of the United States Navy to vate corporations by cabinet ministers and least one of whom received large sums money from big oil interests for transng the land to corporations which made ge profit. It is an open secret that many ponsible Government officers of the United tes of America during the last world disposed of property and business of vate German citizens (enemy aliens) for ch less money than their real value and s indirectly profited themselves.

None should construe from the above is that the United States is a nation of honest people. On the contrary, average lesty and idealism of the American people nost praiseworthy. The point I wish to phasise is that the people of India and rest of the Orient are in no way inferior matters of innate national virtues has honesty, toleration, to the people of West. The ideal of international morality world affairs is rather higher in the ent than that is to be found in the West; ause the power-mad West has a double adard of international morality, one for the called experior whitse and the other for

the other races of people. The people of the Orient should also remember that while the Christian missionaries speak of Christian virtues and the superiority of the Christians ever the heathen, they do not always tell the actual state of affairs in Christian lands which have dark sides as well.

The Orient indeed has much to learn from the West, but the West has much to

unlearn, particularly its arrogance.

Corruption exists in the West, as it does in the East; this should not be an excuse for the people of India and the rest of the Orient to condone the evils and lack of efficiency in political and industrial life of the nation. There is nothing like innate backwardness of the people of the Orient and absolute superiotity of those of the occident.

The time has come for the people of the Orient, particularly India, to demonstrate to the world that altho they are now in many ways at a disadvantage, altho there is a kind of conspiracy among the so-called superior white peoples of the world to keep the rest of the world under subjection, yet morally, politically and intellectually they (the people of the Orient) are in no way inferior to any people and they are determined to get out of this abject condition of subjection and supposed inferiority, through ardent sustained efforts and to bring about a new social order based upon the ideal of equality of nations through Asian independence and emancipation of all subject nations.

This ideal can be fulfilled if the people of the Orient can de-hypnotise themselves from the clutches of the idea of their racial inferiority and from the bonds of slave mentality. This can be accomplished through achievement. Let the younger generation of the Orient, particularly India, realise their responsibility and calmly devote their best energies to surpass the West in honest competition in the field of achievement and this will lead to permanent emancipation of Asia and therefore India and better understanding between the East and the West.

Asia, that in the past gave to the world Confucius, Buddha, Jesus, Mohammed and at present Tagore and Gandhi must emancipate herself to lead the world from its present condition—"civilised barbarism". There is not the least doubt that the West, which wouships power, will not pay any attention to the genuine greatness of the Orient unless Asia can assert politically. This political assertion of India and the rest of Asia must

maither be regarded nor directed as a movement for national jingoism. In the call for lation emancipation I see a special spiritual value, a new ideal of freedom for all, particularly the emancipation of the "Power-mad West" from its present dangerous illusions.

New York City.

April, 24, 1924.

HISTORICAL RECORDS OF NORTHERN INDIA, 1700-1817

By Prof. JADUNATH SARKAR

T

records of this period written in European languages. The English records have been mostly hand-listed up to 1793, and many of them have been printed, some in full, some in the slightly abridged form called celendars. The French records at Pondicherry have been catalogued and are in a rapid process of publication, thanks to the enterprise of the Society for the History of the French Colonies and the impetus given to indo-French history by M. Alfred Martineau.

As for the Portuguese papers preserved at Goa, the more important of them, such as treaties, diplomatic correspondence, instructions to Government officers &c., have been printed by J. F. J. Biker in his Colleccao de Tratados e concertos, 14 vols. The other mapers in the Goa archives are of minor importance, because in the 17th century the Portuguese ceased to occupy an influential position in Indian politics, and sank into a mere provincial power. They lost connection with the imperial Government of Delhi, and had diplomatic relations only with the petty chieftains in their immediate neighbourhood. such as the Savant of Vadi ("the Bounsello"), and the desais of Sunda, Sanguelin, Bicholin, Ponda, &c., besides a short war with Shambhuji. Rarly in the 18th century, they had some the littles with the Peshwas: but after the peace with Baji Rao I in 1739 their relations the Poona Government are indicated only by a small series of MS. reports from the Portuguese agents at the Peehwa's Court in addition to what Biker has printed. The Portuguese records, therefore, cease to se of any value for North Indian history that the accession of Astrangaib.

п

The problem of Indian history in the Mughal period is to find out the most original sources of information. We, no doubt, possess the contemporary official histories, written by order of the Emperors of Delhi from Babur to Bahadur Shah I. But they are derivative works, as they were compiled from still earlier records, or documents written immediately To this latter after the events described. class belong (1) the despatches from the various provincial governors and generals, (2) the reports sent to Court by news-writers and spies, (3) the summaries of such of these despatches and reports as were read out to the Emperor in public Court and embodied in the akhbarat or manuscript news-sheets sent to the various Rajahs and nobles by their agents at the imperial darbar, and (4) the instructions of the Emperor and his ministers to officers absent on duty. Of the first and fourth classes much material has perished, and the only remnant now surviving is the handful incorporated in formal letter-books left behind by certain secretaries or munshis in the service of the Emperor and some nobles. No report of a Government spy or news-writer is now in existence in its full original form. Therefore the scientific historian of the Mughal period is left to depend almost entirely upon the akhbarat or news-sheets telling us of the daily occurrences at the imperial Court, the Emp eror's movements and public orders, and the news and rumous circulating there.

The importance of these manuscript newspapers or unofficial Court-bulletins has been described by me in a paper read at the Second Session of the Indian Historical Research Commission held at Lahore in 1920. I have relied them the Missing Links of Indian History

because at that time only two sets of these documents were known to exist, namely a large collection referring to Aurangzib's reign in the Library of the Royal Asiatic Society, London, and twenty-two sheets only dated the close of Muhammad Shah's reign in the Bibliotheque Nationale of Paris.

医腹膜皮膜及皮肤 医皮肤 1.

Since then large masses of these raw materials of Mughal history have been traced. The earliest and most copious belong to the Jaipur State archives, and run from 1681 to 1725. Those of a later period exist in great volume, but dispersed over many collections

and with sad gaps in their midst.

The imperial Government as well as private persons (such as dependent Rajahs) also kept news-reporters in the camps of the Mughal princes and other grandees who governed provinces or commanded expeditions. Akhbarat of this class has been found for Prince Muhammad Azam Shah's viceroyalty of Gujrat and Prince Bidar Bakht's governorship of Malwa, both in the closing years of Aurangzib's reign. The former belong to the R. A. S and the latter to Jaipur. For the second half of the 18th century records of this class are copious as I shall indicate a little later. We thus get the raw materials of provincial history, though not in an unbroken series.

Ш

From 1750 onwards the Emperor's power rapidly declined and the importance of the provincial governors increased. The Delhi Court, therefore, fell into insignificance as the creative centre of political news; it merely continued as a sort of news-exchange. The wazir of Oudh, the Rohila sardar, the Jaipur Rajah, the Jat chief of Bharatpur, Sindhia, Holkar, the successors of Ahmad Shah Abdali, and even Ranjit Singh of Lahore, now dominated the political scene, each for a period only. Happily, many of the news-letters written from their camps and Courts have been preserved, though many more have perished.

But the news-sheets now change their character in two ways: First, unlike the akkbarat of Aurangzib's or Bahadur Shah's Court, hey do not record any and every news heard here, nor mention every Court incident, great ad small. They give longer accounts and of elected news only; or speaking in terms nore familiar to us, they cease to be mere elegraphic summaries and assume more and nore the character of news-paper reports. econdly, they join together in one report the lews of several days, sometimes a fortnight, natead of giving only one day's or sometimes

A STATE OF THE

one noon's news only. This change made it necessary to use two or three very long sheets of paper, while the brief daily newsletters of Auraugzib's or even Muhammad Shah's time were compressed into one small slip of paper only. These late 18th century akhbarat exactly resemble the news columns of our old English weekly papers of the days before the telegraph.

The news-sheets also change their name at this period, being no longer designated akhbarat-i-darbar-i-muala, but simply akhbar, sawanih, parcha-i-akhbar, or ahwal-i-taza.

It may be objected that these news-letters are not authentic, as they contain only what was heard or rumoured at the place of their writing and are not of the same value as despatches and secret State-papers written by the makers of history. An examination of the real character of these akhbarat shows that the objection is based upon a misconception: For one thing, they do contain summaries of despatches received or sent out (except secret orders). Secondly, no secret could be kept in Mughal India. And thirdly, the news circulating at the Court of a king or the camp of a general, whether true or false, was the only information available to him, and it determined his line of action. We thus get from the akhbarat a knowledge of the true springs of his conduct and policy.

TV

perishing of the greater part of the The Mughal State-papers and Court-bulletins is due to a cause which European historians do not easily realise. In pre-British days the records of every department of the Mughal Government or a feudatory State were usually kept in the house of the Secretary of that department and not in any Government building or archives. No doubt, revenue returns, accounts, &c., would be kept in the record-room of the revenue department, by reason of their immense volume and the need of frequent reference. But all other after they have been read and answered, and thus have ceased to be what we now call "Current correspondence", would be taken by the secretary to his own house, where he transacted his work when not in attendance on the prince or the minister. Administrative convenience dictated this practice, as, in the absence of a State archivist or general recordkeeper, the secretary to a department was the only "walking index" to the old records of that department; he alone knew what papers were possessed by the Government

tér

rith reference to a particular case and where papers were. None else could pick

out quickly.

The result of this old practice was disarona for history, as Sir Dayakishan Kaul pointed out in his paper on the Patiala records read at Lahor in 1920. With the seay of the old families of hereditary secretaries, much valuable material of first-rate importance has perished. Masses of old paper have rotted in their houses or been swept sway as rubbish by their poor ignorant descendants, while the masters of the old necretaries have neglected to recover these records from their houses.

The Jaipur State archives, as may be expected, contain a large mass of letters from the Mughal Government and the officers of the Rajah to him, besides a huge collection of accounts papers which will be of firstrate importance for the economic history of Raiputana in the 17th and 18th centuries, if such a history ever comes to be written. But one series which I had looked for there cannot be found. I mean the secret correspondence between the Marathas and the Jaipur Rajahs, which must be of very great value, as Sawai Jai Singh brought the Marathas into Malwa, and his successors had frequent relations, usually unfriendly, with the Deccani generals throughout the 18th century.

There are twelve rooms on the ground foor of the Amber palace stored with old State papers, all of which with a few exceptions have been eaten up and reduced to green mould by white-ants. I could read three scraps of these and found them to have been with the Rajah Ram Singh from Rangamati on the Assam frontier in 1674. for as can be now judged from their appearance, were not papers of imperial interest or first-rate importance, but belonged to the rainor class of salary bills, accounts, armylists, revenue returns of villages &c. The old revenue papers of the various parganahs belonging to Jaipur, from the 18th century cowards have been carefully preserved with due arrangement in another office Mintaufi daftar) in Amber, (though here, too, some bundles are ant-eaten).

The Jaipur darbar is rich in the possestion of a great number of genuine old formans with their seals and embroidered both envelopes (kharitae) quite intact. These to of extreme value and may properly

adorn a historical museum. Nowhere else in the world has such a collection survived.

All the extant records of Udaipur have been embodied by Kaviraj Shyamaldas in his monumental Hindi history the Vira-vinode. Stray documents, such as farmans from the Emperors, hasb-ul-hukms and parwanahs from his ministers, and news-letters, are possessed by some other Rajput States, and even by private families. But the time and labour required in listing and co-ordinating them would be out of all proportion to their value. Most of them are later than 1740, and their owners are not always communicative Lala Sri Ram, M.A., an enlightened rais of Delhi, has two volumes of diaries.-on dealing with the Marathas in northern Indi in 1792-3, and the other with the imperia family in Delhi fort in 1854-55-both o which have been described in the Journal o Indian History for Feb. 1922, (Vol. I, pt. 2. They are of rather late dates; but his collec tion is always open to scholars. Som stray akhbars have gone to the India office London. (See Ethe's Catalogue.)

VΙ

The Bharat Itihas Samsodhak Mandal o Poona is building up a store of late 18t century news-letters in Persian (particular) relating to Mahadji Sindhia), which promise to grow in volume if private owners in th Deccan are liberal enough to deposit the historical records of this class in the Mande library, for ready use by research student Several families of hereditary State servan of the Peshwa period, such as the Paras-ni Waquis, &c., still hold large or small bundle of old papers, which are perishing throug of th neglect. The general ignorance Persian language prevailing in the Decca will prevent the examination and use these records in the houses of their presen owners.

As for the news-letters and other histo ical papers written in the Marathi languas there was a very large collection of them the house of Nana Fadnis at the village Some of them have been savi Menauli. from destruction and printed by Rao Bahad D. B. Parasnis, and some, I understand ha been brought to the Poona Mandal. entire collection, judging from their owne position as the de facto head of the Marat State for many eventful years, must be ve valuable. They, however, refer to the liquarter of the 18th century.

VII

His Highness the Holkar of Indore has very copious records in the Marathi language, the earliest of which date back to the time of the first Malhar Rao, the founder of the dynasty. There are abundant reports from the agents of this State at the Courts of Oudh, Delhi, Jaipur, Calcutta, etc., in the second half of the 18th century, and particularly of the time of Ahalya Bai. A fire in the archives has destroyed some precious bundles, but much more has escaped with a elight scorching along the edge,—so that at the worst each paper in these damaged bundles has lost only three lines of writing. If these documents are properly arranged and calendared, it would win for His Highness the Holkar the praise and gratitude of the learned world.

It is not known to outsiders that the enterprise and perseverance of the Foreign Office of the Holkar's Government have secured, at an immense cost, faithful transcripts of all the English records in the India Office, London, and the Marathi papers in the Peshwa's Daftar, Poona, relating to Holkar, Sindhia and the Puars of Dhar. The city of Indore, therefore, can now afford nearly all the materials for a full history of Malwa in the 18th century. An earnest historian, if he is prepared to undertake this task, will probably find every help in the learning of Dr. Kibe, the ripe knowledge and devotion of Messrs. Mathu Lal and Phadke, and the scholarship of Mr. A. N. Bhagwat, who are directly connected with the records of Indore.

VIII

In the Land Alienation Office at Poona, miscalled the Peshwa's Daftar,—because the Peshwa's papers form only a fraction of its contents,—there are twenty-four bundles of historical materials in the Persian language. I have made a rapid examination of all of them. About half the mass is absolutely useless, being made up of children's copybooks, lithographed Persian works, fragments of MSS, and ordinary waste paper. An examination of them is apt to produce the hasty idea that the Inam Commission had made house-searches throughout the country, brought to Poona everything written in Persian and every scrap of old writing in Modi that they found anywhere, and left the bundles undisturbed ever afterwards. The fact is that the helders of inam lands deposited all their old papers without discrimination in the office of the Inam Commis-

aion, and these have remained there unexamined,—at least unsorted, unindexed, and unreturned. The only thing done has been to tie them up in cloth-bundles of a tolerably uniform size, by bringing together the papers of several families, without distinction of date or place.

Roughly half the contents are waste paper. About one-fourth consists of old revenue accounts of parganahs like Sironj, Chamargunda, Ahmadnagar, etc., and these are of little use now. But the residue of about one-quarter of the mass is true historical material, some of them being of the highest value. They may be classified thus:—

(i) Farmans from the Mughal Emperors and the older Adil Shahi dynasty.

(ii) Parwanahs or orders.

(iii) Copies of grants, attested under the

seal of the gazi (khadim-i-shara).

(iv) News-letters from Northern India, and a few from British armies, mostly later than 1806.

(v) Private legal documents, such as bonds, agreements, receipts, jury reports (mahaxar), and petitions to the Mughal Government.

IX

I shall here specially dwell on the fourth of the above classes. The original Persian news-letters that were sent from Lahor. Delhi, Lucknow, Jaipur and other capitals to the British Indian Government at Calcutta throughout the 18th century, have perished. But English translations of them made at the time have been preserved and are printed in 3 vols. of Culendar of Persian Correspondence, with two others ready for the press. Similarly, the Imperial Record Office at Calcutta possesses a long series of letters written by Col. J. Collins, Resident at the Court of Daulat Rao Sindhia, to Lord Wellesley or his Secretary, during the very important period just preceding the Second Maratha War. (Only four of Collins's letters have been printed in Wellesley's Despatches ed. by Martin). These contain English summaries of the intelligence sent by traders and British agents from various centres in Upper India. We thus possess the news on which Wellesley shaped his policy.

But there is a vast collection of newsletters in the original Persian belonging to our Government, though not noticed hitherto. These are in the Poona Alienation Office, and exceed a thousand in number. Most of them

¥, \$

for to the period leading up to and during that Maratha War. They came from the state of Ranjit Singh (who is called Lahorman and Sardar, as he had not yet developed Maharajah), Amir Khan of Tonk, the of Bhopal, Jagat Singh of Jaipur, Danlat Rao Sindhia, Raghuji Bhonsle, Maji Bhonsle Appa Sahib, Zalim Singh Kotah, and the Nizam, and the camps of Miteriony, General Beatson, and Metcalfe. coveral of these packets of news still retain helt covering letter,—some addressed to Colonel Sahib." This very valuable mass made available for scholars.

The Land Alienation Office of Poona, on the Persian side, possesses in addition to these untied original materials for political and untitary history, also several documents fit to be exhibited in a museum, of which I

hall here cite three examples:

(1) The original farman of Shah Jahan, coasin of the great Shivaji's father Shahji, peaking him for his loyalty to the imperial course and urging him to work hard and serve Yamin-ud-daula, the Mughal general in the Deccan.

(2) An order from Aurangzib, dated 9th January, 1690, warning the imperial collectors of provisions in parganah Chamargunda not loi molest the peasants in securing grain for

imperial camp.

2) A petition from a high officer to the Happeror, making certain demands, with the Happeror's reply to each item of demand witten in his own hand in the margin test it.

Many more such interesting documents his be picked up by a more detailed

et autination.

X

The result of the searches for historical materials so long made by me. may be summed up thus:-

Period 1700-1725 . . . extremely rich in Persian akhbarats (mostly in London and Jaipur), Marathi documents very few, but Peshwa's Daftar likely to yield some.

1725-1757 . . . poor in Persian and Marathi sources. Much material has perished. Only 20 sheets of Persian akhbarat (1744) in Paris and four in Poona L. A. Office (c. 1754.) The surviving Marathi documents have been mostly published.

1757-1781 . . . a small amount of Persian akhbarat still extant in the Poona Mandal; English trans. of many (originals lost) in Calendar of Persian Cor. Many Marathi papers already printed, and many news-letters in that language extant in Indore (but not yet catalogued). Many Persian akhbarat likely to come to light in Poons.

1781-1795 very copious Marathi papers, (large numbers of them already printed by Parasnis, Rajwade, and Khare.) Enormous quantities of unprinted Marathi sources at Indore, Poona and probably also at Gwalior. Persian alhbarat already discovered, many for 1788-1795, and more are constantly accumulating at the Poona Mandal. Menauli records very rich in Persian and Marathi papers.

1795-1817 . . huge collection of Persian akhbarat in the L. A. Office, and Mandal of Poona, with a few in the I. O. L. English summaries in the despatches of J. Collins, (Imperial Record Office). Marathi materials copious (many published down to 1803). English MS. sources not yet calendared.

THE ETERNAL CHINESE QUESTION

BY BENOY KUMAR SARKAR

SOVDET RUSSIA ON CHINA. Mark is civil war in China once more d, as usual, on constitutional questions. is time the situation is grave enough in talks" among the great powers in to intervention. Curiously enough,

the only power that seems to stand by China's case against foreign intervention is Russia, the state whose enmity to the Chinese people was never less cruel than that of the nations whom she condemns to-day.

But perhaps the soul of Russia had be

The state of the s

purged through the fire-baptism of Bolshevikphilosophy. And so it has suited the leaders of the Soviet Federation of Russian Republics to challenge the right of the four "bourgeois"imperialistic states, viz. Great Britain, France, the United States and Japan to interfere in the politics of China and the Far Eastern Seas.

CHINA, ROMANTIO AND REAL

Neither civil war nor foreign intervention is however a new thing in Chinese politics. These are some of the "eternal questions" with which every student of international law is familiar. But unfortunately, as a rule, people dare not look facts in the face and

hesitate to call a spade a spade.

So far as China is concerned, the romantic idealism popularised by the writings of Bertrand Russell and John Dewey in English-speaking lands and by Rudolf Eucken and Keyserling in the Germanistic world has served but to propagate among the alleged friends and lovers of the Chinese people a false orientation in regard to the actualities. But the Realpolitik has to be faced today or tomorrow, romanticism notwithstanding

PROFESSOR GOODNOW ON THE RIGHT OF FOREIGN CONTROL

In 1915 the American professor, Dr. Goodnow, as adviser to President Yuan Shikai of the Chinese Republic, submitted a memorandum of governmental systems. One of the reasons why he considered the restoration of monarchy desirable for China is that otherwise disorder would prevail in the country. And

"It is ***becoming less and less likely that countries will be permitted to work out their own salvation through disorder and revolution, as may have been the case during the past century with some of the South American countries. Under modern conditions countries must devise some method of government under which peace will be maintained or they will have to submit to foreign control." (Journal of the American Asiatic Association, November, 1915.)

This is a mercilessly frank statement, and the point of view would seem inhuman to Young China and to those of its idealistic friends who desire to see the Powers let the Far Rast alone. But this is only a scientific conclusion from the lessons of diplomatic history.

Writers on international law assert indeed that nations have every right to work out their destiny in their own way, or as the phrase has become current in the literature on politics during and since the Great War,

they have the right of "self-determination". But the rights of rebels, revolutionaries and secessionists, on the one hand, and those of foreign intervention in an independent state, on the other, are some of the other eternal questions that are left to the practical statesmen and the vishvashakti or world-forces, i. e., the conjuncture of circumstances to solve.

Now foreign intervention in the internal affairs of a state "to the point of actual destruction of its political independence" is neither to be the special misfortune of republican China nor an iniquity to be perpetrated for the first time in Chinese history. The question of the form of government for China is thus not specially affected by this danger.

Intervention as a Political Method in Medieval Europe

During the Middle Ages no European State could be called really sovereign even within its territorial limits. The Pope had the right to interfere in the local civics of Christendom, and his cardinals, legates and pardoners enjoyed "extra-territoriality" everywhere. Matrimonial relations and religious sympathies dictated, moreover, the foreign policies of rulers.

The ruler himself was in law but a landlord among landlords. The same landlord could in those days own manors and serfs under more than one king. A baron in one state could be king in another. The cities could form alliances among themselves, or with the feudal lords against kings, or with the kings against the feudal lords.

The Hanseatic League gave laws to the kings of Denmark and Sweden. Each of the Italian city-states was divided between the imperial Gibellin and the Papal-Guelph factious, so that both the German Emperor and the Pope freely took part in the intrigues of the little republics of Italy. Intervention was thus the very essence of the system of feudalistic politics in Catholic Europe.

From Westphalia to the Monroe Doctrine

The peace of Westphalia (1648) is regarded as the first landmark of modernism in the conception of sovereignty. But even since then the independence of States has been infringed upon by the Powers on innumerable occasions. Today the ostensible object of intervention is the maintenance of peace in the "backward countries" in the

at of foreign commerce and investments. other times the pretext has been selfreservation, enforcement of a legal right, entition of atrocities, considerations of atroxity and so forth.

The death of Charles II of Spain in 1700 an incitement to Louis XIV to interfere behalf of his grandson Philip as a candidate for the foreign throne. The Spanish succession could not thus remain a mere Spenish question; it brought on a world-war in which the real issues were the expansion commerce and the balance of power. The notorious partitions of Poland (1772,1793,1795) are the standing monuments of the Powers right to intervention in a territory of political turmoil.

The partition of France, also, became a question of practical politics in 1793 under conditions similar to those of present-day Ohina Austria, Bavaria, England, Russia, Spain and Sardinia were to have obtained slices of French territory and left France a

harmless third-class power.

In 1808 Napoleon ordered that Prussia khould not keep an army of more than 40,000 then. The Holy Alliance (1815) was an open Mouroe Organized for intervention. The Mouroe Doctrine (1823), as a publicly annonneed defence against intervention, came into being on the assumption that the right to intervention was a fact.

AMERICAN INTERVENTIONS IN THE LATIN STATES

" By the "Ostend Manifesto" of 1854 the United States declared the right to seize Cuba by force, should Spain be rejuctant to sell America's intervention in the war (1898) between Spain and Cuba is an infringement of the rights of independent states, as also har notoriously hasty recognition of Panama the disputes with Colombia.

FORMER INTERVENTION IN PERSIA

During the birth-throes of the New is (1902-1909), again, the constitutional sections of party has been constantly the intrigues of Europeans and his courtiers. The Anglo-convention of 1907 defined to their sowers, and was followed joint demands on the Medilia surficiently to obey the Shah designation of the first Medilia by the Shah with the

"Cossack brigade" commanded by a Russian Colonel.

Then came the virtual annexation of the fertile province of Azarbaijan in North-East Persia by Russia on the all-too familiar pretext of safeguarding foreign interests during the second Persian revolution (1909) that eventuated in the deposition of Mohammed Ali. One must also mention the British ultimatum of October 16, 1910, which demanded the policing of the roads in Southern Persia by the Government of India at the expense of the Persian Customs Department.

THE "INTEGRITY OF TURKEY"

Last but not least, the intervention of Christian states whether individually or in concert in the Ottoman Empire was the most universally 'accepted article of faith among statesmen. The "integrity of Turkey," however, was indeed an asset of the British empire against Russian advance and was therefore solemnly announced at the end of the Crimean War (1856).

But the powers have still found occasions to interfere with Turkish rule in Crete, Armenia and Syria. The Berlin Congress (1878) virtually legalized and legitimized the international administration of the problem of internal reforms in Turkey. And it was the demand for European mediation in the administration of Macedonia that exasperated the Young Turks into the second Balkan War (1912).

SELF-DETERMINATION vs. INTERVENTION

And to crown all, the last war was brought about directly by the Austrian ultimatum to Serbia, compliance with which would have implied the regular intervention Austria-Hungary in Serbian administration. Can it not be affirmed, then, without being too cynical that "self-direction" or independence is the exception, and intervention, the rule in the history of international relations?

IMPERAL CHINA IN INTERNATIONAL LAW

It is only in the perspective of all these world-developments in diplomatic intercourse that the problem of China can be intelligently grasped. To treat China as an exception in international relations would appear to be as great a fallacy as to regard Chinese civilization, social institutions, philosophy, arts and so, forth as something peculiarly Chinese of distinctively Oriental. We shall first discuss the section

sovereignty of China, i.e., her relative position and prestige with regard to other independent Powers. In 1842 the Opium Wardeprived China of Hong-Kong. In 1859 Russia wrested from her 800 square miles north of the Amur River, the territory south-east of the Khingan Mountains, the Russian maritime province, and Vladivostok, and in 1871 the land between Balkash and China.

In 1871 Japan took possession of the Liu-Kiu islands between China and Formosa. Burma was lost to Imperial China in 1886. the French republic annexed Indo-China the same year and engineered subsequently the separation of Siam from Chinese overlord-

The China-Japan war of 1894 led to the loss of Formosa and the virtual cession of Korea to the victors. In 1898 Kiaou-Chaou was seized by Germany, Kwang-chau-wan by France, Wei-hei-wei by England, and Port Arthur by Russia. By 1899, as Brown remarks in New Forces in Old China, "in all three thousand miles of coast-line there was not a harbour in which she could mobilize her own ships without the consent of the hated foreigner".

During all this period the Chinese empire had of course to pay enormous indemnities to the powers for the least loss sustained by the aggressors as missionaries, merchants or travellers even in out-of-the-way places. All this is surely "foreign intervention in China" "to the point of actual destruction of independence."

The only parallel is to be sought in the steps by which Turkey has been robbed of Algiers, Tunis, Tripoli, Egypt, the Balkan States, Kuweitt, and recently Arabia and Mesopotamia.

THE STATUS OF CHINESE ABROAD

Let us now look to external sovereignty from the other side of the shield, rix., with reference to the treatment of China and her people abroad. Between 1855 and 1905 Imperial China had to enter into humiliating treaties" with the United States and accept from that power the most atrocious discriminative laws against the Chinese immigrants. Rach of these laws was, moreover, a violation of treaties.

American citizenship was denied to persons of the Chinese race by the Burlingame Treaty (1868). The Treaty of 1880 compelled China to give the United States the right to, restrict and suspend Chinese immigration.

China was not in a position to retaliate the massacre of innocent Chinese men, women and children in Wyoming, Washington and California (1885-1886). The constant outrages on the person and property of her people "legally" living on American soil remained unindemnified by the state of federal governments.

The Scott Act of 1888 and the Geary Act of 1892 relating to the status of Chinese immigrants in America reduced the empire of China to the most contemptuous abyss in the international world. In 1904 the United States finally re-enacted all the previous restriction-laws excluding Chinese immigrants. America's treatment of China for half a century is comprehensible solely on the postulate that China's independence was to be respected only on paper (A. C. Coolidge: "The United States as a World-Power", pp. 335-37).

THE EMPRESS-DOWAGER'S PATRIOTIC EDICT

It is clear, therefore, that towards the beginning of the twentieth century Imperial China descended to the nadir of sovereignty so far, as her external relations were concerned. We shall now study the state of her "internal" sovereignty about the same period, t. c., the rights she exercised on her own territory without intervention from foreign Powers or their nationals.

Since the treaty of Nanking in 1842 China has been "opened" by over a hundred treaties with foreigners. Mostly commercial in character, these are documents of "concessions" which have deprived the Chinese in one way or another of their legitimate sovereignty over their own lands and waters. The military aggressions in Greater China coupled with the economico-political concessions within China Proper could not but draw from the Empress Dowager's hands a most dangerous edict bitterly "anti-barbarian" i.e., anti-foreign as it was. It ran thus:

"The various Powers cast upon us looks of tigerlike voracity, hustling each other in their endeavours to be first to seize upon our innermost territories. They think that China, having neither money nor troops, would never venture to go to war with them. They fail to understand, however, that there are certain things which this empire can never consent to, and that if hard pressed, we have no alternative but to rely upon the justice of our cause, the knowledge of which in our breasts strengthens our resolves and steels in our breasts strengthens our aggressors."

THE BOXER REVOLT

In 1900 the Chinese were driven to do that little Serbia has since done in 1914. They made a desperate attempt to defend their sovereignty against the intervention of the encroachers. The Boxer Uprising proved the encroachers, and left China not only chinously indebted on account of indemnity but also completely humiliated and at the mercy of the Powers.

The treaty of 1901 forbade the Chinese 1) to import fire arms for two years, and 2) to hold official examinations for five years in the cities where foreigners had been attacked. It compelled them moreover (1) to ready spacious grounds of the Legation Quarters to be fortified and garrisoned by foreign troops, (2) to raze to the ground the Taku forts which defended the entrance to Peking, and (3) to have the railway from the sea to the capital occupied by foreign troops. Under the terms of the same treaty, China had also (1) to execute the members of anti-foreign societies and (2) to summarily dismiss district officers and even provincial viceroys if they did not suppress antiforeign outbreaks.

Germany, crushed as she is by the War, has since 1918 been experiencing all these Chinese conditions under the military, economic, and political bonds imposed upon her by the peace of Versailles.

THE CHINESE BOYCOTT OF AMERICA

The political nullity of the Chinese even within the limits of China Proper was thus categorically "declared" by the treaty of 1901. It became more clear in 1905 when the United States forced Young China to withdraw the boycott of American goods, ships and institutions it had decreed in retaliation of half a century's persecution suffered by the Chinese people at the hands of the Americans in the United States.

The Chinese government was reproached by the American minister at Peking for its artraordinary supineness." in the matter; and was ordered to deprive Tseng Shaoching, the head of the Fu-kien merchants' guild in thanghat and chairman of the boycott semmittee, of his official rank of taot'ai, and sunish him in an exemplary manner. The account had thereupen to be disclaimed by the Chinese Foreign Office and at length impressed by an Imperial edict.

MONARCHY NO SHIELD AGAINST INTERVENTION

These are not facts of anti-diluvian history and no profound antiquarian scholarship is needed to excavate these items in human relations. Nor has human nature undergone any revolutionary change during the last two or three decades although it has certainly been enriched with the experiences of the Great War, Bolshevism and the so-called league of nations. One therefore does not grow any the wiser by shutting one's eyes to the methodology of powerful neighbours in regard to the integrity and sovereignty of weaker States.

It is clear that long before the establishment of the republic, the powerful nations found reasons to interfere in China. Republic or no republic, therefore, they may assume direct administration of its government whenever, to use Goodnow's words "this is necessary to the attainment of the ends desired," provided, of course, the Powers can agree among themselves as to the partition of the spoil. The American expert's prescription of a monarchical form of government for China was therefore an absurd performance. It would be illogical and unhistorical to blame the republic for the misfortunes of China.

REPUBLICAN CHINA

There was no improvement in China's international status between the events of 1900 (and 1905) and the abolition of monarchy in 1911. It is sheer blindness to the realities (on the part of Eur-American political theorists) or patriotic timidity to look facts in the face (on the part of the Chinese themselves) that is responsible for the false idea that China was an independent country in 1911. There has besides, been no change in her position among the Powers during the twelve or thirteen years of the republic (Vide the present author's Futurism of Young Asia, pp. 230-247).

Rather, like the revolution of 1906 in Persia and of 1908-9 in Turkey, the Chinese revolution has resulted in the enfeeblement of the Orientals and the increase of aliendom in Asia. Or perhaps, strictly speaking, Asian weakness has been brought up to the limelight just on account of these nationalistic, constitutional and republican upheavals. The world has been thereby made fully conscious as to how terribly incompetent Young Asia happens to be in the technique of modern life.

Only in one quarter has Kemal Pasha, luckly for Asia, succeeded in enhancing her

157

reputation by the international standard. But in other quarters Kemal Pashas do not seem to be forthcoming,-not at any rate in China for the time being.

THE MAKING OF BOUNDARIES

If the foreign interventions are normal or natural phenomena in China not less so are the civil wars. Weakness in the fields of finance, industry and military equipment has thrown the Chinese up into the arms of the foreign-The war between the provinces, although ostensibly a constitutional struggle, is a symptom of another weakness. weakness of the Chinese people has to be sought in certain rather unexplored fields.

And here it is necessary to expatiate a little bit on the boundaries of states, the limits of nationalities, or the manufacture of nations. On this subject there is a fallacy long prevalent among the students of political science in Eur-America. This has been imbibed from them by the intellectuals of Young Asia also. The fallacy is quite simple. People have got into the habit of applying to vast continents like China or India the formulae that barely explain the jurisdiction of the latest types political "nationless homogeneous of more or states" in contemporary Europe.

Since the unifications of Italy and Germany, and under the influence of John Stuart Mill, the nationality-idea has taken a firm hold on the imagination of mankind. But political theorists as well as practical statesmen are prone to forget two important considerations with regard to its application.

First, Mazzini's idealism embraced a population which in strength of numbers was less than the fifteenth of that of China or of India today.

Secondly, Bismarck's "blood and iron" triumph embodied itself in a territory which in its area is about one-fifth of China or of India. United Germany is not larger than the single Chinese province of Szechuen in the S. W. or the Hindi-speaking provinces of the north-Indian Punjab, Agra and Oudh.

Scientifically speaking, one should expect therefore, the same number of "modern" nationalities enjoying "sovereignty" in the Austinian sense of danda-dhara, i.e. sanctionwielding power in China or India alone as one finds in Europe. A China or an India in the singular number in the twentieth century is as great an anachronism as the Christendom of Hildebrand and Innocest III. or the Empire of the Hohenstantens, or

King .

Dante's pious dream of universal Monarchy in "De Monarchia."

THE MEANING OF THE CIVIL WARS

One must not demand a higher standard of nationalism or political unity or statemaking for Asia than what has yet been possible for Europe with its latest experiments in the Central and Eastern territories. It need, further, be observed that the chances for a federation" in any of the Asian culturezones (Chinese, Indian or Islamic) are as great or as small as among Latins, Slavs or Teutons

of the Western world.

It is this "scientific" question that is being solved in and through the civil wars of China. There was a time when Tibet, Mongolia, Indo-China and other regions used to be known as veritable Chinas. The world knows the truth better today. Similarly the world is waiting to learn if Szechuen should be regarded as part of China along with Honan, Che-Kiang. Chih-li and other provinces or if the so-called eighteen provinces of China constitute for themselves a world of independent sovereign states. Herein lies the deeper meaning of the civil wars in China.

THE BIRTH-THROES OF MODERNISM

The recent revolutions are really phases in the modernization of the Chinese State. The disintegration of old China's limbs is the pivot of all these movements. Medieval Europe with its "indefinite incoherent homogeneity" had to be pulverized and transformed into a system of definite coherent heterogeneity" in order to give shape to the modern states. By 1870 the vestiges of medievalism in state boundaries may be taken to have practically disappeared from Western Europe at least. Japan also bade adieu to the old state of things about the same time.

The dismemberment of the Ottoman Empire between 1878 and 1912 has likewise been a move in the direction of "modernism" in South-Eastern Europe so far as the territorial limits of nationality are concerned. During the Great War the Bolsheviks em-barked upon giving the dozen Russians of Eastern Europe a chance to find, determine or realize themselves on the "nationalist" principle. The Peace of Versailles has further operated along the same lines by manufacturing new states out of old.

It would be absurd to maintain that the boundaries of European states as they exact on the map in 1924, chequered as it is with irredentas and minorities, can be defended

THE MODERN REVIEW FOR FEBRUARY, 1925

whether on grounds of "nationalism" or bounds or nanonalism or solutions of self-determination.

should not however, ignore the fact that principal feature in the European wars treaties down to 1918 consists in this consists at the state of the frontiers what may be roughly, and perhaps vaguely moribed as "modern" lines. But in China, medievalism has been persisting until to-day. China's size and form adapted to modern condition have yet to come.

WHITHER IS CHINA TENDING?

The world is waiting to see if the modernizof China is to be effected along Indian lines, i.e., through slavery to alien domination

13

or along the Western and Japanese lines of unhampered and independent development Is China going to become half a dozen enslaved Chinas or is she going to bring forth out of herself a bunch of free sovereign swarajes of the Mazzinian, Bismarckian or Leninian types?

Whatever be in the womb of the future. medieval homogeneity bids fair to be a thing of the past and a conscious heterogeneity to take its place. This is the real significance of the politics of Young China to students of social science whether as observers of the civil wars fought as they are over constitutional issues or of the foreign interventions that threaten its independence.

REVIEWS AND NOTICES OF BOOKS

Books in the following languages will be noticed: Assamese, Bengah, English, Gujarati, Rinds Manarese, Malayalam, Marathi, Nepali, Oriya, Punyabi, Sindhi, Tamil, Telugu and Urdu. Newspapers periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazin articles, addresses, etc., will not be noticed. ENGLISH

Discrepsia and Its Self-Treatment: By Jadu-att Ganguli, B. A., M. B. Printed and published M. B. Nath at the Bisvanath Printing Works, Market City. Price Rs. 2-8.

Historia City. Price Rs. 2-8.

The author is an old graduate in arts and medition of the Calcutta University and much of what he has written in this book is the outcome of his profession for over forty years and of his personal experience as a victim to the disease. He has given much good at the calcutta University and many practical hints to avoid indigestion its univelcome complications. The name of the book is, however, a little misleading. Dyspepsia is succeeded in the profession of the book is, however, a little misleading. Dyspepsia is not often a symptom than a disease by itself and a dependent upon a variety of causes, functional of the distribution of the patient himself is not often in the patient of which by the patient himself is not often in the patient of which by self-cured Dyspepsia, he means the mentional disorder following errors in diet or as the mentional disorder following errors in diet or as the mentional disorder following errors in diet or as the mentional disorder following errors in diet or as the mentional disorder following errors in diet or as the mentional disorder following errors in diet or as the mention of cases, can be brought under control with districted efforts of the patient himself. But the general name and to say that the disease is the general name and to say that the disease is the general name and to say that the disease is the season in the treatment of certain combinations, the author has advised the use of highly that and trule medicines such as iodine, carbolic

acid, creosote, opium, belladonna, morphia &c., the selection and application of which it would be dan

gerous to leave to the discretion of the patient,
The chapters on the "Digestive organs and thei
actions," "Exercise or labour cure" and "Dyspeptic"
Directory" contain much useful information and wil

prove a profitable reading.

We disapprove of some questionable methods of treatment recommended by the author. Those in clude among others the use of grand-mother's nos trums, faith cure, inspiration cure, ic., which cannot bear the test of a scientific examination and which detract not a little from the merit of the book.

The paper, printing and general get-up of the

book are of medium quality.

NARAYAN VANAM TILAK: By J. C. Winslau (Association Press, Calcutta—Re. 1-4.)

To the very valuable work which the Association Press has already accomplished by the publication of the Heritage of India Series, it is now adding a set of useful biographies under the title, the Builders of Modern India. The reputation of the late Mr. Narayan Vaman Tilak, the Christian poet of Maharashtra, was somewhat overshadowed by that of his more illustrious contemporary and namesake Mr. Bel Gangadhar Tilak but it is hoped that this biography will being some well-deserved recognition to his manner, as in

CHUNILAL BOSE.

the case of many enlightened Indian Christians of to-day, a change from the ancestral Indian faith did not mean any densitionalisation with Mr. Tilak, and patriotism is one of the most powerful notes of his poetry. He writes, for instance, in his Abhangaryah, which we may mention, is a book of Christian devotion:

Think not of India as of a child's buffoonery or

a jester's tricks and airs; Here have sprung mighty heroes of faith, at whom the world trembles.

whom the world trembles.

Here have sprung sages that were lords of Yoga whose light abides unto this day.

Men whose faith was their very life, their all and the world their home.

Yes, even here such kingly saints were born, and in the hearts of all men they shine resplendent.

What hoots it to bring here a measureade of

What boots it to bring here a masquerade of

strange disguises and of foreign airs?

All that you gain you will squander in the end, about your neck Ignominy shall lay her garland.

He has brought to bear upon his Christian faith all the emotional intensity of his Hindu ancestry and the effect of his poetry is always elevating. We have great pleasure in recommending the biography to our readers.

P. Seshadri.

MASTER RICHARD QUYNY: By Edgar I. Fripp. (Oxford University Press) 7-6.

The literary critic has often to use facts of an author's life to understand and elucidate points about his work. This is legitimate and we have no reason to quarrel with him so long as he under-stands the limitations of the method and pays proper attention to the degree of objectivity of the work. The reverse process of trying to understand an author's life from his work is seldom satisfactory work. The reverse process of trying to understand an author's life from his work is seldom satisfactory and if the form of the work happens to be dramatic, such an investigation is all the more likely to be futile. Our difficulty with Shakespeare is that through the paucity of the materials at our disposal we can seldom make the former attempt, whereas there are too many temptations to indulge in conjectures about his life from a study of his works. The great value, therefore, of a book like that of Mr. Fripp is in this that it advances, if only to a small extent, our knowledge of William Shakespeare the Stratfordian, and his friends and contemporaries. If this book had been content with merely telling us about the city-life of Stratford of the 90's of the sixteenth century, had given us mainly quotations from old documents and the letters of Quyny and Sturley, we should have had nothing but praise for it. It does this; but unfortunately it tries to do something more. It tries to find reflections of contemporary events in Shakespeare's dramas, to identify numerous passages as personal sentiment of Shakespeare and offers an interpretation of the sounds from the conception of Shakespeare as a morally blamelesa person.

To go through these points in order, it gives us a really delightful picture of a Stratford of the time. It tells us of Richard Hill and others of the Stratford Chamber, of Richard Quyny and Abraham Sturley, of Nicholas Barnhurst and George Badger, of Shakespeare's friend, Richard Tyler and Master Edward Greville of Milcote, We have the interesting information from the Baptismal Register that Richard Cuyny's children were the following:

William, Anne, William (the first Will. was dead). Mary and John. These were the Christian passes of the poet, his wife, his mother and his father; and it is certainly an interesting coincidence, but one may not be justified in concluding from this that William Shakespeare was at Stratford to act as godfather to the two William Onynys. We hear a good deal of the City Chamber of which Onyny and Sturley were such prominent members. The proceedings of the Council were not always peaceful and both Nicholas Barnhurst and George Badger got into trouble, the former for using "lewd and bad speeches in the Council-Chamber" and the latter for "wilfully refusing to come to the Council Hall" and for "declining the bailiwick". Little details like these help us to visualise the old Stratford society, much more so than general descriptions of the wet summer of '94 and of the great fires of '94 and '95 can. The letters of Quyny, particularly those written from London, form very interesting matter too; and it is in such details that the charm of this book really lies.

Much less satisfactory are the author's conjectures about the identity of Quyny and Harsto or of

Much less satisfactory are the author's conjectures about the identity of Quyny and Horatio or of Hamlet Shakespeare and various boy-creations of Shakespeare's works, while the attempt to find Shakespeare's peare's religion in the environments of Silvia er Malvolio appear equally futile. In the interpretation Malvolio appear equally futile. In the interpression of the sonnets too, the author is never on sure ground. His attempt to find Marlowe in the descriptions of sonnets 84-86 is mere conjecture; while his diamissal of the reality of the "dark lady" as "an impossible amalgam of qualities" would be open to various objections, foremost among these being this that an inconsistency in poetic descriptions. proves nothing, each sonnet being expressive of the mood of the moment. Moreover it is very difficult to explain away sonnets 129 and 138 as mere poetic fiction; "the expense of spirit in a waste of shame" seems a little more than more

Still when all is said and done, this work is one of the most valuable of recent contributions to Shakespearana. It does an enormous service to all students of Shakespeare by bringing within their reach the three dozen or so of hitherto unpublished letters which help them to visualise Shakespeare's fellow-Stratfordians. N. K. SIDHANTA.

INDIAN HISTORICAL RECORDS COMMISSION: PROCESSO-INOS OF MEETINGS, Vol. V. Calcutta, 1923. Superintendent, Government Printing, India. Price Rs. 3-2 as.

dent, Government Printing, India. Price Re. 3-2 as.

The Indian Historical Records Commission is doing very good work in later Mughal and early British history. The fifth volume of the proceedings contains many original contributions from notable scholars like Professor Jadunath Sarkar, Professor Beni Prosad of Allahabad, Rao Bahadur D. B. Parasnis of Satara and Prof. K. R. Qanungo of Lucknow. Mr. P. C. Nahar's genealogy of the Jagat Seth's family is a contribution in a style hitherto unknown in later Mughal history. Nobody but a true Murshidabadi could have dealt so lucidly with this renowned family of Bankers. Prof. Jadunath Sarkar's "Affairs of the English factory at Surat, 1694-1700." is written in his usual charming terse but effective style and is full of original information. The most interesting articles in the collection are "Old Judicial Records of the Calcutta High Court" by Mr. Badruddin Ahmad, B. A., Keeper of Records, High Court, Calcutta. How many people in India.

know that the traitor Musalmans of Murshidabad list turned against the British East India Combany! Riras Jan, a courtier of Sahib-i-Alam (a prince the Mughal Imperial family) conspired against the British, with Shamsuddaula, a son of the Musalm, Mubarakuddaula, a son of the Musalman Musarakuddaula of Bengal. He sent letters to Zaman Shah the Pathan king of Afghanistan inviting him to invade India and to drive out the British in 1798. He sent a noble man of Lucknow named Mustaufi-ul-mulk Mirza Abdur-Rahim Khan as the messenger to Kabul. Active man, Sayyid Ashraf Ali Khan was sent to Behar to incite the zamındars of that province to rebel against the British. Such feats on the parts of the traitors of Murshidabad might have saved the Mughal empire from total destruction in 1756-57.
Azother notable paper is from the pen of Khan Bahadur Sayyid Abdul Latif, B. A., B. L. Calcutta, on the will of the great noble Shayista Khan, the nasternal uncle of the emperor Auranzeb, the brother of the celebrated empress Mum-taz-i-Mahal, the son of Nur-Jehan's brother, Asaf Khan, one of the premier nobles of the Mughal empire during the reigns of Shah-Jahan I and Auranzeb Alamgir. The descendants of Shayista Khan's will discluse the fact that his properties were distributed in different parts of the empire. The following live at Agra and Dacca. Shayista Khan's will discloses the fact that his properties were distributed in different parts of the empire. The following provinces contained the personal property of this noble.—(i) Thattha or Sindh, (ii) Multan or Lower Punjab, (iii) Lahore or Upper Punjab, (iv) Ajmer or Rajputana, (v) Burhampur, or Khandesh, (vi) Allahabad, (vii) Akbarabad or Agra, (viii) Guzarat or Ahmedabad, (ix) Kabul, and (x) Kashmir. The anthor does not say where the will is preserved and what are the distinctive proofs of its authenticity. An illustration of this important document would have been very welcome.

ARCIENT MID-INDIAN KSATRIVA TRIBES, VOL. I: By Bimalacharan Law, M. A., B L., Ph. D., with foreword by Dr. L. D. Barnett. Published by Thacker Spink & Co., Calcutta & Simla, 1924, pp. 44+166+2, royal.

Sainte-Beuve, in his Portraits Litteraires, lays it thown as a criterion of historical criticism, that a collection of opinions and odd facts constitutes wither history nor even a book. Dr. Law's work, according to that canon, is not a book, much less

bigtory.

From the start (pp. 1-10) Dr. Law reveals his method. Quotations begin from the Rig Veda coming down to Rapson—the whole leading to?

Theorems identifications reverentially Nowhere. Un-proved identifications reverentially repeated, (e.g., in p. 117): Stray Buddhist and Jaina senerously thrown into the melting pot, (pp. 110-11) etc. Lots of contradictory opinions or to be 10-11) etc. Lots of contradictory opinions or to be more precise, contradictory opinions in lots—the set result, a blank. The real historical method of setting every legend, feeling the psychology of the man and tracing its inward evolution gradually electric shape in cutward events, all inexorably electric on towards their steady fulfilment, is a set of the forms of words, the choice is a set of the form of words, the choice is a set of the form serious and ingenerate and ingenerate and in the form of words and the form serious and ingenerate the form serious and instants to write books is laudable, but a mere electric of materials becomes a heap and an

Dr. Law is fortunate, as a rule, in enlighing some English experts on Indian literature or his tory to write a foreword to his books and that time he has secured Dr. Barnett who has lately distinguished himself as ushering in a new era in reviewing, in the pages of the J. R.A. B. (cf. his flippant remarks on Rabindranath Tagore and Indian history, J. R.A.S.), as a Saliyanta scholar claiming to speak both on Cretan archaeology and the Visyabharati, with equal authority in the course the Visyabharati with equal authority in the cours

the Visvabharati with equal authority in the cours of one review.

Dr. Law's book is interesting only for one acmission of that all-knowing critic. He approves a Krishna as a historical person and points out the Arishtanemi was a contemporary of Krishn This is a right deviation, but he reverts to the Bharata battle at 950 B. C., an example of the force of Samskara! Of course, a search has to made for men in this country who would accept that date. Yet, after all, there is a slight progreeven in Dr. Barnett's Indology!

TENDENCIES OF MODERN ENGLISH DRAMA. By G F. Worgan. (Constable and Company Ltd.)

The stage looms very large in the history of all relised nations, and even those peoples who are lescribed as uncreased also make much of playeting. As the mode of life and ways of thought if nations alter, the character and aspect of their Irama alters also. In fact while drama has a great frient in educating the people into ways of thought, t itself is influenced largely by the conditions and deas of every-day life. Sometimes the characteristics of drama remain in one groove for a long time, ometimes they suddenly change with a swiftness hat is almost incredible. Readers will therefore be and is minuse increasing. Treatiers will therefore be nuch interested and indeed instructed by Mr. Merpan's very timely book. Desuna has two functions, let us to assist the mind to escape from the sordid let us of lefe and mind to escape from the sordid one is to assist the mind to escape from the sordid letails of life, and present to the eye of the imagination new and enthralling vistas. The other, which is far more important, is described by the author of his book: "Its greatest function, like that of all irt, is to assist us to penetrate into and to interpret life rather than escape from life." Every great Irama, says the author, should be the artist's "implicit commentary on life". "Drama is an image of life. But it must be an interpretative image. With these ideas as the ultimate test of the goodness or badness of a dramatic tendency, the author ness or badness of a dramatic tendency, the author approaches his subject. In the Eighteenth Century two tendencies were prevalent. The one was to make of drama a mere farry or burlesque. And the other to produce sententious, sentimental and excessively merchanisms. sively moral plays which did not bring drama into excessively moral plays which did not bring drama into touch with life in any sense. The dramatist of those times, kept his attention fixed on the stage or the work of other dramatists, and disregarded life. Drama thereupon lost most of its value and did not even attain to the dignity of being an extractly considering. lost most of its value and did not even attain to the digarty of being an art worth considering. A sudden change however was coming and the forerunner of that change was the Norwegian Henrik Ibsen. Properly to give an account and a criticism of the book before us would entail far more space than any editor would care to allow. The first few chapters deal briefly with authors now little before the public such as Election Knowles and Douglas Jerrold whose play Black-ry'd Susan attained very great success. It is interesting to learn that Browning wrote for Macroschy his play "Stafford" which however was a failure. Of Bulwer Lytton who gave to the public anonymously The Lady of

م ما يون المحروبة الم

Lyons' and thereafter 'Richelieu' and 'Money'plays which won and long maintained immense
popularity, the writer of this book has not much
opinion. Their sentiment, says he, is sentimentalism,
their grandeur, a pose. The work of bringing about
a reform in drama was materially assisted by
Robertson, whose play 'Society' roused uninense
interest and appreciation because of its witty dialogues
and broad sature. Special attention is given to and broad satire. Special attention is given to writers such as H. A. Jones and Pinero All tore their share in changing the aspect of drama to a certain extent, but the real force which converted the drama from a dull almost dead thing into a livthe drama from a dull almost dead thing into a living and influential entity, was a young man called "Shaw who was writing most extraordinary and absurd things". George Bernard Shaw of course is known to every one. The way to attain to fame as described, if we remember right, by Oscar Wilde, is either to feed or amuse or shock the people. George Bernard Shaw both amused and absorbed records but he was and is a true tracher. shocked people, but he was and is a true teacherhis 'happy knack' is to seize more 'quickly than most the significance of what is new in thought and discovery and present it in such a pleasant and effective manner as to make it lodge in the con-

sciousness of the public '

Modern drama is a drama of ideas and a large portion of this book is devoted to the study of Shaw as a philosopher. In fact the author contrasts the point of view of approaching the study of Shaw with that of Synge. In the former, his philosophic aspect should attract attention, in the philosophic aspect should attract attention, in the latter his aesthetic aspect is more worthy of attention. There are very closely reasoned chapters in this book on Shaw, the dramatic iconoclast, Shaw, the social iconoclast and Shaw, the philosopher, in which his objects and methods are exhaustively discussed. The three chapters form a study in themselves Granville Barkes and Hankin receives a chapter such. One of the forement tenderous of a chapter each. One of the foremost rendencies of modern drama is the emphasis on the emancipation of women All these writers lay great stress on it, of women All these writers lay great stress on it, and their characters very forcibly justify to themselves and others the importance and correctness of this movement. The study of Galsworthy shows how that very great writer is successful in drama. His plays are extremely well made. He is familiar with the stage and knows what can be done on it and although he rarely introduces humour into his work the plot is always interesting—"his artistic ideals are always maintained at a high level and his purpose is ever noble." His pity for the sorrows of mankind only degenerates into sentimentalism when he deals with child characters. the sorrows of mankind only degenerates into sentimentalism when he deals with child characters. It is a curious fact on which the author remarks that no dramatist has been able successfully to portray a child character. From Galsworthy we come to the Irish pioneers—Yeaks, Martyn and Lady Gregory. The value of Yeats is not so much, we are told, in his own work but in his inspiration and guidance to younger men. To Lady Gregory is directly due. Mr. Morgan thinks, a great deal of the threatrical and dramatic success of the modern Irish revival. Synge is a name not very of the threatrical and dramatic success of the modern Irish revival. Synge is a name not very familiar to the general public. His early death prevented him from attaining to the very highest in his art but "even in the work that we have there is sufficient quantity and all the quality to warrant us in assigning to him a place second only to Shakespeare". Under the heading Drama of Revolt the author brings to our, notice the works of Houghton and Miss Githa Sowerby. There are

中心是於明確整整整的學術學學學學學學學學

captars on Irish dramatists and more Irish drama-tic. Under the heading "Fairy Tales" we bome the works of Sir James Barrie. Masefield is set the works of Sir James Barrie. Masefield is set that the with and his occasional coarseness is contained. "Revolting against the cant and hum-ter of the art of a past day he sometimes goes to extreme of violence and crude brutality." Crakwater, the author thinks, will not find appre-tation from more than a small select audience. It Morgan hardly does justice to Flecker whose Plassan" is probably one of the greatest dramas written since Shakespeare and has taken London by storm. Flecker was essentially a poet and even

ritten since Shakespeare and has taken London by storm. Flecker was essentially a poet and even it he had become a dramatist he would nevertheless always have remained a poet."

Certain aspects of this book have been here set down. The author has shown how the tendencies of flodern English Drama are to abandon the artificial and to come to the real—to attempt to find things at their proper value and to come to grips with the itself. He considers that after all the superstitions of old times, the book-maxims and the awe of the so-called superior classes have been swept away. Inglish drama is coming into its own as an influence to stimulate thought, encourage greater charity to fellow-beings and to display and promote culture and the love of art and poetry as an aid to the mitigation of the sordidness of life. The book betrays the work of an artist and a scholar, as well mitigation of the sordidness of life. The book betrays the work of an artist and a scholar, as well as that of a critic. The author's judgments are copiously illustrated by extracts from the works of those authors and dramatists with which he deals. The subject covers a very large field and every page is full of interest. The book is not only a study of the drama. It is a very deep criticism on every-day life. There are parts of it which are kighly controversial, but it is safe to say that any reader whether he be a student of the drama or not the very acceptable book of Mr. Morgan.

R. C. R.

EMAYS IN THE POLITICS OF EDUCATION: By F. Course, Professor of Education in the University of Caps. Town. Published by the Oxford Press, pp. 24-158. Price 5s.

There are nine chapters in the book, viz.—(i)
The Need for a Philosophy. (ii) Education and
Society, (iii) Liberal or Vocational? (iv) History in
the Primary School. (v) What is Secondary Education? (vi) The Juvenile and Colour. (vii) The
Livenile Status of the Teacher. (viii) The Study of
Education and (ix) Conclusion and also an ap-

There is a certain raggedness and want of harmony in the thought of the several essays, though the of them are well written.

In the chapter on "The Juvenile and Colour" without says that the Colour bar "may take a saidety of forms. It may involve complete economic secretarion of coloured from white....or it femand that Coloured workers be placed in a saidition of permanent helotry and confined to laterate and menial occupations in a sort of semi-laterate. Here commonly the Colour Bar is taken as reservation of certain trades or branches the white man as in certain parts of Transvall the white man paints the safe and easy with parts of the telegraph poles and the native, the colour said dangerous top, wages being in the colour and dangerous top, wages being in the colour ratio to the height at which the work is

The author then remarks:—"When it appears to the white citizen of a country like South Aftica that the bread is being taken from the mouths of the children by the competing coloured man, the sense of trusteeship, though still present, is apt to become strongly diluted, with apprehension. Outside critics should never forget that the first and foremost object of the South African citizen is the establishment and maintenance of a civilized modern state on a Dark continent." (p. 110)

His conclusion is:—"It would seem, then, that for a long period yet it will be necessary to continue a regime of differential advantages for the European and tutelage for the coloured man and juvenile. The security of a civilized order is bound up still with the maintenance of white superiority." (p. 115) Comments are useless.

It is written from the standpoint of orthodox Christianity.

MARES CH. GHOSH.

BENGALL

ISLAM-ER ITHAS (HISTORY OF ISLAM): By Quazi Akram Husain, M. A., Moslom Publishing House, Calcutta. Re. 2-8.

The author is to be congratulated on his manner of presentation, and he appears to have a mastery of Bengali composition. He is right in holding that a popular history of Islam was wanting, and we have no doubt that Te fills a real want.

The book under review deals with the growth of the Islamic faith from the time of the Prophet Muhammad and the progress and doings of the Musalman races of past ages and of many climes. The term Muslim race is a misnomer, as Islam connotes a creed and not race; but all believers in this creed may legitimately take pride in the achieveconnotes a creeu and not race; our an observers methic creed may legitimately take pride in the achievements of other races under the inspiration of this religion. The Muhammadans of Bengal who take no notice of the history of Islamic lands, are rightly held by our author to be unfortunate in the extreme. As Hindus and Muhammadans have been hard under one land under one it is thrown together in one land under one sun, it is all the more necessary that here in Bengal the Hindus should know the history of a creed with millions of votaries of which they are bound by destiny. The author's contention that the peace and prosperity of the country depends upon such a harmony, ought to command the assent of the reading rubble to refer the country. reading public, to whom we can with some qualifi-cations recommend this book.

cations recommend this book.

It is a nity that the author has not laid under contribution several authoritative works on the subject which would undoubtedly have enhanced the merit of his book. We would strongly advise him to go through the following works when it is necessary to publish a second edition of this history.

Muir's Caliphate; Cambridge Med. Hist., ii, iii, iv; Noeldeke-Sthdies (secondary); von Kremer (Eng. tr. by Khuda Bakhah); Browne's Lit. History of Persia, i. (first rate); Encyclopedia of Liam; Lane-Poole's Hist. of Hoppt; Docy's Spanish Islam; Amir Ali's works (critically and sparingly).

Reassurpassars. History.

PRANKULLA (THE RUDGLE); By Dirondra Kumar Dutta M.A., B.L., Second Edition. Pp. 760. Price Rs. 4. Gurudas Chatterjee and Sons., Publishers, 203-1-1 Cornwallie Street, Calcutta.

We had occasion to review the first edition of this novel at length in the columns of this magazine. Since then the book has received very high praise from Rabindranath Tagore and also in the Report of the Calcutta University Commission. The fact that a second edition has been called for shows that the public has begun to appreciate the book, though it contains no thrilling incidents, and deals only with the homely joys and poignant sorrows—mostly the latter—of rural Bengal. The few provincialisms which were to be found here and there in the first edition have been mostly expunged, and the bulk has been slightly reduced. The printing and get-up leave nothing to be desired The author's style is quite simple, and yet most impressive. His love of nature and faculty of observation are manifest in every page. observation are manifest in every page. But what gives the book an individuality all its own is the boldness with which the author tackles all the social problems which agitate the bosom of modern Bengal, its moral perplexities and intellectual difficulties. With Tennyson, the author believes that there is more truth in honest doubt than in half the creeds The conflict of faith and in half the creeds. The conflict of faith and reason, religion and science, and the havor wrought by it in the minds of the intelligentsia, and its influence in moulding the life of the more highly gifted of our educated young men, have been depicted with a masterly hand, and at the same time, by slight touches here and there, the deadweight of custom, and tradition in the practical lives of the mass of our so-called educated men has been laid bare. The book is written in a serious yen, and is not to be lightly laid aside after a hasty reading as books of fiction usually are. The story vent, and is not to be lightly laid aside after a hasty reading, as books of fiction usually are. The story is simple, charming, pathetic and pervaded by a slight vein of melancholy; an appropriate background of arcadian sights and sounds gives a natural setting to its quiet unfolding. But the philosophic doubts of the hero, the passion for social service, the burning indignation at man's inhu-manity to man, the exposure of all the mischief that is being done in the name of popular Hinduism, all this must be felt and read and inwardly digested in order to produce their full effect. A perusal of the book, will, we can assure the reader, produce the best of results among our educated young men by filling their minds with noble impulses and challenging their most deep-rooted prejudices to come out in the open either to justify themselves or what is more probable to be shamed out of existence. We hope the book will go on doing its noble work long after the author as well as the reviewer have ceased to be, and successive editions will testify to the real need of constructive work. alart from politics, which must be done up and down the countryside before the nation can be born again in its cottages.

NITIVAKYAMRITA OF SOMADEVA SURI WITH A COMMENTARY: Edited By Pundit Punnalal Soni. Published by Pandit Nalhuram Premi, Secretary. Manikehandra Jaina Granthamala. Hirabagh, Bombay, Pp. 33+427, Price Rp. 1-12.

Breadly

Broadly speaking, among the general subjects dealt with in Brahmanical works there is scarcely

one to which considerable contribution has not been made by the followers of the Jain religion. This fact is daily supported by the publication of their different books in which the Nituralyamrita is included. Indeed, it enchances the value of the well-known series, Manskchand Digambara Jaina Granthamala of which it forms the 22nd volume. The author, Somadeva Suri is also the writer of a big Champu Yasastilaka (10th Century, A. I), published in two parts with Srutasagara's Commentary from the Nirnavasagara Press, Bombay

The Yasastilaka Champu is an important work

The Yasastalaka Champu is an important work in various respects, for it contains among others, some historical facts. It appears that the Nitiva-kyampula was written by him after it. It deals with polity and as such it has its special importance, Dr. Shama. Shastri refers to it in the introduction to his English translation of Kautilyas. Arthaeastra (p. xxi) and says that it seems to him that the former is based on the latter. In support of it he quotes some parallel passages from both the works. The list of them could further be lengthened as has been done in his introduction by Pandit Nathuram Premi. Editor. Jamahitaishe, a first-class Jain monthly now unfortunately discontinued. The Doctor is, however, not right in saying so, for it will be perfectly clear to one who will take a little trouble to read both the books carefully. One will know it at a glance that the work is not based on any particular book or books, but is compiled by the author in his own language and style from the sayings found in various ancient works as shown in the Tika. The very quotations in the Tika read with the original text with particular attention to the wording in both of them will strongly support the fact. This fact also leads us to think that the author of the Niturikyamvia, Somadeva Suri, is identical with the commentator whose name is still unknown. It must have been a point of the commentator that he would not allow to pass a suira without quoting an authority in its support

The commentary quotes a good many unknown or generally unheard-of authors One importance of it is that it refers to Bribatkatha several times. The original book is composed in sutra form and in a very simple language. It is divided into 32 chapters. AMS, belonging to Madras Oriental MSS. Library, as says Prof. B. Seshagiri Rao in his Studies in the South Indian Januam, pp. 88-91, has only 29 chapters omitting nos. 27, 30 and 32. The subject-matters of the respective chapters are as follows.

32 The subject-matters of the respective chapters are as follows.

1 Dharma, 2. Artha, 3 Kama. 4. Arisaderga,
5. Vulyarrddha, 6 Anriksiki, 7 Troys. 8, Varta,
9. Dandanuti, 10. Mantrin, 11. Purohita, 12. Senapati,
13. Duta, 14. Cara, 15. Vicara, 16 Vyasana, 17. 8
Svamm. 18. Amatya, 19. Janopada, 20. Durga, 21.
Kosa, 22 Bala, 23 Mitra, 24. Eujaraksa, 25. Divasanusthana, 26 Sadacara, 27. Vyerahara, 28. Vivada, 29.
29. Sadagunya, 30. Yuddha, 31. Vivaha, 32.
Prakirna.

Now, the importance of the work can easily be estimated from the above contents. It couples a place next to hautilya's Arthasastra and as such

* Refraining from a tedious probably we shall refer here only to a few passages in the way of example: p. 96. N. (Ntirakyomrula) 10: 1 ar ta in the cong. (commentary): p. 97. N. 14 Harita: p. 98. N. 18: Harita: p. 241. N. 65: Bhagur; p. 243, N. 69: Sukra; p. 243, N. 70: Sukra.

reserves to be studied earnestly. No student of Indian polity should be without a copy of it.

HINDI

ANTARASHYRIYA VIDHAN By Sampurnananda J., Sa., L. T. Published by Juana Mandala. Kasi. 1961. Price Rs. 2-12 as Pp. v1+326.

It is so far the first attempt in Hindi to give a hystematic idea of some of the main principles of international Jurisprudence, and as such it is highly welcome. The author of the present work has, however, failed to utilise the great continental jurists like Savigny, Kohler, etc. His sources are only English and even then his choice is open to criticism. The book itself is divided in four chapters: I is introductory, II. deals with international laws during Peace, III. during War, IV laws of Neutrality and V. a formation of International Federation.

Though in no way original, the book is likely to a large heavy useful to a large heavy of students who are

prove useful to a large body of students who are unsequainted with any Western language.

A. BANERJEE-SASTRI. Goswam Tolsidasji—By Ramchandra Shukla and published by Kashi Nagri Pracharini Sabha (Benares).

341 pages. Price Re. 1-8 as.

44

The book is divided into two parts, the first part contains some of the informations of life and mincles said to have been wrought by the great spect, reformer and ascetic, as described by all his biographers during the last sixty years; therefore though interesting it contains nothing new. The second part (Alochana Khund) is quite a new departure than the old here proteins and a reliable of percond part (Alochana Khund) is quite a new depar-tion from the old beaten path and is a valuable ad-dition to the fast growing Hindi Literature, being a critical study of the great man's life, works and techings. Though I do not agree with all the views of the critic, still I find the book to be really of the critic, still I find the book to be really of the interest to those who are not satisfied with a few inces of his life, but want to understand where the greatness of Goswami Tulsidasji really lies, as well as his religious, social and moral teachings. I am sure, it will be appreciated by all the lovers and students of Hindi Literature.

AMRITALAL SIL

TELUGU

"KOYDA PATALO": By Manginudi Purushottama Sarma. Printed at the Kenari Printing Press, Rajah-mundry, 1924, pp. 50. Price 6 annas.

This volume of poems is written in the well-known free verse style which suits admirably the maker when he wishes to express his conceptions. Made, allegory and symbol of a very charming kind out his seen on every page. It is a very attractive matrix to the scanty literature of this type to be found in the Telugu language. A fresh volume of this kind is sure to be received with pleasure and will earn for him a secure place among the really delightful writers of the day.

B. Kamacharden Rao.

MARATHL

AHARSHASTRA-PRAVESH OR INTRODUCTION TO DIETE TIOS: By Messrs Jogalekar and Sant. Published b the Authors at Babajipura, Boroda. Pages 15 Pages 156 Price Re. one.

Importance of a change in one's diet in conson ance with the change in one's habits and circum stances is not sufficiently recognised in India, says the author and proceeds to explain the essential elements to be included and their proper proportions to be kep in one's diet. But he has nowhere explained whereir hes the defect in the present diet of our people which is proved by ages to be most agreeable and salutary to health. However the information given in the book, so far as it goes, is useful and the proper observance of the author's instructions with regard to the use of vegetables and condiments &c will go a long way to conduce to the comfort and good health In this lies the value of the book and it is not inconsiderable.

STRIYANCHA KARWAYOGA OR WOMEY'S SPHERE OF ACTIVITIES: By Mr. D.Y Kolhatkar To be had at the Arya Bhushan Press, Poona. Pages 190. Price Re

This book consists of seven essays dealing with subjects of feminine interests such as the value of a mother, women and politics, compassion, etc. The essays are written on the model of Smiles' well known works on Character, Thrift, &c. The book will make a good reading for grown-up girls, style smells of the theatre in some places. However the budding author's efforts deserve every encourage

Sri Vir-rasayan or A ballatl on the capture of Sinhagad, composed by V. G. Sathe of Miraj. Pres

Every one, in these days, possessing however little fire of poesy in him, aspires to be a Shahu (or bard) and we, in Maharashtra, have a number of them amongst us. Not one of them, however can be compared with those immortal bards o Shivaji's times, who, though unlettered themselves to the ship of the left behind memorable and inspring poems. poem under notice is a praiseworthy attempt.

BEBANDSHARI OR ANARCHY: A Play by Mr. V. I. Aundhkar. Publisher, the Maharashtra Dramati Company, Poona. Pages 116. Price Re. One.

This is a historical play written by one who combines in himself both histrionic and literary arts and therefore deserves more than a passing notice. The subject chosen is the tragic end of Sambhaji, son of Shiwaji the great, at the hand of Emperor Auranzeb. As a picture of the terror ism, in which the whole Maharashtra was throw in the weign of Sambhajies there is nothing to fin in the reign of Sambhajee, there is nothing to fin fault with in the play. But terrorism is not an narchy a distinction which has escaped the notice the author. Kabji, the minister, who was respons ble for many acts of cruelty committed by Sambhajee is shown in the play to be led by lucre in the act of treason against his master, which is not a fact of history. But one cannot expect strice a fact of treason against his master, which is in a fact of history. But one cannot expect strict historical accuracy in an historical play, and strict his lapse on the part of the play-writer may be condoned. There are other short-comings also if the play, a few of which may be mentioned her far larger space is allotted to low but hamore characters like Khashaba and Farjaba, that can justified by propriety or expediency, while retains

and nobles of the time (excepting Khando lallal) are conspicuous by their absence. The foghal Sardar, who captured Sambhajee, is shown to be a tool in the hand of Ganoii Shirke, and looks illy. The language of the play is embellished ith words taken from the Bakhars to make the haracters real, but the thing is overdone and the gures of speech profusely used only serves to becure the meaning—a falling which is too common in the present-day Marathi drama. An insance of anachronism is visible in the ballad sungly Chandravali. But these defects are not so very erious as to detract from the merits of the play, which are many and reflect credit on the play-right, particularly when the fact is known that he a mun of moderate hterary education

GUJARATI

SWATANTRATANA SIDDHANTA: By Khush Vadanlal Ihnadulal Thakore. Printed at the Proja-Baudhu Printing Works. Ahmedabad Thick card-bound. Pp. 175. Price Re. 1-4 (1924)

A translation of Terence McSwiney's Principles of Freedom with a foreword by Dr. Chandulal standal Desai, who in every way is entitled to grite it, as he has sacrificed every worldly thing in the service of the province, shows how quickly he face of things is changing in Gujarat The ranslation is well done, and will reach many hands, is it is given away as a present to the subscribers of the "Praja-Bandhu," a well-circulating weekly

RAS TARANGINI : By Damodar K Botadkar. Printed at the Dharma Vijay Press. Limbdi Paper Cover. Pp. 96. Price Re. 0-10-0 (1924).

We had only lately noticed the first edition of this remarkable collection of poems in the homelife of a Gujarati girl, as a daughter a daughter-in-law, sister, wife and mother. We had noticed the halo with which he had surrounded it. The second edition shows four more poems added, which if anything, make the halo glow more brightly round her lip.

JAUN: By Mrs Bhanumats D. Trweds Printed at the Diamond Rubilee Printing Press, Ahmedobad. Thick Card-bound. Pp. 102. Price Re. 0-8-0 (1924).

The Japji, composed by Guru Nanak, which every Sikh recites as a part of his daily ritual, was not yet introduced to the Gujarati reader, and hence-Mrs. Bhanumati is to be felicitated on what she has accomplished. She has given the what of every stanza in the original Purjah, and then given the meaning of every word in Gujarati, and then its bhavanucod based on the Bengali translations of Babu Avinash Chandra Majumdar. The work thus leaves nothing to be desired. A short biography of Guru Nanak is given also.

SWAPAN-MANJARI: By Mrs. Dipakka Desai. Printel at the Sayaji Vijay Printing Press. Baroda. Paper Cover. Pp. 87. Price Re. 0-10-0 (1924).

Belonging to the well-known and cultured family of the late Dewan Bahadur Manibhai Jashlai, Minister of Baroda, Dipakha had in early life essayed the writing of poetry. A visit to the temple of goddees Amba, or the Abu hills, where the worshipper has to recite the usual prayers in

Land The

verse as part of her darshan, and which verses are generally old compositions, the idea came to her that she can pray as well to the Mother, in her own words. This revived the old faculty which was lying dormant and the result is this book which contains verses not merely in praise of the goddess, but of many others, historical and mythological personages and incidents. Though there is nothing very remarkable about this work, the even level of ability that it maintains and the intelligence that it shows, arrest the reader's attention and he feels that he is perusing the work of a really cultured lady, even though belonging to the older generations.

RANA YAIN: Elited by Manjulal Ranchhodlal Majumdar, B.A., L.L. B. Printed at the Lohan Steam Printing Press Baroda. Paper Cover. Pp. 168. Price Re 1-1-0 (1934).

One of the best poets of old Gujarat, Premanand, has written this poem (in S. Y. 1741). It is a short poem, but displays all the reality of Premanand's pen. The incidents are taken from the Yuddha Kand of the Ramayana and vitalised by the skill of the poet. The editing is of a piece with the original and does not lack anything required to appreciate the poem philologically, sentimentally, instorically and in other ways, if anything, it overshoots the mark. It is done with the assidiuty of a student and the eye of a scholar, and the effort has succeeded well enough to hearten hun for other similar work as the poet's longer poems.

SWARGANU AMRIT (HEAVEN'S NECTAR)* By the late Amrailal Sundary Parihiar Printed at the Diamond Jubilee Printing Press - Thincabad - Cloth Cover. Pp. 266 - Price Re 1-8 (1924).

This is a posthumous publication it was composed at odd moments by the late Amratial Padhiar, in the course of percentations, but the different bindoos or drops are connected by means of one idea, rex, self-intro-pection. The short essays are written in his usually "Catching Style," and thus book adds one more to the number of his valuable publications

BISMI SARDANI GOOLAMI, By P. V. Mehta and S. P. Shastre. Printed at the Nava Yuqa Printing Press, Surat, Paper Cover. Pp. 132. Prior Re 0-8-0 (1924).

"Slavery of our Times" by Tolstoy gives a graphic picture of the state in which our indigent workers and labourers live. This translation reproduces in simple language what Tolstoy has got to say on the question, and the mechanical and artificial lives which our mill-hands and factory workers have to live emphasizes the problem. The book then deserves to be read

PRAY INCHITTA. By Ambalal Govendial Desai, B.A. Printed at the Aparel Bandhu Printing Press, Surat, Paper cover. Pp. 48 Price Re 0-4-0 (1924).

Maurice Macterback's play, 'Sister Beatrice' has been adapted to Indian hie in Hindi, and Mr. Desai has rendered it into Guirati. It is a very short play, and can be finished in five minutes. It shows how an erring soul repents of her moral lapses and is once more received into the bosom of the All Merciful.

TUBE-WELLS

By RAJSHEKHAR BOSE

tion just now, and readers of newspapers are being fed up with all sorts of schemes, possible and impossible, for solving the problem of water-supply. The bamboo well, said to cost only five rupees, has just aprouted up; but as the inventor modestly acknowledges that there are still some defects in his system, the thirsty but thrifty public must yet possess their souls in patience.

POROUS IMPERVIOUS LEVEL OF
SUBSOIL LAYER SUBSOIL WATER

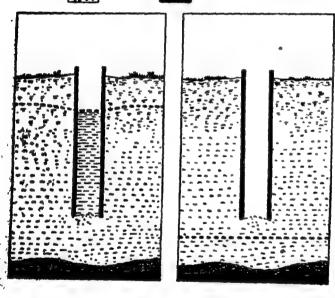

Fig. 1

Wells Depending on Subsoil Water;

Fig. 1 shows the condition during the rains

Fig. 2 shows the well depicted in the dry season

My new invention has the ri-k of degenerating into a fad and thereby coming into disrepute. There was an enthusiastic amateur who having learnt that re-inforced senting is the latest thing, built his roof by stretching a tangle of wire from wall to wall and dumping concrete thereupon. The roof of course gave way. The enthusiast because a pessimist and assured his friends that

re-inforced concrete was rot. It seems that a similar calumny awaits that useful but highly technical appliance,—the tube-well.

Most people seem to have the idea that all that is necessary is to insert into the ground, by whatever means, a pipe having a few holes at the bottom wrapped round with wire gauze; and that greater the depth to which the pipe is sunk, greater will be the output of water; and conversely, for a small

supply, one need not bother to go down much below the ground level. In what follows, an attempt will be made to show how much of the popular conception is correct and what the essentials of a workable tube-well are

THE SUBSOIL During the rains, a tremendous quantity of water is absorbed by the soil. This water finds its way through the porous upper layers (mostly loamy in deltaic Bengal) until its progress downwards is arrested by some layer of hard impervious material like clay or This water is called subsoil water and is the source of supply of all ordinary wells. During the dry season, much of the subsoil water evaporates away through the porous upper layers and a still larger amount drains underground into adjoining lower levels. The level of subsoil water therefore tends to sink lower and lower, and in the drv may yanısh season.

The state of the s

altogether in places where the retentive capacity of the soil is small. (rig. 1 & 2). The range through which the level of subsoil water fluctuates varies widely in different parts of Bengal, even within a few miles. It may be 5 to 30 feet in some locality and 10 to 100 feet in another. All ordinary wells show this fluctuation in varying degrees.

BELOW SUBSOIL: Below the impersions

lining at the bottom of the subsoil water. occur various strata of different degrees of poro-ity. Some of these lower strata consist of vast beds of sand permeated with water. Such water is often very different in quality from the upper subsoil water. Geologists are not quite agreed as to the origin of these waters occurring at great depths. They may be pre-historic rivers once flowing over the surface and now buried under deposits of silt, but still pursuing a sluggish course through beds of sand they may be getting their supply through an underground connection with some existing river or a far off catchment basin. Whatever the explanation. the fact is, that water, and often plenty of it, occurs at various depths below subsoil (Fig. 3). The quantity of water available from

cheapest type and consists of a pipe, 1 to 11/2 inch in bore, having a number of holes at the lower end over a length of 3 or 4 feet which is wrapped round with wire gauze, and terminating in a solid conteal foot. The pipe is pushed down into the earth by means of blows from a 'monkey' or heavy weight suspended from shearlegs just as a pile is driven. (Fig. 4). Lengths of pipe are screwed on, piece by piece, and driven down until the whole appliance reaches down to the desired depth, generally 20 to 30 feet, where the perforated end of the pipe is expected to reach a suitable water-bearing stratum. will be seen that the well-sinker has no means of ascertaining the nature of the strata passed through. All that he can do is to feel for water during the process of sink-

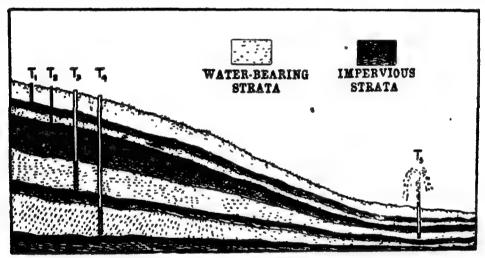

Fig. 3
Occurrence of Water-Bearing Strata
To a shallow tube well drawing subsoil water. To To are deep wells drawing water from different strata. To is an airesian well

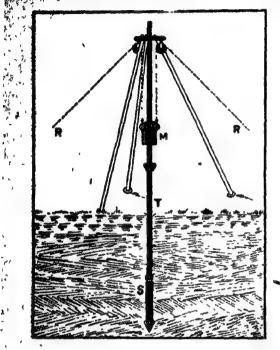

some of these low-lying strata is to all appearances inexhaustible; and the level to which such water will rise when tapped out from its underground prison is often very much higher than that of the subsoil water in the same locality. In certain favoured regions, the water may gush up like a fountain and form an artesian well. Such a phenomenon is possible when the stratum that is tapped has its outlying portions at elevated levels and holds water under pressure like a watermain. It is however too much to expect that any tube-well in the plains of Bengal will behave so obligingly.

Now about tube-wells:—This is the

Marrow Marting Same a marrow a

ing. This he generally tries to do by dipping every now and then, a thin pipe through the well-pipe and notherng whether the end of the feeler pipe gets wet. When water is supposed to be struck, a small hand pump is attached to the top-end of the well-pipe and the tube-well is ready. If the bottom of the tube-well reaches a water-bearing layer with sand-grains or gravel coarset than the mesh of the wire gauze, things go on well. If water be scanty, the pump gives out a dribble which ultimately ceases altogether. If the sand be fine or mixed with clay, the gauze offe s no protection and gradually the well becomes choked. During the driving process, the wire gause may get torn by

fiction, an event which is only discovered tate. The strainer, i.e., the perforated piece is the weakest portion of the tubeand very often gives way under the blows and enormous friction encounared during the sinking process. The pipe bokets may also burst. If the foot strikes a sick or impervious clay, the well is a failure. The Abyssinian well is thus a hit or miss

h, .

Fig. 4 METHOD OF SINKING THE ABYSSINIAN WELL. R Driving ropes; M monkey, T tube-well, S strainer.

affair with a large element of uncertainty. It cannot be driven very deep and relies for its supply on the subsoil water only. water is generally contaminated and likely to fail during the dry season It is however not intended to discourage the sinking of this type of well. It often gives good results, is cheap and may be installed with fair expectations in places where such wells have al-Hady been found to work satisfactorily. But it is well to remember its limitations and fickle nature.

RORING BY SLUDGER:—To get positive results from a tute-well, one must know by actual inspection the various strata passed through. This is only possible by boring examining the samples of strata with-There are various methods of doing

this, one of the commonest being drilling or dredging within the tube of the well. As in all systems, the tube-well is made in sections, the lowest section consisting of the strainer. A hole is first dug and the strainer section is fixed into it, the bottom of the strainer remaining open. In the case of soft strata like clay or-sand, boring is conducted by means of a 'sludger' attached to a rope passing over a pulley suspended from a derrick or shearlegs (Fig. 5.)

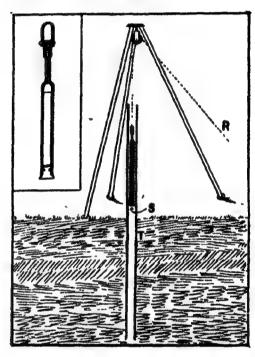

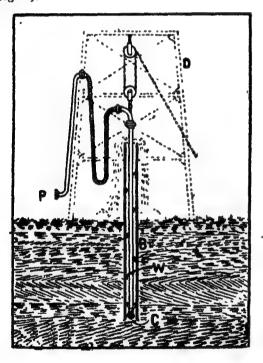

Fig. 5 METHOD OF BORING BY SLUDGER R driving rope; S sludger, T tube-well inset: enlarged view of the sludger

The sludger is a heavy hollow cylindrical chisel and is worked by alternately pulling the rope and letting it go. By repeated blows, the strata underneath the tube is cut through and the detritus is caught into the hollow of the sludger and prevented from falling off by a sort of valve. At intervals the sludger is hauled up and the samples of strata withdrawn and inspected. Various kinds of cutting tools are used for breaking up different strata and water is often poured through the tube to soften hard material. The tube is gradually forced, down into the hole underneath by means of loads or jack screws. Progress is necessarily slow mader

this system and a great deal of perseverance is required in tackling obstinate strata and

remedying breakdowns.

BURING BY WATER-JET: Recently a a new system has been introduced which is particularly suitable for alluvial strata occurring in most parts of Bengal. Boring is conducted by means of a cutter attached to the end of a hollow shaft which is inserted within the tube-well and rotated like a drill The hollow shaft is connected with a pump and a powerful jet of water is brought to bear upon the strata occurring underneath the cutter. The jet of water combined with the action of the cutter, rapidly bores a hole and the detritus is automatically discharged up the annular space around the cutter shaft. Progress is very quick, and a 200 feet bore can often be finished within two or three days. (Fig. 6).

METHOD OF BORING BY WATER-JET
D Derrick; C cutter; W hollow shaft of cutter through which water is forced: B tube well.
P connection with pump

It will be seen that in the system described above, boring is conducted within the pipe forming the tube well. The strainer section is sunk first and further lengths of pipe are screwed on as the bore progresses. When the necessary depth has been reached

the outter shaft is withdrawn and a plug is let down to close the bottom of the well to prevent uprush of sand. It will be evident that in such systems there is the same risk of damaging the strainer as in the Abyssinian system. The friction that the strainer has to overcome in forcing its way through sand is enormous, and accidents are frequent. The strainer cannot be made as long as may be desired. It is after all a perforated piece of pipe, and its weakness increases with its length. The size of the strainer has therefore to be greatly restricted and its filtering capacity sacrificed for the sake of rigidity Such a tube-well, however carefully laid can never take full advantage of the water-bearing stratum.

IMPROVED METHODS. In order to get best results, boring must be conducted within a separate tube, larger in diameter than the tube well. The boring tubes are sunk section by section and an accurate record is kept of the location of the samples of strata dredged out. The expert well-sinker should be able to visualise the exact condition occurring underground. He rejects laver after layer of undesirable strata until he arrives at a bed of coarse sand or gravel permeated with water and cut off from contaminated surface water by a thick partition of impervious material. He then gently lowers the tubewell fitted with a strainer of suitable length often 40 feet or more, within the bore and finally draws up the boring tube, staking care to seal the gap left by the latter (Fig. 7). It will be evident that under this system there is no risk of damaging the strainer or the joints of the well-pipes The strainer need not be restricted in length. If a single stratum be not deep enough for the requisite water supply, water may be tapped from several strata and the intervening clay beds may be locked out by introducing plain pipes between the lengths of strainer pipe at the points where the clay beds occur.

THE STRAINER AND CRITICAL VELO-CITY: Next to the selection of a proper waterbearing stratum, the design of the strainer is of the greatest importance. It must offer free passage to water and yet exclude sand, and its dimensions must be correctly proportioned to the rate at which water is to be pumped out. It must be remembered that the real filtering medium is the sand outside the strainer, and the latter should be so designed that the sand grains are not disturbed and sucked in when water is pumped. When water flows slowly through a bed of sand, there is no disturbance. But the water exceeds a certain velocity, it in the sand grains bodily with it. This shortly at which disturbance commences is sown as the critical velocity and it varies according to the texture of the sand. In the gring the strainer for a tube well of a control output, it is of great importance to proper consideration to critical velocity

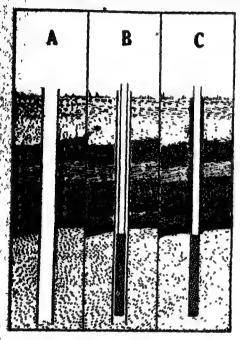

Fig. 7

Markon or Serring a Tubt-Well Within a Bone

A The boring pipe sunk to the desired depth.

He the tube-well inserted within the boring pipe.

The boring pipe withdrawn and the gap around the tube-well sealed up.

東江 ながかり

We shall try to make this clear by an example.

Suppose it is determined by experiment that the critical velocity of a water-bearing stratum is ½ inch per second, ie, 150 feet per hour. This means that if water be drawn out beyond this rate, the sand grains will be disturbed and move along with the water. Now suppose that a tube well is sunk within made a stratum and the strainer is 3 inches in diameter and 10 feet in length. The distinct therefore presents a surface of II×3 mean 10 feet or roughly 8 square feet. But his whole of this surface is not open to the perforations in the strainer amount to 2 square feet only. To within the critical velocity, water must

not be drawn through this surface beyond the rate of 150 feet per hour. Therefore the highest rate at which water can be pumped with safety through the strainer is 2 square feet × 150 feet or 300 cubic feet per hour, or roughly, 1860 gallons per hour. If such a well be wrongly regarded as adequate for 3000 gallons per hour and worked at that rate, the strainer will certainly give way and sand grains will be forcibly drawn in, resulting in choking. The failure of many tubewells is due to such inadequate design of the strainer.

LIFE OF A TUBE-WELL: Tube-wells are of comparatively recent origin and it is impossible to predict their life with certainty. A great deal depends on the selection of proper water-bearing stratum and the correct design of the well. Failure may be due to the depletion of the underground supply of water, natural corrosion of the strainer or the pipes and also due to some initial defect. Several deep tube-wells sunk in the neighbourhood of Calcutta have been working for over ten years without any loss in efficiency. It may be safely assumed that a tube well sunk under the best conditions will give at least twenty years' satisfactory service.

PURITY OF WATER: The water yielded by deep tube-wells is remarkably free from bacteria. This cannot be said of shallow tube-wells of the Abyssinian type. The essential condition for bacteriological purity is, that polluted surface water should find no access to the strainer of the well. This is ensured when a thick layer of hard clay or other impervious meterial intervenes between the upper porous layers and the stratum from which water 18 drawn. It is also necessary to set the tubewell in such a manner that no crevices are left along its sides through which surface water may trickle down. In localities where a continuous layer of porous material extends to great depths, contamination can be avoided by sinking the well low enough, so that even surface water may be filtered in passing through deep layers of sand.

The chemical purity of water varies according to locality, often widely within a few miles. Water drawn from a depth of 200 to 300 feet in the south of Calcutta is distinctly inferior to that in the northern parts. Many tube-wells in the northern parts of 24 Perganas, Nadia and North Bengal yield water that is chemically, purer than Calcutta filtered water.

• CONCLUSION: The alluvial plains of Bengal are particularly adapted for sinking

tube-wells. Considerable prejudice has unfortunately been created owing to the unreliability of Abyssinian and other designed tube-wells, and it is time for the public to learn the broad principles so as to be able to discriminate. The tube-well is essentially an expert's job and does not admit of dabbling if best results are to be obtained. Properly designed and sunk, it offers the easiest and cheapest solu-tion of the water problem of municipalities and industrial concerns. A 5-inch well generally yields over 6000 gallons per hour. Two such wells should be quite sufficient for the water works of a small municipality consuming say 100,000 gallons daily, and will cost much less than the usual system of pumping water from a river and filtering ame before distribution. A single 21/2 inch well yielding over 3000 gallons per hour will meet the needs of many small towns. Still smaller wells, 11/4 or 11/2 inch, with hand pumps. are very suitable for domestic purpose and for municipalities which cannot afford the expense of a central distributory system. Such wells, deep sunk, are quite as reliable as the bigger ones and yield 500 to 1000 gallons per hour. They cost a little more than pat-kuas or small ordinary wells with earthenware curbs, but are considerably cheaper than indaras or brickwork wells and give a purer supply which is also much less subject to seasonal variation.

A tube-well, properly sunk, needs no repair. In the case of small tube-wells, the only item likely to frighten the public is the hand pump which has a knack of getting out of order quite frequently. But the unreliability of the pump will dissappear when it comes more into use and when people become more familiar with its simple working principle The bicycle and the sewing machine have been mastered by the villager, and the hand pump is surely not a more difficult machine to manage.

WHAT HAPPENED AT GENEVA

By C. F. ANDREWS

THE Geneva Opium Conference at which delegates from the different Powers assembled as plenipotentiaries to settle the world opium question, is an event of such importance that the contemporary records of eye-witnesses may have an historical value in the future. The United States delegation rightly stated that the Opium Conference would be the acid test as to whether the League of Nations could function as a moral force in the world or not. Though I was not actually able to be present, I have been in closest touch with many of those who went there. Some letters, which I have received, give a vivid picture of the proceedings and I shall venture to publish them as they stand. The first two letters are from Mr. Horace Alexander, the son of the late Mr. Alexander, who visited India at the time of the Royal Commission in 1895 and complained of obstruction and espionage on the part of Government officials which prevented him from doing his duty. The

three letters which follow later on are from Miss La Motte, who has published two books on the subject.

(Letters from Mr. Alexander)

November 18, 1924.

"I was very glad to get your letter just before I left England together with the parcel of Assam Reports. Only a day or two before receiving them I had been appointed, unexpectedly and suddenly, by the Society of Friends to come here on their behalf, so your letter seemed to be a confirmation

of my conviction that it might be right to come.

"I am afraid the results of these Conferences are likely to be desperately disappointing. I hope to enclose with this a short account of what has happened so far, in case you like to use it in Young India,' which Tarini Sinha tells my you are editing at present or elsewhere.

at present, or elsewhere.

"I wish it had been possible for you to send a representative of the real India to Geneva: I wish too, that I had a message direct from Mr. trandhi to deliver here. But these are vain wishes, it is too late! We ought to have thought of these things

At the end of this week an opportunity is to be given to the private societies to make statements; perhaps I can say something. I am not sure if shall have the opportunity. But if it comes, I hope to be able to say, in love, the things that mood saving.

November 26, 1924.

"After I had written to you, I realised that it might not be too late, after all, for a message from Mr. Gandhi. So I sent you a telegram asking for a message. The reply reached me, while I was atting in the Conference-house, waiting for my turn to make a statement to the Conference; and when my opportunity came an hour later, I was able to read the telegram. It seemed to make a deep impression on the Conference; and it has been fairly well reported in the press Mr. Dukes on the same afternoon made a statement and

deep impression on the Conference; and it has been fairly well reported in the press Mr. Dukes on the same afternoon made a statement and presented the petition brought to Europe by Dr. Tagore. So I think the real desire of India was made clear to the Conference.

"I left the Conference after the preliminary business and the general discussion were concluded. I felt more hopeful by the end of the week than at the beginning. All the Asiatic representatives had declared themselves ready for strong action.—Dr. Sze for China, M. Sugimura for Japan, the Persian, Turkish and Egyptian representatives, the last two wanted hashish dealt with too. One of the most impressive statements was made by Dr. J. Z. Koo, on behalf of the Shangha Anti-Opium Society. He told the Conference how the student-clubs all over China, and other organised groups, are undertaking a campaign throughout the country, to find out exactly how much opium is being grown, and to root it out. This, and the information that the whole subject is to be discussed at the forthcoming Chinese Peace Conference will take something of the sting out of Mr. Campbell's contention that, so long as China's promises are mere 'scraps of paper', it is futile for other countries to talk about reducing production. The Americans, of course, are taking a strong line, and Bishop Brent's speech raised the whole tone of the Conference; he was followed by a moving little speech from an elderly German, and a sound speech by a Czech, them, next day. whole tone of the Conference; he was followed by a moving little speech from an elderly German, and a sound speech by a Czech, then, next day, a number of other delegates declared themselves willing to 'sign anything', and perhaps the best speech of the morning came from Sir Malcolm Delevringne, whose emphasis on the importance of reducing production was very valuable. John Campbell later made a clever pronouncement, very brief, in which he seemed to associate himself with Delevringne, but really only committee, which hardly touch the question of production. Then came the private societies, after that a day of committee, and then question of production. Then came the private societies, after that a day of committee, and then I had to leave. An ominous silence was preserved by the representatives of France, of Holland, of Yugo-Slavia, of Peru and Bolivia. If all these states, with interests involved, refuse to accept an effective agreement, I fear the Conference is doomed. But at present there is still hope. You will know more by the time you get this.

"I was able to circulate the Assam Report, and I saw that some of the delegates were reading it."

(Letters from Miss La Motte) November 23, 1924 "Well, the petition has been presented, as you may have seen by the papers, and a fine stir caused, too! It seemed better, since there was n Indian here at Geneva at all, to have it presente by a British subject; so Mr. Dukes gave it is with an exceedingly good little speech. That, an a telegram from Mahatma Gandhi, read out by Quaker, named Mr. Alexander made the hits of the afternoon! The Paris Tribune, of November 21st, carried out a column of news on the Conference; but the London Times of the same dat made no mention of it at all! Just a brief note two inches long, that a meeting of the second Conference had been held! But the English paper are waking up a little, though not much. That was a big day, when all the private association had a hearing And when the Indian petitio was read out, and Campbell rose in protest, it was pretty thrilling." pretty thrilling."

15th December, 1924. "I was very glad indeed to get your letter; day or two ago, and hasten to answer it and to tel you what I can of what is going on here. First let me say that I am sending you under separate cover, the minutes of the first 16 meetings of the First Conference, and those of the first four meetings of the Second You will get some idea of 1 from those The rest are not yet issued but they shall go along too, as fast as they appear. You will note a long gap, nearly a week, during which the First Conference held no open meetings—all done behind closed doors, in the dark. The wretched little Treaty they evolved (no one seemed to have any idea that they were going to make some formal agreement) and Bishop Brent's commen on it, I am also sending. If these don't reach you I will send a second lot.

"This First Conference was to deal with smoking,—to fix annual requirements, and to set a time-limit as to when the use of prepared opium temporarily continued, was at last to end. They carefully avoid this issue. Anything weaker, or "I was very glad indeed to get your letter

carefully avoid this issue. Anything weaker, or more evasive, it would be hard to find. Of all the countries, Japan alone offered an excellent programme for ending opium, and seems to be in dead earnest. China, of course, was eager to end it but China was left outside the discussions which but China was left outside the discussions which concerned the smoking in countries where smoking is permitted, as in the Far Eastern colonies of the European powers. Japan has been splendid all along,—the curious thing was to see the East lined up against the West, and poor China pleading for protection for her people when they entered any of these European colonies. I will try to get another copy of the Japanese plan,—it was terribly disconcerting to the Europeans to have Japan propose a perfectly feasible scheme and, moreover. propose a perfectly feasible scheme and, moreover, show how well it has worked in Formosa.

"The First Conference about ended the day

"The First Conference about ended the day before the 2nd Conference began. Judge of the amazement when the U.S. delegation discovered that the American terms were not to be included in the agenda. Our proposals, which we thought we had been invited to discuss, were that opium should be limited to the medical needs of the world and that all other use was an abuse and not legitimate. Campbell stepped neatly aside and said that India had made her reservation as to that in May, 1923, and that that reservation stood and was not to be tampered with. The opium bloc," i.e. Great Britain, France, Hollan?

Portugal, with a few countries such as Switzerland,—have been fighting us right straight along. Porter insists that as the First Conference has failed to insists that as the First Conference has failed to limit smoking, or to set any time-limit, etc., this must be included, if any estimates are to be arrived at as to the probable needs of the world. The Conference cannot do any work, till that is settled. We have already had several big fights, and are to have a big one to-morrow, which will either see the Conference blown up, or it will see the "opium bloc" give in. By give in, I simply mean, admit that our terms do form a part of the agenda and must be considered in the plan to form proper methods to end the opium evil. It will be an exciting day. Our country simply cannot give way,—we are not allowed to. Our Congress passed a resolution, saying that we must make no compromise, or as Porter told them all in plenary session two days ago, we cannot recog-

make no compromise, or as Porter told them all m plenary session two days ago, we cannot recognize one law for the East and one for the West.

"Here is an odd thing. Campbell signed that First Conference convention a week ago, and then left for London. He seems to have been—well, I don't know—he says he is going back to Greece. Amr. Walton has taken his place, along with Mr. Clayton. Well, the rest of the "opium bloc" were to have signed this thing on the 13th, at six pm. We were all there, to see it happen. And when they came into the room, Sir Malcolm Delevigne and he had just received a telegram from the Council at Rome, to postpone signing! The French delegate said he too had had "instructions." So it was all over in two minutes, and nothing was delegate said he too had had "instructions." So it was all over in two minutes, and nothing was done. Pressure was obviously coming from some quarter. The best of it is, that they had no instructions in the morning, and all during that morning session had been committing themselves tirmly and thoroughly in opposition to the American plan; and the morning session had ended in a deadlock. Yet here, at the eleventh hour, they gave up signing this treaty which would have barred any possible consideration of the American terms.

terms.

"This much has happened; the opposition has come right straight out into the open for all to see. Our newspapers are carrying simply columns about this Conference, and all the fights and efforts to block progress. And the opposition has summered down to about eight countries alone out of the 40 represented here. The London press is practically silent. Not one word about that big petition from India, which you signed, together with Mr. Gandhi. Mr. Dukes presented that, and it came so much better from an Englishman. Not one word either (in the London press) about that

telegram from Gandhi, read out by Mr. Alexander. But our papers made a tremendous lot of it, and our papers are reaching England by this time. Moreover, a lot of us have good friends in England,—not very enthusiastic about opium unfortunately, but who are certainly anxious for Anglo-American relations to be good, and who also have no desire to see the League go to pieces over a "humanitarian" issue. I imagine a lot of pressure comes from those two angles

those two angles.
"So, to-morrow will be a decisive day. If the opposition gives way, then the Conference will adjourn for a couple of weeks. We are all simply worn out, with nearly six weeks of strain, tension and distress. But if the opposition does not give way, if it decides that reduction of production is not a suitable item for the agenda, then we will just go home. But I don't think they will allow

that to happen.
"Geneva is the worst place that could have been selected. About half a dozen people, such as myself, took the trouble to come here. No audience for all these discussions, no public opinion to form its own ideas of the situation, no press, (except the American journalists who have been sent here) to enlighten the outside world. press, (except the American journalists who have been sent here) to enlighten the outside world. Yet somehow, not at the moment but later, a very big publicity will result. If only this had been held in London, such a deadlock would not have occurred. I will send you a line to-morrow to tell you what has happened. And anything about Assam will be welcome."

-20th, December, 1924

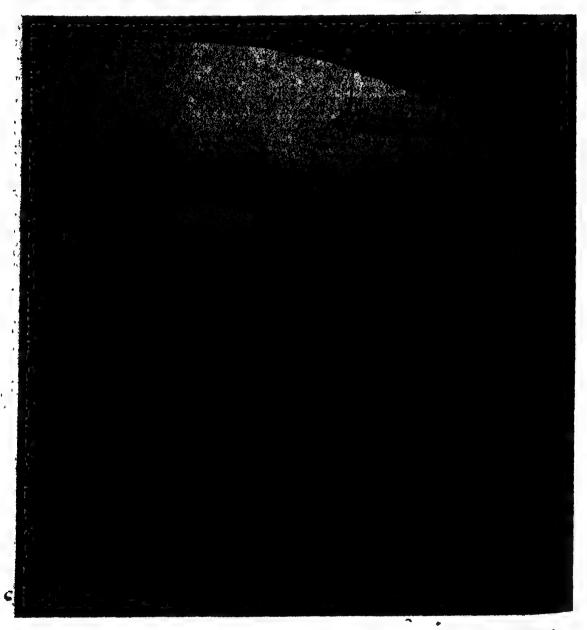

"I promised to send you a line as to what the fate of the Conference was to be,—either it would break up, or adjourn. It did the latter, on December 17th, to reconvene the 12th of January. At that first meeting, after we come back again, the American proposals to consider opium smoking is the first thing on the agenda. We should never have had to insist on this and make such a point of it, if the First Conference had not avoided this issue. We hope that much will happen in this three weeks of reflection. Heaven knows what will happen, however, as the opposition seems so strong and deeply intrenched. The opium question is so vast and complicated that with the best will in the world, with whole-hearted and sincere international co-operation, it will be difficult to solve. But with obstructionist tactics at work on every phase, it is almost impossible,

"I enclose the Fifth Plenary Meeting record,—the first four I sent from Geneva. As fast as the rest are published you shall have them too."

GLEANINGS

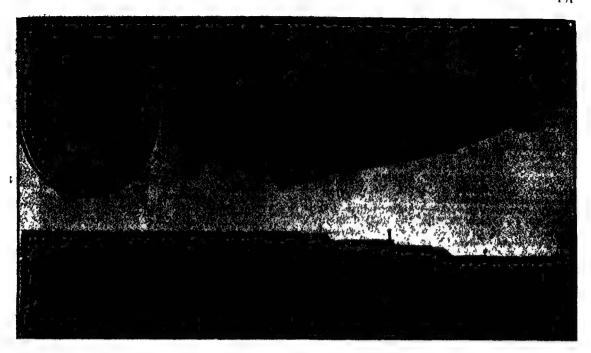

The Real Marvel of the ZR-3

ZR-3 is the largest dirigible to attempt a transatlantic flight. Tales of the tests and the flights of the big airship have been told and retold, but the story of the real miracle of the ZR-3, the Shenandouh, and other dirigibles is new to most folks. That is the story of duralumin, the marvel metal of the twentieth century—the metal invented especially for airships.

ZR-3. This photograph shows the end of the greatest voyage in air travel. Here the sirahip is warped into her hangar at Lakehurst, N. J. (v. a. a.) after completing her 5000 mile voyage. The ZR-3 is 663,20 ft. long and she can attain a speed of 75 miles an hour.

7

ZR-3 starting from Friedrichshafen, Germany on her 5000 mile voyage. The crowd below burst into tears when the ZR-3 vanished in the sky. Inset—An American flight-officer.

It is a remarkable partnership, this between he airship and duralumin. If it were not for the irship, duralumin probably would not have been ormulated; if it were not for duralumin, there would be no transatiantic or crosscontinent flights y dirigibles. The airship requires strength and ghtness for its ribs and hull. Wood, while light, in a strong enough, but too heavy. Duralumin stronger than wood and much lighter than teel, in fact, about one-third the weight of the itter. So light and so strong is it that you can tek up with two fingers a girder of it that will ick up with two fingers a girder of it that will upport six men.

upport six men.

Duralumin is an alloy of copper, manganese and magnesium, with about 94 per cent of alumium. In "strength-weight" efficiency, that is, in rength and lightness, it is 17 per cent greater an a good alloy steel and nearly three times effect than mild steel or half hard aluminum. It as first made by Alfred Wilm in Germany in the evelopment of Zoppelin airships, but is now man made in England and the United States.

Engineers talk among themselves of a Duralumin Age. They speak of vast quantities of fuel tood by lighter engines, trains and motors, of mildings dissily high: of mechanical wizardry in anufacture: of a world unabackled from pon-

or a manuscare: of a world unsuscence from pourorous iron and steel.

Statistics of one of the new duralumin-framed
mammoths are illuminating. Take the ZR-3.

Ignres for her sas capacity reached 2,500,000 cubic
or A ship of a size holding the immense volume
1 10,000,000 cubic feet is contemplated. The
or of the vary man futher.

five 400-horsepower motors give a speed of miles an hour to the ZR-3. A load of nearly

100,000 pounds can be lifted. This means at least 20 passengers besides crew and personal baggage. Something like 12 tons of profit-paying express can

be added.

The fearlessness of the men who prepared the ZR-3 for her Atlantic voyage was well advertised. And justly so too For acute interest lay in the perils she faced that were unavoidable in her particular case. The North Atlantic is never entirely free from storms in the autumn. Moreover, while her diameter was greater than either that of while her diameter was greater than either that of the Shenandoah or the ill-fated R-32, engineers are not yet wholly sure what dimensions are safest. The R-32 was lost and the Shenzulouh and R-34 suffered much from the wrenching blows of high winds and from the violent bending forces induced

winds and from the violent bending forces induced by sharp course changes

Then there were the specific disasters that make us shudder to recall them. France's reparation Zeppelm, the Dizmude, originally built to bomb New York, was struck by lightning. The British R-32, built to be our ZR-2, broke in half and burnt up on her trials. The Italian Roma, built for our army, was ignited by high tension wires at Norfolk and cremated both herself and crew.

A list of horrors, to be sure, yet study of

A list of horrors, to be sure, yet study of them reveals that the tracedy in each no longer would be possible. Neither the Roma, Darmind nor R-32 could have burned had they been inflated with helium. For the most energetic efforts of our best chemists have so far failed to set fire to this strangely inert gas. Not only that, but helium is a non-comburent, that is to say, it does not telerate fire in its vicinity: it is a fire extinguisher

Duralumin is the most important single factor in bringing about the triumph of commercial airahips, but there are other points in my conviction that they have come to stay One

THE MODERN REVIEW FOR FEBRUARY, 1925

the anchorage now afforded by the mooring masts, which can hold and protect the largest dirigible in any kind of weather and offer safe latent to the air-liners in winds that ordinarily would keep them out of hangars. In addition to the safety element, the cost of a mooring mast—\$35,000, as against \$500,000 for a hangar—is a big argument for the operation of air-liners from a commercial view-point.

But mooring masts would have been of no use had not the dirigible been rugged enough to withstand the wind and rain. Nor would helium have stood for great progress over hydrogen had not its swed for great progress over hydrogen had not its first goldbeater's skin containers been housed in a structure almost incalculably staunch. Both the ruggedness and the staunchness were wanting before the day of duralumin.

before the day of duralumin.

Another unexcelled safety feature that distinguishes the air cruiser that has the light duralumin manework is that she is virtually unsunkable. She has 20—she may have 50—small balloons inside her metal hull. Each of the balloons is filled with gas and is independent of all the others. Each constitutes a lifting unit Each can form an aerial raft in case of shipwreck. Each can be controlled by valving so that survivors clinging to it can drift landward safely Each is individually inspected, tested, filled, and lashed in place before the journey.

Definite plans are being formulated for linking the nations of the world by commercial dirigibles—places that include regular airship services between nations of Europe, America, Asia, and Africa. France intends to use the airship in developing her African colonies. Spain is contemplating weekly four-day flights between Seville and Buenos Aires. England is talking of an airship line to India and the Far East. For all such projects, of course, dirigibles twice as large as the ZR-3 would

be required.

There is sure to be almost an immediate demand for the "excursion air-liner." There is a passionate wander-lust in all of us that thirst for a view

ate wander-lust in all of us that thirst for a view of strange lands.

Special Red Cross dirigibles no doubt will be equipped for rescue work in floods and forest fires. Real estate business will take a new start. Larger and more beautiful suburbs will be planned and built. Aerial therapeutics for tuberculosis and other special disorders no doubt will be developed.

But let us not forget that the natural laws of seromantics always have existed, that elements of such worth as helium surrounded Caesar. Not intil the ingenuity of a chemist alive today added he final necessary touch was man master. That ouch was durulumin, wonder metal of the age.

Indiese Power

Wanted: \$100,000,000 to assure mankind of all he heat and power that will be required until the ad of time!

If you were to read somewhere an advertisement worded substantially as the above, your ariosity undoubtedly would be piqued.

And yet this amazing suggestion is made by one ithe world's foremost men.

This man is Sir Charles A. Parson, K.C.B., F.R.S., the noted British scientist to whom we are indebted for the present-day widespread use of the steam turbine. The way in which he proposed to make man forever independent of coal, oil, and other similar sources of power is by sinking a shaft 12 miles deep and drawing out the tremendous heat of the earth's interior.

The drawing shows diagrammatically how Sir Charles proposes to sink his 12-miles shaft and to use the earth's interior heat to develop electric power.

It was almost 20 years ago that Sir Charles first brought to the attention of science the possibility of utilizing the earth's interior heat for the developof utilizing the earth's interior heat for the development of power. At the time the suggestion was regarded as an interesting scientific speculation. Hundreds of scientists since then have discussed the proposal and studied it from a theoretical standpoint. Meanwhile, though, Sir Charles quietly experimented, until now he has been able to announce that it is thoroughly practicable from an engineering point of view, and that the only har to beginning work immediately is the money necessary in finance the project—\$100,000,000.

His shaft, he said, would be 20 feet in diameter and lined with granite, for experiments had shown that such a shaft would not cave in. The shaft would not be one continuous straight tube for the 12 miles of its depth, but would be suck to successive levels as the shafts of deep inness new are sunk. Thus it would be in effect like a flight of stairs.

of stairs.

For two miles or so ordinary engineering methods would suffice. Then the fieres heat mad the

mendous strain that would be placed on the les used in hoisting materials to the surface, uld require extraordinary methods. It would necessary to pump out the heat and to utilize scial cooling devices to event the melting of the ring tools. It would be sessary to run the shaft rizontally, or at least at angle, for a time to hid the possibility of the less snapping from their les snapping from their n weight. Geologists Geologists could point to us the best place to c our shaft if we had the ney to finance the under-ing. That much they e learned about our earth n the study of earthke waves. l'welve miles is not a r distance. A locomotive,

science. Herewith is shown a complete streetscience. Herewith is snown a complete street-sweeping and -washing unit that may be operated by one man, the driver of the truck. This mechanic-al cleaner consists of a street-sweeper. gutter broom, and sprinkling device. It will wash and sweep the street

and gutter at one operation, pick-

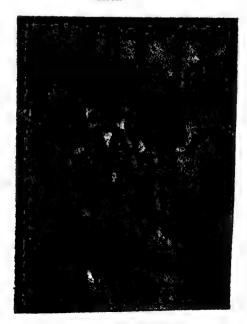

ing up the dirt as it travels.

The gutter broom, made of sectional steel wire, automatically follows the curb line, working in and out with any variations that occur, throwing the refuse from the gutter into the path of the main broom located across the truck at the rear This deposits the sweepings in the large dust hopper above. Both brushes are quickly raised when the truck is going to and from its work.

Three Persons Ride on Tandem Bicycle

A German inventor has come out with a new form of tandem buyele that carries an extra person on a platform between the two machines. The contrivance, called a "combi-bicycle," consists of two bicycles attached in parallel, with a platform and seat suspen-ded between them. This platform is slung from a light frame con-

is significant in a light frame connecting the two breveles. The pedaling is done by both riders, and the front wheels are connected in tandem so that if the machine is operated by only one driver, the steering may be done as if there were only one whold. wheel.

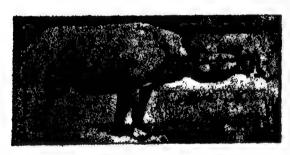

Tandem Bicycle Riders with a Passenger

They Once Lived in Your Backyard

Irish Deer, once plentiful in Ireland and on the? Continent, grew antiers weighing 80 pounds and spreading 11 feet across.

The Caenopus was an ancestor of the horned rhinoceros. It lived a million years ago and was about the size of a Jersey cow

Two million years ago the strange Palaeosyops browsed in grass along river banks. Its remains have been found in Wyoming.

The hairy Mastodon roamed the United State before the last Ice Age, ages ago. Some believ these beasts were hunted by men of primeva times.

Ground aloths living now are small surviving cousins of these clumsy monaters of past age Embedded in their tough hide were thousands or round pieces of bone, forming a cost of armo Even this was not protection enough from the blood-thirsty saber-toothed tigers.

Figure Scher-toothed Tigers. Above the figure great prehistoric vultures.

The huge bird called "Dustryma" could have made a quick meal of the small three-tood horse of prehistorio times. The bird's jaw was 17 inches

Speedy New Motor-Hoop Amazes Italians

Spectators at the speedway before the National Stadium in Rome, Italy, gasped with amazement not long ago when they saw a huge wheel, driven by motorcycle engine, careening at high speed round the track like an overgrown toy hoop. Within the wheel, apparently unconcerned at the possibility of being precipitated in the mad whirl, they saw a driver, his hands gripping an ordinary automobile steering wheel, his feet resting on ordinary motorcycle pedals.

His body kent the wheel in perfect balance. At

His body kept the wheel in perfect balance. At every turn he would lean to one side or the other. And when the spinning wheel finally slowed down and came to a stop, he simply rested both of his feet on the ground, then let down a standard to keep the wheel from toppling over!

keep the wheel from topping over:

The driver of this remarkable vehicle was Davide Gielaghi, a motorcycle officer of Milan, Italy. Possessed with the idea that one wheel would be more efficient than two, he had perfected what more than one inventor before him had attempted unsuccessfully—a one-wheel cycle that actually would ran!

The minusela, which is called a "velocita" by

The unicycle, which is called a "velocita" by its designer, and also a "motormota," has two principal running parts—a large pneumatic tire and an inner hoop of steel. The inner circle carries the driving mechanism and the driver, while the tire moves around it. The diameter of the wheel varies according to the height of the driver, but usually 11 18 about five feet. A short man has a smaller

wheel than a tall man.
The car-cooled motor that drives the wheel forward, and its accessories, are fixed rigidly to

the inner steel hoop.

The motor, the driver's seat back of it, and the driver himself, are grouped in a small sector of the circle. On the outer circumference of the steel hoop are rollers, and these support the run of the tire. Thus the two concentric pieces, hoop and tire, are independent of each other as the wheel moves forward.

Davide Gislaghi, the inventor of the monocycle enjoying a ride in his strange vehicle

When the machine is moving, the inner hoop is kept stable to a great extent by the weight of the engine and driver. But opposing this, there is a friction roller, driven by the vehicle's motor, which acts against the rim of the tire and revolves it. This force is more powerful than any retarding resistance.

So it is that the driver does not turn with the wheel, but maintains his upright position wheel, but maintains his upright position lie balances the machine much as he would a metorcycle, and he regulates the direction to be taken by the vehicle by inclining his body to the right or left and by a steering-wheel similar to those or automobiles. To keep the wheel from falling when it is not in motion, there is a special stand that fits inside the circle and can be released.

COMMENT AND CRITICISM

[This section is intended for the correction of maccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the landness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. No criticism of reviews and notices of books will be published. Writers are requested not to exceed the limit of five hundred words.—Editor, "The Modern Review."]

The New Sunga Inscription from Ayodhya

Thanks to Mr. Jayaswal, this inscription is attracting a great deal of attention and causing acute difference of opinion. According to the happy defi-nition of Prof. Banerjee-Sastri, the present writer happens to be Sanskrit-safe but far removed happens to be Sanskrit-safe but far removed from what we generally call an epigraphist. But I have an old-fashioned conviction that paleographic truths which have become established by decades after decades of research and supported by scores and scores of epigraphs, can hardly be lightly brushed aside by a single inscription, however startling results its normal interpretation might yield and whoever might be the bold buccaneer who offers the interpretation. The normal student of antiquities would naturally think that there is something wrong in the apparently normal explanation. thing wrong in the apparently normal explanation and would try to find out the true explanation. The course of those who delight in a sensation is, of

course different.
Pushyamitra reigned from about 184 B. C. Pushyamitra reigned from about 184 B. C. to about 148 B. C. A man sixth in descent from him would therefore be flourishing by about 50 A. D. The paleography of the new inscription shows that it can roundly be said to belong to the first cen tury A. D. The normal interpretation, therefore, is that by the term Sasthena, 'sixth in descent' is meant and not the 'sixth brother'. Thus argues a Sanskrit-safe man of common sense with Vidyasagara's Upakramanika in hand. But people of common sense have no place in the world of of common sense have no place in the world of scholars who are all uncommon. They explain that Sasthena, means the sixth brother and so the inscription belongs to the 2nd century B. C. So all your paleography is worth nothing and the paleographists during a long century have all worked to settle nothing. And I have demonstrated this wonderful and startling fact and caused storm in

wonderful and startling fact and caused storm in your stagnant pool of research.

I should only like to draw the reader's attention to the following points.

(i) Pushyamitra came to the throne about 184.

B. C. He reigned for about 36 years and was succeeded by his son Agnimitra. If Pushyamitra's jather even survived the long reign of his son, his tuneral memorial should have in the natural course of things, been erected by Agnimitra and not by Dhanaders, an obscure sixth brother.

(ii) The list of the Sunga Kings shows several names which do not end in Mitra e.g., Vasujyestha, Odraka, Pulindaka, Ghosha, Bhaga, and Devabhuti. In fact, of the ten names in the list only four end in Mitra, the remaining six, as shown above, do not do so. So there is nothing wrong in a sixth des-

cendant of Pushyamitra being called Dhanadeva or his father, Phalgudeva. Moreover, it is not known whether these were decendants in the daughter's

(ni) Prof. Banerji-Sashtri writes:—"Purely epigraphic considerations should not be allowed to interfere with a normal interpretation of the text." The normal interpretation of the term Sasthena is sixth in descent. When that agrees with paleography, an abnormal unwarranted and absolutely uncalled-for interpretation like—'the sixth (brother)' can in no case be allowed to interfere with century-long settled facts. century-long settled facts.

N. K. BHATTASALI,

والمدينة والمراجع والمراجع والمراجع

Prof. Banerji-Sastri's eply

(i) Mr. Bhattasali pleads 'old-fashioned conviction' against the Sunga inscription. When in 1909. Mr. Shama Shastri had the hardihood to publish the Kautilya Arthashastra, he did violence to a lot of vested "convictions"; there are honest and respectable people even to-day who have not entirely ceased to look askance at him and his foundling. When again in 1912, Pandit Ganapati Shastri introduced his Trivandrum Bhasa, the commotion of convenient 'convictions' was so tumultous both here and elsewhere, that self-respecting critics still mention his name with apologetic hesitation and demonstrate their individual profundity, by reiterating the magic formula-caution. But when last year, Mr. R. D. Banerji had the indecency to explore not mere literature but actual and tangible culture-relics at Mahenjo-daro, the whole tribe of convictions desperately clutched at the crumbling emptiness they called their historical knowledge and gasped no more. When therefore, Mr. Jayas-wal (already noted for his various indiscretions, 'Hindu Polity' and 'Kharavela' to mention but two) draws aside the curtain covering the Sungas, the old bottle of mouldering 'convictions' cries I burst'. Like Messis, Shama Shastry, Ganapati Shastri, and R. D. Banerji, Mr. K. P. Jayaswal has survived many shocks in life and he may yet survive 'criticisms' of pretended wisdom and obscure 'convictions'.

(ii) But when Mr. Bhattasali forsakes the shelter of impregnable convictions and strays into (a) Sanskrit and (b) Epigraphy he descends from the sublime. (a) Mr. Bhattasali's unlimited intellectual horizon is yet to be demonstrated. Everybody knows that volumes of water have passed down the Sindhu, some of its streams are choked up

and the Race of Seers is extinct, their sceptical descendants are not satisfied without reasons. Hence the delightful finality with which Mr. Bhattasali declares that Sashthena cannot mean 'sixth brother' is refreshing (especially in view of Bhattasali's utter ignorance of Sanskrit by his own confession) but hardly convincing. His restraint in not repeating the already exploded objections is praiseworthy, but a complete non-interference with unfamiliar topics would have been more commendable.

(b) Mr. Bhattasali dilates on Indian Epigraphy (b) Mr. Bnattssail dilates on Indian Epigraphy as 'century-old' and so on. James Prinsep's early attempts date from 1837; since, the number of competent workers has been singularly inadequate. Colebrooke's caution about verifying accumulated half-truths and untruths before realising a single truth in the domain of archaeology was never more needed than to-day. Such naive little-knowledge extravagance would be unpardonable in a schoolloy but coming from evidently a grown-up indi-vidual, it would be an eye-opener to those who search for the real reason of the ignominious failure of the general body of Indian students of Indian antiquities.

It is easy to pick up and employ such terms as conviction, and common sense, but those who employ them should not let them be turned into unmeaning cants and substitutes for evidence and sense. In English language 'common sense' means sonse' and not its 'absence' and is not synonymous

with dogma. We do not want futwa in place of reason and evidence. A. BANERJI-SASTRI.

Paina, 7-1-25.

The Aboriginal Population of India.

In your November issue on p. 595, in the course of a note on Mahomedan Education, you mention that the total aboriginal population is one crore, or to be more accurate 97.76.000. the figures correctly from the Census Report.
The Report itself states that it is not possible to give accurate numbers of the tribal aborigines....

INDIAN PERIODICALS

"Swarajya" Belgaum Congress Number

The Swarajya Belgaum Congress number contains many interesting and informing contributions, from some of which we extract some passages below-

GANDHI'S COLOSSAL EXPERIMENT

Writing on "Gandhi's" colossal experiment," Mr. Upton Sinclair says:—

When we read about Gandhi, we are tempted to av that of course the poor Hindus have to fight with their souls, because they haven't anything the to fight with: the British have kept them

from getting any arms.

But I assure you the British know that if India thmes into revolt, if all the three hundred million took to cutting the railroads and the telegraph has, and burning down the factories and the leave rement buildings, the little handful of white headennate. inadequate.

Me are compelled, whether we will or no, to be ognize that in the Hindu we are dealing with a great people, having a very old civilization, and an intellectual and spiritual tradition as high as our own and in some ways higher.

the same of a bit is common to

That is what Gandhi's soul force is doing; it is making all of us stop and think It has made some American publishers issue a book about Gandhi, and has made an American author review it, and a great chain of newspapers publish it, and millions of other Americans read and think and debate about it.

Of course, the soul force of Gandhi and his people may not be great enough, but if it should prove great enough, if it should hold on, I am sure that in the end it will conquer even the top-hatted savages who run the Foreign Office of the British Government,

INDIANS ABROAD

About Indians abroad, Mr H. S L. Polak makes the following appeal to Indians at home :-

I would ask them, in all humility, to put aside party tactics, national irritation and injured dignity, and to treat the subject objectively as it deserves, study the facts, pursue faithfully the welfare of their exiled countrymen and act upon the welf-founded assumption that humanity is one and indivisible. In this way, the problem will be raised to an altogether higher level, moral issues will come to the front, and the solution that is being carnestly sought in many quarters will be easier I would ask them, in all humility, to put aside

achievement. If my appeal is successful, I feel sundent that the blunders of Kenya, Mauritius, i.i., and British Guiana will not be repeated, but succised. I have no doubt that if men sell their about in Ceylon and Malaya, rather than in India, will not be because economic and social conditions leave them no alternative. I am certain that indian emigration, in so far as it will in the future stage will take new forms, and that, for the honour in India and the welfare of the race, the world will know of the Motherland from her best expensents, instead of by her most unfortunate and least representative. Yet, lest I should seem to disparage even these, I would, in my last word, them a high tribute of admiration and respect to the splendid resistance against tribulation and temptation that stands to their eternal credit. They have shown how the human spirit triumphs over its environment.

THE WOMEN OF EUROPE

... Lala Lajpat Rai says that during his last visit to Europe.

The first thing which impressed me even on the steamer was the great advance that has been made in the freedom of women. The women of furope have attained a degree of freedom which is in one respect at least denied to men. This is the freedom of dress. A European woman can dress as she likes, but not a European gentleman. In 1905 when I first visited Europe, convention ruled supreme over both. But the last twenty years have given grater freedom to women in the matter of dress than to men. In our country, the contrary is the rule.

the matter of dress than to men. In our country, the contrary is the rule.

As regards education and culture, the women of the Western, Northern and Central Europe have many and as good facilities as men. That is not the case, however, in the South East, which practically means the Halkans and Turkey. Bolshevik Russia makes no distinction between men and women in the matter of education. Turkey has, however, taken a great step towards the amelioration of the position of women. She has officially abeliahed "pardah" and accepted women servants in their offices and enacted laws aiming at restricting polygamy. They are also providing educational facilities for their women. In the Balkans, it seems the women are still in a backward condition. Great women, however, seem to be quite advanced.

factities for their women. In the Balkans, it seems the women are still in a backward condition. Greek women however, seem to be quite advanced. In politics the women are gradually coming into their own. In literature and science they occupy a fairly respectable position, but in the service of afflicted humanity they are supreme. Most of the Indians have a very curious notion about European women. They seem to be under the impression that European women have most of them an easy time and live very luxurious lives. The fact is that the European woman works much listeder, for longer hours and under most trying conditions than the European man does. Of course, there are all kinds of women. As in India, so in Europe, as among men so among women there are very many drones also but they do not form the majority. An European woman, however, gets much more out of life than her Indian sister. She works hard and enjoys well. She earns and spends. On the whole she is much better off than her Indian sister. The latter is strong in her affections, in her devotion to her own ideals of duty, in her ideals of self-sacrifice, loyalty and fidelity; the

other is strong in her ideals of independence, and the freedom to live her own life. The fact that in Europe the female population is much in excess of the male explains the difference. Most of the women in Europe or in India went to be married but in Europe failure to marry suitably does not carry with it the feeling of helplessness and misery which in India it would. The European woman is copying her Indian sister in her ideas of personal decorations. The ear-ring, the bracelet, the bangles, the neck-lace are all finding a vogue. The armlet shining on a bare white arm is becoming the rage of fashionable life. The Indian woman yields to none in the world in her devotion to her children, but the European is generally a more efficient and a more careful mother. Women's interest in games and athletics, formerly the monopoly of men, is ever on the increase.

EUROPEAN POLITIOS

According to the Lala,

European politics are almost being revolutionised both in theory and practice. No eminent European thinker or writer now believes in the theory of the supremacy of the State. The State and the subject have been superseded by the nation and the crizen. The nation is supreme and not the state. No one is a subject. All are citizens.

Economic Changes in Europe.

Regarding economic changes, the Lala observes :-

Economic changes fill the whole atmosphere. Capitalism is almost universally condemned. Orthodox theories of economics are discredited. Socialistic literature is widely read and appreciated. Trade union and workers' organisations are universally gaining in power and influence. Direct action is coming into greater and greater vogue but with less success. The greatest change is in the wages of labour and conditions of labour. The former have increased beyond recognition and the latter have considerably improved. European capitalism is quite anxious to make terms with labour and keep these happy and contented so long as the latter would not completely dispossess and make short shrift of them. Bolshevism is very much dreaded. Graphic accounts of its misdeeds, real and imaginary, fill the columns of the European press. The one anxiety of European bourgeoisic is to keep it out of doors, and to kill it, if possible Fear of Bolshevism plays an important part in European life of to-day and is the greatest underlying cause of the betterment of labour conditions.

ECONOMIC FALLACIES

In emploding some economic fallacies, Professor Manu Subedar observes:—

In spite of the fact that political economy has now come to occupy a prominent position in the curricula of many Universities in India and in spite of both centres of education and number of students having increased, it will be hardly disputed by soyhody that in discussing practical problems, numerous fallacious assumptions creep in the reasoning of official writers as well as non-official publicists. No science demands greater watchfulness if useful results are to be achieved

than the science of political economy, and I cannot do better than direct attention on some of these fallacies in response to the invitation of the Editor of the "Swarajya" for an article for the Annual Number.

The fallacies which he exposes are that India is a merely agricultural country, that increase of trade means increase of prosperity, and that when Europeans use the words "development of resources" with reference to India, they really mean what the words denote and not exploitation in its sinister sense.

AMERICA'S BAN ON ASIATICS

Dr. Sudhindra Bose observes :-

The new Immigration Law of 1924, which excludes Asians from America technically known as the land of Freedom, will go down in history as the most unprovoked and most discriminatory piece of legislation ever enacted by a nation against a whole continent. It involves political and international issues of far-reaching importance. It may even mark the beginning of the parting of ways between Asia and America definitely.

It is to be remembered that all Orientals who come to America are not 'laborers', "coolies". Some of them are as well born and have as high a tradition of culture behind them as the best that

dation of culture behind them as the best that Europe or America can show. Why, then, is there such a feeling of touch-me-not toward all Asians?

THE CAUSE OF FRICTION

He who will go below the handy and cherished pretexts will find that the fundamental cause of friction is not economic, but social. The chief reason why Asians are barred is because they are regarded as inferiors. That the so-called economic reason for anti-Asian discrimination, relative to the nationals of European countries, is pure myth has been ably demonstrated by an anonymous "Japanese" Publicist" in The Japan Advertiser, a Tokio American daily. can daily.

A Bengali Bird-Myth

In the Quarterly Journal of the Mythic Society Mr. Sarat Chandra Mitra writes :-

Regarding the evolution of this hird Indian black-headed oriole, the following actiological myth is current in the village of Kuarpur in the Madaripur Sub-Division of the District of Faridpur in Eistern Bengal:

Once upon a time, there lived a woman who had several daughters-in-law. But she hated the youngest daughter-in-law with the greatest of rancour. Whonever guests or relatives came to her house, she compelled her much-maitreated youngest daughter-in-law to serve the said guest or relative with her own meal. As the cruel mother-in-law with her own meal. As the cruel mother-in-law would not cook any fresh meal thereafter for her hated youngest daughter-in-law, the latter had to remain fasting during the whole of the day-time. One day, a relative having arrived in the house, the ill-treated youngest daughter-in-law was, as usual, obliged to entertain him by serving out to him the platterful of her own morning-meal. But as usual no fresh meal was cooked for her thereafter. The result was that she had to remain fasting the whole of that day.

Being unable to endure her mother-in-law's cruel ill-treatment any longer, she besmeared the whole of her own body with the paste of the yellow turmeric, and placed upon her own head an earthen pot (handi) blackened with soot and went away from the house, crying out: "Kutumay, Kutumay", that is to say, "O guests and relatives! You are (now) welcome (lit. you may now come) (though you have been the cause of my death)." She was, subsequently, metamorphosed into the yellow-plumaged and black-headed bird which now bears the appellation of the Indian Black-headed Oriole or Bene Bou or Halde Pakhi Black-headed Oriole or Bene Bou or Halde Pakhi and which utters even to the present day, a callnote sounding very much like the aforementioned words "Kutum ay Kutum ay"

Railway Posters

The Bengal Nagpur Railway Magazine gives reproductions of some striking railway posters and writes with reference to the subject -

The Railway poster in India is practically unknown. What future the poster has in this country can only be estimated after a very careful enquiry as to the incidence of Railway travel and the influence of the right kind of publicity.

Whether such publicity would be effective is also another question that would have to be answered.

In England railway posters have undergone a revolution. One reilway for instance has had a

revolution. One railway for instance has had a series of posters prepared by no less than seven-teen members of the Royal Academy. Other railways have followed suit, so that to-day the most beautiful posters now being exhibited belong to the railways companies. Each in itself is a beautiful picture-a real work of art.

There is of course no question that such posters influence traffic in England. Once a year at least the whole Nation goes holiday-making. It is al-ways a question as to whether fresh ground should ways a question as to whether fresh ground should be broken and the artistic poster is a strong lure to fresh fields and pastures new. It is not to be thought that the series contain only pictures of alluring and beautiful scenery. Not at all. An ordinary goods Depot comes in the list, also the cab of an express locomotive showing the driver and fireman. Industries are portrayed in vivid colours. The railways have definitely called in Art to their aid and it will be a matter of keen interest to see if the scheme succeeds in establishing a permanent relation.

When Sir John Millais' picture "Bubbles' was acquired by Messrs. Pears for a soap advertisement there was a tremendous outery and commercial adaptation was henceforth taboo. Now however it seems that such ideas are either dead or dying. Art goes forth into the market-place as a helper of commerce.

Profit-Sharing

A T

We read in the Bombay Co-operative Verve :-

The French Ministry of Labour has recently completed a study of profit-sharing in France. The recently was made because a number of bills had been introduced in the National Assembly to make profit-sharing compulsory and it seemed advisable in the Government to secure official information as

to the Government to secure official information as to the present status and results of profit-sharing.

No legislation has been enacted in France regarding the sharing of profits in industrial or commercial enterprises generally; but a law of December 18, 1915 made profit-sharing compulsory for workers' co-operative productive associations which receive support from the State. By a law of September 9, 1919 profit-sharing was compulsory in all mining operations which should receive concessions in the future, and a law of April 26, 1911, provided for the formation of incorporated co-partnership societies in which stock apportioned among the employees assures the workers an interest in the profits realised. The law of October 19, 1921 relating to the new regime of the Railways, has been considered by some to permit the creation of a system of profit-sharing on inclineds. The question was considered in the National Assembly during the discussion of the law but the text which was finally adopted provides only for a bonus granted for the purpose of promoting the interest of the personnel in the development of traffic and in economy in co-operative expenses. economy in co-operative expenses Information was secured relative to 328 workers

co-operative productive associations, employing about 12,000 workers. The profits divided among the members of these associations varied from 25 to 75 per cent, the majority of associations paying from 25 to 30 per cent. The profits distributed in 1926 by 195 of the associations amounted to 3,396,458 francs, 9,239 employees participating. The average amount received by workers who had then employed the entire year varied from 100 francs in the clothing industries to more than 1.000 francs in the glass and porcelain industries.

Profit-sharing due entirely to private initiative, was found to be in force in 75 out of 168 establish-

was found to be in force in 75 out of 168 establishments which were reported to the Ministry of Labour as having profit-sharing systems.

10 of the firms employed more than 1,000 persons, 7 from 500 to 1,000, 32 from 100 to 500, and 25:less than 100. There were profit-sharing plans in operations in 17 banks and insurance companies, 15 in the metal industries. 13 in mercantile establishments, 5 in the clothing industries and 4 in the lishments, 5 in the clothing industries and 4 in the book industry, while the remaining 21 were scattered among various other industries.

The results of profit-sharing for the year 1921 were reported for 62 establishments, employing

39, 550 workers.

The total amount of the profit-sharing dividends for 1921 was 25,743,000 francs. The average dividend per employee was 906 francs.

The general opinion of the employers in the undertaking in which there was a profit-sharing scheme was that it exerted a favourable influence on the stability of the working force. The opinion not so unanimous, however, in regard to improvement in production or employee relations, although several employers considered that production had been increased and that labour troubles

had been much clearly established by the study whether profit-sharing is increasing or on th decline. While more than one-third of the plan had been put into effect since 1919, a number. an among them some of the oldest, have recent. been abandoned.

A Bill has recently been introduced in the Portuguese Senate by Mr. Ferreira de Simas for the establishment of a profit-sharing scheme appli

cable to all Portugal.

Under the proposals of the Bill, all commercia industrial and agricultural undertakings and employer's must allow their work-people to participate in the profits of the enterprises by which they are employed without any responsibility being attached to the works by their employment contract in cases of business losses or failure. Of their side, the workers must, by the insertion of a special clause in their contract of employment renounce all rights to share in the managemen and supervision of undertakings, and in the auditing of accounts. cable to all Portugal. ing of accounts.

"The Indian Review"

HUMOURS OF THE POST OFFICE

Mr. H. A. Sams has contributed an enjoy able article on humours of the post office He tells us among other things -

Postal officials are not usually imaginative, but a clerk in the Circle Examiner's office of a certain Circle was an exception. The order had gone forth that 2 rupee stamps of a particular issumere to be used up. He got a letter on which customs duty of several thousand rupees had to be paid. He saw his chance and attached to the Customs Receipt sheets of 2 rupees stamps pasted end on until the length stretched from one end of a corridor to the other. The Postmaster Generat took the letter and roll of stamps to show to the then Director-General. As the sheets were unfurled, the Director General first smiled, there giggled and ended up with a fit of uncontrollable laughter.

Some clerks are not quite so brainy. At one

Some clerks are not quite so brainy. At one post office the Postmaster-General was trying to get the clerks to insure their lives. Most of the questions on the application form such as "Have you ever been insane?" obviously required the answer in the negative. Then come "Are you of temperate habits? Have you always been so?"

Most of the clerks answered both questions also in the negative!

NEED FOR MARINE BIOLOGICAL STATIONS IN INDIA.

Dr. K. N. Bahl thus concludes an article on the need for marine biological stations in India :-

To reach the goal of "Swaraj," we must not only try to be politically independent but must also develop our system of higher education so as to make us self-reliant and not dependent upon other countries. The number of Indian students

going abroad to finish their education is inordinately large, and the Lytton Committee held that "the perfecting of our educational machine in India" was the key to the problem of Indian students abroad. In every branch of human knowledge, we must improve our equipment and try and reach the highest standards possible. The establishment of marine stations is one of the ways to reach a high standard in Biology in Indian Universities.

WHAT BRITAIN EXPECTS OF INDIA

In her article on Britain and India, the Lady Emily Lutyens asks "what does Britain expect of India?" and answers :-

What does Britain expect of India? The great difficulty which all friends of India and Great Britain have to meet is the reproach of a lack of unity among Indian politicians. It is that more than a property and the property of the propert unity among Indian politicians. It is that more than anything else which gives the reactionaries the right to say that Indians do not yet know what they want, neither are they willing to unite together and sink their minor and local differences for the great national cause of Swaraj. Therefore it seems to me that the first step is for the leaders of all the parties to meet together and to prepare a common programme and to define very clearly exactly what is meant by Swaraj. The first step towards this unity was taken in Bombay last month when a really representative Committee was formed to consider the outlines of a Constitution.

POPULATION AND SUBSISTENCE IN INDIA

Mr. D. S. Gordon observes in his article on population and subsistence in India :-

One of the reasons why early marriages have continued to be in vogue has been the ease with which subsistence could be found in the past. In fact, it was no disqualification at all for a bridefact, it was no disqualification at all for a bridegroom not to have an income; for the maintenance of the family was the look-out of his
elders; or, if he belonged to a joint-family, it was
the common concern of all the members. The
situation, however, has now changed with the
hange in economic conditions; the upper and the
middle classes have become more circumspect.
But in regard to the lower classes the effect has
been quite otherwise. In their case a wife and
children really augment the scanty earnings of a
man, so that the man undertakes little responsibilby and bears no burden in marrying. Indeed, ty and bears no burden in marrying. Indeed, it is even said that children are the poor man's Insurance, for they somehow support their parents in old age. grow

But it is obvious that this tends to perpetuate a section of people who will always live on the lorderland of starvation with no prospect of physical or intellectual improvement. It is physical or intellectual improvement. It is necessary, therefore, to cultivate higher ideals, spicially among such as these. Marriage should not be regarded as a socio-religious affair which happens as a matter of course. On the other hand a sense of individual responsibility must develop in each father of a family, and the community must come to regard the capacity to provide for a family as a size qua non of matriage. Until this comes to pass no reduction in the birthate and no material improvements are possible.

"Journal of the Bihar and Orissa Research Society

BRAHVI SEALS

We learn from an article by Mr. K. P. Jayaswal that very ancient Brahmi seals. three in number, were found at Patna by Cunningham. After Cunningham's discovery six seals have been found. Four of them are glass seals, of which three were dug out by Dr Spooner at Kumrahar, and the fourth was found by Mr Manoranjan Ghosh at Bulandi Bagh

The glass seals have no catches on their back. The grass sears have no catches on their osci. The back portions are plain and smooth It seems that they are moulds for preparing clay impressions which when burnt would have been the real matrices. On this hypothesis alone we can explain the positive legends of the seals and the want of catches. The legends in relief show clearly that the seals have been cert which proves a development. the seals have been cast which proves a developed stage of glass industry at Patna where the present glass industry has probably come down from

ancient times.

The first three seals appear to belong to a period errea 200 B C. Out of the three, the second is more archaic than the others. The fourth is more important from epigraphic point of view. The letters are certainly older than Asoka's time.

The scal may be even older than 300 B.C. and we may even call it pre-Mauryan.

Dr. Spooner and Rai Sahib Monoranjan Ghose are to be congratulated on the discovery of these important finds in such a unique material. To my knowledge, glass seals have not been discovered elsewhere.

The fifth seal was discovered by Mr. Jayaswal. The lettering shows that the seal belongs to the 2nd century B C.

THE USE OF GLASS IN ANCIPVY INDIA

Mr. Manoranjan Ghosh says in his article on the use of glass in ancient India --

It is a common belief that glass was introduced in India by foreigners during the Muhammadan time. Before entering the Archeological Department, I had also the same notion until I came across glass objects in the excavations at Taxila. The Pataliputra excavations gave us glass objects The transputra excavations gave us glass objects with letters which supplied a more definite clue and conclusively proved that glass manufacture was common in ancient India. A study of ancient Indian literature has confirmed the behef that glass was known in India from very early time and its use common in life in the time of the Buddha and from that time onwards there are continuous references to glass in Pah and Sunskrit literature. literature.

Mr. Ghosh goes on to quote references to glass in ancient Indian literature. The first passage he quotes is from the Satapatha Brahmans, of which the date is about the eighth century B. C. Passages are then quoted

from the Vinaya Pitaka, Kantilya's Arthasasthe Sukraniti, Katha-Saritsagara, and "The above passages clearly the Susruta. prove that glass was known in ancient the time of the Satapatha india from Brahmana."

Mr. Ghosh then proceeds to tell the reader in what places glass has been found in the course of archaeological excavations. From this section of his article we shall cull

only a few details.

In the Manikyala Stupa in the Punjab glass has been found deposited within the stupa. The date of the Manikyala Stupa is about first century B. C. Pandit Dayaram Sahni, Superintendent, Archæological Survey, Hindu and Buddhist Monumenta, Punjab, has found glass bangles in association with seals containing peculiar heiroglyphic legends and neolithic implements at Harappa, Montgemery District, Punjab.

Sir John Marshall. Director-General of Archæology

Sir John Marshall, Director-General of Archeology in India has found blue glass tiles at Taxıla in Buddhist chapels which can be dated as early as accord century B. C. Glass flask and fragments of glass have also been found at Taxıla which according to Sir John Marshall can be dated as early as sixth

century B. C.

We have already seen what glass seals have been found at Patna.

Mr. B. D. Banerjee has found glass beads and other objects at Mohen-jo-Daro in Sindh at a distance other objects at monen-jo-paro in Sindh at a distance of six miles from the railway station at Dokri on the Educi-Kotri sections of the North-Western Railway. He places the glass and the Harappa-like seals found there as early as 2500 B. C. He observes very close affinity in the objects found there with the objects excavated at Crete by Arthur Evans.

Ontside India the earliest date for the use of class was in Egypt 1400 B. C., because numerous class heads and coloured glass have been found in abundance in the tomb of Tutankhamen who flourshed about that date. Mr. Arthur Evans has found class beads in the Palace of Knossos, Crete, and dates them as early as 3rd millennium B.C.

SANSKRIT WORKS ON ELEPHANTS

Meesrs. Vinayatosa Bhattacharyya and G. K. Shrigondekar describe the extensive literature that there is in Sanskrit on elephants, the methods of catching them, their tending and treatment.

OUR HISTORICAL SENSE.

Mr. B. C. Bhattacharya deals with

The question whether the Ancient Indians recorded no contemporary events or whether they never had the knowledge of writing history in the modern fashion. The latter question to be applied to Ancient India would be assuredly a self-contradiction. The first question can be most adequately

manufered.

History fundamentally deals with memorable events—events connected with the life-history of contemporary kings, religious teachers, and power-

ful clans. This kind of history we find in abundance in Indian literature, ancient tradition, coins and inscriptions. In some cases, it is possible to get a full glimpse into the daily life of ancient peoples

4.

MAGICAL PRACTICES, OMENS AND DEBAMS AMONG BIRHORS

Roy Bahadur Sarat Chandra Roy gives a brief account of the rites and practices, spells and taboos by which the Birhor seeks to enter into some sort of relations with the more important spirits and to delude or scare away or control the lesser spirits so as to secure good luck and avoid bad luck to the community, the family and the individual, "either by utilizing or avoiding some magical virtue supposed to inhere in certain material objects or in certain pantomimic or other practices or in certain words or spells, or through the help of certain impersonal powers or energies which the Birhor magician thinks he can set in motion through appropriate actions to further his own ends or those of his clientele or community." Mr. Roy also treats of the interpretations of omens and dreams among the Birhors.

NIBVANAV

Mr. Kalipada Mitra discourses on the meaning or meanings of Nibbanam in Buddhist literature and arrives at the conclusion that 'Nibbana is left avyakta, ineffable, indeterminate, a mystery by the Buddha."

"Welfare"

LUXURY

We make the following extracts from Major B. D. Basu's article on Luxury:

Prof. Ross writes:—
"Intercourse with abroad acquaints a people with foreign luxuries and implants new cravings. The sudden growth of the standard of consumption beyond the means of satisfying it sharpens the struggle for wealth, undermines old personal ideals and subverts the old valuations of things. As tastes and appetites which hold them in check heavy borrowings from a foreign culture are apt to demoralize, for a time, the upper classes of the people. The Greek moralists deplored the rage for Assatic luxuries, which whetted the greed for gold and led the Greeks to take the pay of the Persist King." (Ross's Social Control, pp: 407-468). Unfortunately the same is happening in Inductorday. Prof. Ross writes :-

Luxury brings about race suicide, for it is accompanied by a disinclination to bring into the world or rest, children. It is lineary to which should be successed. Noo-Malthusianism of outlines. times.

Again, it is luxury which begets what is known as "Fashion." Count Giacomo Leopardi, in his "Dialogue between Fashion and Death" very humorously calls them twin sisters. He makes "fashion" speak

to Death,—
"I say then that the tendency and operation common to us both is to be continually renewing the world; but whereas you have from the beginning aimed your efforts directly against the bodily constitutions and the lives of men, I am content to limit my operations to such things as their beards, their hair, their clothing, their furniture, their dwellings, and the like. Nevertheless, it is a fact that I have not failed at times to play men certain tricks not altogether unworthy to be compared to your own work; In short, I contrive to persuade the more ambitious of mortals daily to endure countless inconveniences, sometimes torture and mutilation, ay, even death itself for the love they lear towards me,"
"Death" is made to exclaim,—

By my faith, I begin to believe that you are my sister after all. Nay, it is as sure as death, and you have no need to produce the birth certificate of the parish-priest in order to prove it.

Pros and Cons of Industrial Insurance

In an article on this subject Professor Benoy Kumar Sarkar makes the statement

The French Chambre des deputes has been devising a scheme of legislation for industrial insurance, or as it is known in French. les assurances sociales. The government is bent on taking insurance to the control of th mmediate steps in order to relieve persons with meomes not exceeding 10,000 francs(about Rs. 2000) per year and cover their risks such as arise from stream that cover their risks such as arise from stream and the insurance is to be compulsory. Premiums are to be paid at the rate of 10 per cent of the wage of which half will be charged of the employer and the rest of the employee. Altogether 9 million persons are going to be insured in this manner.

The system was introduced in Germany by Bismarck in 1883 in order to cover sickness.

Against the scheme.

M. Villey says that the scheme is philanthropic but in contrary to the principles of economics and blikely to produce evil consequences. In the first place, the incidence of the premium will tend to fall on the employer. But will it not in that event ultimately touch the workingman's wage? In any dee the wage-earner's own foresight and sense of individual responsibility is likely to be

Germany being the pioneer in industrial insurance, Prof. Sarkar also summarises the experience of the German people, begins thus :-

In 1907 lecturing at the Industrial Club of Chicago, Professor Schumacher (then of the Inversity of Bonn, now of Berlin), concluded as follows: The result of all these measures is that Germany is today ahead of all other countries in the matter of arrangements for the protection of life and health. We largely attribute the most

remarkable feature in the modern development of our German nation, of modern German life, to this industrial insurance legislation.
"We are convinced that only on the basis of such

a far-reaching industrial insurance legislation that object could be attained of which we are so proud. an increase of our population together with the great improvement of the standard of life in the broad masses of our people"

RURAL SURVEY

From Professor Dr Rajani Kanta Das's article on rural survey, we learn among other things that

In point of efficiency Indus stands 22nd among agricultural countries. When it is pointed out that most of the farm produce is exported as raw materials and not as manufactured goods and that more than half of the fisheries, forest land and mineral resources remain untapped, unafforested or unmined, it becomes easier to understand why

India is the poorest country in the world.

The vital problem of India today is that of industrial re-organisation with a view to augmenting social capital and national dividend. The supreme need of Indus is the introduction of modern arts and sciences into productive processes, of which agriculture forms the pivotal point in both national and village economy. It is upon a solid industrial organisation that a sound and progressive national life can be built.

Modern industrialism has already established itself in India, especially in manufacturing industries. But its field is not limited to the textile

industries.

Modern industrialism is not an unmixed blessing. Its indiscriminate adoption may cause more harm than good The old village was not only an industrial unit, but also a social and political whole. It had its own individuality, which had withstood the ravages of ages under the rise and fall of dynasties and empires. The real solution of India's problem must come from within and not from without What is needed is to help India evolve an industrial system which will form the substruct an industrial system which will form the substructure of her culture and civilization and at the same time ensure her political development and social

progress.

The re-organisation of the village with this object in view will necessarily raise such pertinent questions as the following: (1) What are the essential features of the village? (2) Why and how has the dis-organisation been brought about? (3) What are the existing institutions through which modern science, art and philosophy can be infused into its social, industrial and political aims and objects?

(4) How can the people be awakened to strive for following and political aims.

fuller and richer self-realization?

These and similar questions cannot be adequately answered without a comprehensive survey of villagelife. Lake the diagnosis of a disease, rural survey must precede rural reconstruction. A survey of this kind will naturally take into consideration such features of the village organism as land, people, industrial systems, political organisations and social institutions.

Such a comprehensive survey is bound to be very broad and will eneroach upon the domain of several theoretical and applied sciences, both actual and applied sciences, both natural and social. But when studied from the

THE MODERN REVIEW FOR FEBRUARY, 1925

larger aspects of sociology with economics as the background, all the diverse elements and parts will be correlated into an organic whole, which is called obtlective life or society.

W. W. PEARSON

Of the late Mr. W. W. Pearson, Mr. Ashoke Chatteriee observes in an illustrated erticle :-

Our dear friend prayed and worked so that the world could be a better place to live in, so that there could be more real happiness and the growls of disastisfied blood-lust die out for ever, so that the fair earth be not again and again scorched by the fire of covetous criminality and wanton fratricide.
He devoted his life to the cause of Human WellBeing and he did not want to be a 'good soldier',
because he was a good teacher.

A tall spare figure, a face expressive of joy in
sacrifice, eyes that could see the sorrow and suffer-

ing hidden in the heart of others, a smile that gave unpretentious sympathy and won friendship and a nature simple as a child's but strong like that of a knight-errant, are the things that come up in my mind when I think of William Winstanley Pearson.

Toys for Children

Mrs. Nestor Noel pleads for more toys to be given to children, even when they are thought to be too old for them.

People are very particular to give their children enough to eat. Certainly most children nowadays provided their parents are able to supply it—

have more than enough to eat
Yet while their little bodies are stuffed, their
hearts are often starved for want of toys.
"I suppose you are busy buying toys." I

remarked to a mother one day, a few weeks before Christmas.

"O no." she said. "My children are too old for toys!" The eldest one was not yet nine!

"What do you give them?" I asked She told me that she filled their stockings with peanuts,

oranges and candy! More to eat! From time to time, I had taken these children toys and I knew by their delight in my gifts that they would have appreciated toys more than anything else.

HOW A STEAM BOILER IS WORKED

Prof. S. R. M. Naidu, F.R.s (sc.) of the Visvabharati, describes in detail how a steam boiler is worked, observing, to begin with :-

The life of a steam boiler depends largely on the manner in which it is worked. Recklessness and ignorance on the part of those responsible for the maintenance and upkeep of a boiler are certain to lead to rapid wear and tear and, perhaps, serious accident, or possibly explosion. It is an unfortunate fact that steam users frequently place their boilers in charge of ordinary labourers, thinking that it is nuite unnecessary to employ skilled attendants. This is a sad mistake which may result not only

in excessive cost of upkeep, but also in unduly heavy coal bills.

The working of a boiler comprises several distinct operations which may be summarised as

(a) Filling with water and raising steam.
(b) Feeding.
(c) Maintaining a constant pressure. (d) Firing,

(e) Shutting down and emptying.

WHAT CHILDREN REALLY WANT

Mrs. Mary S. Stover tells us in the course of a short article full of insight.

One can do a child grave injustice by getting him everything he wants. This is a world of limitations, thwarted wishes, necessity for sharing with others. The person whose every early wish was granted finds it hard to adjust himself to

We ought, however, to choose our gifts from the standpoint of sympathetic regard for the child and less from what catches the adult fancy; there ought also to be more concern for the needs of his developing life. Knowledge of what the child really wants furnishes valuable understanding of his personality. This means not only to know what he wants but why.

Co-operation in Rural Reconstruction

The following paragraphs serve as a sort of introduction to an article on co-operation rural reconstruction by Mr. S. C. Sarkar, M.A., M.R.A.S, B. & o.c.s. (retired) :-

Even if one casually surveys the economic condition of a present-day village in Eastern India one will not fail to be struck with its random and topsy-turvy character, the result of many factorinhering in a decadent age.—The need of a reconstruction on economic lines will, at the same time, make itself felt. The need has been there for many a long day; but, is reconstruction possible? To a great extent, yes; yes, only if all the constituents of a village cohere and co-operate. In faction there is no hope of well-being; in rivalries, there nere is no nope of well-being; in rivairies, there is no good; competition and ambition to dominate are vain. Mutual service, helpful co-operation is the force, the moral attraction, that may reconstruct, and bring forth that desirable harmony, that hoped-for progress, that wished-for peace and goodwill, which many an earnest spirit are now dreaming of.

Ordinarily,—and generally speaking—a villagecommunity is composed of the land-owning classes the peasantry and the landless labourers; the rur al artisans and handicraftsmen, the petty trader and the grain or money lenders. In a co-operative reconstruction, the best interests of all these classes of the population will have to be served; combining self-service with the service of one's neigh

hours, to the advantage of both.

THE DAIRY INDUSTRY

The importance of the dairy industry, or which Mr. V. S. Chiunaswami, n.a., (Technical Chemist), writes an illustrated article will be understood from the extract giver below.

S & Sparker L

Mr. W. H. Harrison, Agricultural Adviser to the lovernment of India in one of his elaborate contri-utions pointed out from striking facts from history nat the prosperity of a nation has a direct rela-ion to the dairy cow. He has therefore stressed pon the importance of the needs of India's Dairy ndustry. A. Hayne of Chicago sums up in the illowing sentences the benefits that the dairy ow has conferred on the human race.

The cow is one of the greatest blessings to

10 human race.

2. No nation or people has become highly wilised without her.

3. She produces the best human food on earth.
4. She makes this health-building, strength wing food from grass and coarse plants. strength-

5. She provides not only good food for her young nd her keeper's family but also a surplus to

6. Without her, agriculture is not permanent r prosperous and her people are not healthy and

appy.
7. Where cows are kept and cared for civilisa-

on advances, lands grow richer, homes grow etter, and debts grow fewer.

8. Truly the cow is the Mother of Prosperity. and verily therefore the Kama-Dhenu of Vedic ore has been worshipped as on her depended the cusehold prosperity, health and happiness. But the interacy and ignorance of the public has played o small part in jeopardising the milk industry. The present state of the dairy industry is recarious. It was only in the last World's Dairy longress that Mr. William Smith, Imperial Dairy xpert, stated that of all the civilised countries in the corld. India was matched that was metabolic the most backward in vorld. India was probably the most buckward in levelopment of the dairy industry. He stated that t was almost impossible to obtain reasonably pure nilk at any price. The milk supply is not only ery high in cost but it is also of inadequate nality

On Advertising

Advertisers in India will do well to read the whole of the article on the relation of the newspaper and the magazine to adver-tising, by Mr. Kshitindra Kumar Nag, Ph. B, of the University of Chicago. They will then he better able to decide where and how to advertise. By way of sample we quote the following passages :-

Of all the mediums of publicity for the adver-

Of all the mediums of publicity for the advertisement of saleable goods, the newspaper and the mazazine stand first. They are the mediums though which the producer or seller can reach effectively any considerable body of intelligent purchasing classes. From this general supposition it is interesting to note the special merits of each and institute comparisons of advertising values.

The magazine and newspaper have their distinct values as advertising mediums, and each is most essential in making the most out of the commodities that are offered for sale; each calls for a different style of copy, and for a different plan of advertising campaign. There are several things for the advertises to keep in mind before initiating any advertising campaign in either the newspaper or the magazine.

the training the star make a second as

The mental disposition of a newspaper reader is different from that of the magazine reader. The mind of the former is engrossed in the news of the day, and if he receives any impression from an advertisement he must get it quickly and easily. The life of the newspaper is short, seldom exceeds over twenty-four hours. It is waste of money and space to cover every aspect of a proposition in one issue of the newspaper. If an entire story of days in series of papers, adding a new phase each day and multiplying impressions until the reader has become convinced.

The circulation of the newspaper is largely

local generally, covering only the city in which

it is issued.

The newspaper permits the advertiser to make frequent appeals from the product to be sold, the paper being published daily or several times daily. For example, in America, business men's shopping advertisements come out in morning paper, articles for home use are advertished in the evening paper, Again, the daily price-changes of a product can best be announced easily and quickly through the medium of newspaper advertising.

Now, let us note some of the merits of the magazine in respect to advertising. People read magazines more leasurely than they do newspapers and have time to peruse the advertisements more and have time to peruse the advertisements more carefully. They are a distinct class of readers, but there are variations within the class which can be appealed to by varying the character of the advertising according to the character of the magazine. For instance, the advertisement inserted in a magazine having its circulation among cultured and intellectual people must be of the highest type from the standpoint of appearance, language, and argument. The average magazine has a life of thirty to ninety days, that is, the average magazine will be around the average home or the average club from thirty to minety days, and during that time its advertisance magazine magazine will be advertisance magazine magazine will be advertisance magazine magazine will be members.

advertising pages are repeatedly scanned by members of the family, neighbours, visitors, or members of the club. In some cases, indeed, the magazines are not put away until the end of the year, while in others they are carefully laid away each month as soon as a new number arrives

The magazine reaches particular groups of people in all sections of the province or the country. In other words, its circulation is national. Then, too, a

single copy is often read by several persons.

From the few aspects of the merits of the new spaper and the macazine mentioned above, it is now pretty clear that the new spaper and the magazine perform entirely different functions and magazine perform entirely different functions and have different values in respect to the advertising plan. Whether the advertiser should use the newspaper or the magazine depends upon the kind of commodity he has to sell, the class of people he wants to reach, and the character of appeal he has to make.

A COUNTY SCRIPT FOR INDIA

Dr. I. J. S. Taraporevala, Ph. D., Professor of Comparative Philology, Calcutta University, discourses on a common script for India, observing

When we consider this question of script we must beer in mind several important points. The chief requirements for a script to be acceptable

(1) It should be easy to write,
(2) It should be easy to remember,
(3) It should be scientifically accurate; and, at

the same time.

(4) It should be based on principles quite easily renderstandable by the man of average education

To these four I might add a fifth qualification, learing in mind this is the question of a script for India, not of an international phonetic script. Hence the additional qualification is;

(5) It should, if possible, thave historical asso-

ciations with our own past.
In the ancient days, even from the third century.
B. O., we meet with the unexpected and very welcome fact that all the diverse scripts of India are really of one common parentage, and that they have all inherited to a greater or lesser degree the characteristics of their Parent, Moreover we find that the idea of a common script for all India was united under the Emperor Asola there was this common script for the land. About this Parent the Brahmi, this is what Isaac Taylor says in his work on The Alphabet

"In India the ... monuments of primitive writing consist of a magnificent series of contemporaneous inscriptions, written before the divergence of the Indian alphabets began, indisputable in date, in a wonderful state of preservation, repeated again and again, almost in the same works, on rocks and pillars throughout the breadth of Hindustan.

"The elaborate and beautiful alphabet employed in these records is unrivalled among the alphabetof the world for its scientific excellence. Bold, simple, grand, complete the characters are easy to remember, facile to read, and difficult to mistake, representing with absolute precision the graduated niceties of sound which the phonetic analysis of sanskrit grammarians had discovered in that marvellous idiom. None of the artificial alphabets which have been proposed by modern philologists excel it in delicacy, ingenuity, exactitude and comprehen-

Here we have all the qualifications for a perfect script existing in our own land, the handswork of our own peoples, during at least 2500 years past. We have a script exactly adapted to our special sounds which is able to distinguish them with great nicety. And the direct descendant of the Brahmi, our modern Nagari (Devanagari) alphabet, fulfils all the requirements of a perfect script fulfils all the requirements of a perfect script.

Dr. Taraporevala points out the disadvantages of the Roman script.

> THE ECONOMICS OF LEATHER TRADE AND INDUSTRY

= 4

Mr. B. Ramachandra Rau, M.A., L.T., F.R.E.S. Lecturer in Economics and Commerce. Calcutta University, writes on the economics of the leather industry, dwelling in the first article on the economic importance of leather and taking a survey of the existing industry.

THE RUBBER INDUSTRY

Professor Prannath Pundit, M.Sc., contributes an illustrated article on the rubber industry, concluding :-

"We have seen that India annually exports a large quantity of raw rubber. It is however a pity that the quantity of manufactured goods has not kept pace with the produce of raw-rubber. To quote the Report of the Indian Industrial Commission (1916-18).—This industry is one of those that are essential in the national interest and should be inaugurated. by special measures."

INDIGO TRADE

Mr. Doongersee Dharamsee writes on the indigo trade, pointing out :-

The cultivation of Indigo is not only of importance to the indigo industry itself, but that there are other advantages, which materially help and enrich other industries. According to Sir Thomas Holland, it has been found that, acting as a soil feithliser indigo increases the yield of other crops with which it is grown in association or rotation Wheat and sugar benefit greatly by association with indigo. As no synthetic substitute will be made in India, the cultivation of natural indigo is therefore a necessary safeguard for the Industries of India. An adequate production of natural indigo is an insurance against the monomoly danger. is an insurance against the monopoly dangers which may arise if synthetic product is allowed to completely replace it as no synthetic indigotine is made in India.

The cultivation of indigo by Indians is on a distinctly larger scale, than that on plantation-controlled by European planters. For the die is much used by Indian dyers throughout India. If the cheap foreign synthetic dye replaces it, then the Indian industry will die an unnatural death It is a pity that the European planters do not publish, and demonstrate, the results of scientific It is a pity that the European planters do not publish and demonstrate the results of scientific improvements and advance made by them in the growing and production of indigotine to the small cultivators, who would largely benefit by it. The research work done at Pusa has been considerable but unfortunately the results have not reached Indian cultivators yet and indigo cultivation regetting profitless as far as Indian Ryots are conserved. cerned.

Revolutionary changes in the manufacture of iron smelting are probable in the very near future rendering the production of coke in huge quantities at a high temperature unnecessary and the production of great quantities of benzene napthalene etcheaply will stop, and there is a likelihood for the natural colouring matters, such as indigo, again come to the fore.

PHOTO CERAMICS

Prof. Dr. H. K. Sen, p.sc., P.R.s., Professor of Applied Chemistry at the Calcutta University writes on photo ceramics, explaining it as follows :-

Photo-ceramics is the art of transferring photographs to porcelain, enamel, stone-ware, or metal back-grounds, and giving these pictures permanence by burning them into the grounds with the help

of heat. The development of this art is so closely associated with the development of the science and art of the phototype process, that inventors who worked out processes for the one. also influenced the development of the other, and indeed, the greater practical utility of the chrome-lithoprinting process caused this small but interesting art of photo-ceramics to attain its present condition of perfection.

NATION-BUILDING AND THE CRITICAL SPIRIT

Babu Ramananda Chatteriec explains in an article on nation-building and the critical spirit how the critical spirit is useful and necessary in the spheres of religion and social polity, in politics, economics, industry and in every other field of national activity. for the purpose of building up a united Indian nation

"Current Thought"

THE OUTCOME OF MODERN BUSINESS PRINCIPLES

In the course of an article on the age of power, Mr. Wilfred Wellock points out consequences of modern business principles.

Modern business principles could all be rolled up into one, viz, that it is a man's object in business to acquire as much wealth as he can for himself and his family. By what moral laws he shall be guided to this end, it is not stated. As a fact there are none. He may make five per cent or five hundred per cent; he may "corner' commodities or form combines. The only stipulation is that he shall hold to his bargain. It is not a crime to "cook" a market, or to take advantage of knowing a little more, or seeing a little farther than one's neighbour. The only crime is to squeal when you are caught in the trap, and particularly if you blame the man who set it for you.

The outcome may be imagined: it is the working itself out to its logical conclusion. A series of ever-widening clashes has marked the course of this hopeless conflict. Each manufacturer has lought his neighbour, each combine its competitor. Modern business principles could all be rolled

of this hopeless conflict. Each manufacturer has fought his neighbour, each combine its competitor, each financial group its rival, while, internationally, the same conflict has taken place, first between industries, then between the combines, and finally between the banks and financial groups.

At times the conflict has broken out into open hostility, within the nations in the form of strikes or, worse, civil war, and internationally in the form of increasingly ferocious war, generating all the time an unwholesome fear, and causing highly civilised nations to spend increasing portions of their boasted wealth on armies and the means of destruction. destruction.

The world war was a symptom and a warning, a premise in the logical syllogism that history is working out. That war came as a shock to hundreds of milions of people who had made the tragic mistake of allowing the Press and the Church to do their thinking for them. Yet it was, but the

natural fruitage of greed. And worse ware will follow unless the attempt-to carry on civilisation by the principle of greed be abandoned.

THE MACHINE WORSHIPPERS

The following extracts will give some idea of what Rene Fulop Miller calls the cult of machine worship .-

In Russia, the machine has become for the multitude the new God, insatiably devouring sacrifices afresh. All the known means are employed in the attempt to uncover its mysterious being, and to subordinate life and the world's doings to

its laws.

Its laws.

In every slightest detail, this reverence for the machine bears the unmistakable signs of a sternly practised religious cult. This is clearly perceptible from a visit to the "Studios" or "Work-shops" of the new artists (as the mystery-temples of the Machine Worshippers are called). Upon entering these sacred predicts, along one wall are seen standing, as it mystically conjured up there, machine-like structures of steel reinforced cement, or wood—the myster ideas of the new Wachine. or wood—the mystic idols of the new Machine God. The walls are thickly covered with designs showing various positions, sections, or the processes of building (incainations)—the aspect and majesty of this God. These technical drawings, numbered A. B. C. D. etc., in their chaste severe lines, recall at moments those austere holy pictures of the primitives—The Holy Machine cross-section A. the Holy Dynamo-generator B, the Holy Blast-furnace C, etc., and all these are bearing out testimony to the eternal truth of the All-highest, the Absolute, whose law governs the whole world— Absolute, whose law governs the whole world-Amen

The people of these halls by their glances and expressions and their completely awe-inspired behaviour, display all the typical outward signs of fanaticism, revealing their inward unison with the fanaticism, revealing their inward inition with the Divine both their head-dress and clothing have an air of the ritual costume about them. They stand for hours in the temple of their God, lost in amazement, or meditating—as if deep in prayer before the holy images—the numerous wood and steel constructions and the old designs upon the walls, those extraordinary sacred symbols of the new thurch. Their mass-gatherings in the presence of these idols are veritable devotional ceremonies in honour of the supreme "Deux ex Machina."

At the famous Monday-midnight rites in the

At the famous Monday-midnight rites in the Foregger-Studios', they perform the Machine-Dance in homage to the Machine God
Proudly, the Revolution had proclaimed the fully responsible, self-consicious man, owing no allegnance or subjection to superhuman forces, or to a God. The pictures of the old God had been ridiculed, and Allah, Jehovah and Christ derided. Simultaneously americal the new adoration of Simultaneously appeared the new adoration or religion, with all the puraphernalia, even with all the old ceremonial requisition, merely re-draped to suit the times but nevertheless manifesting a fanaticism and intolerance similar to that of other

in a semi-circular, red-brick building in Moscow is the office of the High Priests of the Machine-God: the Gastypes Institute for the research of Mechanistic Laws, which ascertains by means of the most exact measurements and computations, the bio-mechanic of the Machine God in men.

THE MODERN REVIEW FOR FEBRUARY, 1925.

In the first hall, the attempt is made to determe the maximum capacity for achievement of human organism. Four departments, with the human organism is being the matter than the Psycho-economic Laboratory, the economic that the human organism is being the listed. How much energy is expended at the province of the human organism is being the listed out as economically as possible, are being definitely ascertained; and the most favourbie durations for periods of rest and work are being sternly graded. They have also discovered to exactly determinable psychologic frame of maind essential to the best work, and the various psychological stimuli have been estimated to a second. Nothing remains hidden to the scientist; the time taken for every minion and macro-movement is determined down to the hundredth of a second. Precision has exulted in the most intoxicating triumphs, comparable only to those of a Caesar, in his most energetic and commences to the contraction of the contraction of the human organism. In the first hall, the attempt is made to deter-

mehensive study of the human organism.

Another, equally important place of initiation.

a sort of second centre of the Machine Cult, is
Mayerhold's "Theatre Workshop." Here the
Machine Man is exhibited and demonstrated. The Here the Machine Man is exhibited and demonstrated The Theatre no longer serves as a diversion it is a work-yard, a State factory, exclusively concerned with the work of creating the new Man, and Mayerhold is the most distinguished of his manufacturers. He it was who first portrayed upon the stage the machine works of the human body, its bio-mechanical functions. By his exact study of the anatomical and physiological constitution of the human organism. Mayerhold did away with the entire customary trappings of mechanical stage laws. In their place, he substituted the fruits of that really wonderful series of achievements, from the classic investigations of the Brothers Weber to the kinematographic analysis of Brothers Weber to the kinematographic analysis of the Marcy Institute, bringing their results into

In Europe and America, the Machine cult is only admitted as a secret tendency, still definitely bound to industrial activities. To the world the spiritual aspect of a righteous intellectualism is preferred. In Russia, on the other hand, there is open confession of faith in the Machine, and this fattle is lived with Russian intensity into religious costasy. Therefore, it is quite possible that this finatic aberration may have stronger and more homographle, outcome in the course, of history than the rest of the world's customary and slightly sour, genteel diplomatic relations between commerce and the life of the mind.

DUTCH AND PORTLOUFSE IN JAVA

In his second article on the Hindu civilisation of Java, Mr. C. F. Andrews quotes certain passages which show that

At this time, terrible evils were inflicted upon the islands of the Malay Archipelago by both Dutch and Portuguese alike. When the islands could not of any help to one of the warring powers, their trees and plantations were destroyed, so as a larger tamine to the population. The following account is given of the last stages of their process, their trees all the steps of de-population.

Molecular was quite stripped of inhabitants,

the cloves were spoiled before the harvest was ripe. When the people returned, the fruit was found all spoilt on the trees.'

'After these proceedings the Agent visited the island and destroyed all fruit-bearing trees and sago-palms, so that the inhabitants were deprived of food and stores. The rebels were finally compalled to destroy their clove trees. Kour thousand of food and stores. The recens were many com-pelled to destory their clove trees. Four thousand of these trees were cut down. The natives of the island would not listen, so on the night of the 22nd December we surprised the chiefs who were gathered at their assembly and all the means of Later on, the inhabitants wishing to tebel, we went to Subo. The inhabitants of Hiton have been comto Subo. manded to destroy all fruit-hearing trees and sage-palms and other necessities of food, which have been planted for no other purpose but to serve as food in time of rebellion, and it is very probable that they will make another effort to throw off the voke of the Company. Agents have been sent round the islands to find out the situation of the clove trees, so that, in case of need, orders may be sent for their complete exterimpation. Our intention is to eradicate all fruit-bearing trees, except in the above-mentioned place which we are able to protect. Our own opinion is, that the first extermination of the trees will have to be followed by others, and the only means of enjoying beautiful scenery is the destruction of the clove trees and on outlying islands in order to motect ourselves against the treachery of the natives and the wicked efforts of our enemies."

Andrews gives some idea of the admirable work done by Sir Stamford

Sir Stamford Raffles had been marvellously succossful in Java, as an administrator. He had been also the very first to rescue the old Hindu and Buddhist ruins in that island from further inevitable decay. Probably, his influence alone saved Boro-budur from utter destruction. He discovered this wonder of the world, covered over with earth, and liable at any moment to crumble into ruins, owing to land slides and heavy rains. Posterity cannot be too grateful to this truly great Englishman for his wonderful care of antiquity and his archaeological enthusiasm and research. Long before any one was thinking of preserving ancient monuments, he began this remarkable work in Java.

The Dutch took up the work of administration, which Sir Stamford Raffles had laid down. During the niucteenth century, their administration has been on the whole, in certain economic directions, remarkably successful The population of the island has enormously increased, so that to day it numbers nearly five times what it was in 1815.

As regards the Muhammadan invasion. Mr. Andrews observes .-

The Muhammadan invasion, which followed this Hindu civilisation, swept away the greater part of the earlier culture, and made the Malay race virile and strong in war, but weak in intellectual and artistic pursuits. A certain amount of art still remained in the music, dancing and social life of the people, but very little else was in evidence after the Mohammedan invasion had swept over the land.

7.1

Indians in South Africa We learn from Gandhiii's article on Satvagraha in South Africa that there

Absolutely free Indians now number between forty to fifty thousands, while the 'Free Indians' socalled, that is, the labourers who are freed from their indentures and their descendants, number about a hundred thousand.

JAPANESE AND INDIAN PAINTING

According to Mr. Manindra Gupta-

Landscape has no place in Indian art. Only in Morul and Raiput painting, we see landscapes, and even there only as the background of pictures. The even there only as the background of pictures. The reason is that India has expressed her art through the varied moods of human life, while Japan has expressed her art through the varied moods of Nature. In our art, Man is of primary. Nature only of secondary, significance. In Japanese art, Nature is first and man comes after. The physical beauty of a man or woman has never aroused the imagina-tion of a Japanese. The Japanese have no fascination for the human body, so rarely is any naked figure

seen in Japanose painting.

Japanese art became folk-art at the time of the Ukiyoji artist. In India such a large school of folkart has never grown up Ajanta painting was not at all a folk-art, but Rajput painting was Mogul painting can never be said to be folk art, as the artists were chiefly court painters. Only the Bengali village painters known as "poto" were real folk artists. Day by day, these artists are disappearing.

Value and Defects of Present-day International Law

Mr. Arthus Davies writes in The Young Men of India :--

What is the value of the international bur ue

what is the value of the land of have?

(1) There is a recognition that a family of nations exists. That there, therefore, ought to be and are rules that govern their relations inter.

(2) The rules have a moral content, e. y in theory the smallest and weakest nation is in respect to its independence and so regignty on a basis of equality with the largest and most powerful. Idealists must beware of failing to appreciate that, with injustry with the largest and most powerint. Accounts must beware of failing to appreciate that, with all its shortcomings, the world stands in a higher position to-day because of 300 years of the Grotian International Law than it would have done without it. They must have been of cutting these ideas on which what has been accounts. away these ideas on which what has been accomplished are based, eg, the ideas of independence and sovereignty—before the world is ready to receive any higher idea—eg, of a unitary world state. Otherwise their efforts may lead to anarchy

of tyranhy.
What, on the other hand, are the obvious defects of present-day international law? Some of them

(i) Its morel content cannot be better than that of the most backward members of the family.

(2) In fact, its ultimate arbiter is the sword alone.

(3) Nations where material interests are not concerned in any given disputes, are not required to interfere, and it is even hardly conceded that such interference is at least permitted.

(4) Many of its principles are so vague and so countered by opposing principles as to be of very little-value as practical guides to conduct.

Civilising Forces in England in the Nineteenth Century

In the same magazine, Mr. J. S. Hoyland writes .

There were three main tendencies in the sphere of ideas which co-operated in the task of arousing of ideas which co-operated in the task of arousing the conscience of England to the appalling barbarities which were being perpetrated by the new industrial system. These ideas proved in time strong enough to rouse to activity men of determination and strength of character sufficient to ensure, after a long and hard struggle, the righting of the wrongs in question and the starting of the returnal life inton a new inward course.

of the wrongs in question and the starting of the national life upon a new upward course.

In the first place, there was the scheme of ideas which had arisen during the Quaker movement in the seventeenth century. In the second place, there was the scheme of ideas associated with the name of John Wesley and the evangelical movement in the eighteenth century. In the third place, there was the scheme of ideas connected with the French R volution. Men affected by these three different types of thought approached the problems of national degradation and the urgent need of national regeneration, from very gent need of national regeneration, from very different points of view. In many cases they were actively hostile to each other, and to each other's type of thought. But in the end it was seen that these three tendencies supplemented and reinforced each other, and that their combined force was finally strong enough to bring about almost mira-culous changes in the state of the country.

A Bill to Constitute the Commonwealth of India.

In the draft of the commonwealth of India Bill, printed in The Young Chizen, we find the following fundamental rights defined --

I. The liberty of the person is inviolable, and no person shall be deprived of his liberty except in accordance with law and by ordinary Courts of Law, provided, however, that nothing in this Section contained shall be invoked to prohibit, control, or interfere with any act of the civil or military forces of the Commonwealth of India, during the existence of a state of war or rebellion.

II. The dwelling or the property of every person is inviolable, and shall not be entered or expropriated or confiscated except in accordance with law.

with law.

III. Freedom of conscience and the free profession and practice of religion are, subject to public order or morality, guaranteed to every person.

THE MODERN REVIEW FOR FEBRUARY, 1925

IV. The right of free expression of opinion as all as the right to assemble peaceably and without the angle of the purposes not opposed to public order or regulating. Laws regulating the manner in which a right of forming associations and the right of assembly may be exercised, shall contain no relays distriction.

assembly may be exercised, shall contain no militial, religious or class distinction.

Y. All persons in the Commonwealth of India lave, the right to free elementary education and law arrangements shall as soon as possible be made by the competent authority for the everuse of this right.

Yi. All persons have an equal right to the use of public roads, places of public resort, Courts of Justice and the like, provided they do not disturb public order or disobey any notice issued by a lawful authority.

by a lawful authority

"VII, All persons of whatever Nationality, residing within the Commonwealth, are equal before the Law, and shall be tried for similar offences in Courts of the same order and by Judicial Officers of the same grade, and no person shall escape the penalty annexed to any breach of the Law, on account of his Nationality or his caste, or his class. or his occupation

Non-Violence in Ancient India

We read in Prabuddha Bharata -

We read in Prabudha Bharata —

It is no doubt true that in India even from the early Vedic period, non-violence was always considered to be the highest virtue. But no virtue, however superior in itself, was ever conceded the right to rule out other virtues in their proper spheres. The disorganisation and confusion that one meets with in the various departments of life to-day, are due to causes, most of which cannot be easily traced to their origin. At a very opportune and critical period in the history of the world, the virtue of non-violence has been brought prominently before the public eye. While we believe it is through the wide exceptance and practice of non-violence alone on the part of the individuals and nations alike that any permanent peace and harmony can be established in the world, we must utter also a note of warning. So long as weakness and cowardine is the world, we must utter also a note of warning. So long as weakness and cowardice is must will be the result. Nor can any section of humanity in any particular part of the world ever realise to the full the ideal of non-violence, so long as the rest act upon the principle that might is right.

Granted this is all true, what is the alternative period this is all true, what is the alternative force, when pushed to its logical extreme, will reveal its self-destroying nature. In the meanwhile all those who set no limits to the possibilities of human evolution, will have to go on with the patient labour of love and demonstrate both by example and precept that considerations of the moral and spiritual personality of man must be the supreme goal, in the interests of which all causes of class, race, nationality, etc., could only be given a subordinate position.

A Property of the second

The Arab Question

Mr. Marmaduke Pickthall observes The New Orient :-

The New Orient:—

If it is necessary for England to reverse her recent policy towards the Arabs and Muslims generally, which has brought her no advantage in reality while it has runed her prestige, it is nonsense tor us Muslims to inveigh that any settlement of the Arab question can be made to-day without England. I have come across some articles in the Indian Press, expressing regret and even horror at the fact that Ibn Saud should even condescend to parley with a British Agent. Ibn Saud has come down to the sea, and every prince who has a coastline must make terms with England. It is absurd to blame a man for self-defence, or who has a coastline must make terms with England. It is absurd to blame a man for self-defence, or for conforming sensibly to the requirements of a given situation, which is all that the Sultan of Najd has done or is likely to do I hope that he has come down to the sea for good in more ways than one, that he and all his people have forsaken their position of secluded dignity, however independent in the centre of Arabia, and will henceforth take an active and a leading part in the Islamic world. We need their virtues and their real, and their example in the way of sacrifice.

The Duty of Hindus

In the same magazine Professor Mohammad Habib says .-

The duty of the Hindu whose soul is in genuine The duty of the Hindu whose soul is in genuine harmony with the anthropological processes, that have produced him, is clear. He must take for his guide the selective reason that illuminated the footsteps of his ancestors, and select from among the innumerable practices and customs of his land those best suited to the needs of the day. There are no chains on his hands and no fetters on his feet Reason—free, untranmeled, human reason—was the light that sparkled on the horizon of his forefathers four thousand wears are and it must forefathers four thousand years ago, and it must also be his guiding star in these latter days.

Thoughts for the Month

The Editor of the D A. V College Union Magazine gives his readers the following thoughts which have come across in his reading :-

Enthusiasm starts the race, but porseverance

You won't push far ahead by patting yourself on the backs

Any time is a good time to start carrying out a good idea.

The worse troubles are generally those that never happen.

The reason some people don't get on is because they won't get up.

• Experience is what you get while you are looking for something else.

Many people have a lot of good in them, but northingly they keep it there.

Sultan Mahmud of Ghaznin

Professor M. Habib of Aligarh pronounces n the *Hindustan Review* the following onsidered judgment on one aspect of Sultan fahmud's career:—

No honest historian should seek to hide, and n Mussalman acquianted with his faith will try to stify, the wanton destruction of temples that blowed in the wake of the Chaznavide army, ontemporary as well as later historians do not ttempt to veil the nefarious acts but relate them rith pride. It is easy to twist one's conscience, and we know only too well how easy it is to find religious justification for what people wish to do om worldly motives. Islam sanctioned neither is vandalism nor the plundering motives of the invader; no principle known to the Shariat justified is uncalled-for attack on Hindu princes who had one Mahmud and his subjects no harm, the shame-is destruction of places of worship is condemned to the law of every creed. And yet Islam, though was not an inspiring motive, could be utilised as no a posterior justification of what had been one. It was not difficult to identify the spollation finon-Muslim populations as a service to Islam, and ersons to whom the argument was addressed and it too much in consonance with the promptings of their own passions to examine it critically, of the precepts of the Guran were misinterpreted important and the tolerant policy of the Secondaliph was cast aside, in order that Mahmud and is myrmidons may be able to plunder Hindu imples with a clear and untroubled conscience. It is a situation to make one pause. With a new of the werything depends on its method of presentation. Islam as a world-force is to be judged hope, and hated if it wears the mask of a brutal ritorism. Islam as a world-force is to be judged.

It is a situation to make one pause. With a new uth everything depends on its method of presentaon. It will be welcomed if it appears as a message it hope, and hated if it wears the mask of a brutal rivorism. Islam as a world-force is to be judged by the life of the Prophet and the policy of the coond. Caliph. Its early successes were really use to its character as a revolutionary force against eligions that had lost their hold on the minds of the people and against social and political systems hat were grinding down the lower classes. Under noth circumstances the victory of Islam was conducted by the conquered population as something it misteratic priesthood and a decrepit monarchy, but the doctrine of equality, first preached in the castern world, opened a carrier to the talent of the depressed masses and resulted in a wholesale onversion of the populations of Arabia, Syria, et sa and Iraq. Now Hinduism with its intense and tying faith was something quite unlike the oncastrianism of Persia and the Christianity of the invader; it suffered from no lecu-scated internal disease and, a peculiarity of the national character of the Hindus, deeply eated in them and manifest to everybody, was heir intense satisfaction and pride in their astoms. They believe any alberuni, that hore is no outing but theirs, no nation like theirs, no science their theirs. They are haughty,

foolishly vain, self-conceited and stolid. According to their belief, there is no country on earth but theirs, no other race of men but theirs and no created beings besides them have any knowledge or science whatsoever. Their hanghtigess is such that, if you tell them of any science or scholars in Khorasan and Persia, they will think you both an ignoramus and a liar." People with this insularity of outlook were not likely to lend their ears to a new message. But the policy of Mahmud secured the rejection of Islam without a hearing,

A religion is naturally judged by the character of those who believe in it, their faults and their virtues are supposed to be the effect of their creed. It was inevitable that the Hindus should consider Islam a deviation from truth when its followers deviated so deplorably from the path of rectitude and justice. A people is not conciliated by being robbed of all tholds most dear, nor will it love a faith that comes to it in the guise of plundering armies and leaves devastated fields and ruined cities as monuments of its victorious method for reforming the morals of a prosperous but erratio world. "They came, burnt, killed, plundered, captured—and went away—was a Persian's description of the Mongol invasion of his country; it would not be an inappropriate summary of Mahmud's achievement in Hindustan. It was not thus that the Prophet had preached Islam in Arabia; and no one need be surprised that the career of the conquering Ghaznavide created a burning hatred for the new faith in the Hindu mind and blocked its progress more effectually than araies, and forts. "Mahmud," says the observant Alberu, "utterly ruined the prosperity of the country, and performed those wonderful exploits, by which the Hindus became like atoms of dust scattered in all directions and like a tale of old in the mouth of the most inveterate hatred of all Muslims. This is the reason, too, why Hindu sciences have retired far away from those parts of the country conquered by us, and have fled to places where our hand cannot vet reach, to Kashmir, Benaics and other places. And there the antagonism between them and all foreigners receive more and more nourishment both from political and religious and other causes."

The evil that men do lives after them: the good is often buried with their bones." Mahmud's work, whatever it might have been, was swept off fifteen years after his death by the Hindu Revival. These who had taken up the sword perished by the sword. East of Lahore no trace of the Mussalmans remained, and Mahmud's victories while they failed to shake the moral confidence of Hinduism, won an everlasting infamy for his faith. Two centuries later, men, who differed from Mahmud as widely as two human beings can possibly differ, once more brought Islam into the land. But times had changed. The arrogance of the Mussalmans had disappeared with the conquest of Ajam by the Mongolian hordes. The spirit of the Persian Renaissance had blossomed and died, and the new mysticism, with its cosmopolitan tendencies and with doctrinos which did not essentially differ from what the Hindu Rishis had taught in ancient days, made possible that exchange of ideas between men of the two creeds which Albertuni had longed for in vain, lastend of the veterance who had crossed the frontier in search of their winter spoils there came a host of refuseer.

in the fittrates willings of Central Asia come to a spot where they could lay their it beace and casting aside all hopes of the part of their birth. The serpent the intellectual history of medieval the bearns with the advent of Shaikh Moinudal of Ajmere and its political history with the testion of Sultan Alauddin Khili; the two trees which distinguish it from preceding the Chishti Saint and the administrative and the Chishti Saint and the most bitter drop of the country Mahmud has nothing to do. But the law inherited from him the most bitter drop our cup. To later generation Mahmud became is Arch-fanatic he never was; and in that accination he is still worshipped by such Indian tiesalmans as have east off the teaching of Lord Assima in their devotion to minor gods. Islam's borst enemies have ever been its own fanatical followers. didwers.

Provincialism in Co-operation

Mr. Abdus Sathar writes in the Bombay Oo-operative Quarterly:-

Should a member of a co-operative society be netriodic? By all means. But how would a co-operative society's patriotism differ from that of the street patriot? Citizen-patriotism is country-bred; it is confined to one's own country and breeds the lives of the country one lives in. But co-operative patriotism is patriotism for the movement, a movement as wide as the world itself, and not confined the particular land. Therefore, co-operative patriotism is international, not provincial. A true considerator layer the movement and the particular coordenator loves the movement, not the particular coordenator loves the movement, not the particular spect of it which happens to manifest itself in the own country. He is desirous of making the streament a world movement. Therefore, all aspects the so-operative movement interest him. He is concerned with the various aspects of it as they exact in each country and with co-operative struggles they confront each nation. Others' difficulties in his own, others' burdens are his own burdens. The is they sign of a true co-operator.

Lountries there are which study a particular account of the movement only, that branch of the movement which is prevalent in their own country.

Not only this, in their orthon to starty the use of co-operation to any other expect of the use of co-operation to easy other example, people the call consumers co-operation the only form of operation worth the name. But that is wrowners co-operation are a joint effort to be their economic and moral condition, there is a constant of these joint afforts also

operation. And each of these joint efforts shou form the subject of study of every true co-operate. Citizen-patriotism breeds race projudice at race conceit too, as is evidenced by the dominer ing attitude assumed by the nations of the We in their dealings with the so-called inferior race.

in their dealings with the so-called inferior race. In co-operation there can be no question of superirity. The true student of co-operation approacheach question with the humility of a true seek
after truth, a seeker who feels the vastness of th
Infinite Mind whose amplifications are limitless.

A co-operative college or any school or colled
devoted to the study of co-operation must stuc
all sides and all aspects of the movement.

India's salvation lies in tolerance and liberali
and above all in that broad outlook which is th
first requisite and the very essence of internations
ism. Therefore, an Indian co-operative college
should one be established, must not allow any so
of provincialism or State patrictism to creep in
it. Each and every side of the movement, great
small, magnificent or insignificant, must con
within its purview. It must concern itself with
the successes of the great as well as the stugglio
of the small. To the successful, it must never del
the just praise due to them and to the strugglio
it must never refuse to extend its helping hand.

The Value of Horse-shows

We read in the Journal of the Nation Horse Breeding and Show Society of India:

labours with those of other breeders or of gaugir the requirements of the market. He could bree on his own lines and to his own ideals but I had no opportunity of checking the accuracy these and there was nothing to rouse that spin of emulation and rivalry to breed better stoc than his neighbours: and, without the public sho it was impossible to fix a standard which it shoul be the aim of the breeder to equal or surpass.

FOREIGN PERIODICALS

Bias in Writing History

METUAL INDEBTEDNESS OF NATIONS

Principal L. P. Jacks writes in The Com-Review:-

Americation in Europe that can claim a history of the national characteristics to the long period of their life and

growth together, interaction has been going on, in the course of which each national type has begge borrowed, stolen, imitated or otherwise acquire much that belonged originally to the other while the others reciprocally have acquired much from it. It has been a vast, though for the most part unacknowledged system of co-education. This process of give and take has, of ourse been a from uniform. Some nations, while states have taken little, or vice perm. France was the

went the way have

render to Bassia, but taken her less in return. Small particular, as a rule, have taken more from their great neighbors that they have given back, though some of them, like Holland and Switzerland, have exercised a notable influence all round.

There is not a single European type in existence to-day which can be explained or understood without reference to the rest.

out reference to the rest.

"SELF-MADE" NATIONS AND MEN.

But, the writer observes :--

With few exceptions, now happily becoming more numerous, most national histories leave the impression on the reader, and are often intended to leave the impression, that the nation whose doings are recorded is self-made. There are histories of England and (still more conspicuously) histories of America which remind one of a certain type of autobiography which self-made plutocrats, under the mistaken belief that their fellowmen are anxious to emulate them. to emulate them, sometimes perpetrate in their old age, for the purpose of glorifying the Ego. Every-thing accomplished by these self-constituted heroes is, of course, set down to their own valor or astuteness, in utter disregard of the fact that at every step they were climbing up on the shoulders of their fellows, and making use of forces which originated from better men than themselves. Every history written on a purely nationalist basis is infected with the same lie. It degenerates into a vulgar autobiography. No self-respecting nation would claim to be the exclusive creator of its own power, its own wealth, or even its own character. National histories written for the purpose of making good such a claim belittle the nations which suffer the historians to represent them in that way, just the historians to represent them in that way, just as the autobiographies just referred to, written for a like purpose of self-glorification, only serve to bring their authors into contempt.

100 PER CENT. AND 5 PER CENT. PATRIOTISM

He goes on to add:

But though we are quick enough to detect the absurdity when perpetrated by foreign historians in the supposed interest of their own countries, we tolerate it in our own without protest. But not wisely. There is no kind of Englishman more likely to bring ridicule on his country than the "hundred per cent" variety when he takes to the writing of history.

Into the total make-up of man, it may be said at a venture that not more than five per cent, of national characteristics can be introduced without making him something of a fool. Beyond that percentage, his patriotism fall under a law of Diminishing Returns, he grows progressively more ridiculous and more dangerous, until at the hundred per cent level he becomes an insufferable monster and deserves to be executed by his fellow-countrymen as a traitor and a felon. Five per cent—to be raised at a stretch to seven—may be recely allowed; not only allowed, but positively required as essential to the make-up of a good citizen. Everything in human if depends for its value on the other things with which it is mixed, and the ninety-three per cent of our account should said not be worth much unless it be well salter and the worth such unless it be well salter.

exclusively to England and makes him distinctively English.

NATIONAL AXE-GRINDING

In the opinion of Principal Jacks:

It should be obvious that so long as the purpose of history is regarded by historians as a means of grinding the national axe, it will abound in distortions, half-truths and falsehoods, and there is matter for deep satisfaction in the fact that, a powerful and growing revolt has set in against this mode of writing it.

WINTERN AND OTHER CIVILISATIONS

With reference to the "Unity Series" of books brought out by Mr. P. S. Marvin. Principal Jacks says :-

I would also suggest that the contributors to these volumes are on dangerous ground when they insist, as some of them do, on the superiority of Western to all other forms of civilisation. That, I am persuaded, should be regarded for the present I am persuaded, should be regarded for the present as an open question, in view especially of the unquestionable fact that without the friendly co-operation of the East, the problems of the West are insoluble. Mr. Bertrand Russell may not be right in thinking that China is nearer the line of development to be taken by the future civilisation of the world than any Nation of the West can claim to be. But at all events the Chinese will count greatly in whatever international synthesis destiny may have in store for our civilisation, and neither they, not the Eastern nations generally, are in any mood to submit to airs of superiority on the part of Western writers. Western civilisation is still on its trial, and it is not yet clear how it will compare, in the final issue, with other civilisations on which it is now too ready to look down. which it is now too ready to look down.

The Mecca Pilgrimage in the Life of Islam.

Mr. Arthur Jeffery writes in the International Review of Missions:--

In a recent lecture at the School of Oriental Studies in Cairo, Professor Margoliouth drew atten-Meca is practically the one bond of unity in the world of Islam. Islam assuredly has no political unity, for the most recent census of the Mosiem world reveals the Moslem population divided in political allegiance appears come treasty different consumptions. world reveals the Moslem population divided in political allegiance among some twenty different governments, and six-seventh- of that population under western suzerainty. There is not even that ideal political unity of which Pan-Islam was the symbol. for the House of Islam has not yet been able to decide which is its real Commander of the Faithful. Nor is Islam a religious unity. Not only is there the great gulf fixed between Shias and Sunnis, but its so-called orthodox seets are poles asunder, and all through its history there has been the clash of opposing doctrines within its fold. Nor is islam a cultural unity. The Muhammadanism of Malayasia is a gloss over Malayan Animism, and Islam in China is an Arabianized Confuccanism, while in lands of more advanced civilization islam has admitted the peoples whom it conquered. Not even has

stored tongue, the language of Paradise, been indeed cultural unity, for though it has impressed that to other tongues and made at times a suppression on the vocabulary of the peoples have conquered, yet it has created no linguistic in the Moslem world, for the vernaculars had sway, while in Java Arabic is mostly as the substances of charms and amulets, as the substances of charms and amulets, is aim is in any sense a social unity, that uniscensed in the Mecca pilgrimage, when in the sensed in the Mecca pilgrimage, when in the sense of the Holy City there meet and mingle from every quarter of the House of Islam, are wild Bedouin of the Arabian desert, and seemily tailored Turks from Angola or most; rough Afghan mountaineers and soft made is from Bombay; smooth-faced Chinamen Thansu and bearded Russians from Kazan are the Egyptains and Moors and Swahilis; learned from Hind and densest dullards from the Bengalis. There are white-faced Persians mal-black Sudanese, Caucasians from Anatolia Mongols from Turkestan And here during the image they are in a sense one great family.

Mongols from Turkestan And here during the desimage they are in a sense one great family, in the base of the family, in the base of the family a common enthusiasm for a common end the base of anywhere, Islam is one if the plant of the family, when he took it over from the same religion that he superseded. The plantage of the family is a superseded.

Fame and Greatness

Mr. H. M. Forbes tells us in Chambers's four nol:-

According to a renowned statesman, the world the known its great men', according to Bernard Market Hall Caino, G. K. Chesterton (all of whom I was a who die wholly unrecognised is indisputional whole wholly unrecognised is indisputional what about the reputation of the actual what about the reputation of the actual market by far, as often as not—survives only as a companier by far, as often as not—survives only as a companier with the survives only as a companier with the survives only as a companier with the survives only as a content of the survives only as companier with the survives only as companier with the survives only as a content of the survives only as content of the survives only as content of the survives only as the survives of the survives only as the survives of the survives only as the survives of th

the by far, as often as not—survives only as consufferance?

Instruct is, what keeps a reputation everinstruct is not so much high talent, splendid seran unimpeachable record, as that amazingly as unimpeachable record, as that numering thing, a picturesque personality. This makes the property of houraphical plays and makes the property of the propert The control of the masses never tire of hearing about the masses hear th

This is speaking generally of the great masses of condition. It is true, however, that among the section, Arabic is known all over the Moslem Some writers make a great point of this write boilenstic periods on the unity of Islam China to Morocco and from Russia to the Cape the universality of the Arabic language. The practical truth there is in this, however, by the whole class of interpreters at the control of the majority of the majority

about Bonnie Prince Charlie? All for one identication and reason—that already indicated. The here of the people must not merely be a man of action as must be something of an actor. To live in the heart of the multitude a great man must have some other claim to immoratality than mere great. ness. He must be unusual in some other sense. He must collect pieces of orange peel like Samuel Johnson; he must employ bank-notes as bookmarks like De Quincey, he must stuff the carcasses of dead birds with snow after the style of Franas Bacon, he must take to climbing church steeples like Clive, failing which, in the matter of personal magnetism, whatever else he may do he can never hope to be one of the darlings of the

can never none to be one of the gods.

The part played by love in the scheme of immortality is incalculable. Not for nothing was the adage coined—'All the world loves a lover'. The scholar loves Dante for one reason; the man in the street for another. It is the poet's passion for Beatrice, like l'etrarch's for Laura, like Burns's for Highland Mary, that has fixed these great names in the minds of the educationally unredeemed.

redeemed.

After adding a few more names, the writer observes .--

Amazing as it may seem, next to romance it is devilment which most fascinates and bewitches the multitudes. To the man in the street Fox is never so picturesque as when running up debts to well-high two hundred thousand. Byron as when his tame bear was causing uneasiness to the college authorities, O'Connell as when engaged in a des-

perate duel. According to Macaulay, the great ladies of London society were once much fascinated by the devil-may-care tactics of a certain highwayman whose robleries were more than forgiven him on account of his gallantries. When he was at long last captured and condemned to death, heaven and earth were moved to save him from the hangman's noose, some of the fair petitioners being the noblest in the land. The petition itself faling, the fair sought to allay their sorrow by doing homage to the remains as they rested in funeral splendour in a chamber which, for the melancholy occasion, had been superbly hung with trappings of woe!

But it was not only in the good old days that the desperado enjoyed a warm corner in the heart of the sentimental

As with men, so with women. The woman who entrances the crowd is the woman with a romantic story

Jainism

We read in the Boston Museum of Fine Arts Bulletin, which reproduces a page of a manuscript of the Kalpa Sutra with the picture of Mahavira enthroned:--

The faith called Jainism appears to have arisen in India simultaneously with Buddhism in the sixth century B. C. Both religions aim to point the individual toward the perfect spiritual life; and each builds its own way of salvation the foundations of the sacient Hipda ideas of thins-mikration (Samsara) and inexorable constitution (Karma). Buddhism emphasizes ethics

Control of the Contro

staphysics. While to Buddhism the soul does not ist as a separate entity, to Jainism it is immortal d may attain divinity. Mahavira, the founder of inism. called the Jina is also named the "Finder the Ford" across the ocean of universal death d rebirth.

d rebirth.

The two religions have had an opposite history, iddhism is nearly extinct in India, while counting hundreds of millions of atherents elsewhere in stern Asia. Jainism has survived in India alone was once important politically, and still is luential through the character and wealth of the nerents. The percentage of crime is asserted he lower among the Jains than among the nerents. The percentage of crime is asserted be lower among the Jains than among the ndus, Muhammadans or Christians in India, d it has been estimated that half the increantile alth of India passes through the hands of the in laity. Jainism has left its impress upon Indian tin architecture, sculpture and painting. The in shrine at Mt Abu, built of marble with iborate, sculptured ornament, has been called the set superb temple in India and comparable only the the Tai Mahal. th the Taj Mahal.

Illustrated manuscripts like those of the Museum lection are very rare even in Jain libraries. The ges retain the form of the strips of palm leaf or rch bark used before the introduction of paper is illustrations are colored drawings about three d one-half inches high and two and one-half to ree and one-half wide, placed as if pasted on e page. The faces and figures depicted are most markable in character, and, like the composition the different scenes represented, adhere strictly canonical forms. The illustration reproduced low is the first page of a manuscript of the Kalpautra. A sacred book held in high esteem by the ins for a thousand years. The manuscript is dated 97, and, with the possible exception of a similar anuscript in the British Museum, is the oldest town. An inscription states that it was prepared behalf of a certain merchant, his family and lleagues. Several leaves from the manuscripts are present shown in the Indian Corridor. G. markable in character, and, like the composition

Future Cultural Relations of East and West

In an article in The New Orient of New? ork on future cultural relations between

The transfer of the second second

east and west, Mr Bertrand Russell discusses the considerations which lead him to the conclusion that.

In so far as Western culture consists of in-dustrialism, it is fated to conquer the East. Japan, at an early stage, adopted this view and acted upon it; hence the political independence of Japan tipon it; neaces the pointed independence of Japan at the present day. India is being industrialized by British capital, on account of the cheapness of Indian labour. China will have to industrialized herself or submit to being industrialized by foreigner. The Soviet Government is bent on industrializing the regions under its control as un Persia, at the moment, is on the way to becoming a dependency of the United States, the rest of the Near East is mainly controlled by England and France Nowhere is it possible to resist the Western thirst for oil which entails a great measure of industrial development,

Assuming that Asia is to become industrial, is it possible to retain any of the distinctive traits of the various Asiatic civilizations. Or must all Asia become gradually more and more like Pitts-

burg?

Marx taught that the economic factors of a civilization are the source of all its other charactertrial, must inevitably become just like industrial Europe and America un'ess its industrialism were to take some different form from that of the West.

He also mentions the reasons why.

Although I think the civilizations of the East in many wave better than that of the West, I do not expect to see any of their distinctive charac-

not expect to see any of their distinctive characteristics preserved, with the sole exception of reigion. And even religion, while remaining nominally unchanged will, in practice, cease to be other-worldly and enter the service of the State as the handmaden of the drill-sergeant.

One conclusion which is forced upon us by the above arguments is that any future civilization must be a world-civilization, not the civilization of a nation or even a continent. Asiatic ideals cannot be preserved in Asia except to the extent to which they can be spread over mankind. The days when relation was possible are past: Asia must teach the West or unlearn her distinctive virtues. In order to teach the West, compromise will be necessary, something of what the West has to teach in the way of technical efficiency will have to be assumilated, since otherwise the East will continue to be exploited and oppressed by the west, and however unjustly, despised by the average Westerner who is incapable of admiring anything except efficiency.

The evils at present associated with industrialism are not inhersont in it as a method.

The evils at present associated with industrialism are not inherent in it as a method of production, they apring from its accide tal association with competition and priva e monopoly

competition and priva e monopoly. The East has less respect for the successful hustler, and might therefore succeed in humanizing industrialism. In order that this may be achieved, it is necessary to mitigate competition, especially in the form which is at present most prominent; the competition for the possession for raw materials by means of armies and navies. All raw materials

THE PROPERTY AND A CONTRACT OF

tught to be owned internationally, and rationed to the different nations according to their needs. This would constitute a true international government tach as can never result from a purely political institution like the League of Nations. The main reason for modern wars would be eliminated if an nation and no group of capitalists could reap a private profit out of the monopoly of some important source of raw materials. The result might be that industrialism would be devoted to increasing human happiness, not, as at present, to the spread of ferocity and destruction. To bring this about is, to my mind, the great work which asia (including Russia) has to perform for mankind in the future.

When a typical Westerner is confronted with the ideal of an industry not under the lash of competition, he objects that it would not be efficient. This may be partly true. But when men's main purposes are bad, efficiency is only harmful. It would be far better to pursue the common good with some slackening of efficiency than to pursue mutual destruction with the energy and ruthlessness which the West admires. Although while the present system lasts, the East may need as we said a minute ago) to acquire something

and ruthlessness which the West admires. Although while the present system lasts, the East may need (as we said a minute ago) to acquire something of Western efficiency, this should be only a transitional stage, leading on to a world where industrialism is used to give leisure and a civilized existence to all. This is a distant goal; perhaps the Western nations will destroy each other in mutual suicide before it is reached But it is a goal which must be reached if industrialism is to be made endurable, and it is better than anything that is possible without industrialism. It would result naturally from the application of Eastern ideals to the modern economic world. I, therefore earnestly hope that Asia will come to the rescue of the world, by causing Western inventiveness to subserve human ends instead of the base cravings of oppression and cruelty to which it has been prostituted by the dominant nations of the present day.

The World's Largest Koran

We read in The Living Age:-

Of all the strange and precious objects (of art and otherwise) that have been auctioned off at Sotheby's in London, one of the strangest came up for sale last month. It was a Koran (intended for use in a mosque) which is said to be one of the largest, if not the largest, in the world.

The book is four feet tall, with pages two and a half feet wide, and is a foot thick. The covers are of wood. It takes two men to lift this truly ponderous tome. Each page contains but ten lines of script which is four inches high, and the borders are richly illumined with floral designs. The whole book is covered with gold brocade. It was sold to an Oriental fer two hundred pounds, and will probably go back to its home in the ancient East. For the same reason that leads curators of museums to juxtapose estriches and humming birds, the auctioneers offered for comparison a tiny Koran measuring one and a half inches square.

... The Destiny of South America.

Manuel Ugarte writes in his book El Disting de un continente (The Destiny of a

Continent") thus, in part, with regard to South America:

The people of a virgin continent of fabulou undeveloped wealth, born under new condition unprejudiced by social precedent, inspired by demo cratic ideals, ought, in a century of economic rivalrilike our own, to face life with a practical prepartion fitting them to deal with the problems thus present ed. Instead of that, we have taught our peopl the routine learning of nations that have alread fulfilled their destiny. Latin, belies-lettres an fulfilled their destiny. Latin, belles-lettres an purely scholarly attainments are worthy contributions and precious possessions of a higher culture but they can exert little or no influence on the development of societies in process of formation that are struggling to subdue nature, that are called upon first of all to defend themselves, to establis themselves, to make themselves master, by their own intelligence and toil, of their particular patrimony. This antithesis between practical needs and empirical instruction is the source of all on mony This antithesis between practical needs and empirical instruction is the source of all our difficulties. It is the cause of the conflict between our urban intellectuals with their pretentiou literary accomplishments, and the country population, which, in spite of its illiteracy, performs the really useful work of the country; and its fina fruit is stagnation and dependence upon foreign enterprise and capital.

Our communities, prepared for anything elsetter than for the practical task that fate ha assigned them, either let their resources lie undeveloped, or alienate them to the foreigner. And bear them to the foreigner and the second that the second terms of the second t oped, or alienate them to the foreigner. And bea in mind that by undeveloped resources I do no mean merely treasures to be drawn from the son and the subsoil—mines, forests, petroleum deposit and the like—but the social apparatus through which a modern State functions: railways, publi-works, sanitation, clothing, food, and other things in numerable. In each of these branches it is works, sanitation, clothing, food, and other thing innumerable. In each of these branches it is exceedingly rare for the native to become a practical provider to the community. This is not due to his indolence, as is often charged. His indifference is rather the effect of his disillusionment and his mental misdirection. The ultimate cause is his supercilious literary pride, which unfits him for practical pursuits, and his lack of scientific preparation, which reduces to a minimum his efficiency in any productive vocation.

any productive vocation.

Even those who start out to devote themselves to agriculture, stock-raising, or other occupations suitable for a country in the earlier stages of its development, do so without professional preparation, and with no knowledge of the modern methods

pursued elsewhere,

Our school courses have not even the remotest connection with the demands of our age, our physical environment, our state of social progress, our needs as a community. Primary instruction has been confined to teaching merely auxiliary acquirements, such as reading and writing, while advanced courses have been monopolized by the useless and ornamental accomplishments of a parasitic group. That explains why we must go abroad for capital, for engineers, for skilled artisans, every time we have to build a highway, a railway, or a bridge.

By confining education to these purely ornamental subjects the Latin Americans have surrendered the profits of their rich territories to strangers, and have made their countries tributary nations. Their wealth has been systematically extracted, converted into useful forms, transported, manu-

factured, and sold with the aid of foreign capital, factured, and sold with the aid of foreign capital, and by firms, specialists, and traders whose sentiments and interests are those of distant lands Every object of personal use—our clothing, household furniture, even much of our food; all our public services and works, such as tramways, telephones, street paving; all our national enterprises, such as railways, telegraphs, and armaments, are furnished by other countries. To be sure, every nation is more or less dependent on its neighbors, and international trade is the lifeblood of the community of peoples. But for this very neignoors, and international trade is the medicion of the community of peoples. But for this very reason, that wealth is never durable which is derived solely from the fortuitous fertility of the soil and local markets. Trade does not redound to the advantage of a nation except when the people of that nation hold it in their hands. A country is never prosperous unless it can pay for what it gets alread with what it produces at home, and lives abroad with what it produces at home, and lives within its income.

Thus, a faulty and misdirected education, unfitted to encourage enterprise initiative, industry and a fruitful economic life, condemns us to pay tribute to the stranger in connection with almost every act: when we take a tramcar, when we attend a movie-show, when we use a telephone when a movie-show, when we use a telephone when we sign an insurance contract, when we enter an automobile, when we open a book, when we turn out a light, when we ascend in an elevator, when we do business at a bank, when we purchase a bicycle, when we tread a carpet, when we wear glasses, when we look at our watch—for every one of these articles, conveniences, or necessities come from outside the country and is supplied by foreign firms. The paper in our favorite periodical, the pen with which we write our letters, the very bunting from which we make our national flag, has been manufactured outside our boundaries, and what is worst of all in many cases from raw materials taken from our own territories without our people receiving the slightest profit

from the transaction. What Latin America actually buys in final analysis is not physical goods, but the scientific superiority, the technical shall, the business capacity, that come from an education that she herself might give to her own sons with no more effort than is necessary to draft a sensible plan and consistently to apply it. We have become so accustomed to our inferiority in many matters that the very thought of overcoming it strikes is that the very thought of overcoming it strikes us with surprise, But our condition is not something irremediable and beyond the power of man to hange. The idea that we may sometimes build our own ships, manufacture our own arms, manage our own railways, utilize the metals from our own mines, conduct our own freezing works and pack-ing house, and do a thousand other things of the same sort, is just beginning to dawn in the minds of our younger generation, which at last shows an ambition to address itself to the great task of developing the continent that stands at our elbows

without our people receiving the slightest profit

developing the continent that stands at our enows maining our enterprise and labor.

While the prejudices begotten of our faulty education unfit us for practical pursuits, they are claimed to make us superior in the realm of art and letters. Our people often say. The Anglo-Saxtens are the masters of practical life, but we excel them in the higher spheres of thought. The falsity of this is so evident that one almost shrinks from discussing it. Even assuming that the natural apditudes of the two races were different in this respect,

we should be no less foolish for that reason to neglect the practical pursuits on which national power is founded. But do we unquestionably possess the superiority in purely intellectual achievement of which we boast? Do our thinkers and artists actually have a precedence in art, philosophy and science? Can we cite definite masterpieces and inventions to prove this assertion?

Rarely has history produced a people more richly endowed than ourselves with native intelligence, quickness of perception, and imagination. But absence of inspiring intellectual guidance, lack of moral discipline, a purely mnemonic education, dearth of high ideals, and devotion to routine, have kept the latent capacities of our people from bearing fruit.

when the Japaneae were forced to open their islands to the trade of the world and found themselves face to face with the formidable superlority

selves face to face with the formidable superiority of occidental culture they instantly took measures necessary for self-preservation, instead of continuing to worship their ancient legends. They met their rivals on their own ground, they borrowed from the West whatever promised to be of profit to them, and realizing that political independence is the child of economic independence, they promptly applied themselves to winning the latter.

If Latin America would substitute for her present system of education one suitable for the modern age, she might gradually accomplish similar results. In speaking of a new education, however I do not mean that we should confine ourselves to a merely trade education in the various practical vocations to the neglect of all higher forms of culture Without the latter, knowledge is but a body devoid of soul. It is only the highest elements of culture that give men a spirit of initiative, intellectual freedom and creative energy. First of First of intellectual freedom and creative energy all, we should throw overboard the primitive idea that education is merely acquiring a certain stock of information. It is far more important, more exalted, than that. It becomes a beneficent and creative force in national life only when it is directed toward positive goals of social progress, solely when it serves a national ideal to which each individual subordinates his personal good.

When Latin America gives her sons a technical and moral training for life, suitable for the day in which we live, our wasted energies will find more which we live, our wasted energies will find more profitable employment than fomenting revolutions and we shall rid ourselves of the unhappy illusion that we own the wealth of our country merely because it is produced beneath our flag. In many respects we remain to-day virtually colonies of Europe and the United States, and our subordination will not and until we steam our courses through tion will not end until we steer our course through the centuries by a new chart and equip ourselves to reach a nobler port.

These passages in English translation are taken from The Living Age. We have made such long extracts because, though India is not "a virgin continent" like South America, our problems are in many respect- not unlike those of that continent '

Seeing Without Eyes

We read in Current Opinion :-That it is possible for a human being to see without using his eyes, and without recourse to approached by a French savant, Jules Romains (Louis Marigoule), who has just published the result of this painstaking reasearches in what he calls extraretinal vision" or "paroptic sight." In order for this paroptic sense to function, the normal eyesight, and to some extent the normal consciousness, must be abolished, another state of consciousness being induced in its place. In his book "Eyeless Sight." M homains contends that practically anyone may attain some degree of success in developing extraretinal vision, by constant experimentation upon humself

experimentation upon himself
Various areas of the body seem to be instrumental in rendering possible this secondary vision. These are: the finger-tips, the forehead, the back of the neek, and particularly the skin of the chest, over the solar plexus. Sometimes objects are perceived which would lie wholly outside the normal field of vision—when apparently seen by the back of the neck for example. Sometimes the objects are merely placed in space at a distance of about a yard from the subject and in front of him.

There seem to be two types of paroptic vision. in the first, the subject feels that he somehow sees with the sight-centers of the brain, in the inspai manner: this M. Romains calls "homocentric vision." In the second the subject sees with his solar plexus", this is called "heterocentric vision."

It was found, by experiment, that as soon as the normal optic apparatus was stimulated in any way, this secondary vision cease. It is as though the secondary vision were acquired only after much effort, with return to the normal order of things as soon as the slightest opportunity is given.

How may this remarkable phenomenon be accounted for? M. Romains beheves that it represents a power, still possessed by all humanity in more or less limited degree, which was originally inherent in all living beings. The most simple organisms seem to possess a sort of diffused sense or sight, all over their bodies, which becomes specialized, into the eyes and general optic apparatus only among the higher organisms. These organs having usurped the special function of sight, the rest of the body loses it but M. Romains feels that it has never been lost completely, and that by means of suitable experiments it can again be stimulated into activity.

mants it can again be stimulated into activity.
But, as the Scientific American comments, this would indicate that there are still left within the skin hundreds of thousands of very minute and primitive "eyes" capable of reacting to the stimulus of light in an appropriate matter. Can this be shown to be the case: As the result of his researches, M. Romains believes that he has proved the existence of such primary organs, or occili, to which the paroptic sense must be attributed.

Birth Control

S. H. Halford states in The Socialist

Some years back I was responsible for a contribation to the *Review*. entitled, "Sex and Statistics," in which figures from our own Registrar General's reports were given showing how birth restriction was affecting the population, not merely numerically but in quality.

Briefly, both his investigations and mine prove that birth control does and must reduce the proportion of intelligent persons in the populations in which it is practised. It does not really need much unprejudiced thinking to convince any but the most deluded believer in the effect of environment that this is so. Necessarily, the more intelligent social strata most extensively adopt restriction and therefore must reduce their proportion of contribution to the general population.

Even in regard to its effect upon sexual morality we are not now so entirely without evidence as Dr. Bentham seems to think. Those who like to go to the expense of purchasing the Blue Book containing the minutes of the recent Joint Committee on the Criminal Law Amendment Bill, will find there, in the evidence tendered by the Home office and Scotland Yard, some very useful and remarkable facts and figures out of which a great deal can be deduced. They tend to prove that birth control knowledge encourages and extends very largely habits of promiscious intercourse favourable to a large increase of venereal disease. I know how extensive, powerful, and blind British prejudices are in any matter relating to sex, but they must be extremely so in persons who imagine with any confidence that birth control knowledge will reduce immorality. It may indeed reduce mercenary prostitution and the diseases consequent thereon, but the evidence I have referred to suggests that it will and does enormously stimulate non-mercenary prostitution, with the much greater disease rate that attaches to that as compared with the mercenary type. Indeed, as the Home Office witness stated to the Joint Committee, if anyone who has known the West End of London twenty years or mornago will walk round it now after dark, he will see with his own eyes a difference so vast as to easily

A Call to Combat Race Suicide

convince hun.

The following extracts are taken from an article in *The Literary Digest* with the above heading:—

A happy marriage is the greatest of blessingand there is no career which compares in all itrewards with that of motherhood. The pronouncement, the it comes from the lips of a great educator
who is himself happily married and a father, might
be considered as too obvious for repetition; but it
is coupled with the statement that parenthood
among the educated is declining at a rate unpleasant to opisider. Investigation shows that Harvard
graduates over a long period of years average only
1.7 children. It is, therefore, for the old-fashioned
view of marriage and its responsibilities, lest racsuicide continue at its present rate among poopleof European stock, that Dr. Charles W. Eliet pleadThe plea is contained in a recent address before the
Harvard Dames, a group of the wives and sisterof men connected with the University of which In
Eliet is President Emeritus. Personal inquiry conducted by Dr. Eliet among a number of young
people brought from the majority of men the opinion
that marriage is the most important event in life

NOTES 9)~

But Dr. Eliot found some women who entertain hopes or expectation about their own careers who are not so sure that marriage is of such importance. The apparent reasons for this hesitancy on the part The apparent reasons for this hesitancy on the part of women, says the veteran educator and philosopher, are the desire for independence of all tres and the desire for a better career for women. To Dr. Ehot the idea that there is a better career than that of motherhood is a delusion, "but it is a delusion which obviously in these days is harbored and entertained by a certain small proportion of young women." Actually, asks Dr. Eliot, as we quote him from the Boston Globe, does not marriage open to women "the highest, most beautiful, most rewarding career in life—a career in comparison with which career in life-a career in comparison with which all other careers open to women are inferior " He

goes on
"It may be inferior because of the physical disadvantages in the women, it may be inferior because of unfortunate circumstances connected with her childhood and youth, but at bottom, is these new expectations in there not danger that these new expectations in women are going to have serious effects on the habits of women throughout hife. I believe that marriage, and the natural normal result of marriage —the bringing up of children—is infinitely the best

career for women and for men also

"If we look about at our acquaintances in the society in which we live, I think we may easily see that the number of happy marriages is very much greater than the number of unhappy marriages. and also that the unhappy marriage is the worst disaster that can befall any one—the worst disaster. Does not that go to show that marriage is the most important event in life? If failure in marriage is the greatest of disasters, so a happy marriage is the greatest of blessings."

It seems, however, that modern education is

tending to discourage marriage and parenthood at ! to that extent is cutting off the flower of the race.

Dr. Charles W. Eliot concludes his addresby saying: "I hope you all realize that there is no career in life which compares in promise, in expectations, in satisfactions, in all the rewards of a cancer, with that of motherhood '

Gandhi's Great Achievement

Mr. Wiltred Wellock observes in The Socialist Review

The only point at issue is as to whether a nation can be raised to the level of moral elevation whence non-resistance can be successfully applied. Gandhi has gone far, both in South Africa, and in India, toward proving that it can That, indeed, is his great achievement. He has not only worked out the theory of non-violence he has applied it in a mass direction, and on a gigantic scale. This I reprard as his real contribution to make the contribution of the contribution. regard as his real contribution to modern civilisation. In many ways Gandhi's exposition of non-violence is superior to Tolstoy's, and for the reason I think, that his character is superior. Gandhi is first and foremost a saint, but he is something of a thinker too and he is also a man of action, whose contact with "affairs" has neither weakened nor impaired his principles nor stained his character. It is beyond relutation that no man who has ever lived has influenced so profoundly in his own litetime the lives and the conduct of so large a number of human beings as has this physically insignificant indian saint, whose thoughts and struggles are recorded in these three wonderful volumes

NOTES

Excuses for Usurpers and Exploiters

In reviewing a certain historical work on the origin and growth of the British power in India, an Indian reviewer of a leading Indian daily says that the following points gathered by him from the first three volumes of the work throw some light on England's mysterious success in India:-

Dupleix found out that no power could succeed in India without the cooperation of the leople of the land. They had no patriotism and and were divided among themselves, It was so asy to set them against one another and take sides.

(2) They had intelligence and physical courage and physical courage and physical courage.

and would prove excellent fighters if trained on

western lines.
(3) Their simplicity, trustfulness faithfulness and devotion to their leaders, made them an easy new to the English.

(4) The 'heathens' were hypnotised by the smooth and specious promises of the English Christians. They were made to part with their liberty and earthly possessions. The rise of the British power in India was like the progress of the white ants.

(5) Whenever it was then interest to do so, the English violated the solemn engagements they entered into with the people of India Colonel Malleson summed up the causes of the Great Indian Mutiny in two words-bad faith.

(6) The Indian rulers made the mistake of

keeping in their service officers of European extra-tion. These were never loyal and were glad and ready to betray their masters

(7) The planting of British Residents in the courts of Indian Rulers enabled them to foment domestic dissensions and prevent union with their brethren. "The British Friend of India Magazine for March, 1843, asks "how did the Company acquire Rengal, but by perjury and forgety. Or Arcot, or any other principality" any other principality

THE MODERN REVIEW FOR FEBRUARY, 1925

(8) The system of subsidiary alliance was meant to wipe out the French from India as also the thidependent existence of the Indian States.

(9) The grant of concessions by Indian Rulers for foreign Christian Traders led to their

supremacy.

(10) The ruin of Indian trades and industries and the political downfall of India began when the Moghal Emperor, in mistaken generosity, granted to English merchants such concessions as the rulers nowadays would give to any power, Christian or

otherwise.
(11) The deliberate destruction by Watson and Clive of the Indian Navy paved the way to the rise

of the English.

After mentioning these points in his own words, the reviewer observes that these views of the author are supported by the documents which he has cited, and proceeds to add :-

They however lose sight of or do not lay sufficient emphasis on these facts

(1) We ourselves were our enemies and lost

eelf-rule.

(2) If they have come by their acquisition wrongly, it is but human nature and we might

(3) If they played us against one another, it is our fault that we allowed them to do so. Jayachandra of Kano; led the way.

(4) If they took away our liberty and undermined our national institutions and character, they have given us something—their civilisation with

(5) If they are here to-day, it is only because we are not united in asking them to go away.

It is not our purpose in this note to criticise the critic so far as the merits or demerits of the work he has reviewed are Nor do we wish to enquire concerned. whether the author has lost sight of or refrained from laying sufficient emphasis on the points mentioned by the reviewer. Our object is to draw attention to some general principles and to some characteristics of Indian civilisation which may be deduced from India's ancient history

We do not claim that on the whole we as a people are superior to other peoples, and it may be that on the whole we are as bad as or worse than the English. What we submit is that two wrongs do not make one right. It may be that, if placed in the position in which the English were placed, we might have behaved as ill as or worse than the English. But that does not justify what they did. There are liars, cheats, thieves, robbers and murderers among the inhabitants of all countries; but their existence everywhere has not led to the revision and modification of the moral code of mankind. Similarly, if it could be shown that all nations or all trading companies or incor-

porated bodies have been guilty of particular kinds of unethical conduct, that would not justify or whitewash those kinds of conduct nor lead to the lowering of the standard of international or intergroup morality by which moralists judge nations and groups of men. It is one of the duties of a historian to narrate how certain events happened and how certain nations or bodies of men behaved under certain circumstances and pronounce moral judgment on them. If other nations or groups of men have behaved similarly or worse, they were also wrong.

" THE CAR WITH !

We have said above that on the whole we do not claim any superiority for ourselves as a people. But it may be that in some respects our ancestors behaved better than some other nations of the earth the case of doing good to other people by helping them to be spiritually-minded, cul-tured and civilised. The reviewer says that though the British people have taken away our liberty and undermined our national institutions, they have given us their civilisation with all its good and evils. Let us refrain from discussing whether the doing of evil may be justified by the subsequent doing of some good, also whether the "civilisation" of India by the English was an act of disinterested and deliberate philanthropy or a by-product of the pursuit of power and pelf. Let us only say that the British people or the peoples of European extraction in general have not been the only "civilisers" in the world's history. Indians also did some civilising work in ancient times. And the question which we would ask all our sisters and brethren to put to themselves is, how did our ancestors do it?

Did our ancestors domineer over and exploit other countries without themselves settling in those countries and mixing with the indigenous population thereof, and did they civilise them in that way? We have no proof that they did any such thing in the country in which we find abundant proofs of

Indian culture in ancient times.

Take the case of China. Great Chinese scholars have said that Indian teachers and Indian civilisation helped China greatly in her progress in culture, civilisation and spirituality. The other day Bishop Fisher said in his lecture in Santiniketan that no country had ever been able to conquer China, but that on the contrary China had absorbed all her invaders. He made an exception only in the case of India. India's conquest of China was however, he observed, a conquest of love.

NOTES 227

effected by Indian Buddhist missionaries and other teachers. This view was subsequently endorsed by Prof. Lim, a Chinese scholar, in one of his lectures in Santiniketan. The influence of India on China still endures. This is admitted by Chinese scholars themselves. Of course India also learnt many things from China. But what we wish to emphasise here is that India's influence on China was not exercised by conquest or commercial exploitation: it was an altruistic achievement

What is true of China is also true in the main of Tibet So, we ought not to remain hypnotised in the belief that Indians have all along been like the British or that it is possible for Indians to do things in a better

way than the British have done

In Central Asia, remains of extinct civilisations have been unearthed by the labours of European explorers, to whom our heartfelt thanks are due. These civilisations were Indian in origin But there is no proof that these regions were governed by migratory Indian governors and officials sent out by some Indian ruling power in India and commercially exploited and sucked dry by migratory Indian business men through the destruction of the indigenous industries of those regions by the exercise of political power. These extinct Central Asian civilisations were products of intermingling of races and cultures.

Japan was influenced by India in ancient times but not through conquest and political, commercial and industrial exploitation.

Islands in the Indian Archipelago like Java, Bali, &c., were civilised by the Hindus. Similarly the countries of Anam, bodia, etc., called Indo-China, were civilised by the Hindus. But the process was different from and better than the political and economic imperialism of the West. Moreover, though when the Hindus began the work of civilisation in these countries, they were inhabited by backward and sometimes savage races, the civilisers raised the indigenous peoples to a higher level, and thus the resulting culture and civilisation were the work of two peoples fused together. Hence it is that whatever remains of Indian culture and civilisation we find in these countries are not purely Indian but the product of Indian and indigenous genius combined.

The civilising work abroad of peoples of European extraction has been in the main carried on by the co-operation of merchants, missionaries and military men. India's civilising work abroad has been in the main far

different. Her teachers and missionaries have crossed oceans, snow-covered mountains, deep and broad rivers, waterless deserts, forests infested with wild beasts and regions inhabited by men perhaps wilder and more ferocious. Many such Indians lost their lives, without indemnities being claimed or extorted by India Of course, there have been Indian merchants and colonisers also But we do not know that they deliberately destroyed or monopolised indigenous industries abroad, or exterminated or enslaved any native races It may be suggested that they did not because they could not In any case, the guilt of extermination and industrial Vandalism does not rest on their shoulders.

We do not like the kind of comparison of which the object is to bring out the superiority of our own selves or of our ancestors. It is an odious task. And it does not do any good to anybody On the contrary, it tends to make our people vain boasters and idlers. Modesty and humility are to be preferred. We do not believe that all that is occidental is material and worldly. and all that is Indian is spiritual and heavenly. We do not believe that we are all spirituallyminded and live up to the highest ideals of our country, and that all occidentals are worldly-minded and do not live up to their spiritual ideals, which certainly exist.

But we cannot agree to believe, we are not willing to be hypnotised into the belief, that there are not some achievements at least to the credit of our people which are superior to the achievements of some other peoples or that it is unthinkable that the behaviour of our people under certain circumstances might possibly be better than that of some other people under those circumstances.

The reviewer has spoken of the British people giving us "their civilisation with all its good and evils." It is well known that Britain also has been indebted to India in We do not refer here to the many ways. material benefit which Britain has derived from her connection with India. That has been immense, and too patent to escape the eyes of any unprejudiced observer and student of history. We speak here of the non-material advantage which Britain has derived from contact with India. That Indian thought and ideals have greatly influenced Britain and other Western countries has been admitted by many thinkers. Only the other day we came across the following sentence in the Japan

THE MODERN REVIEW FOR FEBRUARY, 1925

Weekly Chronicle, edited by Mr. A. Morgan

"Indian thought has had a profound influence on the thought of Europe during the past century"

It may not therefore be unjust to infer that for any benefits conferred on India by Britain. India has more than amply paid by the material and non-material wealth which the British people have received in return. But for the wrong done by the British people to India compensation has still to be made This forms part of the compensatory effort which many Western Christian peoples should make. So far as we are concerned, we are which these peoples are rendering But so far as they themselves are concerned, it will be time for them to begin to be self-complacent when they have liberated as many countries as they have enslaved, saved as many tribes as they have exterminated, enriched as many peoples as they have ruined by economic warfare, and rescued as many persons as they have killed, maimed and disabled.

It is to be noted here that what good India has been instrumental in doing to Britain has been done without political and economic subjugation and exploitation Japan has also similarly influenced the West. As the Japan Weekly Chronicle says:—

Japanese influence is to be seen in far more Western homes than western influence is to be seen in Japanese homes. The aesthetic influence of Japan has been profound, and decoration in the West is very different to-day from the soulless symmetry of a hundred years ago.

This Japanese influence is not the result

of Japanese conquest and exploitation.

It is well known, too, that though the British or any other Western power has not conquered Japan, that country has made far greater progress in self-rule, modern education, modern science and modern mechanical arts and industries in half a century than India under British rule has done in nearly two centuries. China is also making progress in these spheres of human activity without being conquered by any Western power, perhaps we sught rather to say that the progress of Japan and China is due to their not having been conquered.

So, as the reviewer has raised the question of what we might have done in certain hypothetical circumstances, or what generally might have been, we also say as a mere matter of speculation that, not only was it possible in ancient times, but even in our

modern days progress can be achieved without being conquered, enslaved and exploited.

If Chesterton Lived in India

The Catholic Herald of India says that in the first copy of Mr. G. K. Chesterton's new paper, G. K's Weekly what the paper's policy will not be and what readers will not find in it is detailed as follows, in part, by the editor—

"Arrangements for photographing Mr. Lloyd George's smile. Mr Baldwin's pipe, Lord Birkenhead's cigar, Mr Churchill's hat and Lord Beaverbrook's coronet, are not yet completed and never will be

"Similarly, readers anytous to enter the competition to decide who has the Most Beautiful Grand-Mother in the British Empire should not send in

photographs after the end of last week.

"All serious students of social conditions interested in the experiment of strong-minded American heiresses refusing to live with their husbands, will search the paper in vain for anything about it."

If Mr. Chesterton had started his paper in

India, he would perhaps have added -

"All serious students of social conditions interested in the illustrious career of the Muslim ex-mistress of a Hindu Maharaja, who subsequently became the concubine of a rich Muslim young man who was murdered in the attempt to abduct her from his automobile will search the paper in vain for anything about those male and female human beings or their beaufic portraits."

Bombay Malabar Hill Murder

The murder of any person, be he saint or sinner or placed somewhere between them, deplorable, and the murderer should be sought out and properly dealt with. The attempt to abduct any woman or disfigure her, be she of good character or bad, ought certainly to be also condignly punished. Therefore, what the Bombay police are doing to arrest and bring to book those who murdered one Mr. Abdul Kadir Bawla in the attempt to abduct or disfigure his mistress, a dancing girl of the name of Mumtaz Begum, is worthy of praise. But we cannot appreciate the publication in the papers of the portraits of the woman and her murdered lover, and details of her past life. She might have been the mistress of more Maharajas. and rich men than she has actually been But even that would not have made her a

NOTES 229

heroine whose career would deserve to be recorded day after day in column after column of numerous newspapers. If newspaper readers desire to feed on garbage or wallow in salacious filth, surely it is not the business

of journalists to supply such stuff.

It seems that Mr. Bawla was a public man of a sort. No one can grudge him his due meed of praise for the degree of dutifulness which he showed. But should not men be judged by their characters also? If a man drives in the company of his mistress and flaunts his vicious life, if he does not make her his wife even though neither the scripture nor the custom of his community stands in the way, it cannot be said that he cares for social purity and the sanctity of family life as every man ought to, or that he really has any respect for womanhood Rich libertines have often given to the women they have injured more than a hundred thousand rupees, but that has not been accepted as a proof of the nobility of their nature or of the purity and genuineness of their love or of their love or of their idealism in relation to woman

Nor can the state of that society be considered healthy and desirable in which driving and living openly with a dancing-girl is not considered disgraceful. The blunting of the moral sense must have proceeded far when so much is being made of those who led impure lives, simply because of their wealth and "connection" with men in "high"

position.

In the story of the murder of Mr Bawla the heroism and nobility of four British officers, Lt. Seagert being the most prominent among them, stand out as the bright relieving feature. They were passing along when the murdered man and his mistress and secretary were attacked, and immediately came to their rescue. Though Lt. Seagert received some shots, he did not let go one of the miscreants whom he had caught.

Mrs. Robinson's Case

In England some degraded specimens of humanity formed a conspiracy to blackmail Raja Hari Singh, nephew of the Maharaja of Kashmir, in consequence of which he was discovered where he ought not to have been. To hush up the matter, he agreed to part with £300,000. A weman named Mrs. Robinson, her husband, and some other rassals were to share in this leot. We need not

enter into more details, which have been published, in the papers Owing to the notoriety which these facts brought the adulteress, Mrs. Robinson, a paper called The Sunday Chronicle got her to contribute serially an account of her life and immoral It betokens a very degraded adventures. state of society that a woman and her husband should with other persons form a conspiracy of this disgraceful character to fleece an ass of a libertine. And it betokens still deeper degradation that a public print should find it possible and profitable to print an account of her vicious life written by herself What sorts of homes are those into which such a paper finds ready entrance?

We have no desire to throw stones at English society, seeing that, if Bombay's Mumtaz Begum had possessed any literary talent, some "enterprising" Indian paper would have most probably secured her as a

contributor

The vast sums which Hari Singh has squandered abroad are said to be his private property. But in the last resort, they must have been derived from the poor people of Kashmir. Of course, there are other princes who are as great spendthrifts. But that does not prove that Hari Singh is fit to rule, though it is probable he will succeed the present Maharaja of Kashmir, for the less impeccable an Indian chief is, the more squeezable must he prove to be, considering the relation in which the Indian states stand to Britain.

The Evening Standard, a British paper, in its issue of December 5, 1924, had an article by one Miss May Crommelin, with the heading, "With 'Mr A' in Kashmir". It is introduced by the editor thus .—

While wandering round the world, Miss May Crommelin the novelist, happened upon the Court of Kashmir during the wedding festivities of Sir Hari Singh, the "Mr. A" of the affaire Robinson". She gives here a vivid pen-picture of a remarkable young man-

This shows what makes a man a society here in England.

May Crommelin has indited the following

paragraph among others -

I was shocked to hear an Indian Prince called so unjustiv a "nigger' last week in court But I was far more shocked a few hours are—shocked and sorry—when I found that "Mr A' was the fine young Hari, so loyal to us.

Whatever the other qualifications or disqualifications of a biped of the genus homo may be, he who is "so loval to us" must be fit to be a ruler of men So the people of

Kashmir may rest assured that "the fine young Hari" will be their Maharaja some day. A strong-minded intelligent man of good character can neither be easily fleeced nor be easily made to "grant" concessions; the opposite sort of man is more convenient to deal with. So he cannot but be "fine".

Contradictory Accounts in the Press

New India notices the fact that the account of Lord Lytton's visit to Jessore in a Calcutta Indian paper is exactly the opposite of that in a Calcutta Anglo-Indian paper. The Indian paper states that all shops were closed and the streets were deserted. The Anglo-Indian paper states on the contrary that the whole town of Jessore turned out to welcome Tis Excellency.

We know from a very reliable source that when the Governor of Bengal visited mother town, a telegram appeared in some papers that there was complete boycott of the visit by the towns-people though that was not the fact. When a copy of a paper consaining that telegram reached its correspondent in that town, he and his companions aughed and made merry over the fact that hey had been able to hoodwink the public!

According to these unscrupulous fools, lisregard for truth is a means of national alvation.

What's in a Name ?

Our attention has been drawn to a surious practice of the Bengal Government which calls for a word or two of comment. t would appear that officers of the Provinial Service are ordinarily styled in the fficial gazette as 'Babu or 'Moulavi' according s they happen to be Hindus or Mahomedans. Locording to our information, so strictly is his rule observed that they are never esignated as 'Mr.' unless they can prove to be satisfaction of the Government, that they we in European style. In pursuance of the ules governing promotion in these services. few of these officers are, from time to time. prointed to what are called 'listed' posts, i.e., osts in the superior service which are served for officers of the Provincial Service. Then a Provincial Service officer occupies ne of these posts as officiating Additional or istrict Magistrate (or Judge), his nomenature is at once transformed from 'Babu' or foulavi' to 'Mr.'. The reader must not ima-

gine that this metamorphosis is necessarily correlated to any change in the habits of life of the individual thus honoured. The new style of address is adopted without his leave or license, whether he abandons his national mode of living or not, and as a matter of course. But the funniest part of the story yet remains to be told. The position of a Provincial Service officer, when he begins to officiate in the higher service, is analogous to that of a chrysalis which has not yet developed into a full-fledged butterfly. He has to pass through many a vicissitude of fortune, and has to revert to the Provincial Service many a time, before his confirmation as a member of the superior service takes place. During his periodical reversions, he is again officially styled by his whilom appellation of 'Babu' or 'Moulavi' and thus made to know his place and keep it. An observer of this unexpected transformation unaccustomed to the ways of Bumbledom will be tempted to exclaim 'O Bottom, thou art changed! Bless thee, thou art translated!' Indeed, so ridiculous does the situation sometimes become that in the same gazette, while in one part official in question, as relinquishing charge of his 'listed' post, is addressed as 'Mr.', in another part, a few pages down, where his posting in the Provincial Service is notified, he is styled as 'Babu' or 'Maulavı.' And so hide-bound is officialdom to its traditions, that it gravely perpetrates this piece of practical joke, and invests the same officer with a dual personality like Dr. Jekvll and Mr. Hyde in Robert Louis Stevenson's famous story, without a twinge of of its facial muscles, or without being once moved to think how absurd it must all appear to the man in the street.

We do not mean any disrespect to the Judiciary and Magistracy who belong to the Provincial Service. They are all our countrymen, and many of them, we dare say, are most estimable gentlemen. But are there not even a few among the holders of these listed posts, who have presumably risen to their high sank by reason of their superior merit, who have the courage to point out the anomaly of the practice referred to above, and protest against its continuance? We have reasons to believe that some at least of them feel the ignominy of being thus made the victims of official caprice in the style of their address, and would prefer to be called 'Babu' or 'Moulavi', for almost all of them live in Indian style both before their promotion to the 'listed' posts and after their retire-

1 h

nent from such posts. Only an exiguous number adopt the European style of living, and that only in part during the time they 10ld these posts, and to them alone the title of 'Mr.' should be given. But if the title is conferred on all holders of 'listed' appointnents without distinction, why, in the name of common sense, should it not be continued or the rest of their service, after it is once estowed? And above all, what does the doption of this title of address, in the case of every holder of a superior post, and its evocation in the case of the same officer as oon as he has to revert to inferior rank, ndicate? Does it not clearly denote that in he bureaucratic code no Babu or Maulavi an be a member of the superior service. nd on the other hand no one belonging to he Provincial service can, as a rule, aspire the dignity of being addressed as Mr.? n other words the English title of address supposed to possess an intrinsic superiority thich it is mere presumption on the part of Babu or Moulavi to claim. The humiliation nderlying such an assumption ought not to e put up with by any self-respecting member the Provincial Service and indeed so ntirely devoid of justification is this practice at we believe that it has only to be pointed ut by those concerned to be relegated to the ustbin of obsolete customs and invidious istinctions which have had their day and e no more

In our opinion, every officer living in idian style and used to being called Babu Moulavi, should, when promoted to a post sually reserved for civilians living in Eupean style, be asked whether he would refer to be addressed by his usual designation to adopt the title of Mr. and his choice fould decide the question so far as he is incerned, and the upward and downward live of his future career should not thencerth be denoted by his designation in the heial gazette as Mr.' and 'Babu' or 'Moulavi.'

these days of democratic government, it is ally going too far to taboo the titles of Babu d Moulavi from the ranks of the superior til service. They must be officially rehabilised to a position of equality with the le of 'Mr.' and no artificial character of inlity should be conferred on the latter as to vest it with a dignity and distinction does not intrinsically possess and cannot refore claim.

Would any member of the Bengal Countake up the matter and see that justice is to Indian titles of address and that they

are treated on a par with the English title of address in official notifications and other official documents? The offensive word native has been substituted in official corrrespondence by 'Indian', and it is time that the last strongholds of bureaucratic prejudice and racial invidiousness should be made to yield to common sense and fair play in these matters.

Sydney Smith on the Licentiousness of the Press

"A vast concern is expressed for the liberty of the press, and the utmost abhorrence for its licentiousness; but then, by the licentiousness of the press is meant every disclosure by which any abuse is brought to light and exposed to shame—by the liberty of the press is meant only publications from which no such inconvenience is to be apprehended, and the fallacy consists in employing the sham approbation of liberty as a mask for the real opposition to all free discussion. To write a pamphlet so ill that nobody will read it, to animadvert in terms so weak and insipid upon great evils, that no disgust is excited at the vice, and no apprehension in the evil-doer, is a fair use of the liberty of the press, and is not only pardoned by the friends of government, but draws from them the most fervent eulogium. The licentiousness of the press consists in doing the thing boldly and well, in striking terror into the guilty, and, in rousing the attention of the public to the defence of their highest interests. This is the licentiousness of the press held in the greatest horror by timid and corrupt men"

Easay on the Fallacy of Anti-Reformers.

Sydney Smith on Good Government and . Official Exposure

'As Mr. Bentham observes, if there be any one maxim in politics more certain than another, it is that no possible degree of virtue in the governor can render it expedient for the governed to dispense with good laws and good institutions. It is quite obvious to all who are capable of reflection that by no other means than by lowering the governors in the estimation of the people can there be hope or chance of bencheial change. The greater the quantity of respect a man receives, independently of good conduct, the less good is his behaviour likely to be it is the interest, therefore, of the public in the case of each to see that the respect paid to him should as completely as possible, depend upon the goodness of his behaviour in the execution of his trust. But it is, on the contrary, the interest of the trustee that the respect, the money, or any other advantage in receives in virtue of his office should be as great as secure, and as independent of conduct as possible ... public men must expect to be attacked, and sometimes unjustly. It keeps up the habit of considering their conduct as expect to secretary. The friends and supporters of Government have always greater facility in keeping and raising it up than its adversaries have for lowering it. — Ibul.

Opportunities of Studies in America

There has been a considerable amount of misunderstanding in India about the recent immigration legislation of America as affecting students from India. Though restrictions of entry have been increasing a great deal I may note here that there is no difficulty for a really bona fide student to enter the United States of America.

If India is to hold her own in world politics if we desire to emancipate ourselves from the economic thraldom of the Western nations, the only way is to send hundreds of boys and girls to foreign lands for first-hand knowledge of Western methods of production, distribution, organization and management fractice offers the best field for such a study this is the only place where exceptional facilities are available for research work

There is no doubt that entirely self-supporting students are debarred from entering the States, but even then a really intelligent student who finds himself in monetary difficulties and who works outside his college hours without neglecting his studies is allowed to stay in the United States by the immigration authorities.

The Indo-American Information Bureau, P. O. Beacon, New York, U. S. A., (whose temporary address up to May 1925 is c/o Clark University, Worcester, Mass., U. S. A.) would be very glad to supply any information speeded by a needy student on receipt of one rupee in Indian stamps or currency. The teposit is needed as a guarantee of good faith and 'genuine enquiry and will be refunded to the depositor on his arrival in this country.

V. V. OAK

Sydney Smith on Female Accomplishments

Sydney Smith's Essay on Female Education, written more than a century ago, amply repays persual. In his time, in England, a woman, of forty was more ignorant than a boy of twelve, so the conditions were more nearly utin to what they are in India today much if what he writes, therefore, though long out of date in his own country, applies with full orce to us in India. In his time, there was nuch jealousy among men respecting the aducation of women. The novelty of teaching women more than they were already aught was apt to raise in the manly mind the sensation of the ludicrous. To all such the sydney Smith's reply was:

Nothing is more common, or more stupid, than

to take the actual for the possible,—to believe that all which is, is all which can be; first to laugh at every proposed deviation from practice as impossible—then, when it is carried into effect, to be astonished that it did not take place before".

Educate women as well as you educate your men—this is the burden of Sydney Smith's Essay.

"The pursuit of knowledge is the most innocent and interesting occupation which can be given to the female sex: nor can there be a better method of checking a spirit of dissipation than by diffusing a taste for literature. The true way to attack vice is by setting up something else against it."

Sydney Smith has no illusions as to the power of education to improve the character He says:

"It is true, that every increase of knowledge may possibly render depravity more depraved, as well as it may increase the strength of virtue. It is in itself only power, and its value depends on its application."

Women hazard everything upon one cast of the die;—when youth is gone, all is gone One of the greatest pleasures of life is conversation, and they are enhanced by every increase of knowledge.

"Education gives fecundity of thought, copiousness of illustration, quickness, vigour, fancy, words, images, and illustrations, it decorates every common thing, and gives the power of trifling without being indignitied and absurd" "Diffuse knowledge generally among women, and you will at once cure the conceit which knowledge occasions while it is rare."

The formation of character during the first seven or eight years of life depends almost entirely on women. If the education of women were improved, the education of men would therefore be improved also But Sydney Smith does not treat of female education as a mere accomplishment A mind full of ideas possesses the clastic spring which the love of knowledge can alone convey, it diffuses, equally over the whole of existence, a calm pleasure, suitable to every variety and every period of life. Instead of tying their whole lives to one unvaried line of petty and frivolous occupation, the minds of our women should be filled with strong sense and elevated currosity. Much of a woman's life is solitary, there are sufferings which she must endure alone in silence Daughters should not therefore devote their whole time to sewing, patching and mending kept with nimble fingers and vacant understandings till the season for intellectual improvement 18 uttorly passed away.

A century before Sydney Smith's time. the prevailing taste was for teaching women housewifery; in his time, it was for accom-

Mahatma Gandhi Addressing the Indian National Congress from the Rosirum (Belgaum)

lishments. This is the stage at which we in idia have now arrived. It will therefore be istructive to hear what Sydney Smith has it to say on the subject.

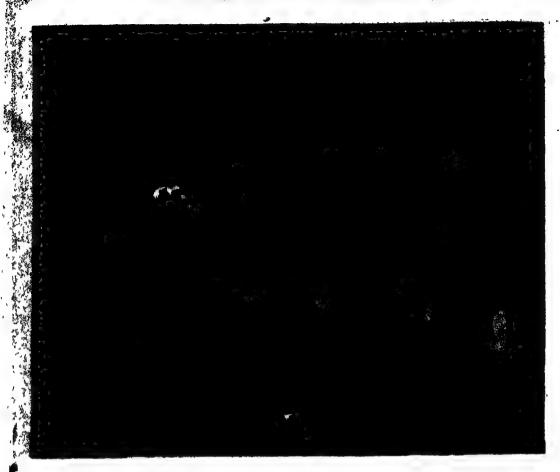

"The object now is to make women artists, to be them an excellence in drawing, music, painting, and dancing. Now one great evil of all this that it does not last. No mother, no women, ho has passed over the first few years of life, ngs, or dances, or draws, or plays upon musical struments. These are merely means for displaying the grace and vivacity of youth, which every oman gives up as the gives up the dress and the anners of the eighteen; she has no wish to room them; or if she has, she is driven out of cm by diameter [i.e. girth] and derision. The stem of female education, as it now stands, aimsely at embellishing a few years of life, which are themselves so full of grace and happiness, that by hardly want it; and then leaves the rest of instence a misorable prey to idle insignificance woman of understanding and reflection can include the given by such kind or education. The object to give to children resources that will endure long as life endures—habits that time will

ameliorate not destroy,—occupations that will render sickness tolerable, solitude pleasant, age venerable, life more dignified and useful, and therefore death less terrible and the compensation which is offered for the omission of all this a short-lived blaze,—a little temporary effect, which has no other consequence than to deprive the remainder of lite of all taste and relish. There may be women who have a taste for the fine arts and who evince a decided talent for drawing, or for music. In that case, there can be no objection to their cultivation but the error is, to make such things the grand and universal object—fo insist upon it that every woman is to sing and draw, and dance—with nature, or against nature—to prefer lit to real solid improvement in taste, knowledge, and understanding A great deal is said in favour of the social nature of the fine arts. Music gives pleasure to others. Drawing is an act, the amusement of which does not enter in him who exercises it, but is diffused among the rest of the world. This is true, but there is nothing, after all, so social as a cultivated unid.

Woman's education must necessarily differ

Woman's education must necessarily differ to some extent from man's, but it should not differ in essentials and need not be worse

THE MODERN REVIEW FOR FEBRUARY, 1925

Mahatma Gandhi Reviewing Volunteers (Belgaum)

in quality. We should remember Robert Louis Stevenson's warning.

"Man is a creature who lives not upon bread alone, but principally by catchwords and the little rift between the sexes is astonishingly widened by simply teaching one set of catchwords to the girls and another to the boys."

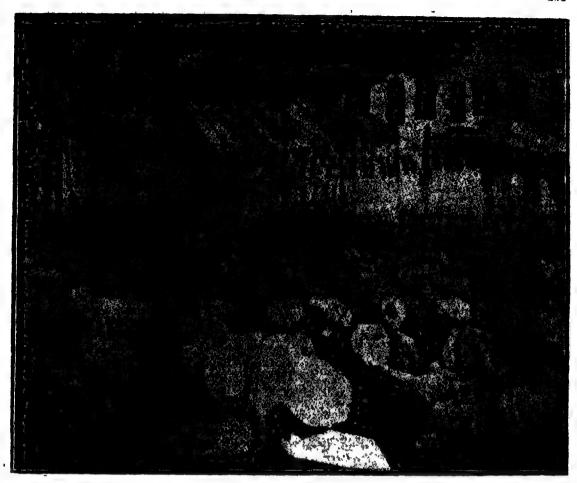

The life of frivolous dissipation, and of petty accomplishments, which make such a brave show but in reality mean so little, is coming into vogue among the upper middle classes of our society. Our unfashionable grandmothers were mostly without education, and they often missed the joy of elevated thoughts which education brings in its train, but they took life more seriously than their grand-daughters, for whose butterfly existence they would feel nothing but contempt. In a sense, both have, in a large measure, missed the meaning of life, and that being the case, the humility of our feminine ancestors is much to be preferred to the grand airs of

the 'accomplished' girls of today And in that part of education which consists in the cultivation of the emotions as distinguished from the understanding, there are not many who would hesitate to give the palm to our self-sacrificing female forbears. If we are to educate our girls at all—and educate them we must—we should remember that what is wanted is not the picking up of a few so-called accomplishments, but the acquisition of real, solid knowledge, with all that it stands for in the realm of deepening, broadening and uplifting the mind.

Passport.

The Japan Chronicle states:

No more passport visas are necessary for persons travelling between Japan and the following countries: France, Italy, and Holland. This is a very good sign. The passport system has been kept on

A View of the Indian National Congress in Session

all this time not because of any need, but simply to get a little squeeze from travellers. Great Governments are gradually waking up to the fact that such petty extortion is beneath their dignity.

What is the object of the passport system as enforced in India, or elsewhere in the case of Indians?

Preparedness

We read in the same newspaper:

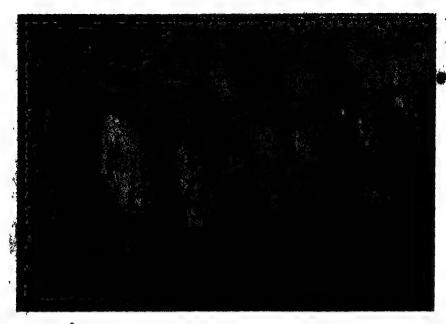

"The formula that unpreparedness increases the chances of war was repeated by Mr. Wilbur, America's Naval Secretary, in his plea for more armaments,....."

It would be interesting to know what in the opinion of diplomats and generals increases the chances of peace...

l'reparedness seems to be like whisky. If it is cold, drinkers will advise you to take drop" of whisky; if it is hot, the prescription is again a "drop" of whisky.—If a nation

wants to go to war and be victorious, preparedness is considered essentially necessary; if a nation longs for peace,—why, preparedness is, again, what is wanted!

But in reality, there will never be either disarmament or peace, so long as some "great power" does not courageously and in loyal adherence to a great ideal set the example of disarmament, even at the certain risk of being invaded and conquered. No great ideal was ever realised except at the cost of martyrdom,—at any rate, at the risk of martyrdom. Individual greatness is achieved by individual fidelity to a great ideal and the consequent actual or possible martyrdom. The way to national greatness hes exactly in the same direction. We speak of real enduring greatness, not of querflowing wealth, big navies, large armies, and numerous air squadrons.

Review of Congress Volunteers (Belgaum)

Sivaji's Greatness

Professor Jadunath Sarkar has recently summarised some of the characteristics which made Sivaji great. Says he, in part .--

The first of those was probably his policy of allowing freedom of worship and thought to all and sundry, complete liberty of speech, action, and mind. The second was his recognition of talent wherever it might be, and his giving of responsibility to all whose abilities fitted them for it. Mahomedans were as numerous in his service as Hindus and more than once he received the approbation of the Mosiem emperors at Delhi for the way in which he employed Mahomedans in all departments. With him ability levelled all men and placed them on the same plane, and to this policy he owed much of his success and power."

Professor Bose's Address to Presidency College Students

On the occasion of the completion of forty years of professorship by Sir J. C. Bose. first as Professor of Physical Science and subsequently as Emeritus Professor, an address was recently presented to him by the students of the Calcutta Presidency College. In the course of his reply Professor Bose said :---

The success that has come to me is more than enough to satisfy all my personal longing. But my ambition for you knows no bounds: for it will be you representing the young generation that will carry on the work which we leave unfinished, it will be for you to build the greater India yet to be, by the selfless devotion of your lives.

This is in harmony with the Sanskrit maxim which tells us to desire to be surpassed by our sons and disciples.

Speaking of his professorship at the Presi-

dency College, Dr. Bose said :--

Forty years ago, Lord Ripon's Government appointed me to be the Professor of Physica Science in spite of the strongest protest of St Alfred Croft, the Director of Public Instruction and Mr. Tawney, the Principal of the Presidency College, Str Alfred Croft told me frankly that an Indian was temperamentally unfit to teach the exact methods of modern science; I would beside be unable to maintain discipline in the Presidence College, the students of which enjoyed the note riety of being the most unruly. I did not make any grievance of this prejudice based on ignorance any grievance of this prejudice based on ignorance it was for me to make them feel ashamed of if The students I found to be quite different from what they were represented to be: during milliong Professorship I never found the slightedifficulty in exacting the most rigid discipling. My teaching was found to be above reproach an some of my most important researches were carried out at off hours in the absence of anythin that could be dignified as a laboratory. The result of all this was that both the Principal and the Director not only became my staunchest friend but even strong partisans. but even strong partisans.

Regarding his discoveries in the realm of physiology, the Professor observed :---

I got into trouble when I tried to enter the preserves of the Physiologist. There was the same pack feeling which resented the intrusion of a stra ger, who belonged to the fold of physicists. I results were incredible and opposed to accept theories. I was challenged to show myinstrumes at work. I had to carry them all the way for India; when I landed in London the poster. Carri

Mahatma Gandhi, the President of the Indian National Congress leaving Belgaum Accompanied by the Chairman of the Reception Committee

the box upside down, with the result that the heavy base crushed the delicate recording portion beyond recognition. So the costly visit to Europe was for that time a complete failure

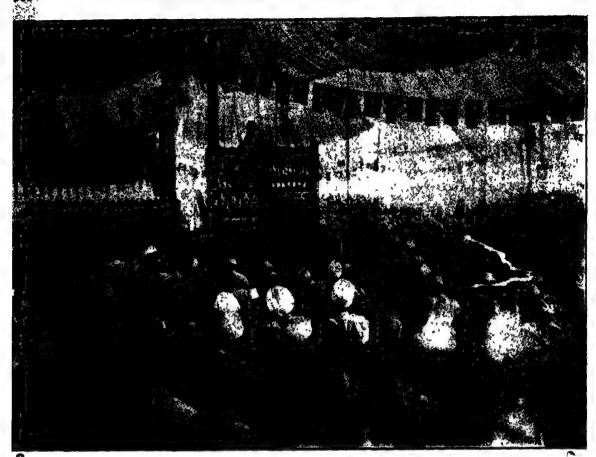

FATE HANGING BY A HAIR

The next time I made a portable instrument which I carried myself. It was the now famous Magnetic Croscograph which produced the incredible magnification of a hundred million times. This was regarded as theoretically impossible. I had a laboratory fitted up which was open to all scientific men. But a persistent opponent challenged me in The Time" to exhibit it at a neutral place, the implication being that the performance of my apparatus was due to some jugglery. Of course my opponent wanted simply to put me to trouble. He well knew that the vital portion of my indicator was suspended by a thread finer than a hair which would break during transport to a new place I could not refuse the challenge, and the leading mentific men assembled to test the apparatus at the University College, Gower Street. I carried the instrument safely in a steady motor-car, but when I got down the slight jerk broke the thread. Hy merest chance I had a seccotine capsule by me, with which I joined the broken ends of the thread. The

secretine did not dry and my delicate indicator was being pulled down by its weight all the time but for fifteen minutes the thread held together and during that time my experiments were all complete. The excitement in the press knew no bounds and it was perhaps my pluck under unfair conditions that won for me the largest number of friends among scientific men and the lay public. From all this it will be clear now how infinite must be the patience and persistence for winning any recognition or success against general ignorance.

In two previous issues we drew attention to the Italian philosopher Croce's opinion that all workers,—be they scientists or philosophers, poets or artists, or men engaged in other honourable pursuits,—and not merely statesmen or politicians, should rightly be considered as doing public work. Increfore Sir J. C. Bose was entirely tight in claiming

Every one of us is united in the common purpose of winning for India an honoured place in the Federation of Nations. This we shall achieve by our united and persistent efforts and by strict observance of the rules of the game. The race is not to the swift but to the wise. By wisdom is

Another View of the Congress in Session (Belgaum)

neant not the subservient discretion of the weak, but that which comes from consciousness of power which is achieved only through righteousness. Whether India is to gain her salvation through conflict or through the other method more consonant with the property of the consonant with the future. For there is something in indian culture which is possessed of extraordinary atent strength, by which it has resisted the ravages of time and the destructive changes which have swept over the earth. And indeed a capacity to enlure through infinite transformations must be latent in that mighty civilisation which has seen the inellectual culture of the Nile Valley of Assyria and of Babylon wax and wane and disappear, and which to-day gazes on the future with the same invincible faith with which it met the past.

The veteran's confession of faith ought to hearten all privates in the ranks.

On "Misquotations"

The Catholic Herald of India (December 10, 1924) writes with reference to Babu

Maheschandra (thosh's reviews of biblical books :-

VISQUOTATIONS

a In a previous issue we read that according to the scholarly work of Dalman, Jesus taught the existence of a merely material banquet in heaven. On tracing the reference we find, to our pleasant surprise, that Dalman says just the opposite, and most emphatically, in so many words, immediately after the words quoted by M. C. Ghosh (Luke XXII, 29), "Never," says Dalman, "did Jesus mean these words to be taken in a literal sense".

Babu Maheschandra Ghosh quoted Dalman in his review of Professor J. Eslin Carpenter's "Buddhism and Christianity: A Parallel and a contrast", which was published in The Modern Review for June, 1924. The passage in which Dalman was quoted in that issue. p. 661, runs as follows:

Jesus and his followers used to drink wine. Eating and drinking at his table in his kingdom was a special privilege of his apostles. (I.k. XXII. 30). "This repast was no mere figure of speech." (Dalman: The Words of Jesus, p. 111). Jesus himself said that he drank wine and that his enemies

NOTES 239

Mahatma Gandhi, the President of the Belgaum Session of the Indian National Congress

died him a "winebibber" (Matt. M. 19 d. l.k. VII to This proves that some of his enemies condemned drinking but he, the Messiah, had no objection to drinking.

Here we do not find Babu Maheschandra thosh asserting that "according to the scholarly work of Dalman, Jesus taught the existence of a merely material banquet in heaven". He simply quotes some of Dalman's words—from a sentence which, as we shall see, Pfleiderer also quotes in a footnote. Veither Pfeiderer nor Babu Maheschandra gives Dalman's context, not considering it essential. But let us come to the "misquota-

THE STATE OF THE SAME OF THE S

tion In "The Words of Jesus by Gustat Dalman (authorised English version by D. M. Kay, B. D. n. sc. 1909), page 111, the passage quoted from runs as follows.—

From the Gospels it may be inferred that the conception of an actual repast for already an old established idea this repast was no mere figure of speed. But he speaks of it in plain language only for the righteens of all ages are destined to entor. Never did He refer to the repast as a mere repast.

Here we do not find the words, "Never did Jesus mean these words to be taken in

A View of the Congress Camp (Belgaum)

a literal sense," which the Catholic Herald prints within inverted commas and ascribes to Dulman.

Regarding the meaning of what Dalman has written, our opinion is (and it is admittedly the opinion of one whose vernacular is not English) that Dalman held that by the repast Jesus meant neither only a material feast nor only spiritual fellowship, but partly both.

Not being biblical scholars, we do not venture any opinion of our own legarding the actual meaning of what Jesus said But we may be permitted to quote the opinion of Pfleiderer, who writes —

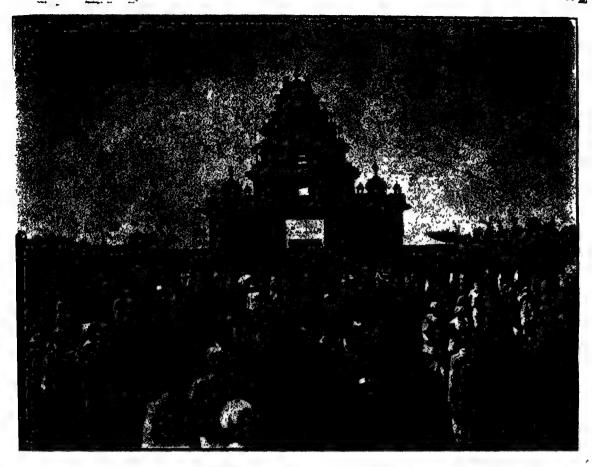

"Dalman is doubtless right in remarking," ... The difference between the preaching of Jesus and Jewish views consists, not in the idea of 'the life', but in what Jesus has to say of the theocracy (Gottesherrschoft) and of the righteousness without which life in the theocracy can never be attained" (Worte Jesu, p. 132=E, T. 162). Naturally, it consists in a condition of perfect happiness, of complete joy and satisfaction. Therefore the loyal servant has held out to him as his reward the prospect of entering into the "joy of his Lord" (Matt. XXV. 21). Frequently this joy is represented as a partaking in the Messianic feast, the guest at

which shall sit at meat with the patriarchs, or eat and drink at Christ's table (Matt. VIII 11; Luke XIII 29, XXII 30) Now as that is not to be thought of as a mere figure*, and as the scene of this feeal loy is certainly the "land" of Canaan (Matt V. 5: cf. Ps XXXVII. 11, Enoch V. 7, XC. 20), Jesus seems to have thought of the condition of the partakers in the Reign of God, not as a supersensuous existence comparable to that of heavenly spiritual beings, but as an earthly existence raised to a higher power and freed from the evils of the present life. That was certainly the way in which the primitive community of His followers understood it, as may be concluded from the fact that they supposed the description which is found in Apoc. Baruch (XXIX. 5.) of the fabulous fruitfulness of field and vine (in the Messianic times) to be a prophecy of Jesus; and even though they were mistaken in this, the mistake would be unintelligible if Jesus had thought and taught the direct opposite—if he had represented the unending life under the Reign of God as completely freed from earthly conditions and as the blessedness of heavenly spirits.—

I server to a real participation in

* Dalman, ut sup., p. 81 (= E. T. III): "Even for Jesus, this repast was no mere figure of speech". Joh. Weiss (ut sup., p. 120) considers the arguments for figurative interpretation of this conception "extraordinarily trivial"—meaning thereby. no doubt superficial and untenable. Pfleiderer's foot-note.

The Working of Local Self-government in Bengal

Lord Lytton and at Jessore that

He had received a most favourable impression of the working of Local Self-Government institutions in the Province. This was a matter of which practically nothing was known in Findand, and when he went back the last evidence he could submit to his countrymen of the fitness of India for Responsible Government would be derived from the working of the representative element in the Local Self-Government machinery of the Province. All the difficulties which were so often quoted as obstacles to the concession of political responsibility were there present though in a smaller degree. On Union Boards, Local Boards and District Boards he found Muhammadans and Hindus, as well as all castes of the latter, working together, and solid work for the improvement of local conditions was being done.

What has Lord Sydenham and other die-hards got to say to this testimony: Here is a British Governor on the spot who of his own accord bears witness to the fitness of the people for Responsible Government.

Lord Lyttton expressed the further opinion

Boy Scouts Saluting the National Flag (Belgaum Congress)

that "the will to effect local improvements was also present. What was chiefly needed was more money." He concluded --

During the two years which still remain of my torm of office. I hope to concentrate upon this problem of increasing the wealth of the Province, and blem of increasing the wealth of the Province, and thereby the ability of Government agencies whether Local or Provincial to supply local needs Wealth is of two kinds and may be derived either from human resources or from the resources of the soil. Human wealth is at present greatly diminished, both by ignorance and disease, and it is also common knowledge that the soil of Bengal is capable of a much greater yield than is at present obtained from it.

The problems of Education, Public Health and agricultural improvement therefore, require special attention from the point of view of increasing

attention from the point of view of increasing wealth.

Governors, like other men, must make every effort to fulfil their promises. At the Joint Conference of the Departments Agriculture. Industries and Co-operation and the Veterinary Department held at Government House, Calcutta, on the 4th and 5th July, 1924. it was resolved:-

This Conference is of opinion that a liberal policy of Government loans is essential with a view to developing special forms of Co-oporative Societies.

This Conference urges on Government the importance of interation as a factor in agricultural improvement, especially in Western Bengal, and in view of the considerable development of small ability of increasing the staff of Co-operative Officerand of posting competent Irrigation Engineers in each district where such development is proceeding or is possible

After his visit to Bankura Lord Lytton wrote to the Magistrate of that district on the 30th Jamuary, 1924

"I should like you to know how very pleased I should like you to know how very pleased I have been to see the interesting examples of co-operative self-help which were shown to me in the Bankura District. The work being done by co-operative irrigation societies in providing by local effort against the dangers of drought and crop failure, is most encouraging and the best possible guarantee of the future prosperity of the district. The members of these societies have shown how wealth can be created even by very poor Communities, and I hope that their example will be widely followed. I have said on other occasions

hat Government help ought to be proportioned to ocal effort, and according to this principle the people of Bankura have established a strong claim upon the assistance of the Government. I shall not forget this admirable effort and shall see that its properly encouraged.

should like to know what Lord to give Lytton has done effect to the resolutions quoted above and to keep the promise made in his letter to the Magistrate of Bankura. Assuming that his ministers ever stood in the way of his carrying out his good intentions, we may point out that there are now no such officers. He is practically all in all The disadvantages of one-man rule are many But so long as the autocrat has good intentions. there may be some advantages also So, let the people of Bengal have the advantages of what is practically one-man rule so long as it lasts

The vital need of irrigation and agricultural improvements in West Bengal was also pointed out independently some time ago by Mr J × Gupta, I. C. S., as commissioner of the

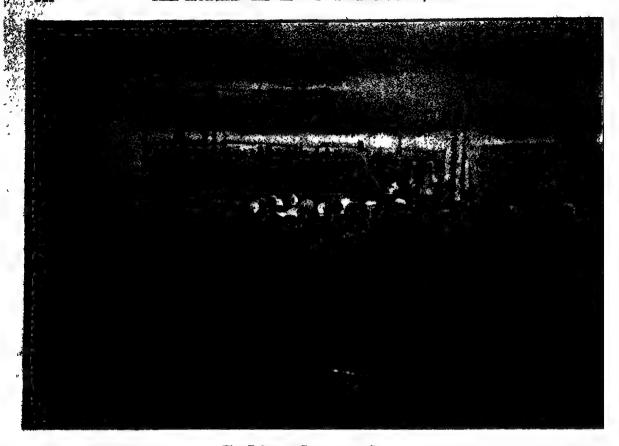

THE PARTY IS ASSETTED

Burdwan division Let us now have adequate steps taken

Lord Lytton's Unwisdom

Lord Lytton made a speech at the meeting of the Bengal Legislative Council at which leave to introduce the Bengal Ordinance Bill was refused by a majority of votes. The speech was made in an excellent spirit and tone. But the line of argument he adopted showed his unwisdom.

He took it for granted that the belief of the people of Bengal that the police not unoften fabricated evidence to get innocent persons convicted rested only on the single instance of what is known as the Musalman-para Bomb Case, in which one Nagendran ith Sen Gupta was accused of having committed murder by throwing a bomb, but was acquitted after trial by a full bench of the Calcutta High Court His Excellency, therefore, tried to show that the High Point judges were wrong in acquitting the accused, the strong-

The Belgaum Congress in Session

est argument advanced by His Lordship being that the accused himself had now confessed that he did commit the murder So Lord Lytton thought that the police could be trusted with discretionary powers. We have no desire to comment on this belated, safe and probably not entirely disinterested confession. But we wish to point out that the Musalmanpara Bomb Case is not the only ground for the belief in the unreliability of evidence got up by the police. In fact, the very day after the delivery of His Lordship's speech the Amrita Baxar Patrika had no difficulty in referring to many other well-known cases in which the police had been judicially found to have concocted evidence. Probably, other papers also may have drawn attention to such cases.

As regards the Musalmanpara Bomb Case, Mr. J. Chaudhuri, Barrister-at-Law, has shown in his Calcutta Weekly Notes that Sen Gupta was acquitted by Sir Lawrence Jenkins, the Chief Justice, and Justices Sir Asutosh Mookeriee and Holmhood, because they found

that some of the evidence adduced was fabricated and utterly unreliable. It appears, therefore, that, assuming Sen Gupta's belated confession to be true, the police wanted to make assurance doubly sure by gilding gold and painting the lily—they tried to make the true evidence truer and more convincing by means of falsehood, and thus spoilt the whole thing

Lord Lytton ought not to have placed such implicit reliance on his advisers as to believe so easily that three such distinguished judges as Sir Lawrence Jenkins, Sir Asutosh Mookerjee and Justice Holmwood had come to a wing conclusion from the evidence placed before them He seems to have some cocksureness in his nature. For he said in his speech that simply by going through the papers of Sen Gupta's case in the India Office in London he could at once see that there had been a failure of justice in the case at the man appeared to him to be clearly guilty

We do not believe that every policeman of officer is dishonest and untrustworthy,

NOTES 245

but we hold that there is so much dishonests, corruption and lack of character in the police force that police officers cannot indiscriminately be trusted to make a proper use of discretionary powers Sir Reginald Police Commissioner Clarke was the Calcutta for a long period. He knows all about secret police reports and the arrest of men in consequence of such reports Speaking of a weapon like Regulation III in the hands of the Executive, he has recently said in England that "ti is one of the most dangerous weapons that any Government can use". As regards spies, informers and secret agents of the police, he observes:-

"I have had much experience of these agencies in the East and often wonder whether they do not raise more devils than they lay."

Discourtesy to Mrs. C. R. Das

Visitors were not allowed to attend the recent meeting of the Bengal Legislative Council at which Lord Lytton spoke, though policemen in plain clothes were seen there. Mr C. R. Das had been very ill and had been pronounced out of danger only on the morning of the very day on which the Council Though very weak, he insisted on met attending it. He was carried upsture in a chair by some MLC.'s who were his friends, because other bearers were not allowed to enter. Mrs. C. R. Das wanted very much to accompany him in order to help and nurse him if necessary. But the president of the Council, Sir Evan Cotton, refused her permission. In doing so, he observed that he had cancelled the visitors' tickets of even his own wife and of Lady Wheeler, wife of the Governor of Bihar. But it was not necessary for either Lady Cotton or Lady Wheeler to accompany a sick husband to his place of duty to nurse him in case of need, which it was necessary for Mrs. Das to do. So there was little force in his argument. We do not know if Sir Evan Cotton also meant to suggest that as two English ladies of high position had not been allowed to come in, there was no harm in shutting out the Indian Mrs. C. R. Das. If he meant any such thing, he ought to have known that in her own community Mrs. Das occupies a position not inferior to that of those English Mr. C. R. Das ennede and has given up a larger income than what provincial governors enjoy. The position of governors as such is not higher than that of the leader of a

people. There is a story current that on one occasion during an official interview, Queen Victoria felt nettled and reminded Mr W. E. Gladstone, her prime minister, that she was the queen of England. "But, your Majesty," replied Gladstone, "I am the people of England". The queen had the good sense to take the hint. The wife of the leader of a people may be considered to have a position not inferior to the wives of high-placed public servants

Certification of Bengal Ordinance

The Bengal Ordinance Bill could not even be introduced in the Bengal Legislative Council And there has been all but unanimous condemnation of the Bengal Ordinance from all parts of India. Still it has been certified and must become law!

We do not say that at all times and in every respect public opinion must be right. But we cannot also say that at all times and in every respect, the bureaucracy must be right. In fact, there is a greater probability of the bureaucracy being in the wrong than the people. In the present case, the people were right in holding that no case had been made out in favour of emergency legislation, as the executive and the police already possessed more than ample powers to deal with the situation.

Government had alleged that revolutionaries could not be brought to open trial, because of the intimidation of witnesses, jurors and judges by the terrorists. The hollowness of this plea has been exposed in detail in the Calcutta Weekly Notes and other papers and by the Indian Association. Government was bearded in its own den by a string of interpellations demanding definite information regarding the alleged intimidation. But the questions were disallowed. That was a practical confession that the Government case had no legs to stand upon.

As we are not vet a sufficiently united people, we cannot effectively oppose Government. We can only observe that it is folly to seek to govern a people without convincing its reason and satisfying its conscience.

The distincted condition of the people has emboldened government so far that it has not ented even to crity out the suggestions of its friendly critics. It has not, for example, made any provision for speedily bringing to trial all persons arrested under the provisions of the Ordinance.

Swarajist Strategy

Government was defeated on the Ordinance Bill by a combination of Swarajists with the Nationalists and Independents. According to Forward, Sir P. C. Mitter led the opposition as the mouthpiece of this united party But he advocated the reenactment of the Rowlatt Act with certain omissions and alterations. Do the Swarajists and others want this sort of legislation 2

Professor Sten Konow

Professor Sten Konow came to the Visvabharati University with a great reputation. The expectations raised have been more than fulfilled. During his stay at Santiniketan he delivered lectures regularly on the following courses:

Indian Religions: A Survey of the Development of Indian Religious Thought from the Indo-European Origin to the Present Day.

Critical and Philological Interpretation of the Kharosthi Dharmapada.

Reading of the Vajracchedika and other Texts in old Khotanese.

A Course of Lectures on Kalidasa's Sakuntala.

In Calcutta, under the joint auspices of the Visvabharati and the Calcutta University he has delivered a course of lectures on the Indo-Scythian Period of Indian History: Introduction to the Interpretation of the Later Kharosthi Inscriptions

His first lecture at Santiniketan has been published in the January number of the Visvabharati Quarterly. Probably all the lectures will be published in the form of a book. Some idea of the scope of the lectures may be formed from the introductory paragraphs of the first lecture, which are extracted below.

About a hundred years ago, in the year 1820, Ram Mohan Roy published his Precepts of Jesus, a highly interesting work which exercised a not inconsiderable influence. It dealt with the leading ideas underlying Christianity, and dealt with them in a way which showed that its author was filled with sympathy for the tenets of the religion of Europe.

One would have thought that his enterprise had been haited with enthusiasin by European priests and clergymen. Such was not however the case. The learned dectors of divinity were rather displeased. They did not think that Rain Mohan dealt with Christianity in the proper way; his view was not the orthodox one; and orthodoxy has often, in most countries, been considered as a necessary condition for being entitled to discuss retigious matters.

In these lectures I am going to do just to opposite of what your illustrious compatriot did hundred years ago, and I am venturing to do without his deep penetration and intinate unde standing of religious mentality. It would therefore be quite natural if some of you might think the my undertaking is a preposterous one and a what qualifications I, a European, have for speaking to you about matters which are dear to your head and which you must be presumed to understang much better than I. I know that I run a gravitisk, but still I take the risk, and I shall try tell you why.

Since I was a boy in the Norwegian Universit I have devoted most of my time to the study Indian History and Indian civilisation, and I have learnt to love India and to consider her as me sacred home. I have tried to follow the development of Indian thought and Indian religions during the continuous, and I willingly confess that it has been do not to be almost impossible for a Europee to grasp the Indian mind behind all the different stages of that development. There appeared to such a fundamental difference between many the different forms which religion has taken it this vast country, that one might sometimes inclined to doubt that it was the same mind whice manifested itself in all of them.

In the hymns of the Rigveda we see a storm warlike people praising mighty heavenly gods an covering their favour through sacrifice, we knowing nevertheless that the celestial kings he the power of blessing as well as of withholding their favour, in spite of hymns and sacrifice. The in the Brahmanas, we seem to be met with qui a different mentality; the sacrifice, the yajna, all-powerful, and the great gods appear to have been reduced to mere puppets in the great dram where the chief actors are the priests who kno all the details of the complicated ritual. An again in the Upanishads, the knowledge, the decinsight itself, appears as the cosmic power rulir and framing the universe and leading man on

Then follow, as a natural consequence of such frame of mind, religions like Jamism and Buc dhism, where it is pointed out that the way to bli leads away from the multifarious life in which the Vedic Aryan rejoiced, away from the sacrific which was so highly praised in the Brahmana through the abnegation of the I to realisation of eternal truth. And again, apparently in direct opposition to this view, we find the Bhagavata with their belief in a merciful personal God, who only asks man to meet Him in devotional love and then draws him into His eternal heaven of bliss.

It would seem as if these different views can not be reconciled, as if there were, within India religions, several different layers without an internal connection between them.

But an old Rishi has told us that such is no the case:

Elernal truth in one, but it is reflected in man

He says this about his own time. He saw the differences, but he also saw the unity; and he leads up to think that where we seem to be nothing but various tenets and beliefs there may yet be a uniting bond, an eternal reality, of which we perceive the varying formulas.

In reply to the address of welcome givet

to Dr. and Mrs. Sten Konow in Sanskrit, the professor spoke in Sanskrit. At the ennual meeting of Visva-bharati also he spoke in Sanskrit. This Sanskrit address was followed

1.10

Bhatta Sri Saila Kanva and Srimati Savitri Devi Professor Dr. Sten Konow and Mrs. Konow -Photograph by Babu Krishna Lal Ghose

by these few words in English, as reported in the Visva-bharati Bulletin:

My friends, we bow down to-day in reverence to him to whom we owe the idea of Visva-bhanati. It is a poet's vision. To this home of peace (Santiniketan) men can come from every quarter of the globe in a common endeavour to promote mutual understanding and goodwill.

It is a poet's vision, but it came at a time when men were in sore need. The Gospel of Jesus had

proved powerless when people rose against people and each of them, in the name of the King of Peace, called upon men to take up arms. The Church invoked His name to support in turn the cause of each contending country. From the

pulpit men were exhorted to kill one another.

r The outlook in the West seemed hopeless when the Poet came and asked us to seek salvation through faith in new ideals. Wise men of the world smiled, but there were individuals who felt that there was yet hope for humanity. The Poet's vision must some day come true. The nations of the world must join hands in a common endeavour to build anew

the history of the world.

I am waiting for such new development. It will not do to bring every country and every continent under European rule and European civilization. Asia, asleep for ages, must make her own contribution to the world culture. All the peoples of the world must come together working towards common ideals

for the univerial welfare. There are differences there are conflicts of interest and it would be idle to ignore them. But it is the endeavour of Visyabharati to study them with a view to effect a reconciliation. lafe is harmony, rich in variety. Death alone is uniform The object of Visva-bharati is to

achieve unity in diversity.

I take it to be a good omen that the Visya-bharati has been started in India India has never attempted to conquer the world by torce or violence. Millions in India have kept their faith in lofty ideals. Let us move forward inspired by the Spirit of India to fulfil the Poet's vision.

In reply to the farewell address in Sanskiit at Santiniketan, he spoke first in Sanskrit and then in English. . It is to be regretted that these speeches have not been reported

Professor and Mrs. Sten Konow have left at Santi-

abiding impress of personality. From Santiniketan the professor visited Kenduli, the buthplace of the poet Jayadeva, where every year a religious gathering of Vaishnavas is held What he said there in Sanskrit made a profound impression on the bands and other Vaishbavas.

The professor's faith in the lofty Indian ideals has led us to think whether we Indians shape our lives according to those ideals.

We have also been led to think that though it was Indian culture and religion which influenced Central Asia, China, Tibet, Indo-China, Java, etc., yet, far from there being men among us who are qualified to teach us all about India's work in those countries, when competent non-Indians are good enough to come out to our country to share with us their knowledge, a sufficient number of students does not take advantage of the opportunity. The importance of these indological studies is not yet understood. Let us hope that gradually we shall come to understand their value, and it will be possible to found and endow a number of chairs for their promotion.

The All Parties' Conference

The All Parties' Conference at Delhi has appointed a committee; to report at an early date.

Early or late, we must have a united demand. That united demand may be the minimum with some parties, and the maximum with others, and those who want more than this united demand may and should be left free to realise their ideal. What is less does not shut out the greater.

When all parties want Swaraj, surely it should be possible for all to hit upon some scheme which will satisfy moderate expectations without obstructing those further developments which others may long for.

The Commonwealth of India Bill

The Commonwealth of India Bill, of which a draft has been circulated for information, opinion and comment, has been carefully and elaborately drawn up Of course, in no country where there may be occasion for the drafting of such a bill can there be complete unanimity. Opinions will differ. But the least that can be said of the value of such a draft is that it provides us with a definite working basis which we can consider and discuss, add to, curtail and alter.

Mrs. Annie Besant and her co-workers have rendered good service to the Indian people by presenting this definite result of their labours.

In poetry there is some virtue in leaving something to the imagination of the reader. The political idealism, too, there is room for

dreaming. But in practical politics, noth is gained by vagueness.

Academic Success of an Orthodox Gir

Orthodox Bengal, which means the v majority of Bengalees, is not well dispotowards the education of women. It is the more remarkable, therefore, that N Nirmala Bala Bose, grand-daughter of late Babu Ananda Krishna Bose, a w known scholar descended on his mother side from Raja Sir Radhakanta Deb, I stood first in English in order of merit the M. A. examination of the Calcu University. That a girl belonging to orthodox family has achieved this distinct by private study does her great credit.

Women Novelists of Bengal

The education of women in Bengal 1 being generally encouraged, as noted abo it is no wonder that the women writers Bengal do not form a large body. But for though they are in number, they appear have made their mark in the writing works of fiction to a sufficient extent make even an Anglo-Indian journal like I Statesman devote an article to them, whi runs as follows:—

Women have given a better account of themselthan men in the task of unfolding the delic shades of thought and feeling which go to make their inner being. For it cannot be denied twomen have other aspects of life and being than manifested to men. There is still surviving certain measure of antagonism between the sex by reason of which each sex more or less driftle curtain on some part of their inner life, white remains imperfectly revealed to the other. So as that part of women which she holds out unreseredly to man goes, one might say that man compaint woman better than women themselves; for spite of the aberration of judgment due to partial or antipathy for the other sex, man can, on twhole, now upon this part of a woman's life with greater measure of detachment than women.

But when it comes to the inner woman, himost soul and the unfolding of her deepe emotions, there man fails.

One can say, with small fear of contradiction that, in Bengali fiction, the most successful pictur of the inner life of woman have been given women writers. The mere male has drawn women with success, so long as he was dealing with toutworks of the fort where her soul dwells. Or in a while they have had the hardihood to venture on a detailed analysis of the mind of woman Racindranath Tagore, Sarat Chandra Chatteries a Nares Chandra Sen Gupta have been fas m

NOTES 24)

adventurous authors in this sphere. They have often done surpussingly well, but, most notably, in their pictures of women who are out of the or-

But woman is a story by herself, even in her most hundrum and common surroundings, and if only one could tell the story of her mind through and through, one could make an engaging romance. That is the lesson of the most successful works of women authors in Bengali fiction. Men have not beaten them in the delicate and finely woven pictures of the hourt of the woman who is far from extraof the heart of the woman who is far from extraordinary.

In Duli, which was her earliest (?) and most successfull work, Srimati Nirupains Devi introduces us to

a wom in of extraordinary chara ter, but essentially a Hindu woman behind the purlah, who is placed in a very difficult situation. Her husband, Amarnath is married to her against his will, at the wish of a masterful father He robels against this compulsion, renounces his wife and home and marries another girl. At the death of the father-in-law, Suraina finds herself the inistress of a household from which her husband has banished himself, and she rules it with all her skill and masterfulness. and she rules it with all her skill and masterfulness Her pride enables her to bear her sorrow and humiliation without flinching

Soon, however, Amarnath comes home with his girl wife, Churu, who is a veritable child, and almost remindsone in her earlier stages of Dickens's Dura(?) They are thus thrown together Surama prepares herself for her encounter with her husband with all her paids and heathful the surama prepares to the stages of Dickens's (?) with all her pride and hostility and the husband is by no means anyious to be reconciled to her, being occupied with Charu.

This child, however, by her very helplessness and simplicity, wins the heart of her co-wife, and for a time Surama and Amariath become friends in a distant and disinterested sort of way.

The rest of the book is a finely drawn-out story of the slowly chapters contains of the man and

of the slowly changing emotions of the man and the woman. The first signs of contrition in Amarnath are met by a dignifi d robuff. But the canker has begun eating into Suram i's soul, and from this time she carries on a long flight against a growing yearning in her for her husband whom she cannot have been a fine and the state of her husband whom she cannot have been a fine and the state of her husband whom she cannot have been a fine and the state of her husband who are so fine and the state of her husband who are cannot have been a fine and the state of her husband who are stated as a state of her husband who are stated as a state of her husband who are stated as a state of her husband who are stated as a state of her husband who are stated as a state of her husband who are stated as a state of her husband who are stated as a state of her husband who are stated as a state of her husband who are stated as a stated now hate, and yet cannot desire because of her pude, and of her love for the child Charu. Only a woman could have given the delicate and arresting picture of Suraina's soul as the author has rendered

MOTHER INSTINCT

A similar though differently conceived theme Mr. There the husband renounces the first wife, whom he loves, for no fault of hers but because his father has unreasonably taken offence and turned her out. He marries again at the order of his father. This second wife that meets us a selfish and self-willed woman whose feelings are always on other with a hore should be and discombal on edge with regard to her absent and disparded owife. Srimiti Anurupa gives a more ambitious treatment to her theme than was attempted by Simati Niripama. In parts of her work sue has one bayond her depth, and this detracts from the artistic finish of her story. But the picture of this second wife, who is always feeling a void in her linshand's heart where the was expecting love, is superb in its subtlety and truthfulness. The motharinstinct of this barren woman proves to be her salvation in the end, and starting as the sworn

enemy of her co-wife and her son she ends as a loving mother to her orpitaled step-son. The story of this development of her inner mind hears on every page the delicate touch of a woman's heart

and insight.

The talented sisters, Sinta and Sita Devi, have chosen their themes from very different surroundwhile Anurupa and Nurupama Devi have told of life in the orthodox Hindu household, the heromes of Santa and Sita Devi are mostly girls from college, living and moving mostly among t cultured people of the advanced Brahmo society. Few people are as qualified to tell the mind of this class of women. and they have unfolded their story with a noble and they have unroided their story with a noble sense of artistic bearing and a truthfulness and delicacy which are not easily beaten. The first ambitious work was the result of their joint effort—the Udyanbata (the garden-creeper) It gives a delightful story of the life of Mukti, a modern girl brought up in a college with a wealth of detail and brought up in a college with a wealth of detail and lightness of touch which is characteristic of these sisters. There is nothing very extraordinary in the main plot, which is that of two young men in love with the same girl. But the charm of the story lies in the treatment of the tneme, which is very arresting especially the last scene where Mukti is bidden farewell by a discarded lover whom she had never known as such till then, and whom she liked perhaps more than anybody elsemore that had never thought of him as a lover

only she had never though; of hun as a lover.
The situation in which she finds herself after the revelation, makes up a delicate tragedy and the authors leave us imagining all soits of things that must have been passing in her mind in her last moment of indecision. The tableau of the girl lingering on the staircase after the lover has gone remains in the mind long after the book is

closed.

A GIRL'S BRAVERY

In Chirantani Sinta Devi gives us an attractive pen-picture of a graduite girl who works for her living and slaves at her work for the sake of her brothers, her sisters, and her grand-father. She is loved with great impetuosity by an eccentric and prosperous young man, and she has but to say 'yes' to be above want. But with the crushing weight of poverty on her, she is yet incapable of siving the word, and she waits in critical suspense till she finds her true love, and her suspense is ended. In Chirantani Sinta Devi gives us an attractive

The author shows living portraits of the life and mind of the type of highly educated young woman who is growing more and more common among us, and also a picture of a poor Brahmo household which pleases the artistic mind by its artiess simplicity and absence of superfluity.

The same characteristics are displayed in the Rajanigandha of Sita Devi, where the end is Rejaniganiha of Sita Devi, where the end is tragge. Here a poor gut from college finds employment as a governess and falls in love with her master though her love is never spoken. She is fated, however, to have to wait on her broved, who becomes the loving husband of a friend which who becomes the loving husband of a friend which are loved and worshipped with a romantic passion. The situation is handled with creat ingenuity and delicacy and the struggle in Kshamka's heart is given full expression.

Mrs. Sailabala Ghosh has contributed largely to

Mrs. Sailahala Chosh has contributed largely to the literature of fiction in Bengal. She is perhaps less keen on panning life than on pointing a moral,

à

252

the matter from a different angle. We have

epages of Prabasi.

Are we justified in having any places of amusement whose existence presupposes and depends on the existence of a class of prostitutes? There are vigilance Committees and there are laws for minimising or doing away with the culs of prostitution So it may be taken for granted that all decent people want that commercialised vice must be destroyed root and branch. But there are many respectable ladies and gentlemen who patroniso the . Bengali theatres, who at the same time want that there should be social purity. They do not pause to think that social purity is unattainable so long as there is a demand in some form for a class of women of ill fame; and under present conditions, the demand for being entertained by professional actresses in Bengal is a demand for the existence of a class of women of ill fame.

The problem before us is this. If we want social purity, we must not have any institutions which directly or indirectly depend for their existence on commercialised vice. So either respectable women would have to take to the profession of acting, or the theatres must be so reformed that the women of all fame who are professional actiesses there may find it necessary and easy to lead pure lives. If neither of these two alternatives be possible, the Bengali theaties should not be patronised by people who want all women to lead pure lives. The larger the number of our theatre-goers, the larger would the number of theatres be. That would mean an ever-increasing number of professional actresses, which, as matters stand at present, would be equivalent to an ever-increasing number of women of ill fame.

It is not that no reform of the Bengali stage is possible. For in many countries there are professional actresses who are good daughters, wives and mothers like other virtuous women.

Humour in "Aindu Polity"

Mr. K. P. Jayaswal's "Hindu Polity" is a serious study of a serious subject. But there is humour in its preface. For example, the author ears therein that the manuscript of the work was ready in April, 1918.

The look was made over to Sir Asutosh

publication of the work, placing it on the univers-

ity syllabus.

"When a few chapters had been in type the author was informed that scientific plagmism was at work. Then, the manuscript was stolen from Sir Asutoch, no other belonging out of the group from which the box of manuscript was missing was touched by the critical though secret admirer. Sir Asutoch informed the police with the result that a professor who claimed to have recovered the manuscript made it over to Sir Asutosh. After three days' confinement, the book obtained liberation."

"Set a thief to catch a thief", so runs the proverb. We do not know whether in the present case the wisdom of the proverb was proved by some tame plannist discovering the manuscript from the study of a brother artist.

Mr. Pal's Apology

We were rather surprised when we found the portraits of Mr Bawla and his mistress in The Bengalee We thought it must have been due to Mr. Bipin Chandra Pal's absence from Calcutta We are glad to find Mr. Pal apologising for the publication of these portraits, saying:—

"This has been done in my absence and without my knowledge and authority, and I express my sincere regret for the prominent publication of the portraits of Mr. Bawka and Mumiaz Begum that have no title to this notice."

Mrs. Basant on Communal Differences

At the All Parties' Conference Mrs. Besant is reported to have said that communat differences would exist so long as foreign rulers were there to throw the apple of discord. This is true; but it is not the whole truth. We cannot but admit that there are some causes of communal discord arising out of our own beliefs, fanaticism, bigotry, "religious' arrogance and superstitions with which foreign rulers have little to do.

Bounty for Steel Industry

In addition to the protective tariff, the Indian people will have to pay a bounty of 75 lakks of rupees to the steel industry. So more than two cross of rupees must be paid to the Tata Company's shareholders by the Indian people, though that Company' has not been required by law to promote the interests of either the Indian working men or the Indian technicians.

. When she

NOTES 253

Mr. Chimanial opposed the grant of protection to steel industry. He severly onticised the management of the Tata Company which lavishly distributed dividends to shareholders four years ago without taking into account that depression might come. The Tata Company had broken every promise given in respect of their labourers. Incidentally he asked for a ruling whether shareholders of Tatas who were in this house would be entitled to vote. The President said that the practice in the House of Commons was that whom a shareholder of any

The President said that the practice in the House of Commons was that where a shareholder of any Company which received subsidy or protection was a member of the House he would be entitled to exercise his vote but as to the propriety of his voting it was a matter entirely for personal judgment of the member. The same procedure would be followed here as well. It was difficult to apply hard and fast rule. The motion of Sir Chailes Innes was carried.

That the Tata shareholders would vote for the bounty to fill their own and their co-sharers' pockets can be easily! understood. But did those Swarajist members who were not Tata shareholders vote for it because it was once declared by a Swarajist leader that the Swaraj Party would ask capitalists to contribute to their party tunds

Sir John Marshall on the Antiquity of Indian Civilisation

Sir John Marshall, Director General of Archaeology in India, interviewed by a representative of the Bombay Chronicle." expressed great enthusiasm for the recent discoveries at Mahen-jo-Dato and Humppi. The discoveries would, he believed, extend the history of Indian civilization to ascertainable eras of pre-Babyloman times. The discoveries up till now have brought them to nine buried cities revealed under alternate strata of mud and similar material. They expect to excavate still deeper, say about thirty feet. There may be still three or four or five more ancient cities buried under the portions which still remain to be excavated. They would bring them to somewhere near 7 to 9,000 B C. The cities that have been already laid bare display, he said, the most interesting panorama of ancient structures, the lavout of towns and streets and an unusual amount of antiques including scale of great variety and distinction. There were, he added, brought to view the finest bricks he ever saw. The finds required the most careful handling. And il would be premature, he observed, to anticipate too definitely at this stage the nature and character of the forgotten chapters of ancient history of this country now thrown for examination by the scholars and the historians of the world.

Communal Representation and the Indian Christian Community

Three times, year after year, has communal representation been condemned from the presidential chair of the Indian Christian Conference. Though the Indian Christian

community is far less numerous than the Moslem community, the former have sufficient faith in God, in their own ability and public spirit, and in their non-Christian countrymen not to want any seats in representative bodies and any appointments in the public service to be reserved for themselves. There is no doubt that their wisdom and charity will be justified by the results

The Wisdom and Patriotism of Bengal Moslems

A small clique of self-seeking persons, headed by Sir Abdur Rahim and others, wanted the Moslems of Bengal to support the Bengal Ordinance and thus earn the special favour of Government With this object in view they convened a conference of their co-religionists in Calcutta and chose Nawabzada Sved Mohamed Hosain of Shaistabad as their chairman. But they did not know their So when the Nawabzada went on reading a very patriotic speech, there was consternation in the ranks of the schemers. and Sir Abdur Rahim and some others beat a hasty retreat from the place of meeting The Nawabzada rightly called upon his fellow-believers to make common cause with all their other countrymen, as they are children of the same soil and neighbours. sharing one another's joy- and sorrows

At a subsequent and larger public meeting of the Bengal Moslems, the Ordinance was

condemned

Hindu-Moslem Unity at Nagpur

The Moslems of Nagpur have shown great good sense and generosity and evinced confidence in their Hindu neighbours by not demanding that the latter are not to lead musical processions before mosques even at the time of public prayers. It is for the Hindus to show that this confidence has not been in the least misplaced.

Kohat Settlement

From what we have read in the Labore Tribune, which keeps up its reputation for level-headedness and persistent endeavour to be fair, it does not appear that the Kohat "agreement" has been accepted by the Hindu refugees in general. It is a pity that the hoped-for settlement is not yet an accom-

plished fact. But how can it be so, if the Hindus do not feel that they have got even bare justice and that their honour, lives and property would be safe in future?

Fine Arts and Music in Lucknow

Lucknow is to be congratulated upon holding a successful exhibition of works of Indian Art, old and new, of various schools. Perhaps at no other Indian Art exhibition were so many fine old water-colours and albums shown as at Lucknow The usefulness and delightful character of the exhibition were much enhanced by the lectures and talks of Dr. James H Cousins, who is so unremitting in his labours to bring about a right understanding and appreciation of the Indian Fine Arts and who possesses quite anusual insight and powers of lucid exposition.

Mr. N C Mehta, I C S, who initiated the movement for this exhibition and worked hardest for it, has thereby earned the thanks

of the Indian public

There has also been a successful All-India Music Conference at the capital of Oudh. A movement has been set on foot to establish a Music College and Art Gallery there for which more than Rs 40,000 has been already collected

The First Kamala Lecturer

Sir Asutosh Mookerjee endowed the Kamala lectureship in connection with the Calcutta University in memory of his beloved daughter Kamala Devi, who predeceased him And he also chose Dr Annie Besant as the first Kamala lecturer. No better chaice could have been made. As the lectures are named after a woman, it was quite in the fitness of things that the most learned woman in India was chosen to deliver the first course of lectures. Those lectures have fully demonstrated the rightness of the choice by their thoughtfulness, insight and scholarship.

Sir C. Sankaran Nair's Presidential Address

In the striking presidential address which Sir C. Sankaran Nair delivered to the Social Reform Conference at Belgaum he dealt chiefly with the status of the women of India and that of the submerged classes, and the caste question. He spoke, in part, as follows:—

Tradition going beyond the dawn of history discloses that women were free, in fact as free as men both in social and political life. We have accounts of those who are wrongly called primitive tribes, amongst whom women, on their own account and not as servants of man, took part in all the varied activities of life such as now are regarded

as peculiarly masculine.

Early marriage, compul ory marriage, compulsory widowhood, denial of freedom to a grown-up woman to choose her usband must all disappear. Age of consent must be raised. It was said by an English member in the Legislative Assembly that in a generation the mortality of mothers due to early marriage was 3.200000. Polygamy must be abolished. Right to contract a second marriage can be conceded only if the wife is given the right to claim divorce on the same ground together with a share of the husband's property. Polygamy had been a safeguard to the wife who for reasons of health was unwilling to live as wife A wife in such circumstances should be protected from her husband.

It appears to me that our supreme effort should be directed to securing women the same right as men so far as right to vote in elections of members and the right to be elected as members of municipalities Local and District Boards. Proxincal Councils and Imperial Leg slative Assembly, is conceined The power to vote will secure the return of their supporters. The pressure they will exert as voters or members will secure the necessary Reforms. We

are fighting for freedom ourselves. But

It ve do not feel the chain When it works a sister's pain. Are ve not base slaves indeed Slaves unworthy to be freed?

Let us therefore make up our minds that women shall have votes like men in all Conneils and that either women are elected as members or only those who piedge themselves to do all in their power to remove women's grievances.

REVOLT AGAINST CASTE TIRANNI

The other great question with which the social reform association deals is that of the depressed classes. As in the case of women, the time has passed when the Non-Biahmin caste. Hindus and the other casteless Hindus pay any attention to the arguments based on religion. The Non-Brahmin Congress which is now holding its session in this town is an answer to those who still want to maintain the caste system. The Non-Brahmin Hindus have determined so far as it lies in their power not to recognise the superiority of the Brahmins, not to co-operate with them in those movements which involve the recognition of these sacred texts which show the Brahmin superiority.

These facts are enough to show that in the case of these low castes as in the case of women the main efforts of the social reform association should in my opinion be directed to giving them the power to vote and the right to be elected as members to all the Local Councils in particular and

also to the superior councils.

NOTES 255

Sir Sankaran Nair on Franchise Exclusively for Manual Work

Sir C. Sankaran Nair in moving at the Social Conference the resolution conveying greetings to Mahatma Gandhi supported the latter's suggestion that the franchise should be given extensively to manual workers

"We are concerned," said Sir Sankaran, "with his social activities. He has taken up the great task of uplift of the depressed classes and the removal of untouchability. He has referred to it even in his Presidential address. One of the proposals in his scheine for Swing is that the qualification for franchise should be initial work. This is the first time such a proposal has been put before the world and it is one of far-reaching importance. But India is not prepared for it. India is no more fit for it than Jerusalem was prepared for the advent of Jesus nearly 20 centures ago. The intellectual classes and the proportied classes have up to now held the right to go to Pailiament. But neither of these should have the right It is those who engage in manual labour that should represent the country in the Assembles."

We cordially agree that manual labourers should have the vote. But we do not agree that they alone should have the vote. If the underlying principle be that those who do some kind of honest work or other, should enjoy the franchise, then common sense and simple observation show that there are many kinds of work other than manual labour which also are necessary for human society, which are useful and beneficial and which are honest. Why should these kinds of work be disfranchised.

We have also shown in a recent number of the Modern Review by queting from the savings of Sri Krishna, Buddha and Jesus that these great teachers of mankind did not understand merely manual labour by "work"

Let us briefly consider some of the reasons why persons are considered entitled to vote. They are considered entitled to vote.

(1) Because they are the inhabitants of a country interested in its weal and woe According to this principle, all persons, including children, should have the vote But as children cannot use any discretion because of immaturity, therefore, in those countries where there is universal suffrage urespective of sex or other considerations, there is only adult suffrage, not franchise for children. This shows that it is an accepted principle that the voter should have some maturity of judgment and some power to discriminate between right and wrong. It cannot be said that manual workers are the only adult inhabitants of a country in-

terested in its weal and woe who possess some maturity of reason and conscience.

(2) Because they do some useful and necessary work for the country. We have already seen that it is not true that manual labourers alone do useful and necessary work for the country.

(3) Because they are fit by their intelligence, knowledge, capacity, judgment and possession of conscience, to take part in or manage the affairs of the country. It cannot be said that manual workers alone possess this kind of fitness.

There are many kinds of manual work which can be and is done by machines, and these machines have been devised and made with the aid of the human intellect machines turn out more work and more accurate work than labourers. All this shows that the evercise of the intellect is work of a higher order than mere physical Manual workers are to be given the vote, not merely because they perform certain results but because they possess in addition reason and conscience If mere physical movements and their result were the reasons for proposing to give the vote to manual labourers, then it would not be easy to explain why the human being who plies the handloom is to have the vote and why the power-loom which does more weaving is not to have the vote, why the man who drives the plough is to have the vote and why the steam-plough which does more ploughing is not to have the vote, etc. etc.

In fact the manual worker is fit to have the vote because he is a man, and man is distinguished from brute beasts and machinery not by the capacity for physical work but by the possession of reason and conscience. If manual work were all in all, why then is Mahatma Gandhi the leader of the people, instead of some illiterate strong peasant; who is capable of far greater physical labour than the Mahatma being our leader. It is rather curious that men who owe their pre-eminent position to their own superior intellectual and spiritual development, not to their superior physical capacity for mere manual work, entirely ignore the claims of intellectual and other non-bodily work.

In Russia more than in any other country the claims of manual work have obtained the greatest recognition. But the greatest leader of the Russian revolution. Lenin, was not a manual worker. He was a graduate in law of St. Petersburgh University who practised law for some time.

The state of the s

Should manual labour alone ever monopolise the franchise, the result would be that intellectual men would do the minimum amount of manual work necessary to qualify for the vote, but it would be their intellect and devotion that would carry them to the topmost rung of the ladder, not their little bits of manual work. Even in Russia intellectual superiority of a certain kind has got its due.

We do not in the least despise or deny the dignity of every kind of manual labour But we cannot admit that it alone possesses supreme value. If manual labour were the only thing or the chief thing or the chief thing of value to man, then the man who gives all his energy to manual work would be the greatest of men. But is it not a common experience that mere manual work without any other kind of occupation, dekumanises? Even a six hours' day for labourers would dehumanise them, if in their leisure hours their minds were not usefully and innocently occupied.

Extremism is not necessarily the highest wisdom, even if it be the extremism of Mahatma Gandhi, or of his quondam detractor and recent admirer Sir C Sankaran Nair.

Mahatma Gandhi-A Heretic

It is popularly believed that according to orthodox Hinduism it is only the Brahmans who know the Sastras and who are entitled to lay down what is according to the Sastras and what not. But a recent Bombay meeting presided over by a merchant of the trading caste has made the pronouncement that those who want to abolish untouchability are heretics Some of the men assembled there wanted even to lynch the heretics, including Mahatma Gandhi. Of course, Mahatmaji would be only too glad to undergo martyrdom; for that would toll the death-knell of untouchability. But as he fights with the weapon of soul force, we suggest that he is not worthy of the steel (or is it the rope?) of the Bombay heroes, and that they should tackle Mahatmaii's Big Brother Maulana Shaukat Alı. It strikes us, moreover, that lynching is not an orthodox Hindu practice; it is prevalent in the mlechchha land of America and is, therefore unfit to be practised by the holy Bombay heroes. We hope this pleading of ours, if nothing else, will save the heretics from lynching.

By the by, it so happens that according to the Hindus, Sruti takes highest rank among the scriptures, and we are credibly informed that there is no authority in Sruti for untouchability.

Mr. G. K. Devadhar's Presidential Address

For some years past there have been two Indian Social Conferences held in December. This year one was held at Belgaum and the other at Lucknow. The latter was presided over by Mr. G K Devadhar. Of him The Leader justly observes.—

In the field of social service Mr. Devadhar leads a dedicated life and has by concrete results shown how much service one individual can render to the cause of humanity and progrees provided he is inspired by the spirit of service and sacrifice. He is the moving spirit and the guiding genius of social service organizations in Poona and Bombay which eloquently proclaim the faith that is in him and are visible demonstrations of his marvellous organizing capacity.

With reference to his address the same paper observes:—

It is a truism to say that internal causes are responsible for the rise and fall of nations. Reaction and conservatism in the social sphere lead to decay no less than they do in the political sphere, and the Liberals, whose eyes are directed to the future and who profoundly believe in the necessity of progress have therefore always regarded social reforms as 'a vital force,' to use the words of the president, 'for the improvement of the vast masses of our countrymen even for their political advance.' The president pointed out the essential objective of social reform which is nothing but social justice. Effete and antiquated institutions, injurious customs and practices, and everything which breeds intolerance and class arrogance, narrows the intellectual and spiritual outlook, leads to social cruelty and inequality and in short enslaves instead of emancipating the manhood and womanhood of a community must be treated as inimical to growth and progress. In the words of Mr. Devadhar, 'human being as such must be respected whatever be his or her condition or status in life and prespective of his or her sex, caste and creed, the principles of spiritual equality inculcated by a liberal religion that emphasises the brotherhood of man and the Fatherhood of God and of equal, citizenship necessitated by common nationalism must be recognized cheerfully, ordinary human rights and civic privileges being the foundations of spiritual equality and equal citizenship'. Social reform inspired by such a high democratic deal is necessary to solve the problem of Indian nationality, unite the various communities, Hindu, Muslim, Parsee and Christian, in one loving bond and furnish the basis for national greatness....... The removal of untouchability is one of the principal planks of the Liberal Federation would show that the Liberals are also equally keen on the subject. The guestion has been carnestly taken up by the Hindu Mahasabha

ـــ ۵۸۶۰

NOTES 257

also. The devoted labours of the Arya Samaj for bringing about their rights of equal citizenship and movement. It recorded the view that the caste system was the greatest obstacle to national solidarity and that it should be immediately discircled. The system has struck such deep roots that its destruction is likely to take a pretty long time. A wader and a keener recognition of its evils is necessary before much headway can be made. The relaxation in the rigidity of caste-rules in various parts of the country may, however, be regarded as the beginning of the end.

Political Principles Affected by Colour of Skin

When any people of European extraction revolt and assert their independence, the government established by them is recognised by European states, if not at once, at least in course of time But the Moors are not Europeans and therefore the "Republic of the Riff" established by them has not been thought worthy of recognition by France which has recognised the Soviet Government of Russia. The unfriendly attitude of France will be understood from the following extract from The Literary Digest.—

The Moor's pride of Ancestry and the memory of a magnificent past in having been three victorious over Spain is said to have been hotly rekindled by his success against the Spaniards in Morocco, where, after fifteen years of continuous warfare, he has forced the Spanish to the coast and to adopt a defensive position. Thus, it is pointed out the Spaniards lose all their gains in the mountainous district of Morocco where Abd-El-Krim, the Moroccan leader, not only wants to hold the ground taken, but seems resolved to establish the independence and self-determination of his people. He contends that the Moors alone are able to preserve the peace and administer the country in accordance with the wishes of its inhabitants. But the Spanish press note that the evacuation plan being carried out under the supervision of General Primo de Rivera. President of the Spanish Military Directorate, and High Commissoner in Morocco, did not contemplate the relinquishment of rights held by Spain under the Franco-Spanish agreement of 1912. On the other hand, the Madrid Epoca reports that Abd-El-Krim not only claims the right to establish an autonomous government in all the territory occupied by him when the war with Spain began, regardless of the boundary lines drawn in the Franco-Spanish Treaty of 1912, but he actually has civic authorities functioning and is said to have formed a cabinet.

nomous government in all the territory occupied by him when the war with Spain began, regardless of the boundary lines drawn in the Franco-Spanish Treaty of 1912, but he actually has civic authorities functioning and is said to have formed a cabinet.

The "Republic of the Riff" is the name the tribesmon give to their political homestead and they claim that they have never recognized the validity of Morocco's partition into zones and protectorates. According to the Riff view, there is only one means of demonstrating sovereignity, and that is actual occupation. In support of, their contention they as cert that the indicial authorities are functioning normally in all the territory occupied by their forces. Now the international aspect of the Morocco

question is full of dangerous possibilities according to La Revue de France (Paris), which fears a tribal rising in the French zone, and it declares that France is bound to occupy the Spanish zone, if it be shown that Spain cannot subdue the natives.

Russia and Narcotics

The following welcome news has come from Russia. In many ways New Russia is setting an example to the older imperialist nations of Europe The message runs as follows:—

On November 6, 1924, the Council of People's Co.nm'ssailes of RSFS.R. issued a decree prohibiting the unlimited distribution and sale of all articles acting or liable to act as forms of intoxicants, and which are injurious to people's health, such as cocaine and its salts, opium and its compounds, morphium, heroin etc. In accordance with this decree the Health Commissariat fixes the quantity of such substances required annually for medical purposes. The production of narcotics may only be carried on by the departments of the Supreme Economic Council after previous agreement with the Health Commissariat, and the import and export of such articles are conducted exclusively by the departments of the Commissariat for Foreign Trade only with the approval of the Commissariat and within the limits established by law

-Russian Information & Review, Nov 29, 1924,

p. soi

Lord Robert Cecil referred to Russia as one of the countries which was standing outside the League of Nations and might therefore upset any arrangement arrived at by the nations within the League. This declaration which practically embodies the American proposals of restriction of opium to the amount required annually for medical purposes should relieve the mind of any fear concerning Russia's attitude

Inter-Religious Unity

The following busef account has reached me from the Rev. J C. Winslaw concerning a retreat held by an International Fellowship group near Bombay. Amid much activity to promote Hindu-Muslim Units such quiet work as this should not go unrecorded He writes as follows:—

"The bungalow in Juhu near Rombay where Mahatmaji convalesced after his operation was through the kindness of its owner the scene of an interesting gathering from the evening of Dec. 5 to that of Dec. 7. This was the first 'kerreat' of the Bombay International Fellowship, when between forty and fifty Hindus, Mehammedans, Christians and Parsees assembled in conference to discuss the implications of brotherhood, and still more to live

out brotherhood in two days of friendly intercourse

and quiet worship together.

The discussions were held under the chairmanship of Mr. Mirza Ali Akbar Khan, whose able summing up at the close of each meeting added enormously to the value of the conference. The racial implications of brotherhood were dealt with by Dr. Zacharias, the political by Professor Wada the economic by Mr. R. M. Joshi and Mr. N. M. Joshi, the religious by Dr. MacNicol. The discussions which followed, while indicating plenty of healthy diversity, yet left the impression of a solid central artisment, which if only it could be widely disseminated throughout the land, would form the foundation of a strong councer of unity.

But far more valuable than the discussions were

the times of intimate fellowship in prayer and social intercourse. Here all barriers of race and caste and creed were surmounted. We fed together, played together, prayed together. There was no Hindu and Mussalman, Parsee and Christian, Indian and European, but one family of God's children. It would have delighted Mahatmaji's heart, as he lay earlier in the year on his couch on that upper verandah, if he could have seen in vision the gathering which would assemble there before the year was out I am convinced that it is by such experience of actual fellowship, of unity in action, that the mists of misunderstanding and prejudice will be most quickly cleared away, and a unity which is no mere lip-unity, but a heart-unity, achieved.

THE MAHARSHI DEVENDRANATH TAGORE*

By PROFESSOR DR STEN KONOW

WE have come together here to-day to commemorate the anniversary of the death of one who occupies a unique position in the history of Santiniketan, as in the development of thought in India on the whole.

Twenty years have passed since Devendranath Tagore left this world, but he still lives amongst us, and on every festive occasion we come together here, at the very spot where he so often sat down in medita-

tion and sought and found peace.

His whole life was devoted to the search of truth, which from time immemorial has been the leading feature in the longings of the noblest men in this country. He was himself, in his family traditions and in his whole spiritual attitude, a successor of the thinkers and seers of bygone ages, who had given up every search for wealth and worldly profit in order to realize man's ultimate aims

And above all he was filled with the spirit of the Upanishad, with its lofty flight of thought into the realms where man's thought ceases to vibrate in response to the impressions of the senses from contact with the multifarious objects which constitute our daily life, and where it is crystallized in sacred rapture and holy silence before the unfathemable truth underlying life and the universe.

· But at the same time his mind was open

and he was prepared to acknowledge truth wherever he found it, in the scriptures of other religions as in the Upanishad. There was everywhere the same test, which he applied wherever God, in his evalted purity, revealed himself, there truth was to be found. The whole universe is only a single, grandiose revelation of Him, the only one, who listens to the prayers of our heart, and whom we can only come near in the spirit. Unnecessary are temples and sacrifices and austerities, whoever purifies his heart, can come to Him, when he turns away from sin and sincerely repents of his shortcomings. And before Him high and low, rich and poor are equal, because the heart alone counts.

He was universal in his conception of God, but all the same he was intensely Indian. His mind was searching for the infinite, the eternal, behind all the changing things in life and in the world, and he felt how this search had nowhere led man higher than in India, in the thinking and the

visions of the Upanishad

He wandered about in his country, and his unselfish idealism and his pure character won for him the devotion and affection of his people, who gave him the name under which we remember him, the Maharshi.

His spirit is here among us. Here there is

* Read in Santiniketan on the anniversary of the Maharshi's death, January 19, 1925.

Maharshi Devendranath Tagore

no difference of caste or class or race. There is one thing which unites us all, the feeling of the eternal truth as the underlying principle in everything. It gives strength to him who is weak and depressed, and it fills his moid with bliss, in the feeling of the harmony and beauty in truth's revelation in the universe.

And this true eternity is to be found within ourselves. We need not search outside, we need not think that it is hopeless

to find it, because we are weak and mortal beings. We need not throw away ourselves. He who reveals himself in the great and harmonious universe, he who makes the sun and the moon and the stars shine, he is the light within our own heart.

We come from different surroundings, from different places of the world. But the whole world is nothing else than the reflex of the same eternal light, truth itself. And it has been shining for ages, and it is this

Sight which we can see in the highest thoughts, the loftiest ideals, which every cation, every civilization has produced.

We should remember this, if we want to follow in the foetsteps of the Maharshi. Everyone of us is, with thousand links, bound up with the flashes of eternal light which our ferefathers have seen. And we are better able to see as they did than otherwise, because our eyes are like theirs. Let us not search outside of ourselves, not away from the path of our ancestors, let us not be dazzled at what at first sight appears more beautiful, more

exalted. We curselves, with all our traditions and all our inherited ideas, are the reflex of the same light, and we must try to see it with our own eyes.

And when we bow dewn to-day in reverence to him whose spirit we feel in these surroundings, which were once familiar to him, we shall gather strength in the memory of him, who taught us to go our way forward towards the one truth, besides which there is nothing else, where there is peace and bliss

Om santih, santih, santih.

HENDU POLITY*

(A Review)

rN an age during which politicians of every creed and colour (white, brown, black etc.,) are vying with one another in order to "give constitution" to India, as a panacea for all evils, the "Hindu Polity" of Mr. wal may appear as a sublime Joke! With serene self-confidence he brushes aside the constitutional hustlers, and dubs their ultramodern constitutional fabrications as anachronisms! "You seem to believe, Sirs, that India is constitutionally incompetent to evolve a constitution?"-so we seem to listen to Mr. interrogating our constitutional visvakarmas, with a devastating irony! Well, facts are sometimes terribly disconcerting and Mr. Jayaswal's challenge is based on the solid foundation of facts Every page of his monumental work discloses some solid, indisputable facts about the constitutional life of the Aucient Indians. People may differ from him in matters of detail, touching explanation and interpretation but none can dispute that he is the first constitutional historian of India who has not only rediscovered the most precious pages of our political life but has made that lost history live again in all its titanic struggles and deathless grandeur.

With profound insight Mr. Jayaswal divides his book into two parts tracing faithfully the two main lines of Hindu Constitutional

Hindu Polity: A Constitutional History of India in Hindu Times. By K. P. Jayaswal, M. A. (Oxon.) Barrister-at-law... Published by Butterworth & Co., 8, Hastings Street, Calcutta (India), 1924.

pluralistic-which evolution-nonistic and seem to be the political counterpart of the metaphysical evolution of ancient India. He shows that "the early Vedas know only monarchy." But so much moonshine and nonsense has been written on "oriental" monarchies (synonymous with barbarous tyranny as a matter of course!) in general and Indian monarchy in particular by omniscient foreign historians that Mr. Jayaswal has been obliged to describe the republican traditions and insitutions first; so that the mind of the reader may be prepared to realise correctly the strictly legal and responsible character of Hindu monarchy. "Going back to the oldest literature of the race, we find from the Vedas that national life and activities in the earliest times on record; were expressed through popular assemblies, and institutions The Saurite was the national assembly of the whole people or Visah. "It could elect the Rajan. It could re-elect a king who had been banished and were thus "the sovereign body from the constitutional point of view". He quotes from Rig Yeda (X. 191.3) a prayer for a 'common samfti and common policy of state, a common aim and a common mind'.

Mr. Jayaswal has resisted the temptation, to which ordinary minds with the pretensions of scholarship would have succumbed, to lay down the causes of the origin of Hindu Republics! The Greek analogy would have been handy, but the author of Hindu Polity does not possess the easy circumlocation

of our too numerous scholars of aniquities, and he has therefore spared us from voluble quotations from Greenidge on this point. From the Samiti and Sabha Mr. Jayaswal passes on to the discussion of republican institutions. With a rare mastery of the entire body of our Sanskrit, Pali, and Prakrit literatures he us through the trackless path of antiquities to the precints of constitutional liberty upon which the fabric of our ancient civilisation was based. He first states the earliest references to non-monarchical constitution in the early Brahmanas and then proceeds to the critical examination of such technical expressions as Sampha and Gana. He repudiates the equation of Gana tribe; because such an equation would stagger Panini, contradict the sense of Jatakas, and make the expositions of such works as Amara-Kosa and Kasika hopelessly absurd in order to maintain the infallibility of Monier Williams. Mr Jayaswal quotes a Jaina text to explain Gana It states that "there is also an abuse of the term. The cyamples given of its right use are, the Gana of the Mallas (a known republican community) and the Gana of the Pura, ie the Pura Assembly. As an example of its abuse, the Gana of Vasus (Vasu gods) is given by the commentator... In other words, the application of the word to a non-constitutional distinguished The constitutional Gana is the real Gana and in the eve of the Jama authority it has a mind. It is an organised conscious body of men like the political assembly of the Mallas or the Assembly of the corporate Paura. It is a corporate assembly as opposed to a mere multitude or chance collection" (p. 32)

Mr. Jayaswal has shown how mere grammatical works such as those of Panini, Patanjali, and Katyayana can yield to a juridical mind ample materials for the reconstruction of the constitutional life of the ancient Hindus. The most significant fact with regard to Panini is that he does not know the religious Samgha of the Jaines and Buddhists, to him Samgha is a technical term which "denoted the political Samgha". There are great scholars in our country as well as abroad who may say to us, "you might have republics, but they are of the tribal stage". The implication of this statement is very obvious to any student of constitutional history. But Mr. Jayaswal has pointed out to us that this attitude was anticipated long ago by Panini who was not only a great grammarian, but was a seer who had anticipated the degradation of the modern Hindus, and by a simple grammatic rule the great Panini dismisses the possibility of there being any mistake with regated to the real nature of the ancient republic. His rules (V. 3. 114 to 117) point unmistakab "to the stage of a developed, the familiar Hingsociety, as opposed to a tribal stage." B alas! Panini, we forget, is more quoted the read.

The results of Mr. Jayaswal's discussion are that sampha is contrasted with monarch and that a sampha or a Hindu republic her Brahmin members, Kshattriya members are other castes, i e the personnel of the samphawas not composed of one state, caste or tribe

The author's interpretations of Sastropajive and Rajasabdopajivin samghas are extreme illuminating. According to him "their respec ive constitutions enjoined on the membe to be skilled in military art in the former and c the rulers of every privileged member to be the title in the latter." The samphas we political institutions and not originall religious But the religious samphas furnis us with the elaborate rules of procedure the safeguarded the maintenance of political organ sations against party factions. Mr Jayaswahas shewn that the Hindus were not onl thorough in their philosophy and religion by what is not admitted, were also extremel careful with regard definite and their polity Our gifted author shows "the the history of the birth of the Buddhist Samgl is a history of the birth of the Monastic Orde in the world. This history, therefore of the birth of the religious brotherhood of th Buddha from the constitutional womb of th Indian Republic is of interest not only t this country, but to the world at large" proceeds to say that though "it was case of borrowing no doubt, yet at the sam time, there was an original idea behind which only a great mind could conceive. Th consisted in transferring th originality constitution of a political corporation t religion and conjuring up an organisatio to perpetuate the being of that religion

The Greek raid led by Alexander did no produce any striking results on the civilisation of the ancient Hindus, but the crop of writers whom Alexander brought in the train of his army is cited by modern histinguaphers from quotations to prove certain facts congenial to the official mind. To many people the Greek evidence is regarded as a sort of divine favour for their case. Though not subscribing to this menfality, yet in the present case we are grateful that the Greeks

Mark Comment of the second

ever came to record their testimony to the glorious and flourishing condition of Hindu Republics in the Puniab. Modern cultrehistorians who do not know the difference between oligarchy and aristocracy and regard Pliny as a Greek writer, accept Republic as a Greek invention but the Greeks were brought up in the nursery of political institutions, and their evidence on this point is extremely interesting. Alexander came and fought republics of various nature, some were aristocratic, some democratic, others combining the good features of both, and several others were ruled by joint kings, Mr Jayaswal's identification of the sites and peoples mentioned by the Greek writers with those mentioned in Sanskrit literature, and his repudiation of already acceptidentifications will not only necessitate an early revision of text-books but place the history of India in a continuous plain of evolution which really makes all histories worth reading We are grateful to Mr Javaswal for having identified the immortal Kathas of the Kathopanishad with the Kathas who were one of the most powerful nations of India reputed for courage and skill in the art of war" The familiar dictum is once more illustrated that the nursery of free thought is freedom. "Their men and women married by choice and their women observed the practice of Sati'. According to Strabo amongst them, 'the handsomest man is chosen a king'"-Rather a strange constitution ' What a chance for our great poet Tagore in such a republic! Not less masterly is Mr Jayaswal's exposition of the technical Hindu constitu-Jayaswal's tions. Mr. Jayaswal here does not speak in the term of European categories, but resuscitates old technical terms such as the Bhaujya which means "temporary rulership" the Svarajya which signifies "that the Swa-rat ruler was taken from amongst equals and was made President and that selection was based upon merit which evidently refers to an election or selection of the President from amongst the members of the Gana or Council," the Vairajya which was a democratic constitution of an advanced type according to which "the whole country or nation took the consecration of rulership", the Drainajya or the dual rulership which obtained in Nepal in the sixth and seventh centuries, the Arajaka or non-ruler State, the ideal of which was that "Law was to be taken as the ruler that there should be no man-ruler. and The basis of the State was considered to be be mutual agreement or social contract between the citizens. This was an extreme

democracy almost Tolstoian in ideal, and lastly the Viruddha Rajjani" or States ruled by parties. Mr Jayaswal then enquires into the real basis of these States. His observa-tions are very important. He says: "The basis of every State has been in all ages and in all climes to a great degree ethnic-tribal or The real question is whother a national State organisation is yet tribal-primitive, habitual and customary or it is the outcome of intelligent thinking of theories, of conscious The stage experience and experiments when state is felt to be based on contract and the ruler is regarded to be a servant of the ruled and when political loyalty is ever open to strangers is a high water-mark of constitutional development. Voting and ballot voting, motion, resolution and legislation, legalism and formalism in procedure of deliberation are other indices of that stage"

It is impossible within the narrow space of a magazine review to condense the many original things which Mr. Jayaswal has so brilliantly said in his monumental work. We shall try to draw the attention of the readers to several points of first-rate importance, our future studies. The concluding lines on the disappearance of republies from India, have been probably written not with ink but with tears "With the end of the fifth century, republics disappear from Hindu The old Lichchavis quit the political India scene, a branch immigrating into Nepal. The young Pushyamitras vanish in the air. The following century saw the final exit of Hindu constitutionalism from the stage of History All that was good came down from the age of Vedic Forefathers, all that progress which had been achieved since the composition of the first Rik, all that gave life to the mechanism of State hade good-bye to the Land Republicanism was first to begin the Great Departure to lead the dirge of political Nirvana We have understood only one verse of that epilogue—the praise of the sword of destruction which nature gives into the hand of the barbarian. But the other vorses are yet a riddle. The real causes of that Departure which the epilogue should disclose remain undeciphered.

From 550 A. C. onwards Hindu history melts into brilliant biographies—isolated gems without a common string of national and communal life. We get men great in virtue or great in crime—we get Harsha and Sasanka, Yasodharman Kalki and Sankaracharya, but they are so high above the common level, that they are only helplessly

admired and sacredly respected. The community ceases to breathe freedom."

In a political world where republics existed side by side with monarchies, the latter cannot be purely autocratic. There is very little evidence to prove that the Hindu monarchy was absolute, but there is plenty ovidence to show that the kings of Hindu India were responsible and constitutional heads of the state In the Vedic age, the Samite was the sovereign Assembly and the high functionaries who represented the various interests of the community were called the "king-makers" and though at a later stage. "the kingship has become hereditary," "the theory that Hindu kingship was elective was never forgotten" "The theory was a living force as late as the time of the Pala kings of Bongal. Gopala claims the benefit of the principle of election in his inscription. He says that the people joined his hand with Sovereignty and put an end to anarchy. "By the inscription of Emperor Kharavela it is evident that Hindu Coronation could not take place before the completion of the twenty-fourth year of the king-elect. This was the age when ordinarrly a Hindu was supposed to have completed his academic career in the period of Upanishads," The profound juristic scholarship of Mr KP Jayaswal comes into full play when he discusses the much-misquoted theory of divine origin of kingship He shows that the Manava Dharma-Sastra which "was written under the Revolutionary regime of the Brahmin Pushyamitra preached that the king should not be despised because he was only a man, he was a deity in human form... The Manava Code twisted the import of the Coronation ritual invoking the help of gods to the elected king in his new career . . The theory of the Manava Code was never approved or adopted by a single subsequent law-book. By constitutional writer the very theory was converted into a divine theory of scrittude

10777 42 A

of the king to the subject, that the king waa mere servant or slave of the people and that he was made so by the Creator" Thus brushing aside the fictitious theory of the divine origin of kingship Mr Jayaswal proceeds to discuss the constitutional safeguards of Hindu monarchy without which of course the theories would not have been worth our notice The chapters on the Law and Administration of Justice, Taxation, Economics in Government and Theory of Ownership in Land (discussions of which we reserve for a future study)—contain facts which had never been suspected before From the institutions of the Vedic democratic monarchy to its transition into autocracy under kings like Vena and its suppression by the people and the introduction of limited monarchy placed in the sacred chains of Brahmanic rituals and coronation oaths and led by a popular ministry controlled by a Council of State representing all castes and the popular assemblies of the realm, to the Gupta Government through district officers and the representatives of local government and the impersonal rule of the Ashtapradhanas (Board of Eight Ministers) had been sketched by the author with consummate originality.

This noble work has an epic form, and shows a restraint, strength and brilliance of expression which occasionally reminds us of the best sutras of ancient India Each statement of the author has been supported by text in foot-notes which show the encyclopaedic scholarship of Mr Javaswal We congratulate him heartily on this production Mr Javaswal has however done a great injury to many ambitious writers of Indian history by antiquating their works by several decades and has proved that a mere desire to write a book does not entitle any one to be an author (much less culture-historian) even in the much-abused field of Indian antiquities

THE MAXIMS OF TIRUVALLUVAR

(The great 'untouchable' Tamil Saint) Translated into English

By

V. V. S. AIYAR.

Acharya, the Tamil Gurukula Vidyalaya, SHERAMA DEVI

Second Edition

The following quotations from the preface and the text will give some industion of the contents of this grand work.

Whether he speaks of moral duties or state policy, of the principles of action to be followed in order to succeed in life, or the varying emotions in the trembling hearts of lovers, everywhere Travalluvar has sounded the utmost depths of human thought. The prophets of the world have not emphasised the greatness and power of the Moral Law with greater insistence or force, Bhishma or Kautilva, Kamandaka or Ram Das, Vishnu Sharman or Machiavelli or Confucius have no more subtle counsel to give on the conduct of the state and Kalidasa or Shakespeare have no deeper knowledge of the lover's heart and its varied moods, than this pariah weaver of Mylapore! Such is the born in the Tamil country but who belongs to all mankind. Prefuce, p. l.

Behold the man who is prepared to strain his every nerve like the buil-buffalo to wade through every difficulty; he may meet with obstacles but he will send them away disappointed. 624th maxım.

Where is the superiority of the worthy man if he doth not do good even unto those that work him injury? 987th maxim.

I said to her, I love thee above all: and behold, the frowned at once, asking Above whom? and above whom? 1314th maxim.

A Carlon and a series of

BY B. G. SAPRE, M.A.

Professor of History and Economics, Willington College, Sangli, (S. M. COUNTRY).

The present book gives an account of the formation of the East India Company, its territorial expansion in India, the system of Double Government under the Company, the Bureaucratic Govern-ment, and hnally Responsible Government. It deals exhaustively with the Reforms of 1919. It also contains adequate treatment of subjects like Indian Defence, Finance, Education, Fiscal Policy, Local Self-Government, Land Revenue Policy. The book also contains in an abridged form the con-solidated Government of India Act of 1919.

Price Rs. 4-0-0. Pages xxvin+457+80. Copies can be had of the author, Williamson College, Sangli.

EXTRACTS from Opinions and Reviews on Prof. Sapre's "Growth of Indian Constitution and Administration"

"Your book which seems to be a realize mentorious production.

DR. D. R. BHANDARKAR, MA., DLITT., President. Board of Studies in History, University of Calculta.

"It seems highly useful, and likely to be of great utility as a work of reference.

Dr. Prof. RUSHBROOK WILLIAMS, M.A.

Director of Public Information,

Government of India, Simil.

I have read the book with great interest and I congratulated you on the way in which the subject has been treated.

DR. SIR CHMANLAL A. SETALVAD, KT., Vice-Chancellor of the University of Bombay.

"Mr. Sapre is a master of his intricate subject and of the English language. He writes with a clarity and conciseness that are worthy of high praise.

-The New Statesman, London Oct. 11, 1924.

"Mr Saure has unfolded the story of constitutional evolution in a book which is evidently intended as a text-book for history students, and he has done so on the whole sympathetically

the East India Company. By Major R. W. Bird. Price 3 Rupees.

Siyar-ui-Mutakherin, describing the decline and

downfall of the Moghul Empire.

Translated from the Persian by Colonel John Brings. Published by Oriental Translation Fund of GREAT BRITAIN and IRELAND, 1832 and republished by the PANINI OFFICE. Cloth, Cult Colone. Double crown 16 mo. Pp. VII+311. Price As.

History of Nadir Shah. by James Fraser, first published in 1742 A.D. This work has become so scarce that second-hand copies are sold at fabulous prices. Panini Office has reprinted it, embellishing it with a little-known but seemine portrait of that Persian Conqueror, as well as with that of the Delhi Emperor Muhammad Shah. Cloth, Gilt Letters. Price Three Rupees only.

Empire in Asia—How we came by it. A Book of Confessions, by W. Torrens, M. P. Cloth, Gilt letters. Price Four (4) Rupees only. No writer or speaker, or patriot or politician, in our country can afford to do without a copy of this beak, and now that this reprint has been issued, he are no arguee for not nossessing one." will have no excuse for not possessing one."

—The Modern Review for July, 1923.

History of the Reign of Tipu Sultan, translated from the Persian, by Colonel Miles. This scarce and rare work has been lately reprinted by Panini Office. Cloth, Gilt Letters.

Saintini Sutres of Purva Mimansa, Chapters One to Ten. Translated by Pandit Mohanial Sandal, M.A., LL.B. Price Rs. 17.

Translated for the first time into English The Siddhanta Kaumudi

Or Panini's Grammatical Aphorisms; as arrang and explained by BHATTOJI DIKSITA: Sunskrit Text and English Translation by SRISA CHANDRA VIDYARNAVA,

VAMANA DASA VASU, Complete in three Volumes, in 2,400 pages, Royal 8 vo.

Contents, VOLUME I—Nouns and Substantives, pages 1.0 Do II—Part I, Verbs and their Conjugate

pages 714

II—Part II, Kridanta, or Making of Norfrom Roots, pages 408.

III—Vaidaka Grammar, pages 247. Dο

Do

It contains 4,000 Sutras of Panini, 900 Sutras Sakatayana (Unadi), 200 Sutras on accent (F Sutras), 2,000 verbal roots and their conjugation incorporating the whole of the Madhaviya Dha vritti with copious explanatory extracts from Kas Mahabhasya, Tattvabodhini, Manorama, &c., &c.

Indian rate, exclusive of postage, Rs. 45. Foreign rate, exclusive of postage £ 5.

It has been patronised by His Majesty's Sectary of State for India, the Government of Incand several other Local Administrations, and rul of Indian States.

This work has been found useful by Univers students.

N. B.-A Calcutta Professor, in publishing i translation of a chapter of this work said that the was no English translation of it. Luzac's Orien List and Book Review for October-December 19 in noticing that publication wrote:

"The Professor is mistaken in saying that the exists no English translation of the Kaumudi, riew of the excellent one by Mr. Sris Chandra Va. (The italics are ours).

The well-known Tibetan Scholar and travell the late Rai Bahadur Sarat Chandra Das, c. 1. In his "Memorandum on the Training of Pand and Moulvis" submitted to the Conference Orientalists held at Simla in July 1911 under presidency of Sir Harcourt Butler said;—

"The translation of the Siddhanta Kaumudi w annotation has been done in such a manner t even a tyro in Sanskrit can understand it with the help of any Pandit.

"I suggest that the above-mentioned work translated into Bengalee and Hindi to enable Sanskrit students at tols and pathsalas to learn understand Panini's grammar in a shorter space time than they do at present."

Principal S. Ray's new Sanskrit Works

Bhavabhuti's Uttaracharitam

Prof. A Berriedale Kith, Edinburgh University, says -

"I have looked through your book in order to ce whether there are not suggestions which I could asefully make to secure greater adaptation trats purpose. It seems, however, that the mode in which the work is performed is well adapted for its purpose, and I note with satisfaction the effort to reader the text into effective English The explantations seem well adapted to secure comprehension of the text, and contain how renderings deserve serious consideration

Prop E J Rapson, Cambridge University says

'I have read with great pleasure and interest. The commentary and notes are admirably clear?

Introduction to Adwaita Philosophy (ENGLISH EDITION)

BY PANDIT KOKILESWAR SASTRI, VIDYARATNA, M. A.

Post-Graduate Lecturer in Indian Philosophy, Calcutta University, Demy 8vo. Pp. 194, Cloth, Rs. 4.

"The work is a brilliant exposition of the Sankara-School of the Vedanta Philosophy. The most striking feature of the work is the full consideration of various altogether new issues such as (1) whether Sankara has denied the reality of the objects of the universe. (2) whether individuality has been resolved in and his system of Philosophy into mere relations and actions and whether the Ego cannot be held to be an active power. (3) whether Vedanta advocates mertia emptying of the human mind rather than its expansion. (4) whether Sankara's Theory can be called Pantheism, and so on. The work will prove an indispensable companion for the thorough and correct understanding of the great Maya-Vada in its various aspects. Copious authoritative quotations from Sankara's commentaries on the 10 Upanishads, Brahma-Sutra and Gita have been given in the footnotes enhancing the value of the work, which are an invaluable mine of information, on the subject The author attempts also to clear up various misinterpretations and misrepresentations of the Sankara-Vedanta, giving a correct and right exposition

System of Buddhistic Thought.

BY REV. S. YAMAKAMI. Royal 8vo. Pp. 371. Rs. 15.

The book presents in a comprehensive though short form a complete view of Buddhistic Philosophy, both of Mahayana and Hinayana Schools.

Firther. F.L.S., I.M.S. and Major B. D. Basu, I.M.S. Bettl.)—Nicely bound in two volumes.

The book contains Botanical description, names a vernaculars, properties and uses of over 1,300 hadian plants. Neatly printed on thick art paper, 419 pages, with clear illustrations in above 1,036 cyal 4to sizel lithographic plates. A very rare advaluable work of reference to Botanists, medial men manufacturers of indigenous drugs and gricultural and forest departments, ... Rs. 275.

Paper on Railway Economics (Calcutta University Readership Lectures), by S. C. Ghose. Re 1
Indian Railway Problems by S.C. Ghose. Rs 3-8.

The Wedie India by Abiasashada Dec M.A.

Rig-Vedic India by Abinaschandra Das. M.A., h.D. Demy 8vo. pp. 616 Rs. 10-8

The work is an attempt to find out the age of the culture as depicted in the Rig-Veda, examined the light of the results of modern geological, rehecological, and ethnological investigations and tawn from a comparative study of the early ivilisations of the Deccan, Babylonia and Assyria, as Minor, Egypt, and Pre-historic Europe.

Some Contribution of South India to Indian ulture by S. Krishnaswami Aiyengar, MA. Ph D emy 8vo. pp. 460 ... Rs. 6-0

[The contribution of the Dravidian intellect ader Aryan guidance, to general culture of Hindu idia is the fascinating topic which our author, an impowledged authority of South Indian history, ings before the student]

A Short History of the Mediæval School of Idlan Logic (Griffith Memorial Prize 1907), by ahamahopadhyaya Satischandra Vidyabhushan A., Ph.D. Royal 8vo. pp. 209 ... Rs. 7-8 [The two principal systems of the Mediæval thool of Indian Logic, viz., the Jaina Logic and Buddhist Logic, have been thoroughly expoundlare by bringing together a mass of informatic derived from several rare Jama Manuscripts at Tibetan xylographs hitherto inaccessible to may. In the appendices a short and general story of the University of Nalanda and the Royal inversity of Vikramsila has also been given.]

** Nistory of Indian Logic by Mahamaho-Shyaya Satischandra Vidyabhushan, M.A., Ph.D. may Swo. pp. 690 ... Rs. 15-0 [A monumental work. Dr. Vidyabhusana has given here a detailed account of the system of Nyaya, and has left no source of information whether Brahmanical or Buddhist (Indian an Tibetan), or Janina, untapped. The history is brought down from the days of the Vedas to the 19th century, and is full of facts well disposed and lucidly set forth.

The author did not live to see the publication o a work which is sure to make his name immorta in the annals of Indology.]

Introduction to Adwalta Philosophy by Kokilesvan Shastri Rs 4

"Your book is a remarkably able and highly interesting contribution to the interpretation of Sankara. Greater value applies to your powerfu exposition of the realistic element in Sankara. It is a striking tribute to his great philosophica powers." A Berridate keith.

Indian Fiscal Problem—by J. S. Coyajee—Rs 4

Each worth Rupee One.

This Prize-fund has been kindly sanctioned by the Gondol State for the benefit of the Volunteers' Union High School, Dhoraji, an institution working on national lines without any distinction of spirit. It works under the supervision of a committee of forty-seven renowned persons of this district. Besides regular courses students are trained in Indian Accountancy, Bookkeeping, Spinning, Weaving and Wrestling. A special Akhada has been prepared, where students as well as Hindu and Muslim

youths of this place achieve physical training. A 'Kindergarten' School for infant students has also been recently opened. As such, the institution has claims on the pockets of every patriotic and kind-hearted gentleman and wishes for their enthusiastic support.

Our subscribers will be glad to note that Maulana Shaukat Ali and his party recently visited our High School and were highly pleased with the spirit of the teachers and the taught

To Our Advertisers

The Modern Review is India's greatest advertising medium. It circulates widely in every part of India, Burma, Ceylon, F. M. S., S. S., South Africa and all over the world wherever Indians and people interested in things Indian are found. That it is a paper well worth advertising in is proved by its long list of advertisers who have used its commons for giving publicity to their wares for years without a break.

Of late the Modern Review has improved its printing, paper, get-up and has meade an all-round advance in popularity, circulation and quality of articles and pictures. It has meant extra expenses to the Modern Review and extra profits to its advertisers. It view of the above facts, it has been found urgently necessary to slightly increase the advertisement rates of the Modern Review. This increase shall not affect existing contracts till their expiry.

THE CONTRACTOR OF STREET PROPERTY OF STREET, S

matrix is a fascination in possessing, in wearing something different from your neighbour, even from your friend it is a rivalry that grips the least and the greatest among us, and yet a rivalry that is possessed of no potential sinister consequences, and is negligible to be encouraged.

the manner in which the Lady of the House furnishes her home, chooses her clothes, and selects her adornments, this keen sense of rivalry is always apparent: not that she is not not guided by her own aesthetic sense, but there is ever present in her mind thought of what effect her choice will have on her friends.

ND when it comes to Jewellery, Gold ornaments or Silver-ware she must needs exercise the utmost care; to a very few of us is given the pleasure of having what we want regardless of cost, and the very great majority must therefore employ the greatest wisdom making their choice—that is they must endeavour to secure THE BEST at the cheapest estible price.

Let Us Help You to Accomplish This I

The Hope of India Rests on The Study of History.

READ

Major B. D. Basu's Historical Works:

Rise of the Christian Power in India

Five Vols. Rs. 5 each. Postage Extra.

[The author has explained in the Preface why the British Power has been called the Christian Power.]

Story of Satara

Rs. 10. Postage Extra.

[A true history of how Satara was annexed and its Raja deprived of His Sovereignty.]

History of Education in India under the Rule of the East India Company

Rs. 2-8. Postage Extra.

[The author has shown that English education in India was first begun by Indians themselves, and that when the government took it up, it was done with selfish motives. Their motives have been laid bare from official papers.]

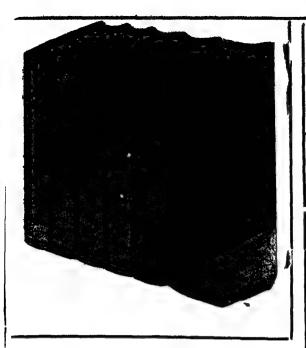

Subscribers to Prabasi will get all the books at 25 per cent less than their published prices up to 14th of March.

THE MODERN REVIEW OFFICE. 91, Upper Circular Road, Calcutta.

NEW INDIA, Edited by DR. MRS. ANNIE BESANT, SAVS

"We road them with immense interest and pleasure, for they are well put together and presented in a form that makes the reading delightful. It is of course an extensive history of modern India, a history of wars, hitterness, oppression, bloodshed, tyranny and hate. An adequate review would take far too much space in a daily paper and one heatates even to suggest that this is a review, but we would like to call it simply a Book Notice, for that is all that can be attempted in these pages.

that can be attempted in these pages

'Taking it as a whole, it is a history that has been off repeated, a story of high-handedness, injustice and tyranny, showing a love of domination and power which has been, is still, a characteristic of the world hoder, honce the Great War These volumes are, in fact, the story of minor wars but on the same scale in other ways except that they did not represent so many Nations of the world, wars do not differ much in corror whether it be twentieth century wars or eighteenth century wars, wars of Christians or wars of other religions. This history peaks of the various Governors of India, and here, again, there seems to have been title variety during the period that these particular volumes cover

'We know somewhat of the history of

'We know somewhat of the history of these times and it seems useless to veil the intentions of the East India Company from he outset. In speaking of Warren Hastings, the author says

"His diplomatic transactions were meant h weaken the country's powers and the last India Company gained strongth in proportion as they weakened."

In speaking of Lord Cornwallis' adminis-

that for the first time, the British had been that for the first time, the British had been obtained the previous to the war with Tippoc had been obtained by conquest. From the time of flive all the sequisitions of land

by the Fast India Company in India were by means of diplomacy, fraud and usurpaby the Fast India Company in India were by means of dulomacy, fraud and usurpation (Cornwallis was the first Englishman to obtain fand in India by conquest." The author goes on to say. "The States under the rule of Indian Princes presented a scene of prosperity which one would have looked for in vain in the territories owing alleriance to the rule of the British. But Cornwallis thought otherwise. He found his Christian countrymen, in high offices of trust and responsibility corrupt and incompetent. The Christian Civil Servants of India in Cornwallis' time were a disgrace to any Government,"

"Sir Philip Francis stands out as a man of very exceptional character, a man of justice, a lover of peace, capable, generous and possessing a nobility of soul which the author speaks of untrudently in Volume IV. Major Hasu claims to record facts gathered from the records of Britishers, facts which he says have not been referred to in any work on Indian History by foreigners or Indians

'This history should prove a most useful work, and it should be read by all alike We hope that it may have a wide sale in England especially at this crisis in the history of the world

history of the world

"We are struck by the very fair way
in which the whole has been treated by this
author, for in the volumes that have come
to our hand there has been no word of
condemnation for errors or expression of
bitternoss for sufferings imposed It is a
fair history of events, sparing the faults of
none and expressing admiration where admiration was due and commending actions
when those actions were distincted and
done for love of truth, justice.

'In concluding this "Notice" we must again say that this short note is not worthy arain any that the short note is not worthy
of these volumes, and we hope that this history will have a wide circulation. It desertes
it from the point of view of the well written
history but more from the standpoint of the
impartiality which will essented their to
all readers alike and must inevitably carry
great weight in placing the subject before
those who hold adverse opinions on many
points '--New Testin.

RISE OF THE CHRISTIAN POWER IN INDIA

BY MAJOR B. D. BASU. I. M. S. (Retd.) Complete in 5 Volumes Rs. 25 for the Whole Work: For Subscribers to "Prabasi" Rs. 18-12. Postage Extra.

PRESS OPINIONS:

THE "LEADER" Says-

"As we said at the time of reviewing the first volume, the chief mart of the look lies in the fact that it is a history of india written from a fresh point of view. British writers of Indian History are so often influenced by what Herbert Spencer calls the pariotic bias--Sir William Hunter said in one of his histories that British patriotism prefers to call the battle of Chilianwalla a drawn haitle--and books written by them are often so exasperating to the Indian student, both on account of suppression of inconvenient facts and of misleading angications, that a book like that of Major Basu is to be wilcomed as a wholesome corrective it puts them on their defence and challenges that no to give reasons for the hope that is in them. And in justice to Major Basu it must be said that in most cases he quotes British authorities in support of his anti-British statements. We do not acree with those sanctimonious critics of the Anglo-Indian Press who condemn such books on the ground that they rake up old antipathies and produce ratial bifterness. Truth is truth and in justice to Indians their side of the case should be stated and the misdeeds of the other party should be exposed. In British histories the Indian is always in the wrong and the Indian arms is always defeated because it was out-fought and out-generalied, on it because at twas miscoverned by its kings and the horarts of British atatesmen bled for its suffering millions. The Sikh army was defeated because it was out-fought and out-generalied, on it because some of the Sikh leaders had turned traitors. And so on and so forth. And hence without agreeing with all that Major Basu says in his time volumes we frankly any that it is right and proper that the other side of the picture should be shown.

FORWARD says in a LEADING ARTICLE:

"Major B. D. Rasu, I. M. S. (retired) has laid all publicists of India under a deep debt of gratitude by writing a book in five volumes entitled the "Rise of the Christian Power in India."..... In the light of our present know-ledge, the materials contained in this important book may be regarded as disclosures of a careful plot among text-book writers of British Indian History to conceal all real facts about this most important period of our national evolution. It will not do for anybody writing after him to string up all the governor-generalships and viceroyalties of India in one common story of bene-volence and good-will towards the Indian people Our estimate of each of them must needs be revised.....

Major Basu's book will take the same place in the historical literature of our country which Mr. R. C Dutt's famous 'Economic History of British India done in economic literature hope to utilise his book in future for discussing problems and dangers against which our author has warned us."

Behold the Power of These Books in

"Power for Success"

"Business Power"

"Culture of Courage"

"Personal Atmosphere"

- -THE MONEY THEY MAKE
- -THE HAPPINESS THEY BRING
- -THE SUCCESS THEY WIN
- THE PLEASURES THEY YIELD
- THE INFLUENCE THEY SPREAD
- -THE LEADERSHIP TREY GIVE

No glowing description can impress, no convincing words persuade, no alluring analysis reveal to you a fractional part of the lifelong value of these lessons. BUT

The Following Unsolicited Letters of Praise Show You

WHAT THEY DO FOR PEOPLE WHO READ THEM.

It is the RESULTS won by students who use these secrets.

that convinces you of the downright necessity of sending for these giant systems

A Gold Mine in These Books

"One marvels at the vast amount of painstaking that must have been expended in writing such books. I know that I have got a gold mine in these books. I would not part with them for any consideration whatever".—John M. Watson

A Great Thinker

"I have read every book that Dr. Haddock has written and I think he is one of the greatest thinkers of all time." -Edward B Baxter

They Reveal Latent Powers

"In my opinion they are the greatest books in print Every business, professional and thoughtful man should read these books for they will reveal to the student latent powers of which he had heretofore been wholly unconscious. They develop a man to be himself and give him activity of mental power to the highest degree possible."

-G. C Dalton.

Unfold New Wonders Daily

"The POWER-BOOKS unfold new wonders of accomplishment every day. The principles applied never fail to produce magical results".—Raymond Brady.

Worth Weight in Gold

"I have found them interesting and know they will be worth their weight in gold to me"—Norman D Merril

Benefits are Marvellous

"I am now putting to use the lessons learned from these books, the benefits de-rived are really marvelous".

-J. A. Macklun.

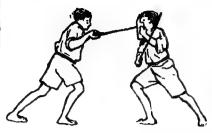

Books That Startled The World

"These books have startled men and wo,nen all over the world. If you want to know what you are, or what you CAN BE, get them and study them".—J. F. Ells.

BAHADURGANJ, ALLAHABAD

ANCIENT MID-INDIAN KSATRIYA TRIBES, Vol. I.

By Dr. BIMALA CHARAN LAW, M. A., B. L., Ph. D.

WITH A FOREWORD BY Dr. L. D. BARNETT, M.A., D. LITT.
Publishers:—THACKER, SPINE & Co.

Contents — Kurus, Pancalas, Matsyas Surasenas, Cedis, Vasas, Vamsas or Vatsas, Avantis, Usinaras.

This book is "interesting not only to Dr. Barnett but also to other distinguished scholars whose opinions are recorded below.

Dr. E. Washburn Horkins: Substantial volume ...very succinct and comprehensive account of these various tribes...I am glad to see that you reject totemism as an explantation of Matsya, etc.

Dr. M. Winterentz: It is a highly interesting and most valuable contribution to Indian history. As a careful collection of historical materials from the Veda down to the Puranas and the Jatakas, it will be welcome to every student of Indian history and literature. I am glad to see that you have refrained from building up more or less doubtful theories and hypotheses, and have given only the solid facts about the Kurus, Pancalas, Matayas, and all the most important tribes of Madhyadess.....

Programoz E. J. Rareow: It is evidently a very useful collection of historical materials.

Dn. Syrvary Lavy: Valuable book...Your book as it mands is an useful compilation of data drawn trees, all sources. Dr. Kerrs: This volume forms a very useful addition to the information which you have already made available regarding other of the tribes of India. It is most convenient to have so much information carefully collected and made accessible, especially as the work is done not in the interest of any preconceived theory but simply to elicit information.

MAHAMAROFADHYAYA Dr. GANGA NATH JEA: It fully maintains the standard of the earlier volumes.

Dr. D. R. BHANDARKAR: Like your other publications this also shows a valuable piece of scholarship and I have no doubt it will prove very helpful to all students of the Ancient History of India.

Dm. E. J. Thomas of Cambride: Most interesting and at the present moment to me especially as I sim studying Buddha's anoustry. I shall refer it in my book and hope to make further use of it.

THE MODERN REVIEW

VOL. XXXVII. NO. 3 MARCH, 1925.

WHOLE NO.

GIVE US STRAIGHT HISTORY

By SUDHINDRA BOSE

Lecturer in Political Science, State University of Iowa

T

THE effort to create a vigorous nationalism is a holy crusade of patriotism. In order, however, to make it most effective, it should be guided by true history. Straight, impartial history—not the hand-made, ready-to-wear kind—can throw a flood of light upon the present tangled situation in world-politics. Apparently there is a species of propagandists masquerading as historians, who will not have it so.

Just now a group of American historians of "the new school", more Anglomaniae than truthful, is engaged in the delightful indoor toort of fabricating American history to order. They maintain that the Boston Tea Party was the work of a number of drunken rowdies; that "in the Stamp Act period the benest purpose of the English Government had been to protect the colonies, not to oppress them"; that "the [British] troops [at Botson Massacre] were subjected to constant and bitter insult. The mob, no doubt, deserved the blame". These "new" historians process to believe that the colonists of the United States had no cause to revolt; that "the colonists were not very deeply oppressed. They enjoyed more freedom and self-government than did the people of England"; that the Revolution was started by a few soreheads; and that "George Washington did not entire the Revolution because he was a parties, but because he was disgruntled or the British to give

him an army commission"; and that the States should have remained a colonial possession, an appendix of the British empire. Whatever else these false, outrageous, and crooked statements may be, they are not most emphatically, history.

Curiously enough there has sprung up in India also a class of new historians, when are assiduously aping the American dreed method of teaching history. They insist that in studying political history the points which should be stressed are the historical triess ship and co-operation between India England, no matter how much the process may involve the mutilation of facts. To then the Punjab horrors of 1919 were a little "disorder"; the Amritsar Slaughter was 'it "incident"; the Mopla Train Massacra mere "accident"; the membership of India the League of Nations due to its fully said governing state"; and the unwanted visitation of the Prince of Wales, as I recall it, a tril of a tactical blunder. Thus the facts, and trimmed to suit . flagrant this illustrates that those who have be, the powers that bureaucratic rhetoric. bunk. history.

Mr. S. R. Das, who may be considered a typical representative of the new school of Indian historians, writes a dissertation of Indian politics and cites Mommeen in defended fritish occupation of India. Despite his of extreme innocesses, See believe.

for imperialism of foreign and home-

who is this man Mommsen? Herr Mommsen was not only a historian, imperialist, a worshipper of Red The best historians of later times' Macaulay, "have been seduced to truth, not by their imagination, but by reasons". Mommsen affords a striking commen of Germany was a voluminous ritor and was generally accurate in recording facts: but his interpretation of recess regarding Roman imperialism was released and biased. His reason was in no small degree vitiated. He emphasized the imperand most frequently the Roman case in all the cynicism and its falsity. This German historian remains to-day the darling of the trapertalists. Naturally the apologists for the Indian bureaucracy take to Mommsen as a mek to water. It seems the poor noisy ducks, the pseudo-historians, as Anatole France puts in his Preface to Penguin Island, spek in a history only the stupidities with which they are familiar". Pengum Island is devastating portrayal of what fools some mortals be. The purpose of their quest is of course quite obvious; but the point is that they will arrive no more at the truth than District Magistrate or the Provincial Governor will make a cook who attempts to an omelette of China door knobs.

Theodor Mommsen was keen for the Toman empire. The question, however, is how and the Romans get their empire? They got war, or course. And war was and is conly organized mass murder, but organized thousand stealing. Robbery and murder ware and are the chief weapons of imperialby war, of course. And war was and is

the beginning Rome was not out and imperialistic. It may be said to have said to hav it itie end of its first struggle with acquired Sicily, the City of the Hills began to dream dreams of the thing. Bome was then practically in Spanish American War in 1899. Spanish American War in 1899.

Holiegt, Emperialism, Wolf, Economic Imperial-Terrouse, Empers in Asia: Hose We Came By Indicons, Christ and Labour; Villate, Econom-perialism; Morel, The Black Man's Burdon,

For a time both countries were uninfluenced by the call of Manifest Destiny. Then America got into Cuba, and Rome after taking the western Mediterranean territory, turned its attention to the east. America, however, did better by Cuba than did Rome by Greece. Mutual feuds among the Greek States no doubt offered a plausible excuse for Roman intervention; but the insane jealousy felt by Rome toward any marked prosperity on the part of even its most friendly allies was almost always the cause of Roman aggression. the real hidden reason of the Roman absorption of Greece.

It is not true, as intimated by Professor Mommsen, that the Greeks never "knew how to act." In the century following Alexander's death, Greece was developing a new level of security. It was then entering upon a new political stage with extraordinary equipment for national unity. The Greeks were uniting into strong federations to resist Macedonia. "These Greek federations", says Webster in Ancient History, - "made a remarkable experiment in ancient politics.'

The first of the Greek unions was that of the Aetolians. Their league included not only the different Actolian tribes, but many communities outside of Aetolia. "The Council of Aetolia was, according to Greenidge's Handbook of Greek Constitutional History, like a modern Parliament, the permanently representative body." The Aetolian confederation was a powerful organization.

Perhaps the most important of the Greek unions was the Achaean league. It was, records W. M. West in his Story of World Progress, "the most important attempt at a federal government that the world was to know until the founding of the United States". The Achaean league, which affords the best example in European antiquity of the federal system, had brought the whole of Peloponnesus into the confederation as a single State. This federal union gave a promise of permanent federation of all the Greek States. The hope, however, was disappointed because of the opposition of Sparia, and especially because of the intrigues of the unscrupulous, underhanded Rome, the most dangerous enemy of the Greek union.

Herr Mommsen glibly speaks of the freedom" which Rome granted to Gessele after the Second Macedonian War is 188 B. C. That was not exactly the case. Gessele was treated to all intents and purposes in the interim between 196 to 146 B. C. In a case of the ca protectorate. It is only by a street

fevered, German imagination could one say that Rome "freed" the Greeks completely, and allowed them absolute, "unlimited right of self-government". The fact is that though Rome came in the guise of a friend, "a champion of Greece", that unhappy country was from the beginning on the casualty list of

the imperialistic Rome.

When the Roman general Flamininus announced with a great flourish at the Isthmian Games in the year 196 B. C. the freedom and independence of Greece, he was hailed as "The Liberator". Rome, however, soon showed in an unmistakable manner the light in which it regarded the Hellenic freedom. The Roman senate set itself up as a supreme court of appeal for hearing and judging all disputes springing up in Greece. The senate did not look upon this as a troublesome burden, as Mommsen had supposed, but a most agreeable occupation offering many luscious opportunities for interfe Greece. "The Romans, however", interference in the historian Inne, "lacked not only insight into the complicated legal questions submitted to them, but also the wish to let justice without regard to Under the circumstances, considerations". the Achaean league was reduced to a shadow. Indeed there is nothing in history to show that the Romans honestly desired for the national unity of Greece. On the contrary, there is ample evidence to prove that they fomented internal strife and widened exist-They believed that powerful ing divisions. Greece was not compatible with their own state".

It is interesting to note that there were many Greeks who recognized Rome as their protecting power, and even sought for an honourable union with Rome, which would give Greece "at least a moderate degree of independence". This union, however, was prevented to a large extent "by the relentless spirit with which the Romans, abusing their supreme power, finally drove the ill-fated and maddened Greeks to a hopeless resistance".* And yet they "neither knew how to act nor how to keep quiet"—thought Professor Doctor Mommeen!

After the Third Macedonian War, the Romans converted Macedonia into a subject province. This foreshadowed the end of

Consult W. Inne, The History of Rome, Vol. III. His four-volume work on Rome is full of dynamics. It completely demolishes most of the assumptions about the benevolent Roman empire upon which is grounded the latter-day imperialism.

Greek "freedom". "All Greeks suspected of sympathizing with Macedonia", testifice an authority on the subject, "were transported to Italy as hostages for the loyalty of their several cities. Among these were a thousand members of the Achaean League." Expecting no mercy from Rome, the Achaean union declared war. There could be only one outcome in this unequal contest: the defeat of Greece, the triumph of Rome. The story of how the Romans, drunk with victory and intoxicated with the lust of power, burnt Corinth, the capital of the Achaean league, how they put to death most of the men found there, and how they sold the women and children as slaves is one of the most tracic chapters in all human history. The destruc-tion of Corinth compares well with another Roman butchery, the destruction of Carthage, which made a desert of North Africa and left civilization standing on one leg instead Says Hutton Webster in his of two". Ancient History:

"The heavy hand of Roman vengeance descended on Corinth, the chief member of the league, and at this time one of the most beautiful cities of the world. In 146 B. C. the same year in which the destruction of Carthage occurred, and just half a century after Flaminians had proclaimed the liberation of Greece, Corinth was sacked by the Rossas sol liery and burned to the ground. A Greek historian, who was an eye-witness of the destruction of Corinth, tells us that the rude Rossas cared little for the treasures of art which filled the city. 'I saw with my own eyes pictures thrown on the ground and soldiers playing dice on them.' [Polybius, xxxix, 13]..... When the priceless paintings and statues were taken to Rome to be exhibited as his [Roman general's] triumph, he gave orders that any lost on the way should be replaced by others of equal value'. Rome was great enough in war, but in everything else was still harbarian."

It was a tale of cruelty, savagery and devilry that with some exceptions in modern times has very few parallels. But Herr Professor Mommsen found Rome, the notorious plot-hatchery of imperialism, guilty only of the feeble policy of sentiment" and "injudicious generosity"! Misrepresentation could hardly go further. And the noble Advocate-General of Bengal, Das, who quoted as a neighborly act these Mommsen words with great gusto, actually put them into italics!

The destruction of Corinth—perhaps it would suit the imperialists better to have it phrased as "Corinth incident"—marked the final extinction of Greek independence. That there is, in broad outline, an uncanny resemblance between the Roman imperialism and the light imperialism is as plain as the light.

sour face. Now, will the new historian, whose cotto is "Safety First", dare to tell us the kuis about imperialism? But back to our muttons!

Rome went to Greece to teach it the art self-government. Presumably the pupil never learnt the lesson well enough to suit master. Consequently, Greece, which iterature, philosophy, science and higher mivilization, remained under Roman subjection from 146 B. C. to the fall of the Western Roman empire, after which Greece formed a part of the Eastern or Byzantine empire until 1453 A. D. This meant for poor Greece a total of about sixteen bundred years of foreign rule. Then with the capture of Constantinople, Turkey, true to the Roman imperialistic formula, became the "trustee" of Greece still "backward", still "lacking in mational unity". The Turkish rule over Greece lasted on down from the middle of the fifteenth century to the third decade of the nineteenth century—well about four hundred years. And had not the powers of hurope clubbed the Sultan in 1829 to recognize the freedom of Greece, it would still be comwling on its hands and knees, and it would still be told—as India is being told—that until # got rid of its internal dissensions and formed itself into a nation", it could never be trusted with self-government.

The Hellenic people had been a subject race for nearly twenty centuries—obviously tearning the art of self-government in a few painless lessons on a safe comfortable rastalment plan. And the imperialists, guided by a deep-rooted feeling of righteousmess"—never by imperialistic appetites—can are doubt point to Greece and say that this is the best way to build a nation; but is that

a fact?

The study of history prompts one to ask:

In there a single instance in the whole wide world where a conquering country ever prepared a subject people for national unity and self-government to the extent of withdrawing the rule voluntarily? History knows of most. Conquerors always try to "divide and the conquered, under one pretext or another."

Ш

The point is frequently mentioned that a country has no right to an independent existence until and unless it has a strong nationality. If these were true, more than one Mestern people would have been under foreign domination to-day.

When the Thirteen Colonies in North America declared the War of Independence in 1775, there was no united nationality among the four million heterogenous colonists. They were rather a "hodge-podge of foreign nationalities", "a polyglot boarding-house". "It required", remarks Charles Board in American Government and Politics, "the patriotism and pressure of the long war to fuse the colonies into a nation". This is an optimistic statement. Many another scholar doubts if the American people were a nation even when George Washington became President in 1789. "It took a half century of political experience", observes Gettell, the discriminating author of History of Political Thought, "to develop a spirit of unity" in the American Union. Most of the American historians are of the opinion that American nationality was not

achieved till after the Civil War (1861-1865) *
Even now the people of these Forty-Eight States are far from being homogeneous. There are in the Republic sixty-five different nationalities speaking as many as seventy-three languages and dialects. The American people are of "Many racial strains and creeds, of endlessly diverse activities, of great individual wealth and great poverty, of deep learning and deeper ignorance", yet the inhabitants of this country do constitute a nation not united by blood, common origin, religion, or age-old ancestral tradition they do make the American nation. Now the question comes to mind unbidden: Had the Thirteen Colonies waited in the eighteenth century for the development of a strong nationality before striking for their independence, where would

they be to-day?

I say again, give us straight provable

facts, and not historical adulteration.

Take a country or two from still more recent history. Italy had a rising spirit of nationality in the middle of the nineteenth century; but was there a national unity among the petty quarrelling principalities of Italy, when the peninsula was under the Austrian rule? Most assuredly not. The same thing that happened to America happened to Italy. The Italian nationality came into existence only after Italy had overthrown the hated Austrian yoke, only after the war of liberation.

What of Germany? It consisted of a number

* See E. B. Greene, "The Foundations of American Nationality; C. R. Fish, The Development of American Nationality; R. G. Usher, The State of the American People; E. D. Adams, The Fines of Ideals in American History.

. CARRIAN

of featous. disconnected States with slight national consciousness in the early part of the nineteenth century. The German nationality, as we know it to-day, was born only after the creation of the German empire in the last quarter of the nineteenth century. In Germany and Italy, as well as in America. it was the political freedom and political experience that gave impetus to national solid-

When an Indian says that there is no nationality in India, he foully slanders his own countrymen. He is indulging in malignant balderdash. India has a nationality, and this nationality is distinctively different from that of almost any other. The Indian nationality is a matter of spirit and purpose, not of creed or race. The people of our great country, our great India—like the mighty people of America—are united by the holy bonds of common cause, by "the spiritual tie of common devotion to the ideal of political freedom."

Constitutional agitation to remove political and economic wrongs is indeed desirable; but how can there be any constitutional agitation in a country ruled by executive fiats? I see by the American press of this week that arbitrary ordinances, regulations and other lawless laws have started India on the path trod in Ireland under the Black-and-Tan regime". It is unabashed, ruth-less, even atrocious. Forces of reaction, as was to be expected, have taken new heart. A Reign of Terror, because official, is no less a crime. I believe in order. But order without liberty is tyranny; it is organized anarchy, legalized anarchy. It is most positively a determined drive against constitutional agitation.

England with its forty millions is trying to rule by force 315,000,000 Indians. Is there any moral sanction in it? Auckland Geddes, the former British ambassador at Washington, said not long ago that England was grateful to the feeble struggling American colonies for teaching it a lesson in colonial administration; but has England forgotten

the lesson already?

Washing States

This gives one a rare opportunity to consider the moral basis of government. What is a State? To begin with, the State is not a mere collective policeman, whose sole object is the maintenance of law and order. The State on the contrary, is a social agency whose highest end is the furtherance of

social well-being.* The main function of the government is to aid the people to the fullest to better themselves politically, socially and industrially. A government that resorts to terrorism admits its failure, and stands condemned before the bar of history. The goverument in all civilized countries is to serve the people. In India, however, the matter seems to stand thus: the people exist primarily for the benefit of the government, rather than government for the benefit of the people. What will all this lead to?

The interest of the ruler and the ruled is so inherently divergent and so fundamentally wide apart, that it is impossible to see how the bureaucrats can keep on posturing as moral apostles of fair play, as professional knightserrant. As for constitutional agitation, even a child above the kindergarten age must know by this time that no amount of fatuous pinktea agitation will serve any practical purpose.

What is, then, to be the next program? I have space enough only to strike the high points. The supreme task before India is education, especially education in social sciences which would include history, government, economics and sociology. Slavery and illiteracy go hand in hand. Reduce the number of the illiterate people. Begin therefore by establishing a minimum standard of education for every boy and girl.

The next item in the program is to advance national unity at all costs. Some day the Moderates and Loyalists, if they plan to live in India, will be redeemed. Even the goody-goodies are not wholly bad. Forget the racial and religious squabbles, close the ranks, and present an united front. The dearest hope of every Indian should be the political unity of all India.

The diverse elements in American population, let it he stated once more, do not prevent America from becoming a strongly unified national State. Indeed the strength of America is in the union of the Forty-Eight States. Just as the gigantic power of Niagara is made up of the united force of many millions of tiny drops, so in the union of 315,000,000 Indians there is irresistible strength. All power is in union, united action.
"The force of union conquers all", said Homer
a thousand years before Christ. "By union

• Read F. J. Goodnow, Social Reform and the Gonetitation; E. Freund, Standards of American Legislation; W. J. Brown, The Underlying Principles of Modern Legislation.

the smallest States thrive, by discord the grantest are destroyed." That was written the Roman historian Sallust who helped

to build up the power of Caesar.

Read the history of Switzerland where men speak Italian, German, French and many dialects. It is inhabited by different races. Switzerland is a tiny bit of a country, a mere dot on the map. It is small in population, small in money, small in natural resources, but great in military courage and united patriotism. The Swiss are all united to defend their country. The belligerent powers, all through the last Great War, respected the frontiers of Switzerland.

Carlyle, born in Scotland, said: "Men's hearts ought not to be set against one another, but set with one another, and all against the

evil thing only". There is nothing that the people of India cannot accomplish through the power of courage and united will. It is only through fear that men become chattels, slaves, and rabbits.

In the deeper things of life, we are not divided. We are, and must ever be, welded together into one indissoluble mass by our common Indian brotherhood. We must talk, think, and be India. There must be no "Lot's -wife attitude". If history teaches anything at all, it teaches that a people united and educated must inevitably reach their destined goal. As sure as the sun rises in the east, nothing on earth can stay their progress. Away with the defeatists! Let the organizers of victory come forward.

A MEMOIR OF OLD DELHI

By C. F. ANDREWS

CHAPTER IV

THE MUTINY AT DELHI

get Munshi Zaka Ullah to tell of the Mutiny itself, especially concerning the things that he had witnessed then with his own eyes. The subject had a horror for him and he always avoided it, except on very intimate excessions when he had something special to any about it. Therefore it was chiefly from indirect hints and comments, in the course of many conversations, that I gathered from him much of the information which I am now about to record.

On account of very straitened circumstances, due chiefly to the general decay of the Meghal Court, which had been so long the patron of Zaka's family, Zaka Ullah himself had felt compelled to refrain from marriage in early life and thus to depart from the usual custom in the North of India among Muselmans. It had meant a great sacrifice on his part, because he was essentially domestic in his nature and extremely fond of children. But it so happened that because of this, when the Mutiny broke out, he had just reached twenty-five years of age, and had neither wife shild.

۲.,

. 6

During the terrible day that followed, this one fact, that he was unmarried, served him in good stead. He was able to give his undivided attention to his father and mother, who were now growing old, and also to his young brothers and sisters, who needed his protection. His own immediate anxiety was concerning his intimate Christian friends, who were in the Delhi College. There were those whom he loved most dearly, and he determined to rescue them if possible.

The story has already been told of his eager impetuous attempt at the very first moment, when the Mutiny broke out, and the mutineers from Meerut had arrived and excited the city into revolt,—to save if possible the life of his deeply-loved Professor, the Christian convert, Ramchandra. The actual news concerning Zaka Ullah and his friendship with Ramchandra seem to have become known to the mutineers and the very fact that the city people imagined, however mistakenly, that Zaka Ullah desired to become a Christian, added to the volume of suspicion against him. He was at this time in very great danger of his own life being taken by the mutineers.

To the young students of the Delhi College, who had imbibed the new learning, the Market

came as a great and terrible shock, shattering at one blow all their hopes and aims. Their own Principal, Mr. F. Taylor, was killed. For some weeks no news whatever was heard of Professor Ramchandra, and the report was spread about that he was killed also. Their minds were in a tumult. They did not know which way to turn or what to do. To go against their own countrymen who had revolted seemed to them impossible: to side with them in the revolt seemed even more impossible. Not a single student took that latter course. During the time that the city was in the hands of the mutineers, they were all of them under suspicion.

As far as I could gather from Munshi Zaka Ullah himself he kept in retirement and told others to do the same. He remained as far as possible within his own house. He hardly went out at all even for a single hour. Instead of doing so, he went on with his own studies in private and sought to keep himself altogether outside the range of public affairs. The family difficulties increased; and at times he hardly knew where to obtain food for all those who were members of the household and dependent on him for support. The prices of all provisions became dearer and for some weeks they were on the verge of destitution.

More than once he spoke to me about the great and abiding comfort that prayer had been to him at such a time. "Without faith in God," he said to me, "could never have got through that period of anxiety and sorrow and dismay. But worse was yet to follow; and it was in the last stage of all, when we were house and homeless that prayer helped me most of all".

When the final assault upon the Kashmir Gate under Nicholson was at last made, and the city was recaptured by the English, Nicholson himself fell in the breach and died in the hour of victory. His death was a grave calamity not only for the English, but also for the city; because he was a strong character, famed throughout the North both for his courage and his uprightness. He was a man of iron will, and therefore he perhaps might have been able to keep discipline among the troops after the victory, when no one else could keep it.

It will be best, in order to avoid all dangers of exaggeration, to tell what happened in the disastrous days that followed, not in my own words but in those of the despatches and correspondence which I have copied out from the two volumes published by the

Intelligence Department of the Government of India. I shall do this as briefly; as possible.

First there is the report of C. B. Saunders, the Commissioner, to W. Muir at Agra (afterwards Sir W. Muir). He writes as follows:—

Only those on the spot know the difficulties with which our commanders had to deal, (i. e. after the assault). The whole Army was utterly and entirely disorganised, and within three or four hours of the assault discipline was almost at an end. For several days a majority of our European troops might almost be said to be suffering from delirium tremens. The native troops were almost as, if not equally, disorganised from similar causes, and from the plunder which fell into their hands.

The same official, in another despatch to W. Muir, wrote briefly as follows:—

"General Wilson ordered that no protection tickets should be valid, unless they were countersigned by himself. The consequence was that but few obtained anything like protection. No guards could be furnished and before two or three days had elapsed, there was not a house that had not been ransacked and plundered, friends and foes of the Government suffering to an equal extent. The chief wealth of the citizens had been bricked up and plastered over. The Sikhs and others with the military force very soon learnt this artifice and a very considerable amount of plunder was carried off which will not enrich the Prize Fund.

"The Prize Agents and the Army generally were rather anxious to lay it down, that the whole city of Delhi had become the property of the Army, having been taken in assault, and were anxious to dispose of real as well as personal and moveable property.

"The consequence has been that all the wealth of the city, which has escaped the clutches of independent plunderers, has been transferred by night-time here and the guarantee has been abused. The city has been so thoroughly ransacked and plundered, that parties are not willing to pay much for their effects still remaining untouched... The authorities have not gone on any very fixed principles in disposing of property, but on the contrary the whole question has been marked by want of principle more than anything else".

It is often stated that this hour of madness among the European soldiers was due to the stories of the outraged honour of English THE MODELN LEVIEW FOR FARM OR

women, who had been killed during the Metlay itself. As this charge against the sandaneers has been very often repeated and has formed the subject of sensational novels, written especially by English authors, who have dealt with the Mutiny in fiction, it is well to give at this point the direct evidence taken immediately on the spot. Mr. W. Muir who was at the head of the Intelligence Department in the affected districts, and perhaps the most well-informed of all the civilian authorities, writes on December

30th, 1857, as follows:—

My connexion with the Intelligence

Department at the Head-Quarters of the
Government at Agra, has brought me, during the past six months, into contact with messengers and spies from all parts of the country. I gladly add my testimony, that nothing has come to my knowledge, which would in the smallest degree support any of the tales of dishonour current in our public prints. Direct evidence, wherever procurable has been steadily and consistently against

*The people,—those who must have known, had there been any case of outraged honour and would have told us,—uniformly deny that any such things were ever perpetrated, or even thought of. The understanding of the people on this point, if, as I believe, we have correctly apprehended it, cannot be

wrong.

"Judging from the great accumulation of negative evidence supported as it is on many important points by direct and positive proofs, it may be safely asserted, that there are fair grounds for beleiving that violation

before murder was never committed."

That many English women and some English children are killed by the mutineers has never been questioned; but it is a relief to remove this accusation entirely from the mind. Not only Mr. W. Muir's evidence was teken, but also a special Commission of Magairy, which sat at Agra directly after the conture of the city of Delhi by assault and reported before the end of the year 1857, Yet it is a deplorable fact that positive

ramours were circulated; and the delirium from which the European troups suffered was partly due to these. This cannot in any way excuse what happened at Delhi, which left a great stain on British military history and was terrible in its moral and psychologic-

al effects.

· . E.C.

For days, after the capture of Delhi, ac-

body's life was safe Murders everywhere were rampant. Zaka Ullab, with his delicate, sensitive nature, saw these things. He was an eye-witness; and the sight could never be blotted out of his mind afterwards. The murder of the Professor he loved and revered most in the world, Maulvi Imam Baksh, a saintly man who had helped forward to the utmost of his power the new English learning and shared in the new enlightenment, was perhaps to him the crowning tragedy of all. The earlier revulsion against the mutineers, who had killed Mr. Taylor and others, including women and children, now turned back again upon these conquering Englishmen who in the hour of victory committed the same outrages. The news of the slaughter of the royal princes at Humayun's tomb added to the horror.

But these very horrors were to come immediately to his own home and family. The order went forth that every house. within the area between the Delhi Fort and the Great Mosque, was to be rased to the ground, as an act of punishment, and also for military reasons. No compensations were to be given. Innocent and guilty were to suffer, both alive.

The house and property of the family of Zaka Ullah, as we have seen, came within Therefore, along with many hundreds of other innocent people, his aged father and mother and the whole family were ruthlessly driven out. They found themselves, homeless, houseless, penniless; at a time when multitudes of others were in the same condition. There was no place within the city itself, to turn to for refuge.

Then followed a terrible journey,—a flight into the country to seek some shelter or protection there. The whole family went out towards Nizam-ud-Din's tomb. They lay at night time on the open ground; and in the day time they took shelter in some ruin, every hour imagining that the end had come. Unly once or twice Munshi Zaka Ullah spoke to me about those days of torture and hunger and thirst and fear. It was evident to him, especially in after years, that the faith of his father had been their one protecting shield.

Much I have related elswhere : I can only tell here one more story that he told me. One night, he said, he could not sleep himself on account of his misery and anguish for those whom he loved far more dearly then his own life. He watched in silence his father. The whele night through, Butie

Ullah was keeping a vigil of prayer to God. His face was filled with light in the darkness,—a light which seemed to come from within. In the morning, he learnt that a band of plunderers, bent on looting and murdering, had passed by the very place. But they had turned aside, and the family had been preserved. Zaka Ullah believed with all his heart that they had been saved only by his father's perfect trust in the Divine aid.

It will not be difficult to understand how the agony within Zaka Ullah's mind,—the agony of shattered hopes and ideals,—was even greater than the physical agony which he and those he loved had to endure. I shall write about this more fully when repeating his own words and conversations. For a long time, the shock was beyond all bearing and the torturing thoughts of his mind drove him almost towards despair.

But this madness of reprisals did not last. 'Clemency' Canning became, in the day that followed, owing to his nobility of character, vital cause of a great moral change and the quick recovery of law and order among the troops. To him also was due the complete rejection of any deliberate policy of revenge. Lord Canning bore the brunt of his fellow-countrymen's indignation for his so-called weakness; but history has simply vindicated him.

Very slowly in Zaka Ullah's mind the ravages caused by the Mutiny itself and the reprisals that followed were healed. Nature can repair her own wounds far more rapidly than those inflicted on the mind of men. I have a copy of a remarkable letter, written

by an officer, named Lieutenant Browne, in which he speaks of the days in the Delhi district that followed the disaster of the Mutiny.

"To look", he writes, "at the smiling face of the country, round Delhi, covered with luxuriant crops, it is difficult to realize that such fearful events have occurred only the other day. The people are ploughing and sowing again everywhere, and the village people have been blessed with a plentiful harvest."

The spirit of Zaka Ullah also revived, not immediately, but as the years went 'by. He too began the ploughing and sowing in his own life again, plucking out much that had been merely weeds and preparing the good soil. He was able at last with a free conscience to take up once more the promotion of the new learning. He had gained a new devotion in his life,—a devotion to Queen Victoria, who had given India what he truly believed to be her Magna Charta. His old idealism revived. Soon afterwards, as his worldly prospects too recovered, he married the wife of his own choice, to whom he was devoted with a profound and tender love. As the years went quickly by, little children of his own were born to him,—a family of sons; and to him who ever had in his own nature the heart of a child, was at last given the unbounded joy of fatherhood. He found the devoted love of his wife completed in the love of his children. In the gift to him from God of these new spiritual blessings, the old wounds of the Mutiny were healed. His buoyant happiness returned and his life began anew.

MORAL TEACHING IN PUBLIC EDUCATION

By MOHINIMOHAN CHATTERJEE

HE religious neutrality, in this country of Government and all public authorities, is as wise as it is praiseworthy. A different policy can only be contemplated with alarm. But it is capable of being viewed as indifference to religion itself. If a State can dispense with religion what use can there be for it in a family or an indi-

vidual? Such a view may possibly have some bearing upon the negative attitude towards religion of educational bodies, under private Indian control. At the same time the inherent difficulty of the problem cannot be overlooked. A Cowper-Temple plan, satisfactory to all Hindus or all Mussalmans, does not seem to lie within the compass of man?

wit. And yet it is eminently unsatisfactory that our Universities should, year after year, and forth graduates who have a greater knowledge of the physical geography of the moon than of the religious faith of their

countrymen.

No improvement in this respect except in its broadest features, can be suggested without the risk of a religious controversy. It seems feesible for the Universities to find a place for the study of the principal religious systems prevalent in the country:— Hinduism, Islam and Christianity, at least in outlines. By judicious attention to the necescary conditions, proper reverence to the Godward thought in all religions may be secured without injury to any. The religious spirit, as distinguished from religious systems, may very advantageously be cultivated by the formation of Masonic Lodges for undergraduates, somewhat on the model of those at Oxford and Cambridge. The details need not be discussed here. In the existing conditions of the country a book like Locke's "Toleration" may be made a permanent textbook, and the history of Europe immediately preceeding and succeeding the Peace of Westphalia may be studied by way of illustration. Ethical instruction stands on a different

Ethical instruction stands on a different footing and a fuller treatment of it may be

attempted.

Ethical instruction as a part of Public Education seems to be universally desired. But as to the method of imparting it a unanimity of opinion appears hopeless of attainment. In most Western countries moral teaching is based upon religious faith entertained, with variations negligible for this purpose, by the general body of the people. Such an agency for enforcement of the ethical constraint is unfortunately unavailable

here, as will presently appear.

It is sometimes suggested that ethical instruction of our students can be advantagecusly founded on a non-denominational religious basis. To discover this basis one has to lay bare the points on which all religions agree, the greatest common measure of all religions, so to speak. But it is obvious that if this common religious ground was, in general opinion, of the same value as what lies outside its area, the existing religious hostilities would have long since disappeared. Had Hindus, Moslems and Christians regarded that portion of the faith of each which agreed with the faith of all as by itself, sufficient to secure the religious summum bonum, the problem would have

tions shorn of a great part of its difficulties: It seems useless to point out that what all religious agree in is regarded by each as its best part to which the rest is subordinate. In practice, the case is wholly reversed. Rules of conduct, founded on this common religious ground, are sure to be open to the suspicion. if nothing worse, of needing amendment or reversal, when viewed from the standpoint of a particular religion in its entirety. And such suspicion will denude the teaching. believed to be tainted with it, of all influence on the individual will. Besides, such ethical teaching cannot be self-contained. It will have to be supplemented by denominational religious instruction. For, unless there be a genuine faith in the religion, one professes or is born in, religion itself will be incapable of supplying the needed ethical constraint. And the teaching of denominational religion in our educational establishments is obviously impossible in the present circumstances.

In some quarters it is desired to adopt an ethical text-book compiled from the Scriptures of the different religions, supporting each ethical maxim by concurrent citations. Any such compilation can only show that universal ethics, as opposed to tribal and theological morality, is not directly taught in all the Scriptures of the world with the fulness necessary for practical instruction, nor is equal value assigned to it by all. There is a further difficulty. Most religions require peculiar theological qualifications in the authorised interpreter of the sacred writings, so that it seems impracticable to secure for the compilation an authority, recognisable by all those who are intended to be benefited.

The usefulness of the class of books which includes "The Book of Golden Deeds" and "Moral Class Book" is of a strictly limited character. They are unsuited to advanced students and they cannot displace the national heroes, not always types of universal

ethics, from youthful minds.

A mere intellectual study of ethical maxims promises little good. The experiment has been tried in France with results, not acceptable to all. Ethical instruction, to be fruitful, must not merely attempt to store the mind with information relating to right conduct, but must also seek to generate a love of right conduct, to influence the will against wrong acts and desires. With this love a knowledge of ethical maxims is likely to be useful, but useless, if not hurtful, without it. In teaching morality, even through maxims, some claim must be pat

The section of

forward to govern conduct. If constantly and directly pressed, as it must be on this basis of instruction, such a claim would be likely to excite an active ethical revolt, even

in natures ethically neutral.

From these considerations one idea emerges clear. The need of ethical instruction is felt mainly on temporal grounds. The good is desired for the good of man in his present surroundings. This position is nonreligious, not ir-religious. All religions value the ethical life, even when subordinating it to dogmatic faith and practice.

In the actual circumstances moral instruction, being deprived of a religious basis, must remain unattempted unless a method be found of imparting it, altogether different

from those noticed.

It would appear that the doctrine of evolution in its progress since the days of Darwin has made such a method available. The early generation of evolutions, notably Professor Huxley, looked upon the process of organic evolution as essentially unethical. But later thought and research led Mr Benjamin Kidd to say:—"So far from it being possible to regard the ethical process as in opposition to the cosmic process, it must, it would appear, be taken that the ethical process is the cosmic process, and that it is through the principles mechanism of the ethical process that the struggle for existence and natural selection are producing, on the largest scale and in the most effective manner, their most characteristic results in the development of life". [Ency. Brit. (10th Edn.) XXIX. Prefatory

More recently Professor Lloyd Morgan observes: - "For the intellectual and moral life there are instructive foundations which a disclose" biological treatment alone can (Darwin and Modern Science, Cambridge, 1909, p. 445). It would hardly be fair to pass unnoticed a criticism on the biological foundations of ethics, occurring in the work just cited. Professor Hoffding in his Essay, "Evolution and Modern Philosophy", included in the same volume (p. 460) says :- "To every consequent ethical consciousness there is a standard of values, a primordial value which determines the single ethical judgments as their last presupposition, and the 'rightness' of this value can as little be discussed as the 'rationality' of our logical principles. There is hereorevealed a possibiliby of ethical scepticism which evolutionistic ethics (as well as intuitive or rationalistic

16 . .

ethics) has overlooked. No demonstration can show that the results of the ethical development are definitive and universal". If the removal of 'rationality' outside the sphere of the rational process does not lead to scepticism as to the validity of logical reasoning it is difficult to see how a similar treatment of ethics, placing abstract or absolute 'rightness,' outside the sphere of the single ethical judgments, is likely to afford a foothold to ethical scepticism. From the evolutionist standpoint "rationality" or the concept, abstract reason, appeared much earlier rightness, or the concept, abstract Hence the denial of the latter's than authority does not appear so evidently absurd as of the former. The older a mental process in the race the more innate and universal is it in appearance in the individual. Just as no kind of ethics other than prudential and hygienic laws would be possible if only one man existed on earth, so no ethics other than what is involved in the observance of tribal rites and customs is possible without extensive inter-rela-tions between many units of associated life. But the days of large empires and many-sided peaceful relations between tribes. sects and nations are comparatively recent. This would explain the disparity, imagined to exist, between the application of reasoning of identical logical value, to "rightness" and "rationality".

Besides, demonstration can show that wellknown natural causes, such as the pressure of increased population and changed climatic conditions, tend to destroy the alcofness of tribes and other similar social groups; that a conquering people unable or unwilling to 'eat up" the conquered must develop rules of conduct for the observance of both. And such rules of conduct must be more general. that is, a higher product of evolution, than the tribal morality of either. In fact, it can be shown that peaceful and, therefore, lasting inter-relations between distinct units of associated life, with different or conflicting customs and other concrete rules of conduct remain impossible, unless some rule of conduct is found independent of the limitations of all such units. For without it, mutual confidence and, therefore, neighbourly relations would be impossible. History supplies numerous instances of political power attending on ethical development converging toward universal "rightness" and not one of a clearly opposite character. The application of these generalised truths to the existing conditions

of this country is likely to be productive of highly beneficial results, both ethical and

political

The usefulness of the absolute ethical constraint being recognised, biology in alliance with history, will be able to demonstrate that those social groups who accept it, as operative in all things, great and small, always and for ever, will be selected for survival or success and the rest rejected. History will here, as before, contribute

striking illustrations.

A proper survey of the evolutionary process will show the utility of association in the different organic orders and the impossibility of association without the posses-aton by individuals of qualities of ethical value. In short, it will clearly bring into view that the wages of sin is death and life is the reward of righteousness. It makes the demonstration possible that the good is good because beneficial to life. Although the atility of ethical conduct in securing worldly success to a given individual cannot be directly shown owing partly to the brevity of his existence and impossibility of collecting all the necessary facts concerning his life, it is certain that what benefits the associated life benefits the individual life which can hardly exist without it The associated life being for the benefit of everybody it is to the interest of everybody that the ethical law should be observed by

The method shadowed forth above is as scientific as it is ethical. It is completely dissociated from religion and yet easily assimilable with it, the ethical law being written

on the Cosmos by the finger of God.

35

A word seems necessary to mark off the biological method from that of the English Utilitarians. It substitutes an objective and universal for a mainly subjective and individual-standard of utility. The soundness of this method may be easily tested. If by massing evidence from biology and history

It is shown that ethical qualities constitute the only mechanism for the maintenance and development of associated life and that without association the individual life is unprofitable, if possible at all, is it conceivable that the mind reviewing the evidence is likely to resist an ethical bent?

that the mind reviewing the evidence is likely to resist an ethical bent?

If the method is adopted, the gradation of teaching will present no great difficulty. The subject may be divided into parts suitable to the mental growth of students.

In the lowest classes students may be familiarised with the fact of association among birds, beasts and insects and the usefulness of the social habit may be explained to them. Kropotkin's "Mutual Aid" is a store-house of such facts.

As the student commences to study British or Indian History, opportunities may be taken to draw his attention to the effect of associated ethical character on momentous crises of associated life. At the same time a more detailed knowledge may be acquired of the increased individual efficiency and fuller individual development in the associated life.

In the higher classes the whole course of study may be crowned by the knowledge of biology, ethics, history and the allied subjects, directed to the end that the cosmic process should be recognised as ethical. The relations between the individual, the family, the society and the State should be fully understood and appreciated so as to generate a reasoned conviction that the ethical law is a necessity of our own being for the fullest development of the individual that good is good because it is good for man.

These observations, necessarily brief and incomplete, will, it is hoped, indicate with sufficient definiteness the only method which seems capable of hopeful employment for imparting moral instruction to the literate youth of India.

WOMEN'S MOVEMENT IN AMERICA

BY TARAKNATH DAS, M.A., PH. D.

TNDER the leadership of the National Woman's party, which has its headquarters at Washington, D. C., the far-seeing feminists of America are entering politics on For the domestic an international scale. politics they are advocating an amendment to the constitution of the United States to the effect that "all men and women within the jurisdiction of the United States will have equal rights". They are fighting for this amendment so that all forms of discriminations that are still practised in the United States against women, (altho they have votes) would be eliminated. They are planning to contest the coming elections to be held in Movember and there is every possibility that there will be many women elected in the Congress. In local politics the women of America are taking a very prominent part.

"Columbus Junction, Iowa. April 1—An entire ticket composed of women was elected to office here yesterday, Eva Bretz elected as mayor; Mary Moore, city treasurer and Nellie Moore, assessor. Mrs. Allen, Mrs. Jamison, Mrs. Schock, Mrs. Robertson and Mrs. Ritchie were elected to the city council. The women will serve two years. Columbus Junction is a village of 400 population in Lousia country."

The women of America are taking leadership in all forms of activities from education to social service; but a group of women of America has taken the most decided stand against war and for world peace. Women's International League for Peace and Freedom of which Miss Jane Addams is the international president and have branches in 24 countries are going to hold an international conference in Washington in May. But the most consistent of the American Pacifist organizations is the Women's Peace Union of the Western Hemisphere with its headquarters at 70 Fith Ave, New York City. The members of this organization are working for a constitutional amendment which would make all wars illegal. The following is the text of the proposed amendment:-

OUTLAW WAR BY CONSTITUTIONAL AMENDMENT

JOINT RESOLUTION

Proposing an Amendment to the Constitution of the United States.

Resolved by the Senate and House of Represent tives of the United States of America in Congres assembled (two-thirds of each House concurrin therein), that the following article be and hereb is, proposed to the States as an amendment to the constitution, which shall be valid as a part of the constitution when ratified by conventions in three fourths of the several states,

ARTICLE

1. War for any purpose shall be illegal, an neither the United States nor any State aha prepare for, declare, engage in, carry on, or any way sanction war or other armed conflic expedition, invasion or undertaking within a without the United States or any State; and

Neither the United states nor any State or sudivision thereof, nor any territory, corporation association or person within the jurisdiction the United States shall organize, train, maintain hire, manufacture, purchase, employ, use, authorize the use of an army, militia, or other armed forces, or of armed ships, machines or other armaments; nor shall the United Sates or any States or subdivision thereof, or any territory, corporation association or person within the jurisdiction of the United States, levy taxes or appropriate or expensional states.

2. After one year from the ratification of the amendment, the manufacture, sale, transportation possession, or use, of arms, munitions, or other articles, implements or chemicals designed for the destruction of human life, within, or the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof, is hereby prohibited.

3. All provisions of the Constitution and of the second se

3. All provisions of the Constitution and of the Articles in addition thereto and amendment therewhich are in conflict with or inconsistent within Article are hereby rendered null and void as of no effect.

4. The congress and the several states she have concurrent power to enact appropriate legislation to give effect to this Article.

Every member of this organization has 1 sign a pledge to the following effect:

"I wish to join the Women's Peace Union
I affirm it is my intention never to aid i
or sanction war, offer

national or civil, or any way, whether by making or handling ammunitions, subscribing to war loans, using my labor for the purpose of setting others for war service, helping by money or work any relief organisation which supports or condones war."

This is a serious pledge and these women are working against the settled military and maval policy of the Government of the United States. The naval policy of the United States has been to build "a navy second to none" and this policy has been upheld in the Washington Conference on "the Limitation of Aramanents," and the United States Secretary of Navy, Honburtis D. Wilbur, in his speech delivered on March 31, '24 before the Y.M.C.A. at Washington, D.C., has made the clear

statement.

"We fail to realise that all human developments and changes are the results of slow evolutions, expedited and sometimes retarded by great wars. The fundamental principles established as a result of war and generally acceded to by the combatants may require complete fulfilment and application to human affairs. We should recognize that even if every nation in the world subscribes to the principle that there should never be war any more, it would be still necessary to buttress that resolution by adequate armies and navies and continued and daily efforts to keep peace among nations."

The American Government is interested in creating the greatest and most intelligent estizen-army in the world and for that purpose it is encouraging military training among the students of High Schools and all State Universities. In forty-eight state Universities at least, a year of military training is compulsory for all male students and

none can get a degree with a year's training of physical education. This year the United States Government is going to give special military training for a month to 30,000 youngmen between 19 and 24 so that they would be able to serve as reserve officers. this, every State in the United States has its own State Militia which is also incorporated

with the National army.

While a band of women are opposing all forms of war, another band of women are asking to increase the facilities for girl scouts and even open a Women's Training Camp. American women are not only becoming more active in national affairs but there is a decided tendency for the American women to take interest in international affairs and the National Women's Party is planning to have the International Congress of Women of the World, so that the women of the world would co-operate to remove disabilities against women in all parts of the world and they would have an international programme to have a better social and political order.

Indian women can learn much from America and let us hope that the women of India would organise to aid most deserving and far-seeing women to come to America to study in American universities and at the same time establish closer relation with the American women who would play for the good a dominant part in future in world-affairs. The women of India should take initiative to remove all disabilities against them and get into politics. With the tradition of Chand Bibi, Maharani Lakshmi Bai, Ranı Bhabani and others Indian women need not hesitate to assert their rights and lead the nation in the field of regeneration and assertion of India on equal basis with all other free and independent nations.

THE THIRD SESSION OF THE ALL-INDIA ORIENTAL CON-

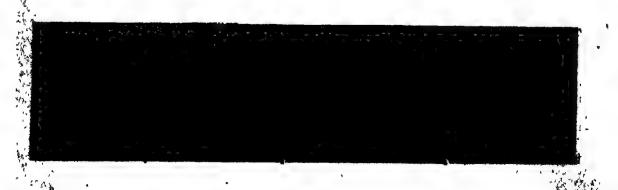

By VERITAS VINCIT

HRISTMAS week, associated in Christian countries with festivities and rejoicings, has of late come to be recognised as the week of our national conferences and meetings. To the usual list of all-India gatherings during this historic week was added last year the meeting of the Oriental Conference which, as previously announced, held its third session in Madras on three successive days, the 22nd, 23rd, and 24th December. A melancholy interest attached to the proceedings of this conference by virtue of the fact that it was to have been presided over by Sir Asutosh Mukherjee. When death snatched him away with tragic suddenness it was decided to let his mantle fall on the shoulders of Dr Ganganath Jha, Vice-Chancellor of the Allahabad University. Long before the appointed date letters were sent in large numbers under the signature of the Honorary Secretary Dr. S. Krishnaswamy Aiyangar of the Madras University inviting contributions from scholars and their personal attendance at the forthcoming session of the conference, but some reason was given for complaint by the direction in the prospectus to the effect that all papers should be sent beforehand for examination by a local committee, and only those which ran the gauntlet of its test could be read at the meeting. As the date of the conference approached, delegates began to pour in from far and near, including such distant places as Lahore and Chittagong, but in view of the fact that the Lucknow, Benares and Patna Universities, the Post Graduate Department of the Calcutta University, the Behar and Orissa Research Society, the Asiatic Society of Bengal and the branches of the Archaeological Survey in Nothern-India went altogether unrepresented or else were very poorly represented, the attendance could hardly be regarded as satisfactory either in quantity or in quality. It must, moreover, be admitted that the arrangements for accommodation of the delegates, who unlike previous occasions, were saddled with a substantial part of the boarding charges in addition to the usual delegates' fee, left something

to be desired. On the opening day the conference met in the spacious and beautifully decorated hall of the University building. There was a large and distinguished gathering consisting of His Excellency the Governor, prominent members of the Legislative Council, and eminent representatives of the bench and the bar, the University and the Colleges, and last but not least, the landed aristocracy. After prayers in three languages (Sanskrit, Tamil, and Arabic), and a welcome speech by the Vice-Chancellor of the Madras University (Dr. Macphail), His Excellency rose to address the meeting. He feelingly referred to the irreparable loss sustained by the country through the death of Sir Ashutosh Mukhericeclarum et venerabile nomen—and he went on briefly to pass in review the various branches of oriental studies with reference to their existing condition and prospects. Then followed the presidential speech which, without rising to the level of a comprehensive survey of the field of Indological research, effectively exposed some of the existing difficulties and drawbacks in its way. Among the points pressed by the speaker were the necessity of organised research, the need, for the preservation and publication of manuscripts, the danger of 'modernising' the Moulvi and the Pundit, the desirability of unbiassed study of the old texts, and the cultivation of the critical study of vernacular literatures. After the President had resumed his seat, the proceedings of the first day's meeting terminated with a vote of thanks to His Excellency the Governor. Then the delegates and visitors attended by invitation a function at the Mylapore Sanskrit College where beneath a nicely decorated shamiana they were entertained with the exhibition of Vedic recitations and discussions in Sanskrit among orthodox pundits gathered from various parts of the Presidency. Then the guests were treated to afternoon tea and a magic lantern lecture in the evening on the subject of Indian architecture. The two following days were set apart for the reading ' of papers, the number of which reached on the present occasion a phenomenal figure. By

what could not but be regarded as an unforsingle decision on the part of the committee. s numerous sections numbering twelve in were lumped together in three groups which sat under as many presidents. This tot only led to the process which a sectional president felicitously called the guillotining of papers, but it also placed the Presidents themselves who, be it remarked en passant were selected only on the opening day, in false position. For what single scholar could possibly do justice to such a varied assortment of subjects as Sanskrit, Avestan. Pali, Jain and other Prakrits, Hindi and Orient-Philosophy (Group A), or Archaeology, Epigraphy, Numismatics, Music and Indian Art (sic), History, Geography and Chronology, Oriental Science, Sociology, Ethnology, and Folklore (Group B), or, most singular of combinations, Philology, Dravidian language and Literature, Persian Arabic and Urdu? of the papers reached a respectable, if not a high, level of excellence, and some facilities were provided for discussion, though one of The sectional presidents thought it fit at a very early stage of the proceedings to forbid any debate on the score of want of time. few of the papers caused some amusement, as when an enthusiastic gentleman undertook to prove the knowledge of electricity in Ancient

India, while another tried to show that Ravana's Lanka was situated in Central India. The conference met for business in the afternoon of the 24th December when it contented itself with passing a resolution for the appointment of a committee (the names of which were to be selected thereafter) for drawing up its future constitution. At the same meeting the President rose to invite the conference to hold its sitting in Allahabad for the next time. A meeting in the earlier part of the day at which the Honorary Secretary presented, and the President proposed the acceptance of, the report of the last conference, proved to be infructuous. For the entertainment of the guests the Committee of the conference arranged on the evening of the 23rd for a theatrical display of the Mricchakatika, and in the afternoon of the 24th an elaborate programme of music to be performed among others by some of the greatest South Indian masters. Both these functions, which were held in the University Hall, proved to be very enjoyable, though some criticism was offered against the former on the ground of incongruous blending of modern technique with an old classical drama and against the latter on the score of prolixity and inequality of its parts. this last function the memorable session come to an end.

FUTURE OF THUMRI IN CLASSICAL MUSIC *

By DILIP KUMAR ROY

THUMRI has, generally speaking, got into the bad books of classical musicians as well as connoisseurs. That is to say. classical musicians as well as connoisseurs are found to be rather prone to wax eloquent. in nine cases out of ten, over the condemnation of thumri as a cheap kind of music which may charm only the Philistines. Thumri singers are hardly recognised by classicists as having any title to be looked upon as musicians. This is not an exaggeration. Kheyal singers have been known to leave a musical gathering in pious horror, if a Thumri singer should have had the hardihood to offer to pollute the atmosphere rendered sacrosanct by their previous Kheyal singing. Dhrupad singers who formerly took up identical attitude towards the same injured Khevalias do not even think it worth while to take any notice of Thumri. Their utmost reaction to the appeal of Thumri is perhaps the condescension of a fleeting smile of unconcealed contempt. I do not mean to imply that no classicist can be found who is catholic enough to see any beauty in the much-traduced Thumri music. I only want to class such genuine souls under the category of exceptions.

It is not so difficult however comprehend the view-point of such indignant condemners of subtle types of music as Tappa or Thumri. The human nature in masses behaves like an inanimate object which is so proverbially fond of Newton's Law of Inertia. This Law states that no object has an innate tendency to change its state of rest or uniform motion in a straight line, except in so far as it be compelled by external impressed forces to change that state. In a word, this means in the case of the human mind that the latter ill brooks any movement which tends to change its old habits of viewing things and time-hallowed ruts of beliefs and prejudices. Is it not well known, for instance, how a time-old habit tends to become apaurusheya (i.e., infallible in its wisdom) through the mere passage of time? This applies not only

Read at the Lucknow All-India Musical Conference on January 10th, 1925.

to our social and religious credos, but to our artistic conceptions as well. Thus we are prone to look askance at any innovation or departure from our artistic traditions in the realm of art, just as much as in other spheres of human activity The Dhrupad singer's denunciation of Kheval is but one of the numerous illustrations of the truth of this statement. Kheval has nevertheless come to stay as our revered Pandit V. N. Bhatkhande of Bombay assured an anti-kheyalia the other day in my presence (much to my satisfaction I must own). I should like however to say about the same thing with respect to Thumri which is as much of a permanent asset in our artistic evolution as Dhrupad or Kheyal 19. This statement, though it may sound a little hazardous at first, is nevertheless true at bottom, as will be the endeavour of my present article to prove.

In order to assign its proper place in the scale of values to Thumri music, it will be found useful to trace its birth and discuss its raison-d'etre. That is to say, it will be helpful to make a brief survey of its nascence and growth in the context of its musical traditions. For that will enable us to look at it in the

proper perspective.

As is well known, Dhrupad is the oldest music still extant. At the time of the Pathan invasion of India, Dhrupad was practhe only highly-evolved music. The Pathan conquerors of Hindustan took it in hand since it gradually appealed to them. By and by, however, Dhrupad was found to pall on them, as is bound to happen in the case of any class of music if it be unique music of a people otherwise advanced in civilization. "Variety is the spice of life" says the poet. It is also the life of art. I mean thereby that no art, however great, can satisfy the eternal craving of the human soul for beauty, if it does not evolve itself more and more with time. That is why new vistas in art have to be opened out from time to time by creative artists to humanity, ever athirst for novelty and variety. This nded not be taken to cast an odium on the art which is old. Nothing is farther from my.

t_

intention. For I am fully alive to the fact that an art which is classic generally comes to stay. Only it palls if variety in the form of newer developments of the same be not superadded from time to time. There is no therefore why time-old classic types of music like Dhrupad should not co-exist with later types of music such as Kheyal, Tappa and Thumri. It was because music-lovers had a sort of of this truth that Kheyal was created by Amir Khasru and Sadarang—to the eternal glory of the Mahomedan creative genius The result was that the two types of music have since then existed side by side to set each other off. I think this is quite comme il faut Kheyahas had recognised the necessity of variety and ornamentation in music and they are to be felicitated on their timely intervention Now the same necessity (viz. that of finding greater fulfilment of the thirst for variety in music) which prompted the early Kheyalias to strike off into a new path, as it were, in the further evolution of our classical music, urged later composers like Golam Nabi (commonly known as Sori Mian) to invent Tappa, and his successors-

Kheyal was ushered in because Dhrupad was felt to be (1) lacking in ornamentation; (2) the subservient to the demands of rhythm; and (3) offering comparatively little scope for improvisation Thus Kheyal ministered to a deep hankering of the human soul in the realm of music, viz. that of bodying forth new beauties at every step in the shape of improvisations. It was comparatively untrammelled by the demands of the rhythmic structure of Dhrupad. It was consequently a great advance on Dhrupad as every right-thinking catholic judge must allow.

Now the same necessity which impelled composers like Amir Khasru and Sadarang to strike out a new path in music in the direction of Kheyal, prompted later musicians to evolve Thumri. I am of opinion therefore that it is as unjust for the present composers of Kheyal to vituperate Thumri as t was for the quondam champions of Dhrupad to condemn Kheyal. I have suggested why such evolution of anything new n art must meet with a great deal of increasing opposition at the outset. I will next set about pointing out why such opposition all but sure to prove abortive in its itempt to stifle the increasing popularity of Thumri—just as even the withering glance

of Dhrupadiyas was unable to blast the evolution of Kheval.

For this it will be helpful to pause here a little in trying to consider where it is that Kheyal differed essentially from Dhrupad as well as what fundamental aspirations of our musical craving it catered for. I have pointed out that Kheval differed from Dhrupad principally in that it afforded a scope for the creative genius of the artist to soar high and lose himself as it were in search of novelties in the shape of improvisations. Not that Dhrupad did not offer any scope to the musician in this direction, viz that of improvisa-Dhrupad alap, rythmic variations known as bants, syncopation known as ari, kuari etc. did afford him a certain amount of scope to improvize But it did not go far enough, for tans, kampans and other subtle ornamentations had to be brought in and Dhrupad did not brook these. Kheyal supplied this need of the musician and everybody knows how much enriched the music becomes in consequence, being comparatively unhampered by the demands of Dhrupadist rigidity.

To take up the thread where I left off, I will be concerned to show now how the likelihood of Thumri prospering in the next phase our musical evolution is about as much of a certainty. For that purpose, it will be well to consider first how Thumri in its turn ministers to a real need of the artist, unsupplied by any other class of music.

Where is it that Thumri differs essentially from Kheyal? This question must be answered first for the clarification of our ideas. Where indeed? There are many points of contact between Thumri and Kheyal just as there are between superior classes of Kheyal and Dhrupad. I will however limit myself principally to bringing into relief the points of dissimilarity—as that will be more to the purpose

Kheyal, I have pointed out, furnished a great deal of scope for improvization to the artist and is as such at least as great an achievement in Indian musical culture as Dhrupad. Thumri affords—and here is my principal point in favour of Thumri—a still greater scope not only for improvisation but for the expression of the subtler lights and shades of our emotion than Kheyal admits of. In other words, Thumri gives expression to our ever-changing perceptions of beauty with a delicacy of touch which would be altogether beyond strict Kheyal. Whoever has heard a beautiful Thumri must have felt how the latter satisfies some innate

سينسين ۽ پھ - پ

craving of his soul which has been so delicately portrayed by the immortal poet in his immortal lines:—

I pant for the music which is divine,
My heart in its thirst is a dying flower;
Pour forth sound like enchanted wine,
Loosen the notes in a silver shower.
(Sheller)

A lovely Thumri with its divine delicacy, fleeting finesse and iridescent evanescence makes the listener feel as it were As one who drinks from a charmed cup Of foaming, and sparkling and murmuring wine, Whom a mighty enchantress filling up

Invites to love with her kiss divine

(Ibrd)

The emotion that a really artistic Thumri can evoke is essentially of a nature uninspirable, by any other class of music (to my knowledge) The real glory of Thumri lies in its taking cognizance of the subtle shades of evanescent emotions that succeed one after the other in the musical experiences of the artist in his sacred moments of undoubted inspiration That is why Thumri must needs be a little kaleidoscopic in the exuberance of its presentation. What it suffers however in lack of restraint (compared to first-class Dhrupad or Khevall is more than compensated for by the *delicateness* of its nuances; and what it suffers in lack of grandeur is more than made up for by the ardour of its living appeal.

To come from the subtly rich aesthetic effects of Thumri to its method and design of producing the same Thumri, as is well known, enjoys greater latitude than Kheyal in so far as the rigidity of the melodic structure is concerned. Or in other words, unlike Kheyal. Thumn's ideal does not lie in the direction of the presentation of a Raga in its purity. Its aspiration consists the presentation of the minutest changes of the musical emotions of the artist. Thus the term 'correct-singing' is, unlike in Kheyal, almost meaningless in Thumri. The result is that the Thumri artist is practically unchecked by the considerations of purity of the Raga in his exploration of the beautiful For does he not enjoy the latitude of freely passing from one Raga to the other? Does he not revel in the almost complete freedom of expressing truly what he feels undeterred by considerations of technique? He therefore afford to concentrate on the faithful expression of his everchanging emotions in a way which would be impossible in its very nature in Kheyal-singing. Herein

consists the principal achievement of Thumri. (Here the writer sang a song to shew how different Ragas keep coming in in Thumri and with what artistic effect.)

The amosticat have me

The question here naturally presents itself, if such unbridled liberty in musical improvisations is good in the long run. For does not this often involve the degeneration of liberty into licence? Besides, does not this often tend to make one Thumri sound too much like the other, thus rendering this class of music rather monotonous? It must be admitted that there is force in such arguments and predictions. For Thumri, as it is sung to-day, very often suffers from the drawbacks mentioned. In Kheyal there is a ideal of restraint, comparatively speaking, which renders them enjoyable for a long time Besides, in the enjoyment of the latter there is this undoubted satisfaction that is to be derived from differentiating one Raga from another Aristotle has rightly pointed out the unquestioned pleasure in the very fact of recognition In Thumn shades of different Ragas keep coming in, so that sometimes the protracted enjoyment of one Raga is marred by too frequent transitions into snatches of other Ragas. Every musiclover must testify to the deep satisfaction that is to be derived from the dhyana of one Raga. When a musician improvises on one Raga the atmosphere that he creates round him becomes truly saturated with the spirit of the Raga and the result is dehoious.

The foregoing considerations cannot but bring into prominence some points where Thumin is bound to be inferior to Kheyal But that does not imply that Thumin should be discarded in favour of Kheyal in consequence For Thumin also possesses charms which are peculiar to itself—as I have already suggested. I can see no earthly reason why Thumin must not exist side by side with Kheyal, just as there is no reason why Kheyal should not prosper simultaneously

^{*} That is, if he knows how to create it, of course. For it must not be forgotten that I have here in view the ideal in contradistinction to the common practice that obtains to-day. The average uncultured Kheyalia of to-day debases his Kheyal more often than not by paying scant courtesy to the spirit of the Raga. For he generally comes to fly off at the outset at a mad tangent into hysterical gymnastics or rhythmic acrobatics, thereby vitiating his whole art. Nevertheless, the ideal of a Kheyal is there, viz. that of invoking a particular atmosphere for each separate Raga. Thumri in its very nature has no such ideal. It is here therefore that Thumri suffers in comparison with Kheyal idealistically speaking.

with Dhrupad. Each of these classes of music possesses a classic element which cannot fail of appeal to the catholic music-lover. Each therefore is going to stand on its own merits and the total effect cannot but be a happy one, if only we are discriminative in our appraisement of the relative merits of each class of music. What I am up in arms against is the ventilation of the opinion that Thumri must be inferior to Dhrupad or Kheyal, for the simple reason that the latter can boast of beauties not possessed by the former. For, is not Thumri also great in its own line, its inevitable shortcomings notwithstanding? Every class of music must have its own shortcomings for the matter of that, owing to the limitations peculiar to itself To run it down because of such limitations is like blaming a creature for being itself.
The butterfly says to the rose: "I pity you who cannot fly." The rose may well retaliate: "I also pity you who cannot give out tragrance". Is it not as idle to condemn the rose for its immobility as it is to reproach the butterfly for its lack of perfume?

If however the claim of Thumri to greatness has to be made good, the charge of monotony often laid at its door must be met. For no art can have any solid pretensions to greatness, if it palls on one comparatively soon. I do not think however that although Thumri is inferior to Kheyal in some respects, it must necessarily be inferior to the latter in point of variety. The truth of this statement cannot but have gone home to those who have had the opportunity of hearing such beautiful Thumri singers like Fyas Khan, Achhan Bai or Janki Bai. Unfortunately for Thumri, however, its repetitions often tend to monotony in the execution of most of our ancultured musicians of to-day who care more often for a display of their technical skill than artistic perception. But a Thumri singer who is a real artist can easily prove that this tendency is by no means an inherent one in the very possibilities of Thumri. Besides, is well to bear in mind that Thumri, is still in its teens; that it is not yet evolved mough; that unlike Kheyal, the codes of its exposition have not yet been formulated, far ess classified. We have not yet had, that is, sufficient data to go upon. Dhrupad has airly exhausted itself. Kheyal, though far from ntiquated yet, shows unmistakable signs of almost complete maturity. Thumri, however, s still like a stripling which stands in need if a tender looking-after. Its aspirations must sympathised with, if it is to find its own

self and realise its potentialities in the near future. For we must not be blind to the circumstance that Thumri has already given a promise which does justify high hopes of its future.

Classicists often cry Thumri down as being the province of women and hayaderes only. This is not just. Neither does it reflect any credit on the sobriety of judgment of such denunciators. For, how on earth can the mere fact of women being able to sing Thumri with effect be used as an argument against its greatness? Besides, the verv assumption is unwarranted that mon are incapable of singing Thumri as well as women One has only to hear the Thumri of men like Abdul Karım, Fyas or Manjuddin Khan to be convinced of this Of course, women singers cannot but lend their womanly grace and delicate flavour to the music they sing. But the Thumri of men singers will in its turn be instanct with masculine confidence and virility. Each has its own charm Each possesses qualities which are peculiar to itself. What is needful to bear in mind is that no noble art can be intended to be the monopoly of one sex. The criterion of a true artistic exposition is that it should be a sincere expression of some aesthetic emotion actually felt by the artist. Thus, so long as a Thumri singer passes this test, there is no reason whatsoever why his or her expression should not be artistic. This is but common sense and as such I hardly need to expatiate on it any further. I want only to add that a good deal of the prejudice of the ostads who profess to look superior to Thumri contending that it is an effiminate art is attributable to their jealousy of the best lady singers who often succeed in outdistancing the former in a truly artistic exposition.

Then, again, there is another erroneous notion abroad that Thumri can be sung by any body and everybody. Nothing can be further from truth. For, in order to be able to sing Thumri really well, one must first of all be capable of expression in an eminent degree, as the soul of Thumri lies in expression and not in mere technical skill, however wonderful. For instance, a Thumri singer must take special care to produce what may be metaphorically described as light and shade effect of vocal modulation. In Kheyal singing he may fare better even without such eminent voice effects. For, in the latter case, he may produce a good deal of effect by his technical skill or by his power of differentiating between

1

kindred Ragas. But this will not stand him in good stead in Thumri inasmuch as correctness matters little in Thumri (nay, becomes almost meaningless),—the essence of beauty lying in subtlety of expression.

There is another idea at the back of most people's minds, viz., that Thumri-singing requires neither any musical knowledge nor any systematic training. Such a view is substantially incorrect. For a good Thumri signer must learn Kheyal well if he should want to sing Thumri effectively For in Thumri, there is almost boundless scope for the introduction of various beauties of the Kheyal style. The other day, the great Fyas Khan sang some Bhairavi Thumris at this very conference exemplifying the truth of the above statement—as must have been apparent to all connoisseurs of Kheyal. A musical friend of mine had once aptly remarked to me that one could ill afford to dispense with a systematic training in Kheyal if he should want to sing Thumm at all well His remark was only too true, paradoxical as it might appear on the surface. For, in order to be able to give a definite direction to the manifold potentialities of Thumm, a thorough grounding in Kheyal cannot but be eminently

helpful as well as suggestive. To pass from one Raga to others, for instance, presupposes a sound knowledge of all of them.

If I refrain to-day from suggesting specific lines along which the Thumri of the future should (and in my opinion bids fair to) develop itself, it is only because a mere adumbration of the same would be of little use without copious illustrations. As this can hardly be done on paper, I have nothing more to do but to add in conclusion that it is going to be not a little helpful in the evolution of our classical music to study as well as to experiment on the potentialities of Thumri And the sooner our educated classes take kindly to it in a catholic spirit of appreciation, the better will be the harvest that is going to be theirs. For it is my earnest conviction that if only really cultured men will take to it in a sincere spirit of research, our beautiful Thumri will gain more and more in dignity. It will then rid itself of the flippancy and frivolity with which it has today come to be associated in the hands of our unimaginative professionals who can at best give us only fugitive flashes of an ethereal vista which it is up to the magic wand of music alone to open out.

THE CRY OF SOCIAL REFORMS AMONGST THE ABORIGINES

BY DHIRENDRA NATH MAJUMDAR

THE subjuct-matter of the paper has been the result of my ethnographic tour in Kolhan in Singbhum, a tract of country in the Chotanagur plateau, inhabited by the Kols or Hos, an aboriginal tribe of pre-Dravidian origin. The term 'Kol' is derived from the Sanskrit 'Kola' meaning pig. apparently given to these people by their Hindu neighbours or Dikkus as they call them. The word 'Ho' is derived from Mundari 'Horo' meaning a man. The origin of the Hos may de traced to the great Kolarian family whose subdivisions are the Mundas, the Santals, the Birhors, the Tamarias and other cognate tribes of the Chotanagpur plateau].

The social progress which we meet with in different parts of India suggests to the most casual observer a warning which every anthropologist in the land should beware of. The influence of social culture has reached the most neglected nook of our land and it

97

is no wonder that the aboriginal people who supply us a clue to the evolution of primitive society and who even now present us with a culture more or less stagnant and traceable to the very early period of their existence should receive the light of culture to some extent. By this I mean that the so-called uncivilised non-Aryan people, call them Dravidian or pre-Dravidian as you please, are fast lighting the candle of civilisation and with the help of Christian missionaries, they are trying to dispel the darkness and misunderstanding that so long shaded them. To be more definite, I should like to cite one example which will explain the rosition. In March, 1923, a batch of post-graduate students

of the Calcutta University with their lecturer Rao Bahadur L. K. A. Ananta Krishna Iyer had been to Ranchi on an excursion to study first-hand the aboriginal people of the Chotanagpur plateau. I was also amongst them. The Chotanagpur plateau is inhabited by saveral tribes of Dravidian or pre-Dravidian denomination. These people form the nucleus of the abornginal substratum upon which the invaders of Aryan speech came as conquerors It is an interesting thing to learn that although they are surrounded by cultured people on sides, these aboriginal people preserved much of their habits and customs At Ranchi we were the guests of a distinguished anthropologist Rai Bahadur Ch. Roy, MA., B.L., MLC. Mr Sarat Ch. Roy has devoted many a long year to the study of these tribes and his monographs on the Oraons and on the Mundas, speak for themselves as to what a vast treasure he has unfolded. It was through Mr Roy's help that we could learn something of primitive life With Mr. Roy's assistance, we could visit these people in their homes and the little we could gather from these visits confirmed us that the time had come when anthropologists and workers in the field should lose no time in collecting all materials available of the life, dress, customs, and habits of these primitive people, for in a decade to come, all that was primitive in them would perish adding only a blank page to the diary of the curious. From Ranchi to Lohardaga, there is a branch line of the Bengal Nagpur Railway and the inhabitants of the places on both sides of the line are the Mundas and the Oraons Scarcely you will find a Beharee or a Bengalee and the fields on both sides are studded with the abodes of these primitive tribes. The rocky land with small bills and occasional forests here and there depicts the true nature of the plateau and the people living on the plateau who are hardy, strong and well built As we proceeded towards Lohardaga from Ranchi, one special sight attracted our notice. At every station we could find a missionary church—a number of missionaries and a group of Christian boys and girls decked in fine clothes, apparently recruited from the aboriginal element. Far from the noise and bustle of city life, these apostles of religion have preferred to stay and built up their huts— the mission of their life being to elevate these people—to spread education amongst them and light the candle of culture in their heart.

I have said before that these primitive

people have come in contact with the missionaries whose culture they receive and the townspeople with whom they mix freely so that it is no wonder that they should rid themselves of peculiar customs which their newly-awakened consciousness seemed distasteful. To take one example, the Oraons of the Chotanagpur plateau have a custom of separating the bachelors and maids of the village and every Oraon village possesses two houses or dormitories better known as 'Dhumkurias' and the unmarried girls of the village are housed in one doimitory, while the unmarried boys share one dormitory amongst themselves

Why the custom was introduced is an open question and anthropologists differ * in their views Some anthropologists take recourse to psychological explanation, some again will explain the dormitory system as arising from local custom of exogamy which means that village mates may not intermarry. They say that to avoid any such combination the elders of the village introduced this The origin of the Dhumkuria is a custom complex problem and I do not like to go deep into it. So, for the present, I shall end this topic with a brief reference to some of the customs practised in the 'Dhumkuria' The members of a 'Dhumkuria' house after they find admission into it serve the villagers who may have occasion to call for their help and they are paid for their service in kind. Every villager has a portion of his income alloted for the Dhumkuna and over and above this, he has to undergo some amount of expenses for the welfare of the boys of the It must be stated at the outset that the Oraons have a very low idea of chastity and their dormitories afford many facilities for an observer to know the social, economic and magico-religious observances 'calculated to secure success in hunting and to augment the procreative power of the young men so as to increase the number of hunters in the tribe'. Says Rai Bahadur S. C. Roy. "Although several of the institutions, customs and beliefs of the Oraons of our time appear to be resultants of a mixture of their own ideas and practices—with those of their neighbours, the Mundas, and although Hindu ideas are, to some extent, and Christian example is, to a smaller extent, exercising disintegrating influences on some of their own ideas and practices, the institutions of the Dkumkuria appears to be a genuine and unadulterated product of primitive Oraon culture".

The curious customs and practices connected with the Dhumkuria house, excited our curiosity and in all confidence we asked several Oraons separately about the secrets of the dormitories. But we are surprised at the answers we received from them and I give here instances of some of them. One of them, an old fellow, absolutely denied any knowledge of the Dhumkuria as if it was an alien practice Another, when asked, got annoyed with us and retorted that they had Dhumkurias and these resembled the play-And I am sure house of the townspeople. that if after ten years some one approaches these people and asks all about the Dhumkuna, I am sure one will not escape scotfree.

Of all the aboriginal tribes of the Chotanagpur plateau, the Hos or Kols are the most interesting. The name was applied to the aborigines by the Aryan-speaking people as a term of contempt, most probably for their habit of rearing pigs. But the physical appearance of these people might have led the fair-skinned, regular leatured race to associate them with pigs Swarthy complexion, flat nose, short stature, wavy to curly hair. prominent cheek-bones, absence of beards or moustaches—these are some of the physical leatures of the people With a crude and nebulous conception of religion, these people believe that they were first created by the Sungod or the 'Sing-bonga,' who afterwards destroyed them by creating an atmosphere When all life was desof blazing flames troyed, 'Singbonga' saw the folly of his fury and repentance seized him. In his despair he began to seek for traces of life and approach ed all the 'bongas' to ask if they had hidden any soul At last 'Nagebonga' or the waterdeity came with a pair of living soul—a brother and a sister whom she kept under the sheet of water. With this pair, Singbonga' determined to bring forward a race of men. But, as they were brother and sister, sexual intercourse could not be possible. between them. What else could the high god do but to offer to them 'handia' or rice beer, an intoxicating preparation Now it was through the intoxication caused by the drinking of this fermented liquor that sexual intercourse between the brother and the sister was possible and the Hos were created again. Had not Singbonga prepared 'handia' and offered it to their first ancestors, the Hos could not have come to live. So 'handia' is their principal food, 'handia' is their drink, 'handia' is associated with their religion. There are people even now who do not take any other

food save quantities of handia and the intoxicating effect of the liquor tells upon, their health. The result is, the men are weak, lazy and wirthless, while the women do all sorts of dispestic work, take care of the children, fetch water from the village tank or river, carry their produce to the bazaar or hat for sale or barter and help the men in the fields during the agricultural operations. And as is natural with a tribe whose males are weak and depend upon the females for help and support, the sexual licence is carried to a great extent and on festive occasions great strain is put on the laws of decency. Besides, on account of the high price, the number of regular marriages is decreasing from day to day and a man seldom marries before he is 25 and cases are there where regular marriage does not take place in one's life-The result is, irregular connections are taken recourse to and the Ho society has to wink at this. The songs and dances of the Hos fittingly express the inner state of affairs and a Ho village at dead of night rings with bacchanalian revelues. It is for this reason that the educated Hos are trying heart and to eradicate all these scandals. Meetings have been held at various places of Kolhan urging upon the inhabitan's to guard up then loins to save their society from tack and ruin

At a representative meeting of the Hos of Kolhan at Lumpunguto on the 25th of March, 1924, which was presided over by the aboriginal member of the Behar and Orissa Legislative Council, Mr. Dulu Manki, the following resolutions amongst others were unanimously passed -

This meeting of the aborigines most emphatically protest against the practice of "Dama Duma and Sisun" in Kolhan villages, for the following reasons:

(a) The health of the people is lost by

keeping late hours at night.

(b) The students are allowed to join the dances which serves as an impediment to their progress in study.

(c) The young people go from village to village to take part in the dances which, in most cases, is detrimental to their morals.

(d) The dances demoralise the young peo-

ple generally.

(e) They involve unnecessary waste of time

and energy.

(f) The music and dance- are looked down upon by the cultured neighbours as very low and degrading.

Another vital resolution also unanimously

ŧ

carried relates to the practice of liaison between the members of the same Kili or Sept. The Hos are divided into a number of exogamous Septs or Kilis, each of which takes the name of some plant, animal or material object. The members of the same Sept believe that they are descended from a common ancestor and marriage is forbidden between them. prohibition or taboo they carried to a great extent and on former occasions, violation of this taboo was fatal and the man who violated this was doomed to death in a number of ways. He used to be tied by rope of straw called 'bor' and packed like a 'bandhi' which is a cylindrical basket for preserving grains and used to be taken to the peak of a hill whence he was thrown down to meet his deserts or he was thrown into the fire and dragged out half dead to suffer the remaining part of his life in a desperate condition. But the laws have become less severe, and considering the number of cases of haison, the Ho society also has grown more liberal. The offender is generally driven out of the village, he is disinherited and his family is cut off from the society. The girl is sometimes allowed to accompany her lover but often she is kept back in the village and the Ho punch bribe some young man of a different Sept to marry her. The brideprice is paid by the father or the offender. The industrial centres like Tatanagar and the coalfields of Bengal and Behar offer them bread and shelter and this punishment has ceased to have any influence on the morals of the people. But as this cannot be avoided, the following resolution had to be The resolution ran passed by the aborigines. thus:

2. "This meeting of the aborigines of Kolhan urges upon the young people not to indulge in liaisons and suggests that in case of liaison between the members of the same Sept or Kili, the offending members will forfeit protection from the society and will be disinherit-

ed from their ancestral property".

The third resolution passed at Lupunguto and corroborated at a subsequent meeting at Chaunpore on the 13th of April refers to the high brideprice. Thirty heads of cattle, forty to fifty silver coins and ornaments covering eacther 40 rupees, besides 200 to 300 pots of rice beer, on a modest calculation cannot be had for less than 400 to 500 rupees and this the poor Ho cannot pay. Being improvident, the Hos possess next to nothing to meet the expenses of a regular marriage. The result is like the number of regular marriages is degreesing daily and irregular connections are

the order of the day. The Hos are foolish. They know that if they do not decrease the brideprice, their girls are likely to be carried away per force, but still they will insist on the high brideprice. The result is, they often do not get what they want. After a heated discussion, the aborigines arrived at the following agreement:—

3. This meeting of the aborigines of Kolhan, considering the state of affairs, hold that unless the brideprice is decreased to a considerable amount, the social position of the Hos will not be improved and with a view to meet practical solution of the position, it is of opinion that the brideprice should be

a fixed one.

This meeting is of opinion that the maximum brideprice should not exceed Rs. 30, two bullocks, and one cow. This brideprice is for those who possess land of their own cultivation.

For those who do not possess any land, the maximum brideprice, in the opinion of the

meeting, should not exceed Rs. 10.

The resolutions were carried amidst great 'hullah' of the people and about 70 substantial people of Kolhan signed a document agreeing to the above proposals.

The other resolutions are of minor importance but all the same they reflect the mental-

ity of the people.

One of the resolutions relate to the employment of female labour in bazaars and hats.

It has been pointed out above, that the women are more hardy than the men and the former do much of the outdoor work. The resolution passed ran thus:—

This meeting of the aborigines of Kolhan hereby resolves that in future employment of female labour in hats and bazaars should be

discontinued.

Formerly the Hos used to sell fuel to the Dikkus or their foreign neighbours by hawking from place to place. This did not smell of good taste to their newly awakened consciousness and they set to resolve that in future people should sit in some place to sell fuel and not hawk from house to house and in case a Dikku wants the fuel to be carried to his house, an additional fee, equal to the amount chargeable for the distance—will be levied on the fuel and only the males should carry the same.

It was the females who used to come to the markets to sell straw, hay and grass. As employment of female labour was incompatible with their high ideal of social reform, they resolved that in future no kuling or Ho women should carry straw, hay or grass to the markets.

Besides drinking their country liquor 'handia', the Ho labourers were getting into the habit of taking 'diang' or liquor into the public godowns or liquor shops. This was indeed a bad practice and the resolution that was passed on the 6th April at Lupungut condemning the practice ran as follows—

This meeting of the aborigines of Kolhan most emphatically condemn the practice of taking liquors in wine shops and urges upon the Ho labourers in the interests of the society

to discontinue the practice

On the 6th April, 1924, the aborigines again met at Lupungut under the shade of the mango grove to consider some items of social

reform. Mr. Dulu Manki presided

The most important discussion that took place on the occasion referred to the forcible carrying of girls by the young men who cannot meet the expenses of regular marriages. This practice is a scandal and the Hos met to consider what steps might be taken to avoid any such scandals in future. The imposition of a heavy fine was urged and insisted upon and the following resolution was unanimously carried:—

This meeting resolves that taking away a woman forcibly should be discontinued and he who would infringe this rule should be fined Rs. 50. In case of default, the man should be excommunicated

The practice of keeping women of low social position as mistresses is in vogue amongst the aborigines. There are Hos who take beef and this is taken by an orthodox lio as something akin to an indication of low status—a Ho will refuse to eat with one who takes beef and the girls of the latter are looked down upon and regular marriages with them are forbidden. But in spite of these prohibitions the Hos are used to keep these girls as mistresses. So a resolution was passed condemning the practice.

On a careful perusal of the above, it seems apparent that the aborigines have determined to purge themselves of whatever is old or antique with them. The time has changed, their outlook has also widened. Education, cultural contact have changed their angle of vision and they must be encouraged to cleanse the Augean stables. But one thing must not be neglected. The state of affairs to Kolhan surely demands a sympathetic consideration from all who shave an interest in the social regeneration of India, but this regeneration should be worked out with great

caution. Everything, old or antique, is not bad, there must be something sound in the old tribal life, otherwise it could not have stood the stood

One of the reasons advanced to protest against the practice of "Duma and Sisun' in

Kolhan villages is this -

The music and dances are looked down upon by the cultured neighbours as very low and degrading. The mover of the resolution must have been actuated by a sense of realousy or else he could not have insisted on the cessation of the practice, simply because their cultured neighbours do not themselves indulge in these dances. This sense of lealousy is apparent when we consider the resolutions urging upon the people not to sell fuel to the Dikkus by hawking from place to Whether from jealousy or from pure social motive, the stoppage of dances in the village, within a couple of years, will be an accomplished fact. We have got to wait to find out the effects of this prohibition but in the meantime, it is not idle to speculate on the prospects of this taboo. The majority of the Hos take dance as a regular exercise When they are free after their evening meal from outside engagements, the dances take up their time and afford opportunities for the young people to spend their energy in some Now, if they are not given sufficient useful work, as a compensation, this time they will remain unoccupied and idle, and want of taste and culture may lead them to do things which may not be conducive or compatible with their newly awakened consciousness. If they had sufficient education, they realise that the dances would themselves were opprobious to their conduct They would also realise the evils associated with these dances and could find out means to end these scandals. But where ninety per cent of the people possess no knowledge of alphabets, it is idle to expect any such thing.

A few remarks about their present economic condition are necessary to form an idea of the Ho society. They have been spoken of as improvident. Improvident they are, but at the same time their wants are very few.

Those, who are advanced in years, are

satisfied with a quantity of ricebear. They do not t ke any other food, save some wild fruits of the jungle The youngmen, if they get a quantity of boiled rice by the what they collect in jungles, are high satisfied with their humble food. The use of salt luxury a few years back. This Was a is evident from the fact that they are ready to part with a larger quantity of their produce for a pice worth of salt than they would for a pice. As a matter of fact, the town boys of Charbasa actually play this trick when they are to purchase plums or blackberry from the Hos As regards clothing, till recent years they were self-sufficient. Every village has one or two families of Tantis or weavers who supply the clothes of the the Hos. But lately they have grown great admirers of foreign clothes. The coarse dhotis and saris do not suit their taste and the Hos are seen to wear finer stuffs. Although their wants are few, they have money enough and to spare. Kolhan has grown to be an important centre of lac cultivation and about two to three lacs of rupees are annually distributed amongst the Hos for this purpose. So the Hos are getting richer day by day. It was only the other day that a High Government Official passed an order asking the heads of schools in Singhblum not to grant free studentship to Ho boys In a formal petition to the high official, the Ho boys appealed for

reconsideration of his order, saving that they were not more affluent than their forefathers and that the curtailment of this privilege would seriously affect the student community. But the remarks of the official, if I was told aright, are worthy of mention. "Headmaster, I return the application to you, the Hos are doubly richer I do not want that the good cultivators should be turned into bad babus". The love of finery has grown so much amongst it requires a right the aborigines that handling by the educated Hos Not to speak of soaps, scents, scented oils, handkerchiefs, the Hos have began to imitate their town neighbours in everything right or wrong. There are about a dozen barbers who daily go to the interior of Kolhan on bicycles to shave the villages And it is surprising to note that a Ho villager does not grudge paying 4 as. per shave An aerated water manufacturer of Chaibasa told me some time back that his business was giving him sufficient return.

The townspeople did not take his water, for it was not good. But the Hos were great admirers of it A little red or green tinge in an ordinary lemonade tetched four times the usual price. And this is the way they are being exploited The traditional ornaments of the Hos have failed into disfavour and they are very great admirers of imported bead necklaces f. om Japan and the glass bangles from Japan or Germany.

IINDIAN MEN OF MUSIC: AIKNATH VISHNU PANDIT

By B. S. SITHOLEY

TO the student of Indian Music Gwalior possesses considerable historical importance as the foremost centre of musical culture in Upper India for several centuries. It has produced musicians of the eminence of Raja Man Singh, Nayak Baiju and Miyan Tan Sen and has consistently maintained through every successive generation those high traditions of the art which have given to the place the distinction associated with it.

Raja Man Singh, Emperor Akbar's *Qilladar* at Gwalior, was, besides being a patron of arts, himself a musician of exceptional talent. He is credited with being the inventor and

the greatest exponent of the Dhrupad style of singing—a style at once maily and dignified and demanding from the singer not only a thorough knowledge of the science of music but also a command over the voice such as is not called into requisition in rendering the less difficult and therefore more popular Kheyal and Thumri styles of songs. In his service was Baiju, whose creative genius was responsible for the addition of several modes to Indian Music. Baiju, affectionately dubbed "Baore" (mad), because of his unconventional mode of life, had attained nearer to perfection in rendering the Ragas

100

in their purity and with precision, and for this he was given the title of Nayak, the highest honour a musician can aspire to. The more popular Miyan Tan Sen was also with Raja. Man Singh before he became the favourite musician at the court of Emperor Akbar. He stabilized Indian Music by placing it on a more scientific basis, that is, by fixing the characteristics of the various modes and assigning to them definite melodic structures. He also reduced the 92 Talas (Time-measures) to the 12 now in use, He was a skilful musician "like whom (as quoted in the Ain-1-Akbari) there has not been a singer for a thousand years".

Musical culture in Gwalior dates to a considerable period back, but it attained to its zenith in the time of Raja Man Singh (died 1518) and since then Gwalior has had the proud privilege of producing or sheltering and giving scope to generations of musicians of note down to the time of the late Sindhia Javaii Rao After his death music declined in Gwalior, and most of the musicians left the place to seek their fortunes elsewhere. A heroic band, however, refused to desert for reasons of sentiment. though Gwalior had ceased to accord to it the encouragement it needed and the appreciation it deserved. One of the survivors of this little band is Aiknath Vishnu Pandit.

Aiknath is a tall, spare man of 59. His age sits lightly on him, for he still carries himself erect and with elasticity of step. He is reserved, unlike the traditional musician who is a great talker and an unsufferable boaster. His speech is slow and refined, and the great charm of his personality lies in his quiet courtesy which he is always ready to extend to all and sundry. A subtle suggestion of determination discernible in his fine teatures points to strength of character; and the writer is informed from a trustworthy source that Aiknath did, in his younger days, stand for his principles against the powers that were. At that time he was serving in the Military Department of the Gwalior State. Aiknath has the dreamy look characteristic of all great artists, and his unpretentious, almost ascetic, mode of life lends him a dignity that distinguishes him quite sharply from the professional musician.

Aiknath was born at Gwalior in March 1865. His ancestors bolonged to Maharashtra. His father, however, with his intense love of music migrated to Gwalior, then a prominent centre of Indian Music.

Aiknuth commenced his initiation into

vocal music at the rather early age of seven, under the direction of Ustad Haddu Khan, the chief Court musician to the late Maharaja Jayaji Fishidhia. After Haddu Khan's death, Asthu Khan. After Haddu Khan's death, Asthu Khan and Nathu Khan were brothers and the two most accomplished musicians of their time. Their names are still remembered with affection and reverence. Later on, while at Poona, Aiknath met and associated with much cordiality with Haddu Khan's son, Ustad Ashniat Khan, and Nathu Khan's son, Ustad Ashniat Khan, and Nathu Khan's son, Ustad Nissar Hussain, to his great benefit. Nissar Hussain laid bare to Aiknath the subtleties and the intricacies of Indian Music.

Aiknath Vishnu Pandit

When about 22, Aiknath began practice on the sitar under the guidance of Miyan Babu Khan, who, on the death of his patron, Maharaja Sri Ram Singh of Jaipur, migrated to Gwalior. At Datia, Mushraf Khan, the celebrated Binkar taught Aiknath to play on the vina.

Besides the musicians already referred to, Aiknath has had association with the following musicians of distinction. Ustads Nathu Khan and Chulant Hussain of Agra; Ustad Faiyaz Khan, Binkar, Baioda, Ustads Vahid Khan, Murad Khan, Bande Ali Khan

and Imdad Khan of Indore; Professor Barkat Ullah of Bombay (now Mysore); Ustad Dilawar Khan of Rewah; Istad Rajab Ali; and Pandits Kashinath Boa, Shripad Rao and Vishnu Digambar, Batashna Boa, Baba Dikshit and Joshi Boa of Gwalior, who represented the oldest classical school of Gwalior musicians, Bala Guru; Panna Sahib, Shankar Pandit (Aiknath's eldest brother, (now dead); Waman Boa; Ustad Mehdi Hussain; Ustad Amir Khan, the finest star player after Rahim Sen and Amrit Sen, Ustad Nanne Khan, the unrivalled sarodkar. Ustad Saadat Khan of Jaltarang and Algoza fame; Ustads Umrao Khan, Fida Hussian, Hafiz Khan and Alaf Khan—all of Gwalior, and Venu Sheshanna of Mysore.

These details are interesting masmuch as they show that Aiknath's education in music has been very comprehensive and that the experience he has acquired, as the direct outcome of the exchange of ideas with these great modern representatives of Indian music, is of a quality and measure which cannot but be characterized as rare and exceptional.

This experience Aiknath has not allowed to remain merely theoret:cal. He has applied it intelligently in the perfecting of his own individual art and its technique. That Aiknath's art is of a superior class can be gathered from the fact that he has given performances at request before such select and appreciative audience as Maharaja Lokendra Bahadur Dev Bhawani Singhii of Datia, the Maharajas of Kolhapur, Alwar, Mysore, Indore and Kashmir, Their Highnesses of the two Dewas, Sirdar Balwant Rao Bhaiyaji of Gwalior and Raja Sir Jatindia Mohan Tagore of Calcutta Aiknath has visited almost every important place in India and given exhibition of his skill His musical tour de force was perhaps achieved at Datia where Kudau Singh, the matchless Pakhawji, provided the necessary accompaniment. Kudu Singh was no ordinary person. Amir Sen, the greatest exponent of the sitar that has lived, praised him; and it is related that Kudau Singh once beat such time on the Pakhawai as to control the fury of a mad elephant. It must have been a classical performance-Aiknath with his sitar and Kudau

Singh with his Pakhawaj—both showing their skill and striving for mastery one over the other!

Aiknath played the modes Sindh-Bhairavi, Jaunpuri-Todi, Vasant and Pilu at the request of the writer, and the atmosphere he created, his graceful manipulation, almost effortless and yet so purposeful, the delicacy of his touch, his solid and subtle technique were all in a class by themselves. The writer has had opportunities of hearing the sitar of many famous Ustads, and that experience provided a basis for comparison in which Aiknath rose easily superior.

Aiknath has gone deep into music with the result that he has abandoned the fanciful ideas of lesser musicians about the 6 principal ragas and their 36 bharyas (wives) and putras (sons) He is also very clear about the time allotted to a raga. His views are logical and not based on more tradition

He is giving instructions in music to his three sons, and it may be hoped that they will endeavour to rise to his standard. Among his many pupils may be mentioned the well-known Mr V. N. Bhatkhande of Bombay, and Mr A H Fox-Strangways, author of the "Music of Hindusthan". Fox-Strangways studied Indian Music under Aiknath when the latter was Principal of the Poona Gayan Samaj

Aiknath has invented a sitai on which by skillful manipulation he can produce notes in seven octaves with all the intervening srutis or finer shades of notes. Besides being an expert singer, vina and sitar player, he is an interesting player on the Pakhawaj and Tabla.

Asked what he thought of the Carnatic system of music as compared with the North Indian system, he gave the opinion that the Carnatic system is perfect in Talu and Laya but lacks comparatively in melody.

Alknath is the last link between the Gwalior School of classical music and the present times, and it is the hope of the writer that he may with his large and varied experience be spared for many more years to benefit those interested in the cultural value of music.

INSECTS AND ECONOMICS

By CEDRIC DOVER, FES.

"TO the terrible utilitarian, a bushel of peas preserved from the weevil, is of more importance than a volume of observations bringing no immediate profit. Yet who has told you, () man of little faith, that what is useless to-day will not be useful to-morrow. If we learn the customs of insects of animals, we shall understand better how to protect our goods. It is by the accumulation of ideas, whether immediately practical or otherwise that humanity has done, and will continue to do better to-day than vesterday, and better to-morrow than to-day. If we live upon peas and beans, which we dispute with the weevil, we live also by knowledge, that mighty kneading trough in which the bread of progress is mixed and leavened."

FABRE

The arrogant belief, fostered and stimulated by religious teaching, that Nature exists for the sole pleasure and benefit of man is to-day an exploded one The progress of true knowledge, hampered though it has been, and is, by religious fanaticism has gradually forced upon man, the realisation that he is only a part of the scheme of Nature, yet in the ignonance that is rife even in this enlightened age, comparatively tew realise the full importance of insects and other organisms, and of their serious study. Our attitude towards houseilies is perhaps somewhat different from the semi-affection displayed in these lines, quoted Chandler in his book on human parasites, from a child's reader of over twenty years ago -

"Baby Bye,
Here's a fly;
We will catch him, you an
How he crawls
Up the walls,
Yet he never falls '
I believe with six such legs
You and I could walk on eggs
There he goes
On his toes,
Tickling Baby's nose"

But house-flies are now destroyed mainly because they are troublesome, and partly because people, in a vague kind of way, associate them with disease. But the menace of this insect to man, in its capacity as the carrier of tuberculosis, anthrax, dysentery, cholera and intestinal worms is even now but indefinitely understood. The full signi-

ficance of the malaria mosquito in England, of plague in endemic form, as near England as Tripoli, of hookworm, of syphilis and a host of other parasitical diseases, is probably not appreciated by the yest majority of people at all. Yet, parasites have modified history, and in every country in the world, have a serious bearing upon economics which we cannot afford to ignore

In past times, nations have been decimated by the plague, the parasites of which are transmitted from rats to man by fleas. About a quarter of the population of Europe was destroyed by an epidemic of plague in the 14th century, and the partial success of the Dutch invasion of England in 1666 was perhaps in no small measure due to the destructive effects of the Great Plague which had swept England two years previously

In olden days it was not uncommon that "A plague upon the people fell

A famine after laid them low, Then thorpe and byre arose in fire. For on them brake the sudden foe

and superstitious terror often led to terrible deeds of persecution and torture of innocent people who were supposed to cause the plague. Fortunately, the conditions with regard to plague to-day are far more satisfactory, but it must be remembered that in India whole villages are still destroyed by it, and the average annual loss of human life from this disease is about 1,000,000. It is said that an epidemic similar to that of the European plague would have swept over the United States, had it not been nipped in the bud at San Francisco and New Orleans, and it is a tribute to the enlightenment of the American people—an enlightenment so helpful to scientists striving to advance scientific knowledge—that made its suppression possible

The role of mosquitos in the dissemination of disease is perhaps the most serious of all insect-relations with man. In spite of our extensive knowledge of malaria, it is at present the most important of parasitical diseases in the world. Three decades ago its full significance was scarcely understood, and to this ignorance is due the disaster of the French attempt, in the latter part of the 19th century

to build a canal at Panama. Thousands of people died from malaria and yellow fever, and it was only the extermination of mosquitos by the Americans, early in century, that made the Panama zone namble and incidentally transformed the district into one of the healthiest places in the world. The downfall of the great Greek Empire has been attributed by Sir Ronald Ross, not to its various human foes, but to its unseen enemy, the malaria parasite Though we are no longer ignorant about the nature of malana, in India alone over a million people die annually of this disease, an estimate which exceeds that of the number of deaths caused during the first two years of the Great War. Thousands succumb to this disease in the rest of Asia, Africa, Southern Europe, South and Central Africa and the southern part of the United States, an immense economic loss to which must be added the handicap to the wage-earning capacity of those suffering from the disease Estimating the money-value of each life in India at the insignificant sum of Rs 100, we find that the State loses from deaths due to this disease about 10 crires of rupees or almost £ 7,000,000; and Dr. L O. Howard considers that the annual financial loss to the United States from malaria is not less than \$100,000,000, an astounding estimate for a country that is relatively free from malaria in comparison with tropical regions Even as I write (1924), Russia is in the grip of this deadly disease, over 15,000,000 cases having been recorded during the last year. More than 50 per cent of the railway workers were infected, and we were told that the epidemic "swept the country from Murmansk to the Caucasus and from White Russia to Siberia, disturbing the railways, crippling industries and threatening the army of peasant workers waiting to reap the coming harvest".

The present advanced state of our know-ledge of malaria is one of the greatest triumphs of scientific research, and it speaks little for the attitude of the people that malaria to-day should be so important a factor in the economics of nations. The elimination of the disease can only be effected by the co-operation of the general public, and a healthy sign of public appreciation of the efforts of scientists to aid humanity would be the generous support of Sir Ronald Ross' efforts to found an Institute for Malarial Research in London.

Lice are responsible for many diseases, chiefly those of epidemic character. Typhus

relapsing fever and the newly-discovered trench fever, are all definitely known to be transmitted by lice, and they are also suspected to be the carriers of other diseases. such as plague and syphilis. There has scarcely ever been a war in which typhus has not infected the armies concerned and the last war was no exception. In 1915, an epidemic of typhus in Serbia destroyed over 150,000 people, at one time causing over 9,000 deaths per day. Austria, Bulgaria and Russia all paid their sacrifice to the typhus parasite and it was only the more advanced scientific knowledge of Britain, France and Germany that kept these countries comparatively free from the disease Trench fever, a disease about which practically nothing was known till 1918, but which is now believed to be allied to typhus, affected the troops in France more than any other infections disease.

It would be impossible to enumerate in any detail here the other diseases known or believed to be carried by insects. sleeping sickness, spotted fever, filarial diseases, guinea-worm infection, lung-fluke infection, some tapeworm infections, and probably Kala-Azar and many other diseases, are transmitted by insects and their allies to man.

In addition to the economic importance of insects concerned in the dissemination of parasitical diseases, we have to take into account the damage done by insect pests of crops, forest trees, structural timber, stored products, clothing, etc., the world over. The cotton trade knows well the importance of the cotton bollworm. the loss thorough crop pests to the people of India, where seventenths of the population are dependent for livelihood on the produce of their fields, and the attacks of forest pests in a country such as Canada almost sets calculation at defiance. Curtis rightly said in his Farm Insects written more than fifty years ago, "...... if an approximation could be made to the quantity destroyed, the world would remain sceptical of the results obtained considering it to be to marvellous to be received as truth"

I do not know of any total approximation of the annual financial losses to the nations of the world through the ravages of insects, but in India, Mr. T. Bainbrigge-Fletcher, the Imperial Entomologist has calculated on a modest basis that the total annual loss to the country is over 200 crores of rupees, over £1,00000,000. Accepting the German debt to the French as 34 milliards of gold

marks and the value of the mark at 20 to the £, this country alone, if she could save one half of this enormous national wastage of wealth, would be able to pay a sum equal to that of the German debt to the French in less than 25 years, and in 100 years, she would be the richer by a sum greater than that of the total reparations required under the Spa Agreement from the Germans, viz. £6, 600,000,000.

But insects must not only be looked upon as the arch-enemies of mankind, for, among them are many forms decidedly benefical to man, though the profit gained scarcely balances the loss caused by their injurious allies. Two of the most important groups of insects concerned in industry are the lacinsects and the silkworms. Lie and silk are among the most important commercial products of the East and the output could be increased by sound research insects which supply these products An insect of lesser importance, but which also deserves mention is the cochineal insect, which produces the cochineal so useful to the confectioner and the housewife

I have excluded from this article any reference to other animals of economic importsuch as the minute, unicellular pathogenic organisms, the various intestinal worms, etc. yet these are as important an economic factor as insects Hookworms infect over half a billion people in the world, nearly a third of its population, and together with malaria weakens the resisting power of men so greatly that they fall an easy prey to other diseases. Kala-Azar, the "black sickness" which terrorised India in 1870 (and is still endemic here) especially in the Assam district, owed its success in depopulating the country to the fact that the people were already almost universally infected with malaria and hookworm. Another disease of universal importance, which is caused by a minute organism related to the bacteria and the protozoans, is syphilis, a disease which is one of the principal causes of insanity, paralysis and barrenness among civilised peoples out 10 per cent (or 10, 000,000 people) of the population of the United States is said to be infected, and the estimates for other count ies less enlightened would be still higher.

It will be seen that even the vast sums of money involved in the last war, the German debt to the Allies, and the British debt to America, which are in the minds of all men to-day, almost sink into insignificance when compared with the losses sustained throughout the world by parasitical diseases entire globe is ringing with such matters to-day, while of our organic foes and friends almost no account is taken Anti-war societies, which carry what may be sensible propaganda to extremes of ridiculousness, anti-vivisection societies, bodies of old women 'fanned into fury' at all experiments on living animals for the benefit of humanity; anti-all-kinds of societies, broadcasting the germs of ignorance in their efforts to reduce same people to the mentally infirm condition of themselves. flourish on every hand, but these biological questions of as great economic importance as war, of greater importance than the "question" of to-day—France and the Ruhr apparently concern the people but slightly. if at all It is uscless, however, to rail at the people when the fault lies largely with scientists themselves. The man in the street cannot be expected to follow the details of scientific research, and it is the duty of scientists, with the co-operation of the press. to give publicity to all important biological matters which directly concern the people. It is only by an all-round co-operation that biological factors of humane and economic importance will receive full appreciation. For

"By mutual confidence and mutual and Great deeds are done and great discoveries made."

A LETTER FROM AN AMERICAN FRIEND

BELGRADE, December 29, 1924—The Rockefeller Foundation has given 10,000,000 dinars (about \$200,000) to Jugo-Slavia for the construction of a school of hygiene at Zagreb, the administrative capital of Croatia; \$40,000 for the

improvement of sanitary institutions in Belgrade, and \$ 15,000 for the aid of heady students abroad who pledge their services after graduation to the public health service in Jugo-Slavia."

This shows a phase of an extra-American

activity of American philanthropists and organizations for social and educational works. Recently, I had a talk with a very serious-minded American closely annected with the Rockefeller Foundation about doing some medical educational work such as stamping out of malaria in India. I was promptly told that "the Rockefeller Foundation spends money in China, South American countries, in European countries and even in Canada, because the Governments of these countries take kindly to its activities; but we do not go into any field where the Government might feel embarrassed by our work. British rule and the 18 under British Government tells the world that all that is necessary for the progress of the people of India is being done by the British; we feel that any activity of the Rockefeller Foundation may not be liked and even resented '.

To make: his point clear to me, he said that he had noticed that Sir Basil Blackett gave the Indian Legislative Assembly and thus the world to understand that as India had not sufficient facilities for meeting the needs of the people in the shape of hospitals, dispensaries and trained medical men and women, therefore the Indian people should be allowed the free use of opium for their various ills and ailments. No American would stand for any such policy of the British Government in India; and the British Government would resent any activity on the part of Americans opposed to the ideals of the British Government in India. Any activity of an American institution would be a reflection on the British policy in India and thus American institutions would have to be careful in dealing with the needs of India.

The same gentleman jokingly pointed out that the British people resent that they have to pay interest on the money they borrowed from America for the prosecution of the World War. They say, Britishers are now paying annually one pound or more per head as interest or tribute to America!! Well, Britain defeated Germany with American aid, yet she resents paying interest on her debt to America.

"It seems funny to us Americans to hear Britishers complain about paying legitimate interest on the amount borrowed from ds, which saved their empire, when we know and the world knows that Britain during her

occupation of India has deprived the Indian people of literally of billions of pounds, and every Englishman and woman and child has been for the past century and a half indirectly extracting at least one pound annually from the poorest nation on earth."

This American friend also observed that during the World War India had given one hundred million pounds sterling £100,000,000 to Britain as a gift. Now that the war is over and Britain has secured more than a million square miles of new territory from other nations, he wonders why India does not demand that at least one half of her great gift which she so generously contributed for the successful conduct of the war, be not spent now by Britain for the spread of education and the creation of medical facilities for the people of India? Why keep the people on an optim dict?

It was through the aid of India that Britain ousted the Germans from Africa Has the time not come for India to demand that mandate be given to India for German East Africa and Kenya for the purpose of Indian colonization, the same to be governed by the Indian people?

There is no reason why India should not demand her legitimate and just rights. The Indian people should do all that is possible to create international public opinion concerning the actual situation in India. They should formulate a definite policy for self-assertion if they hope to receive the respect or aid of other nations. British people are oversensitive about world public opinion. She depends upon her international propaganda to create situations favorable to herself. Why should not the Indian people follow the methods of the British in creating world public opinion in their favor?

Exposure of the British Opium Policy in India during the session of the International Opium Conference at Geneva, by presenting a petition signed by responsible and representative Indians, has done much to convince the world as to the real character of British rule in India. Indians must work hard to make the question of Indian freedom a factor in World Politics. Our earnest hope is that the All-India National Congress will in 1925 take some steps to organise its activities in a way that the question of securing Swaraj be on a world scale, at least it should establish its head-quarters in various capitals of the world and particularly at Geneva, the

seat of the League of Nations. Let us hope that some of the Indian Leaders will come out of India and spend some time in studying the world situation in foreign lands. Let

us hope that some steps will be taken to break up Indian isolation in world po'i ics.

New York City, January 1925.

Fine Wire Invisible to Unaided Eye to Help Surgeons and Electricians

What is believed to be the smallest wire in existence has been made in a government laboratory by George Taylor, a physicist in the department of agriculture. A'though so slender that it cannot be seen by the naked eye, it is strong enough to

Testing Strength of Invisible Wire by Placing Small Objects on Suspended Strands

support objects easily visible. It is expected that it will be of considerable service in the construction of delicate surgical instruments and for resistance the mometers, thermocouples and other electrical equipment.

The Battle of the Snows

Battling against the delayed transportation, disturbed business, and the loss of time and money that once were accepted as inevitable consequences of winter bitzards, has resulted in tremendous strides in the invention of mechanical devices to combut snow. While weather statistics show just as heavy annual snowfalls as imprisoned our fore-lathers within doors, railways, roads and streets are now being kept clear in a battle in which tractors and indoor trucks are the principal warrons.

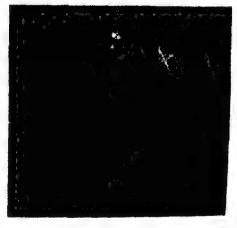

Motor tucks are being l'called upon more and

more to move the nation's freight, both in cities and across country. Snow, life every offer obstacle that has beset the progress of motor transportation,

Locomotive Cautiously Making Its Way throug a Narrow Snow Cany on Cut by Plows and a Crew of Shovel Men

is being effectively removed. Motor trucks equipped with snowplows now are clearing the way for themselves and other vehicles

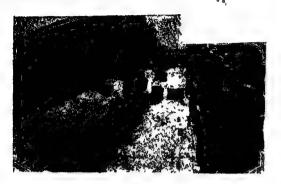

Telegraph Lines that Crushed under Strain of Tons of loo and Sleet Frozen to Wires

Removing snow from highways under the oldfushioned shovel method, both slow and expensive,

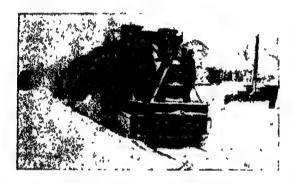

has been superseded by mechanical appliances. Although it costs money to clear a thoroughfare of snow, it costs a great deal more to leave it there. But the cost is prohibitive where man and-shovel methods are resorted to.

Battling Winter's Icy Grasp on One of New York's Busy Streets

A good part of the half-billion-dollar bill for snow fighting is paid by the railroads On the prairies of the west hundreds of mills of wooden fence are maintained to break the force of the drifting snow and pile up a barrier to protect the tracks.

Awaiting Call for Help: Railroad Storm Crew Ready for Dash to Rescue Snow-bound Trains

A foot or two of snow is enough to almost paralyze eastern cities (U.S.A.), but in the western mountains (U.S.A.) falls of forty to sixty feet a season are not uncommon, and can be removed only by giant otary snow-plows driven by two or more huge ocomotives. There is also constant danger in the nountains from snowshdes, which have more than more swept down the hillsides and carried away he tracks, or, if a train was passing, engulfed t. The more dangerous slide areas are protected by miles of snowsheds, over which the cascading lides can pass.

The telephone and telegraph companies, too, ave a heavy bill from snow and ice.

Old Auto Tire Used as Bowling Ball Furnishes Outdoor Sport

Using old automobile tires for balls, bowlers a assouthern city have devised an outdoor varia-

tion of the usual game. A concrete alley and wooden pins, about the ordinary size and shape, are employed, but only one roll is allowed to a game. By sending the tire at the proper angle

Here is a New Use for Old Tyres

and without too much speed, a strike can be achieved and the casing is said to lend ifself well to many experiments in curving the shots to increase the score

Giant Armored Monoplane to Guard the Coasts of Japan

Covered with bullet-proof armor and equipped with two powerful motors, a giant monoplane has been shipped from a German factory in Denmark to the Japanese government after a test fight. The

Japan's Huge Coast-Guard Monoplane

huge single-winged ship is expected to be used when sea-patrol work is necessary. It is said to be capable of great speed and, because of its protecting plate, can approach vessels that may be armed with anti-aircraft guns much closer than would be safe for ordinary flying machines.

• Acrobat's Stunts on Stilts Show His Skill in Balancing

Stilt walking, a favorite pastime of boys, has been developed into a feat requiring conside rable

skill and daring by a German acrobat. He uses no side supports for his hands or shoulders, balancing himself with the aid of strong straps attached to his shoes, on top of the sticks which are more than seven feet long. Imitation boots at the bottom

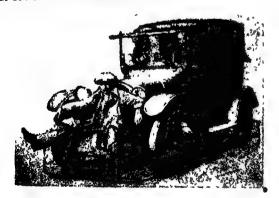

Skilled German Stilt Walker in Two of His Odd Make-Ups and How He Walks over Motor-cycle

of the stilts and costumes aid the performer in grotesque characterizations. To mount the elongated appendages, he uses a special ladder and platform, or sometimes steps directly upon them from a second-story window.

Cowcatcher for Autos to Protect Pedestrians

Motor cars in Paris are being equipped with strong wire cowcatchers as a means of decreasing the alarming number of accidents to pedestrians. A lower meshed shield in front of the wheels is

Pedestrian Thrown ifto Basket instead of under Wheels

suspended in somewhat the same manner as a bumper and serves about the same purpose. Above it is a basket fixed between the mudguards and directly in front of the radiator. The arrangement is designed to prevent running over a victim and to deaden the shock of a collision sufficiently to prevent family injuries.

Hog Catcher and Holder

It is usually a difficult task to eatch and hold a how, especially if it is a large one. However, a device can be made from a broomstick and a length of wine with which one man can hold any hog with ease. Two small holes are drilled diagonally, at one end of the stick, so that they come through

Catching a Hog with Simple Device That Enables one Man to Hold It

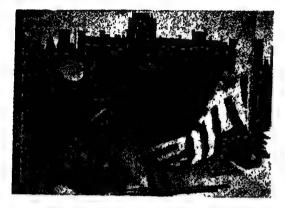

the surface about 2 in from the end A strong, flexible wire is run through the holes to form a loop, one end of the wire being knotted or fastened to the stick, while the other is left loose, and has a small handle fastened to its end. The hog can be easily caught at feeding time by slipping the loop over its upper law and drawing the wire tight

Guarding Uncle Sam's Borders

A battle of wits that extends around the world is ceasele-sly fought by the torces of Uncle Sam and the smugglers army. Thousands of men keen of brain and firm of purpose, are enlisted on both sides spending vast sums of money, and operating entire navies on the seas and air planes and motor fleets on land.

Three government services—the customs, coast guard and prohibition bureau—are directly involved in the battle to keep out contraland articles and collect the frontier tolls of others. Assisting them are the department of justice with its own world-

wide system of secret agents, and the post office department, whose inspectors exercise constant vigilance to keep the mails closed to the smuggler. Just how much revenue is lost annually by the government through the activities of smugglers, or the total value of forbidden merchandise brought into the country, is not known and canast even be guessed, but the government itself admits, the total is quite large.

Crouched in the Bow of a Speed Boat, the Coast-Guard Patrol always Alert for Evasive Rum Runners

Until the passage of the Harrison antinarcotic law, jewels led the list of snuggled articles passing American borders, both because their smallness made concealment easy, and because the high duties on jewels offered an opportunity for big profits—if successful. Jewel snuggling, however, like any smuggling designed merely to evade duties, was confined to a comparatively small professional class with now and then an occasional traveler who

How Law Breaker Disguised His Feet as Cow's Hoofs so Tracks in the Ground Might Mislead Revenue Officers Hunting His "Still"

ttempted to bring in something for his own use. When the Harrison law put an absolute ban on the mportation of narcotics except for medicinal use, t opened a new field that put smuggling on its nodern, highly organized and desperate basis. The lrug smugglers were often addicts, ready to go o any lengths to bring in the "dope" they rayed.

Until an arrangement was reached with Canada y which the sister country has taken steps to block violations of our law, it was not unusual for the skipper of a small rowboat to load a few cases at a Canadian river port, take out clearance papers for Cuba or some other foreign land, and then row across to the American side with his cargo. All that has been stopped by the new international agreement. Under the age-old international law, the rum ships in the Atlantic and Pacific could anchor but three miles from shore and in plain sight of the coast sell their cargoes to motorboats and rowboats from land. With a fast motorboat, even in broad daylight, an enterprising smitggler-from Long Island and the New Jersey villages

Careful Watch is Kept on Isolated Shoros at Night by Beach Patrols

could go out and take on a cargo and then race the revenue cutters to shore and unload before the slower government boats could catch up. But the government proceeded to negotiate new treaties extending American jurisdiction against smugglers to an hour's sailing, or about fifteen miles to sea, enormously increasing the difficulties of the small boats of the smugglers, while the new rum-chasing navy of high-speed boats, armed with one-pound rapid-fire guns, can overhaul them in the fifteen-mile chase, or, if the enemy seems disposed to show his heels, a shot or two is enough to make the most daring come to a halt.

the most daring come to a halt.

The sea-going defense forces are backed on land by prohibition forces and the customs agents, who not only patrol the landing places along the coast

but guard the thousands of miles of Canadian and Mexican frontiers. Fantastic tales have been cir-culated of devices to circumvent the prohibition

Much ingenuity and a wide knowledge of the workings of the customs laws and service are displayed by the professional smugglers. Ten percent of each shipment of freight is sent to the appraisers' stores for examination, and, as the boxes or packages are chosen at random, there apparently is not much chance for the smuggler

to escape detection.

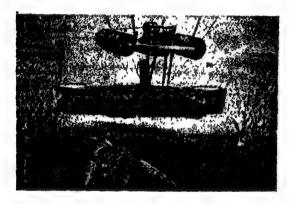

The customs service now has agents scattered all over the world. They keep watch in Paris. London and other foreign cities for professional smugglers, or for large purchases of rare gems by rich travelers, and cable the information to New York. If a traveler who has purchased a pearl necklace or some diamonds in Paris fails to declare the jewels on landing in the United States, trouble is ahead.

During 1923 the customs service made 643 arrests and obtained 351 convictions with 182 cases

still pending.

Early Experiment in Raising Sunken Vessels— Designed for Still Waters

Spurred on by the sinking of nearly 12,000,000 tons of shipping, valued at \$4,000,000,000 during the war, inventive genius has set out to push man's tealm to greater depths than have ever been explored before, and to wrest back from Dayy Jones ome of the millions he has claimed as the toll of he resistless sea.

In Germany, a new diving suit has been developed which already has carried a man 219 leet lower than anyone ever went before, and brought him back safely to the surface. And in America an inventor is preparing to test out on the Great Lakes a new salvaging device which embraces a novel method of attaching lifting chains to a sunken hulk.

But now comes an inventor in Kiel, Germany,

who has constructed a diving suit in which he has descended 525 feet beneath the Walchensee, in Bavaria, and walked around on the bottom, unhampered by air line, for he carried his own oxygen supply with him. His only connection with the surface was a light telephone line, by which he talked to his mates on the surface. But more important than the great depth attained, was the speed of his return. Protected from the crushing pressure of the water, he ascended in four and one-half minutes and stepped out of his diving suit uninjured.

Deep-See Diver in Heavy Armored Exploring Suit Being Lowered by a Ship's Crane for a Tour on the Ocean Bottom

The suit itself looks like nothing so much as a small U-boat turret walking about on currous jointed legs and with a pair of arms fitted with metallic ed legs and with a pair of arms fitted with metallic fingers. In action, too, it resembles a submarine, for it is equipped with diving tanks by which it sinks or rises as water is admitted or blown out, while the spacious nether garment is even fitted with a seat, so that the tried diver may sit down in his own trousers. The trunk portion is made in two sections, of which the upper contains signaling devices, telephone controlling attachments and devices, telephone, controlling attachments and measuring instruments, and the lower affords space for balance and descending weights and tanks that enable the diver to descend or rise at will by admitting water or blowing it out with compressed air furnished by six cylinders. While the German inventor expects his suit will revolutionize salvage work at great depths, an American inventor has devised an unusual apparatus for lifting ships, and will try it out first on one of the many cargo vessels which have sunk in the Great Lakes.

THE TAXATION OF AGRICULTURAL INCOME IN INDIA *

By Dr. RADHAKAMAL MUKHERJEE MA, PH. D

1. THE DISTRIBUTION OF AGRICULTURAL SURPLUS

THE vast population of India is essentially agricultural and rural, the cities and towns of all classes comprising only 102 per cent of the population Agriculture proper supports 71 per cent. of the population Besides the cultivators, the villages contain many artisans, menials and functionaries who are ordinarily supported from the produce of the village fields A considerable proportion of the large number of persons in the category of vague and unclassifiable occupations are labourers clearly connected with the occupation of the land. It has been estimated that nine-tenths of the rural population of India live, directly or indirectly, on the produce of the soil. In a country, where agriculfure is the predomiant occupation, the field produce naturally furnishes the mainstay of taxation yielding approximately 30 per cent of the revenue. The repeated occurrence of famines and the rise of prices in recent years have, however, brought into prominence the question of the presence of absence of taxable surplus among the peasantry in Bombay and Madras the land revenue is assessed upon each acre according to fertility, facilities of irrigation, price-level and general economic condition in villages, messective of the fact whether the cultivator has a surplus income or not. In the permanently settled tracts the economic distress has also shown the inequity of increasing the burden of rent for the cultivators and exempting the zaminders from new or additional burdens, while the increasing chain of rent-receivers in other parts who eat up the profits of agriculture have so far resisted the encroachment of the tax-collector upon their preserve of agricultural income Thus whether the Government or the landlord en-croaches upon the standard wages of cultivation by exacting an undue share of the produce the result of the transgression is the same.

On account of the wide-pread adoption of the principles of subdivision and sub-infeudation of rights in land, there has developed a long chain of rent receivers and rent-payers who are lowering both the legal status and economic position of the actual tillers of the land. There cannot be any doubt that the practice of sub-infeudation of the right to receive rent which has received impetus since the settlements continued through several grades from the superior landlord at the top, imports into the country-side a swarm of speculators and middlemen who live on the margin of profits of farming the revenue. Between the big rent-receivers and the actual cultivators there is thus a host of middlemen who are squeezing the cultivators out of the position of land-holders. Sometimes they take shelter under the security of the legally recognised peasant. Sometimes, again they themselves obtain legal recognition. On one side, in

* A memorandum submitted to the Indian Taxation Enquiry Committee, December, 1924. many parts of India the substantial cultivator is bought out by the group of capitalistic middlemen. On the other, the cultivator gives up his due share of labour in the fields and depends more and more on hired labour or on the share system. Even in the Punjab, there had developed a class of occupancy tenants and inferior owners who exercise practically all the rights of ownership except that they pay certain dues to superior landloids. Thus out of the total cultivated area of 29 million acres in 1918-19, nearly 15 million acres were cultivated by tenants in the Punjab. In Bengal, the creation of a class of patindars, dai-patindars and other interior owners has been a serious evil now sought to be remedied by an amendment of the Bengal Tenancy Act. All this has brought about a marked alteration in the distribution of agricultural income.

This necessitates that we should seek the taxable surplus from the long array of intermediaties dependant on the land rather than from the small holders whose economic position has deteriorated very much in recent years. It is also necessary to adjust the rates of assessment on rent receiver in a graduated scale as in the income tax. Heavy duties upon estates, probates, legaces and succession commonly known as death duties might be introduced in the permanently settled tracts of India as well as in those where an interior land-lordism has developed. Indeed, where there is a large transfer of agricultural holdings and the non-agricultrist classes play a large part in land speculation and farming of land revenue, these gains form a surplus peculiarly fitted for taxation,

2 THE EXEMPTION OF THE UNECONOMIC HOLDING

A way towards a more equitable adjustment will thus lie in (a) assessing the income derived from land from all classes of rent-payers and rent-receivers who do not directly work on the soil, (b) lixing the revenue on the agricultural profits of a representative economic holding, (c) exempting the ineconomic holding from any land tax.

The size of the average economic holding would vary in different provinces and it is necessary to institute regional enquiries with a view to arrive at the average economic cultivation unit. This marginal unit representing the exemption level would be the barrier against the unwise use of taxation. In the ryotwari lands the Government rent is calculated after deducting cost of production from the gross produce such as cost of carriage to market and grain dealers and other middlemen's profits, loss on bad soil which in dry, i.e. unirigated lands amounts to as much as 20 per cent, and the expenses of cultivation. After these deductions are made, the remainder is the net cash produce. Of this the lesser half goes as Government revenue. The danger in this system of rent assessment has been to under-estimate the total cost of production, and to ignore the cultivater's profits, while over-estimating the gross

produce and the benefits derived from land improvements and irrigation projects. Such a danger can ments and irrigation projects. Such a danger can only be effectively met by finding out the size of the economic holding which would fix the limit of taxation, the nature of the crop, climate and soil, as well as marketing facilities have all to be taken into account in the definition of an economic small holding. The absence of such credit facilities as have been available for small holders in Europe nave neen available for small noticers in Europe and the very limited development of co-operative methods of purchasing supplies and marketing produce must also be taken into account in India in determining the size of the economic holding. Again, the intensity of cultivation must be taken into account In India, the amount of family labour expected on the land in your grant and the labour expended on the land is very great and the smaller the holding, the greater the amount of family labour per acre. But if the holding decreases beyond an average size as a result of sub-divi-sion a large part of family labour remains idle or is wasted. We have no evidence to show the direct effect of turther sub-divison of the land on agricultural efficiency, nor is it possible to estimate for different crops the distribution of holdings by size. In some of the Western countries the development of agricultural costings shows the great progress that has been made in establishing an organisation to help farmers to keep proper accounts The statistical value of the results obtained are clearly indicated in that they enable administratois to arrive at general conclusions as regards the size of an economic small holding and to what extent small, medium and large holdings are affected by varying economic conditions. In India no farm accounts are kept, but the cultivator although illiterate to a degree knows the size of an economic holding when particular crops are raised. The Indian peasant estimates the size of his economic Indian peasant estimates the size of his economic holding in proportion to the number of ploughs he possesses. If he has one plough, he cannot keep up more than 10 beeghas (3½ acres) of land. Ploughs are not reckoned according to the number of those implements of husbandry that a man might possess, but according to the number of plough-cattle that he has, four oven being the full complement necessary for the management of one plough, but that number has now come down to three and even to two in great many instances. three and even to two in great many instances, the consequence being that the cattle is overworked. It beeglas (34/2 acres) of land are the unimost that the Bengal peasant can manage with one plough, and this is also the size of an economical plough, and this is also the size of an economical holding in Bengal Presidency, though the average size is smaller. In the beels and marshy tracts boro is grown and in the reclaimed forest lands amandian is planted without the assistance of the plough. Thus the proportion of food-producing land to each plough shows here an excess over 10 bighas, and hence the average holding increases of the size of the conomic than the economic loging of a peasant might be smaller than 10 beeghas if other crops are grown besides rice.

An economical distribution of crops and plots in a An economical distribution of crops and plots in a Bengal village has been as follows: the total size of the holdings is 7 beeghas which is distributed in this manner: aman rice, 2½ beeghas, aus rice, 1 beeghas, gourd, kalai and mustard, 2 beeghas, mugh, ½ beegha and sugarcane, 1 beegha. The size of each cultivator's plot at one spot must vary according to the character of the crop raised. In the case of aus rice, the plots are usually of 10 or 15 cattahs to 1 and 1½ beeghas in dimension; a

The state of the state of

plot of 2 beeghas in area is rather scarce. The low aman fields are 2¹/₂ to 4 beeghas in area.

Let us now estimate the agricultural expenses and the average price of an economic holding whose size we are reckoning as 10 beeghas. We have strictly followed the verbal statements of the peasants in putting down the following items:—

The Expenses of Cultivation	Ra .	A e
Rent of 10 beeghas of land at Rs 1/6 per beegha	13	
Ploughing and sowing by extra hands	2 12	9
Seed grain Weeding expense- Harvesting expense	12	x = 3
	52	

We dot not include the cost of maintaining the oxen, which usually feed on straw, kuro and main supplied by the household. A peasant who has no oxen, but hires them has to pay 4 annas per diem

The peasants estimate the average produce of a beogha in normal years as 10 maunds. So the total yield will be 100 maunds. Out of these 36 maunds will be required for domestic consumption and 24 maunds will be kept as reserve stock. The saleable surplus is 40 mainds which would fetch at the rate of Rs 1-4-0 per maund as harvest price Rs 50. Thus the expenses of cultivation are nearly or just covered.

Let us now estimate the agricultural capital invested -

Total 52 0 0	15, Earthen pans for feeding cate	Total	52.0.0

That is to say, the sum laid out by a peasant in fitting out a plough for cultivation is nearly the same as the expenses of cultivation in a year. Very often this capital is borrowed at high rates of interest. The size of the holding is often less than 10 beeghas (3½ acres) In the United Provinces the average cultivation unit has been found to be less than 2 acres. Thus the smaller yield, the light rate of interest, the difficulty in marketing the produce, improvidence and bad seasons leave the peasant almost nothing to fall back upon. In many parts of India, 6 to 10 beeghas (nearly 2 to 3½ acres) would represent the average economic holding, which, however established, has virtually no ability to bear taxation. A tax on an uneconomic holding would entail a loss of physical efficiency of the cultivator and his family or lead to the transfer of the holding into the hands of money-lending or middle classes who have other

sources of income. In 1917 France introduced an income tax on agricultural profits as distinguished from land proprietoiship at the rate of 34 per cent.* In England the assessment of farmer's profits were at one-third of the annual value before the war and the great majority of the farmers were virtually exempt from all payment. After the war the basis of assessment of farmer's profits was raised to the full annual value. In India, the cultivator and his workers and dependents are maintained directly on the produce of the fields and the real income is difficult to ascertain and value. Book-keeping methods are also unknown amongst the farmers. But these difficulties are not insuperable but must be faced in order that we can establish the distinction between sorts and sizes of agricultural income which rightly rank as costs and those which are to be accounted surplus, which latter and not the former should bear the tax. For obviously five men cannot pay a direct tix in money amounting to 40 per cent of the gross produce and the interest of old debts at 25 per cent upon three acres of overcropped soil without danger in a bad year of catastrophe.

3. Necessity of More Scientific Methods of Estimating Agricultural Profits

Agricultural indebtedness lies heavily on the mass of the Indian peasantry and evictions and forced sales take place to a greater extent than is consistent with sound finance. Regarding the security of the peasants against the undue encroachment of tax or rent as the object to be achieved, the solution can be found only through improvement of methods of calculating agricultural surplus.

ment of methods of calculating agricultural surplus.

The method of computing agricultural profits and prices should be adapted to the different conditions of tenure and settlement, soil and crops, so that there is no encroachment on the standard wages of agriculture in an economic cultivation unit. The curb of an estimate of normal or standard wages of cultivation ought to be fastened on the uncontrolled economic forces now manifest in the lowering of the status of the small holder, his indebtedness and his compulsory expropriation.

Investigations into the yield of agricultural produce show that in normal years there is food shortage in the country and thus the present land tax enercaches upon the physical subsistence which is necessary to maintain the cultivator and his family. The income from the land which is below the size of the economic cultivation unit is a necessary element of income with no power to hear a tax. The question of the surplus of food production over consumption has thus an infimate bearing upon the taxable surplus of the agricultural classes as a whole. According to the latest Government estimate, we require a minimum of one-fifth ton of food grain per head per annum including wastage and seed. For normal current consumption the Indian population of 318 millions would require 63 6 million tons of food grains and other food. The cattlefood would require a normal addition of 14 million tons and seed 11 million tons while wastage would be 63 million tons. Thus making these additions India requires for keeping her population and live-stock in normal health and attength an outturn of approximately 95 million tons. India's normal total outturn of food grains is approximately 85 million tons. We may conclude

This was raised to 6 per cent in 1920.

that during the last decade Indian food production on an average fell below her norma requirements by 10 milion tons. Aithough she has no food surplus she exports 4 to 5 milion tons every year leading to a deficiency of 045 ton in the necessary minimum of tood per head per annum. This implies that there is an inequitable distribution of the national agricultural dividend. Out of the total cropped area of approximately 250 million acres, food crops comprise 200 million acres, food crops comprise 200 million acres, sixteen per cent, of the total cropped area is devoted to commercial crops, but the agricultural income derived from these does not relieve food shortage. This can be explained as due to the increase of the class of intermediaties both in agriculture as well as in industry and the professions, who therefore ought to relieve, the builden of taxation of those flist to suffer from inclement agricultural conditions.

4. Inelasticity

The modes of land assessment also aggravate instead of initigating the effects of restless encroachment. The Mughal and the Marhatta rulers obtained from the land a net one-half of the produce but when there was scarcity, the assessment was reduced. A very interesting instance of such reduction is afforded by a fundan of the Emperor Aurangzeb which is as follows:—

"If Kharaj-muazaf has been fixed on a land and a calamity befalls some crop of the land by which it is not totally destroyed, then you ought to enquire into the case, and deduct from the revenue to the extent of the enquiry done, and from the portion that remains safe, take so much of the produce (mahsul) that the ryot may have a net one-half, ey, ten maunds are usually produced in a field; on account of the calamity six maunds only are left (sate), the net half of this is five maunds, therefore, you should take one mained only (as revenue), so that the net half, vix., five maunds may be left to the ryot."

During the palmy days of Moghul administration the revenue collectors were subjected to a variety of cheeks so that the chances of rack-renting and oppression were very small. If (God forbid) any calamity (2,700) from earth or sky overtakes a mahal strongly urge the omins and omils to watch the standing crops with great care and fidelity, and after inquiring into the sown fields, they should carefully ascertain (the loss) according to the comparative state of the present and past produce (hast-o-bud). You should never admit as valid any sarbasta calamity, the discrimination (tafriq) of which depends solely on the reports of the chaudhris, qanungues, muqaddams, and patwaris. So that all the ryots may attain to their rights and may be saved from misfortune and loss and usurpers may not usurp tother's rights). Strongly urge the "amins," "amils", chaudhris, qanungues and mutsaddis, to abolish balia tor halia) exactions (akhrajat) in excess of revenue and forbidd in abwabs (cesses), which impair the weltare of the ryots. Take securities from them that they should never exact balia or collect the abwabs prohibited and abolished by His Majesty. And you "yourself should constantly get information and if you find any one doing so and not heeding your prohibition and threat, report the fact to the Emperor, that he may be dismissed from service and another appointed in his place."

5. HEREARCEMENT OF LAND-REVENUE

In the light foregoing, the present system might be made more responsive to the local fluctuations in agricultural prosperity. In Madras, Bombay and the United Provinces in particular, the enhancement of assessments has gone up by leaps and bounds. Thus the whole system of land tenure and taxation is called in question by the repeated famines, even though they have been partially stripped of their old horrors. The following figures would show the large and continuous increase of the land-revenue:—

			Revenu of rup		ped area. ion acres.
1890-91		***	***	24.04	194'41
1893-94	***		• • •	25.28	790'38
		***		27 46	196.48
1901-02		***		27.41	226.00
1907-08	***	***	***	26.67	221.63
1908-09				28 29	218.00
1914-15		***		30.70	227.68
.1918-19				31.00	201.31

Only those years have been selected which have followed a famine.

If we now consider the assessment of the three provinces mentioned above the increase would be found to be even greater.

6. THE TAXABLE CAPACITY IN RELATION TO FAMILIE

Much of the benefits of the Permanent Settlement as regards fixity of assessment have been minimised as we have noticed by the growth in recent years of the class of rent receivers and rent-payers on account of which the rates of rent of the miyst paid to the landlords have increased a great deal. This increment does not reach the public exchequer but fills the pockets of absentee landlords and intermediaries. The effect is none the less different as regards weakening the economic position and staying power of the peasantry. Thus economic pressure upon the cultivators in the permanently settled tracts is growing as acute as in other parts of India and in spite of the hopes of the late Mr. R. C. Dutta, distress and hardship during the year of scarcity are visible here though perhaps to a less extent than in the rest of India. As to the exact estimate of the intensity of famines and scarcity, it is difficult to speak with certainty but the investigations of Mann and Kanitkar have yielded results which serve to explain the distress and hardship, suffered during a famine in many quarters.

The increase of land-revenue in the village:-

Year.	Land-Revenue.	Assessed area.
Pre-British-	Rs.	Acres.
1698	301	1.963
1724	526	2.000
1727	620	2.000
1730	1.173	2.000
1770	1.632	2.008
1785	552	1,954
1790	66	1.954
British-		
1803	1,009	1.981
1808	818	1.954
1817	· 792	1.954
1823	2,121	2.089
1844-74	1,161	2.089
1874-1904	1,467	2.271
1905	1,405	2.271
1915	1,581	200

Out of 147 families investigated only 22, or just under 15 per cent, can pay their way in the standard they have themselves fixed. The others are living below that standard, or else are deriving income from outside, or they are increasing their debts. It is not the debt which maintains, in an average year, the bulk of the people in this group in an insolvent condition. If debt disappeared, still 80 per cent. of the village would be insolvent in an average year. The whole maintenance of the position depends on the hope of good seasons, which have come about twice in the last ten years. Then interest can be paid, perhaps debts redeemed.

* For 1917-18.

+ For 1918-19.

5 For 1915-16.

the position improved. It is difficult indeed to see where the inture of such a village liea. If had a series of good years, it would ficurish, and shough it could hardly pay its way and pay a left it would gradually, we think, recover a sound economic position though the people would be good many years have to live below their standard, or be subsidised by their representatives living in the industrial centres. But what are the chances of a good year? Only two years out of the last ten years can be considered as such. If we take the fallow area as the least indication of character of a season, and if we consider 1915-16 and 1916-17 as being good years, though the anna relustion was only 10 annas, then from 1895-96 to 1819-20 we may classify the seasons as follows:—

1. Materially above 1915-16 and 1916-17 or exceptionally good seasons

2. Good seasons

7

Good seasons 3. Average or slighty above average seasons considerably below aver-12

age, including famine seasons ... 3
What one of these last disastrous years means the village may be indicated by what has happened in certain directions in 1918-19, as a remaine famine year. It has meant—

(1) The borrowing of which Rs. 3.00 repairing and Rs.
(2) The mortgage of a people for Rs. 7,02 the village debts in (3) The sale of 65th people for Rs. 2,137.
(4) The loss of 59'7 per 80'5 per cent. of the of the buffalces.
(5) 300 people leaving

(5) 300 people leaving the during the famine, 26 famine camp, the res centres.

Counting only the increase has meant an increase of inde Rs. 13,021, or by over 44 per co Some of this may be paid off at much will probably be perm present or in some modified form.

Such evidence of rural deterioration points the need of a new and forward policy of taxation. The class which maintains the race must not be selected to bear a burden they are least able to do, while the classes which enjoy a taxable, unearned income receive a lighter treatment.

INTERNATIONAL LAW AND SUPER-STATE

By Dr. NARES C. SEN-GUPTA

HEN the League of Nations was first established, statesmen were anxious to repudiate the suggestion that it was going to be a sort of super-state and they ridiculed the idea of the League of Nations enforcing, its decrees by the force of arms. Yet the latest discussions on the question of international arbitration and reduction of armaments seem to bring the League perilously near the ideas which its early sponsors were so anxious to repudiate. I am speaking on an imperfect knowledge of the proceedings and from a distance of thousands of miles. and from a distance of thousands of miles.

I may, therefore, be wrong. But I feel that

I the Assembly of the League has in any
degree allowed itself to be influenced by the idea of having in the League an organisation force of arms, they are on an entirely wrong

I have no quarrel with the idea of a super-state if it is understood in a proper sense. In a sense the world is undoubtedly moving towards a super-state, that is, of

an organisation which will embrace states, harmonise their various corporate lives and by a higher synthesis make the life fuller and more fruitful. The history of human society is one of a progress from narrower to wider societies. From the Family to the Gens, from the Gens to the Tribe, from the Tribe to the City States and from these to the National State, the social idea has grown wider, fuller and richer. And all indications show that humanity is on the eve of the realisation of a still higher concept of human association.

The category which is already in view is an organisation which will embrace many States and, probably, in course of time, embrace the whole human society. Such a larger society might with justice be called a super-state. But it would represent a higher category of human organisation, not merely in embracing a wider area and a larger population but also in its nature and essence; and it would be as fallacious to talk of it exactly in the language and in terms of cracio progress to a maderial State of to-day, as it would be to apply to a modern State the concepts appropriate to a tribal or a city State.

Each stage in the evolution of social forms has had its own forms of organisation and its own principles of cohesion. The principle of cohesion in the clan was blood-relationship, and even when the clan-states had outgrown the old concept, it was kept alive by a fiction of common origin, until a wider concept was found in the principles of race and local contiguity. The form of clan organisation was modelled on the family and owed its strength to the parental authority transferred to the head of the family. When society outgrew this condition, an ampler form of social organisation was found in oligarchy.

The modern State also has forms and principles of its own. There are several ways in which the modern State is outgrowing its national concept and national forms. But, after making allowance for these, it may be roughly said that the principle of cohesion in a modern State is the complex concept of nationality, partly founded on race and partly on political organisation. An outstanding feature of the modern Stateorganisation is a centralised government, largely supported by force, in which the will of the people is more or less indirectly represented. But perhaps the most notable feature of the modern State is the important place held in it by Law and the Rule of Law. Law in a modern State approximates very nearly to the Austinian idea of a command of the sovereign supported by the organised force of the State.

This is the concept of a national State. But, as I have said before, the ideal has aloutgrown. The been considerably Federal States of America have developed a more complex concept of State than can be strictly brought under the definition of a national State. The United States of America is not a single state in this sense, it is really an aggregate of States held together in a wider organisation. The functions of the State are shared between the federal Government and the component States-and the whole constitutes an organic unity. A still more instructive example of the outstripping of the national idea is to be found in the British Empire, in which a large number of States, spread over distants parts of the world, embracing a large variety of eraces and nationalities which often represent different cultures,

are held together by a common organisation. This is not one nation. The British Empire does not answer to the description of a national State. It is an aggregation, an association, on a free basis mostly, of a large number of States and nationalities. It is quite true that in legal and political theory the whole constitutes but one State the sovereignty of which is vested in the British Parliament. But this theory is, in practice, little better than a legal fiction. If the British Parliament were ever thoughtless enough to try to reduce this theory into practice and assert its sovereignty over New Zealand, for instance, the whole Empire would fall to pieces. In point of fact, here we have an association of several nations working with some common purposes and held together by common understanding. Although the shadows of the old forms of State organisation are desperately clinging to this new structure, as defunct social institutions have a habit of surviving in decrepit forms, yet in this great organisation of human society we can really note the rising of human society to a higher category of human association. The super-state of the future, of which the League of Nations may be only a harbinger, will represent a further advance in the concept of human organisations, possibly to some extent on principles underlying the organisation of the British Empire but assuredly not on the lines of the purely national states.

Let us now analyse a little closely the binding principles and the constitutional organisation of the British Empire. We must dive below its purely external forms and break through its outer shell of legal forms to get at the heart and the spirit of this association. Formally, the British Empire is ruled by the British Parliament; but in point of fact each of the self-governing colonies is sovereign within its own territories. principle of cohesion between these various states is a working understanding by which it has been made possible for them to cooperate for some common ends. Beneath all these there is no doubt a strong psychological element consisting partly of conscious sympathies and calculation of mutual advantages, but more largely of an unconscious bias in favour of union, created, to a very large extent, by long convention.

Part of this understanding is embodied in laws passed by the British Parliament. Formally, therefore, these are laws in the strictest sense of the term, being acts of the sovereign body. But if we scrutinise stricts. the basis of these laws as they exist now, shall find that the real foundation for these to day is the mutual goodwill of the states and not any real sanction. It is unthinkable that the British Parliament could for exercise its theoretical sovereignty as to abolish the constitution of the colonies; is equally unthinkable that any breach of these laws could be enforced by the application of any force by the sovereign authority. If there were any case of a deliberate violation of the constitution say by South Africa, the Courts would possibly find that the act of the Colonial Government was of no effect as being ultra vires. But let us imagine that the South African Government chose to defy the decision of the Privy Council; the only way in which the Colony could be made to obey the law would be an act of war or quasi-diplomatic negotiation.

Such a state affairs is beyond of reasonable probability, because all forces of convention are against such a determined conflict between the Governments of the mother country and the Colony. The feeling of the people of both countries would very probably rise up against such intermedine conflicts and effectively curb the activities of the respective Governments. No such occasion has ever arisen, nor in such occasion likely to arise in the near future. But extreme possibility brings out the real inner nature of the bond which unites the British Empire. It is a legal bond, but the law which binds those states to one another partakes more of the nature of International than of Municipal Law, in so far as in the ultimate resort, the only effective thing which makes the union possible however is a principle which has never been adequately recognised—namely, discipline or that feeling of internal constraint which makes a person or body refrain from violating the haw only because it is the law.

The importance of this element even in the internal laws of a State has only been recently recognised by jurists. The force upon which jurists from Hobbes to Austin and Ihering have based the authority of law may be the only visible authority of law, ant a much stronger power is exercised in modern society at any rate, by this sense of inner constraint, or discipline. The quantity of power that is available to the most powerful sovereign executive body in the last resort would be absolutely inadsonate to cope with violations of the law.

Software Comment

if it could not count upon this discipline of the bulk of the people, by reason of which they are naturally inclined in favour of obedience to law. The history of law, it has been pointed out, is a history of the gradual retirement of the element of force in law to the background. Modern law relies less and less on force and its sanctions have become less and less violent. This has become possible only on account of the increasing discipline of mankind.

It is a debateable point which has been hotly argued between philosophical students of law, as to whether the end of this process would be a complete elimination of the element of force in law. As human society is now constituted, one can hardly imagine the total elimination of individuals with antisocial tendencies who must break the law. at any rate, within a measurable distance of time. In spite of this fact, that in society as now constituted, there must be an element of force in law to be used against its antisocial elements, there is no denying that in modern law the concept of law is not essentially one involving force; and to the extent that law is founded more on discipline than on force, we may say that represents a different and higher category of social institution than the law of mediæval society in which the most effective sanction was force.

Besides, modern conditions of human society makes it possible to conceive that, as between States or larger human groups, mutual relations could be established on the basis of laws in which the element of force would be absent. Within a State it is, as yet, difficult to imagine total absence of individuals with anti-social impulses, but there is not the same difficulty in imagining the without existence of States anti-social tendencies.

In ancient and mediaeval times the normal attitude of one State to another was one of latent hostility. Politicians and lawgivers of ancient India considered it a glorious thing for a king and indeed his duty to conquer neighbouring princes. The same mentality governed the relations of sovereigns of the ancient and mediæval times in Europe. But since the days which made Grotius possible, relations of States have proceeded a long way towards the establishment of friendly relations between States. Alliances of a mere or less permanent character between various States have been established and allied States have found it possible to weak

harmoniously and without conflict. The Monroe doctrine of America has gone a fair way towards the establishment of relations between the United States and other States of the New World which is very like a hegemony without any definite alliance. In respect of a great many topics which would have furnished an effective casus belli in the past states have been able to establish an understanding by mutual goodwill.

In respect of commercial laws and various topics of private international law it has possible to establish principles of mutual understanding between different races And, even in respect of public international law, until society was turned upside down by the Great War, it could be said that a great body of rules had been established which habitually governed the relations of

States inter se.

In the British Empire and in the American Commonwealth, we can discern a large number of essentially distinct States working together on the basis of a mutual understanding without any occasion for recourse to an armed settlement There is no rearon to suppose therefore that the time is not near at hand when all states will find it possible to co-operate on the basis of laws which are not supported by force, but which rely entirely upon the discipline of nations

It is reasonable therefore to infer that the next higher effort at human organisation, the super-state, if you like, will represent a higher category of synthesis. It will not merely reproduce the essential features of the forms of social aggregation hitherto achieved, but, both in respect of the principles of cohesion and in forms of synthesis it will be based on concepts of a higher category. One of the outstanding features of the State of yesterday was that there was nothing between the State and the individual and nothing above the State. To-day there is a growing tendency towards the formation of sub-groups and what has been called metapolical societies. The sub-States which go to make up the British Empire or the American Commonwealth are likewise a negation of that principle. These complex States of to-day are associations, not of individuals but of States. In the middle ages or early modern times such a co-ordination of States could not be conceived except by a complete coalescence of the States or on the basis of a more or less ephemeral alliance. The existence of the British Empire has been made possible by the evolution of a higher concept of social

Alama Astr

organisation in which a permanent organisation of the common life of the States has been reconciled with the integrity and independence of the component States. The form organisation is substantially different and the law that binds together the component States is a higher form of law different from the Zwanasnormen holding together individuals in an Austinian State.

It is not possible to lay down with precision what would be the essential features of that higher social concept of the future. But whatever it is, it will imply a co-ordination of common efforts of States by a cooperative organisation which will synthetise the lives of various States without, in any manner, denying the integrity and freedom of States The basis of such co-operation will be laws which will be in the nature of understanding habitually honoured by nations by reason of the discipline in them rather than by reason of force. It is not possible to conceive of a super-state which will dominate the component States by the force of arms. Any attempt to build up such a super-state would fail in its object. It can only end in armed conflicts between parties in the superstate and in the repetition of alliances and counter-alliances which have been fruitful of wars in the past. The only other possible end of such an effort would be the swamping and obliteration of weaker States in such a manner that ultimately the States would be wiped off and replaced by what would only be a greater State. That would be entirely contrary to the indications of history about the goal of human organisation.

If this is a correct reading of the course of history and an accurate forecast of the future, any effort to secure compliance with the decrees of the League by force of arms cannot but be regarded as a move in the wrong direction. The only possible foundation for order in a super-state is discipline and if the League is to succeed, it must have this fact in mind and lay the greatest stress on the development of this discipline among States. That it is possible to hold together States in a permanent organisation by virtue of the discipline of nations without any is demonstrated by the appeal to force British Empire. The same discipline may well be looked forward to to sustain order and peace in international relations under the aegis of the League of Nations or some

other more adequate organisation . It is quite true that in the British Empirethe cohesion is secured by a large element.

، اور"

of mounts in the component parts. The me measure of sympathy does not, unfortusizely measure of sympany does not save who sixely, exist among the various races who are members of the League. The mutual condition of sostility which was the normal condition of States in the middle ages has left remnants in modern States, and mutual jealousy and conflict of nationalities are unfortunately more powerful factors in international relations of forday than a feeling of common purpose and spirit of co-operation. But it is no good being impatient with this fact. It would be more profitable to recall the encouraging circumstance that, during a century and more, forces have been at work which have already secured a large measure of sympathy and co-operation between nations and are most assuredly making for much greater cohesion in the future. On all sides there are signs that modern society is fast outstripping national boundaries in various ways. The various societies of men in different parts of the world have always been more or less interdependent. Two great spheres of human activity have built up this interdependence and mutual aid most remarkably, viz. commerce and culture. To-day human societies everywhere are consciously co-operating with one another in the spheres of commerce and **culture** on a scale never dreamt of a century ago. The great commercial and industrial bouses of to-day are each of them dependent on their correspondents in different countries and the prosperity and comfort of each country depends upon the uninterrupted maintenance of these relations. A slump in the trade in India affects all countries in the world and the depreciation of the mark in Germany is now a fact of world-wide significance. The world now realises this fact and, the more this is realised, the more will be various races of the world be drawn to one another.

No doubt this very field of commerce is also a fruitful source of jealousy, antipathy and war. Nations are now fighting one another for the world markets as individuals bught one another in the past. But individual competition is being daily eliminated by the development of giant companies, Trusts and Kartels. The underlying principle of all these organisations is the realisation of the fact that it is more profitable in the long run to combine with your rival trader than go on cutting each other's throats. It is far from inconceivable that further development along this line of thought will end in the formation of international combines in trade or some understanding by which the interests of

trades and industries of various countries will be harmonised by a more synthetic organisation. The world is slowly but surely moving towards that end, and each step in the progress will add a brick to the edifice of international sympathy upon which the super-state of the future will be based.

Even more important as a force making for international sympathy and understanding is the great cultural exchange that is the most outstanding feature of the civilisation of to-day. Culture to-day has entirely ceased to be national, it has become international. Cultural progress in every country would now be sensibly reduced if it ceases to have that continuous touch with world culture. Germany can be boycotted but Einstein cannot. The mind and thought of the cultured man and, indirectly, of every man to-day is the product of international culture which has permeated the thoughts, feelings and impulses of people in a thousand ways fartoo subtle sometimes to determine with precision. The result already shows itself in the sympathies of men of high culture which outstrip all national boundaries. Their outlook is a wide one in which the narrow limitations of nationality hardly This broad and generous outlook exist. slowly but unmistakably permeating society, and, despite the strong counter-current produced by ancient conventions, the thoughts and feelings of men are becoming more and more international, people are lessand less capable of looking upon a foreigner as a born enemy. The common culture of humanity is thus building up a bond of sympathy which, in course of time, will furnish the strongest principle of cohesion between States—a cohesion which will make a super-state of the sort I have described. the only natural coping stone of the edifice of social organisation built by continuous human effort ever since Man came into existence.

A similar promise is also borne in the international character of the great social efforts and movements of to-day. The Reform Bill of Russel was a purely domestic question. Even the French Revolution, in spite of its great and striking influence on the politics of the world was essentially an isolated effort of the French people against their rulers. But the Labour movement of to-day with all its various forms and theories is an international affair. The Communists of Russia are not content with pursuing their programme in their orday.

country but are burning with a desire to make it an international movement. Fascism too is international. In a similar manner every social theory or experiment, great and small has a more or less international character. Modern criminological experiments, schemes for reform of penal laws, educational programmes and policies are seldom confined within the bounds of a particular country. When a new principle is established, it is established for the benefit of the whole world and not merely for the country of its origin. This fact is borne out by the establishment of a large number of associations of a more or less international character consideration of social and political problems which are not of a purely local character. These have a very important direct value in connection with the problems diseussed, but each of these societies have also a very important result in adding more cement of international sympathy and cooperation on the basis of which the superstate will grow.

A searching analysis of the life and culture of civilised society of to-day would leave no manner of doubt that civilised life has outgrown the strait lace of nationhood. The sympathies of man have been widened in a way in which it can only find satisfaction in an international society. It is only the backward pull of a dying convention which ties political society down to its old grooves and refuses to man the satisfaction of his natural craving of to-day. The day cannot be very far off when human mind will break through the bonds of inherited narrowness and convention and furnish the psychic basis for the formation of a world-wide superstate which, while it will preserve all that is valuable in nationality, will give free play to the international sympathies of men.

There is this message of stupendous importance embodied in the history of the human race as a whole and in the deeper currents of the life of humanity to-day. That hope should hearten all those who, in various walks of life, are seeking to promote that international understanding which eliminate conflicts between nations and harmonise the individual life of each nation with the greater life of human society as a whole. That end is coming. It is no longer the dream of a visionary, it is the certain and infallible promise of history.

The League of Nations will best fulfil its purpose by constantly bearing in mind the tundemental principles of this teaching of

Latin The Latin

history and helping in the growth of this great international society. In seeking to find forms of organisation and co-operation for this greater society in forms which have had partial validity within national societies, but have hitherto been the source of no end of strife and mutual estrangement in international relations, the League of Nations would be digging its own grave. It can fulfil its mission and help to build up the greater society of the future by thoroughly imbibing the fundamentals of this higher category of human organisation and placing, its complete reliance on them.

I am not unmindful of the fact that there are strong forces at work in the society of to-day which make it unreasonable to expect the realisation of that higher organisation in the immediate future. My proposal furnishes no device for the immediate reduction of armaments or the immediate cessation of war. In spite of all the elements of hope in the survey of human society I have made before, there are still a great many forces tending towards the violent disruption of international amity. To meet these forces, the provision of some measure of armed enforcement of the decrees of the League has attractive features as promising a speedier realisation of that international ideal. But this promise of speed is entirely illusory. So long as you permit the introduction of the element of force in the adjustment of international relations, you are only ensuring future wars, jealousies, competitive armaments, defensive and offensive alliances and counter alliances and what not. On the contrary, by placing reliance on reasonableness and justice as convincing arguments in favour of the decisions of the League and eliminating altogether the element of force, you are surely laying the foundation for that discipline which will ultimately make it impossible for a State to think of disobeying the decisions of the League. It will not be a rapid process by which you will realise the end, but it will be a sure and certain process. And I feel sure that in matters like these there is a limit to reasonable expectations of speed. To hurry too much is to rush to rain.

The great fact to bear in mind is this that there are forces in the life of nations and individuals of the world which are silently working to build up international sympathies, and these forces are far more important and more abiding in their consequences that protocols and conventions. The wisdom

League would lie in so adjusting its actions and deliberations as to help and december the silent work of these forces, to emphasise and multiply this manifold work bewards the consolidation of international society and proceed step by step to build up a solid body of convention on the basis of this growing international sympathy which will furnish the strongest bulwark against wars in the future. The process may be slow, but if the end is steadily kept in view it would be found to be a very reliable procedure for the building up of a real super-state.

force is eliminated, what coercive rinciple remains to give strength to the laws and conventions of the international supertate? With nothing else to fall back upon, the Learn must needs rely on universal principles of justice and fair play and seek to carry conviction by reasonableness. Each member of the League will cultivate a tendency to bok more and more from the view-point of the others and seek to meet his opponents as far as possible. He could not be content merely to count the votes on his side and rely on mere majorities. His inclination would rather be to secure a consensus as far possible. Resolutions of the League arrived at on a basis like this cannot but have very much more influence than decisions by a majority secured by canvassing result of common jealousies.

We should then be going back to the days of Grotius and find the only support of International Law in natural justice and fair play. This sounds naive and doctrinaire by

'n,

the side of that very complicated and artificial institution—diplomacy. Diplomacy is one of those arts-or shall we say scienceswhich has grown like a parasite on human society and built up an organisation so complex that it laughs at such simple devices for regulating human relations as mere morality and justice The Professor of Holmes has very accurately characterised these specialised sciences which dig an elaborate most round themselves and isolate themselves too far from the actualities of life on which they look down with disdain. They meet their Nemesis in the hands of apparently insignificant things which build on the basis of some simple facts forgotten or overlooked by the great architects of the science, so that before it their whole edifice gets crushed to atoms. It is to be feared that the science of diplomacy has forgotten this simple, elementary and, we may say, growing fact that morality and justice are, after all, the most abiding and perhaps the strongest, if least obtrusive, facts in human society. The non-moral diplomacy of generations have done their worst so far. It is time that the simple recipe of morality and justice were given a chance. In politics the principles of morality and justice are coming more and more to their own every day. It would be blindness for diplomacy to overlook this fact and go on building up international relations as though there was no such thing as morality and justice in these affairs, even after the Peace Treaty and the League of Nations Covenant with their professions of lofty international morality.

ELECTRICITY IN THE BYPRODUCT COKE INDUSTRY OF THE TATA IRON WORKS AT JAMSHEDPUR

By S. GHOSH, CHIEF ELECTRICAL ENGINEER, AND D.C. AHUJA, B.Sc. (GLASGOW),
ASST. ELECTRICAL ENGINEER

a Technical study of Byproduct Coke Ovens, but rather to discuss the subject in a general rather to the part that Electricity this in each step in the process of manufac-

ture of Coke and its Byproducts in the Tata-Steel Plant.

Byproducts from coal constitute today one of the pillars of chemical industry. It is generally considered that to burn coal results

10.14 - 10.34

without preliminary carbonization and recovery of byproducts, should, and probably will, be

some day prohibited by law.

Coke and gas, made by carbonization of coal, are excellent fuels, clean and highly efficient. Their use as fuel in place of coal has already reached large proportions and is rapidly increasing. Their byproducts, ammonia, tar, benzols and cyanide, have immense value in the chemical industries, and make coal carbonization commercially an important and profitable procedure.

Carbonization is applied principally to the production of metallurgical coke and illuminating or fuel gas. Coke for domestic and industrial heating has, however, become an exceedingly important factor in the industry. The recovery of byproducts brings to a Coking Plant fully one-third of its revenue.

The modern Byproduct Coke Oven has been evolved from the development of both coke and gas manufacture; in this development the growth of modern chemical industries has played an important role When coke alone was required the mexpensive bee-hive oven, located where coal was cheap, served the purpose When public lighting gas alone was required, the very simple and mefficient gas retort sufficed But now, in this day of efficiency and conservation, a coking or gasmaking process, in order to survive, must recover in the largest measure and the highest quality, all of its products which are useful in modern industry, and must do this with low costs

The illuminating gas industry had its beginning in 1792 when William Murdoch, a Scotch Engineer, discovered that by distilling coal he could produce gas for illuminating purposes. His discovery was soon placed on a commercial basis and led quickly to an extensive growth of coal gas manufacture.

Prior to 1906 the Byproduct Ovens in America were for various reasons not generally successful in making good metallurgical coke, consequently Byproduct Coke was not then popular with American Blast Furnace

Managers.

During 1906, the United States Steel Corporation appointed a Committee of well-known Engineers and Works Managers to investigate the Manufacture of Coke for Blast Furnace use. This Committee recommended the building of 280 Koppers Ovens. These were built at Joliet, Illinois, and put into operation in 1908, recovering Tar, Ammonia and Gas. The effect of this Com-

mittee's thorough work has been far-reaching. It has revolutionised the Byproduct Coke Industry in the United States and accomplished the saving of many millions of dollars worth of most valuable natural resources. The Furnace results secured with the Coke from these first Ovens were excellent. They caused American Blast Furnace Managers quite generally to reverse their former opinion of Byproduct Coke, and it is now universally conceded that better Furnace practice and lower Coke consumption can be secured by the use of Byproduct Coke than by Coke made in any other type of Ovens.

The type of the Coke Plant to be used is of vital importance to the manufacture of Pig Iron. The quality and quantity of iron product is greatly influenced by the quality of

Coke used

A Byproduct Coke Plant is a highly technical and costly manufacturing establishment. Its proper design and construction require the best efforts of practically all classes of

Engineering talent

The advantages of Byproduct Coke Ovens over the old Bec-Hive type are many, the most important of which are better coke, because of better heat control, ease with which coke can be taken out of ovens; the saving of the gas, from which are derived the many Byproducts, and the increase in the coke yield from 60 per cent in Bee-Hive to 70 per cent in Byproduct Ovens Further, one charge is coked in 18 hours in the Byproduct, as against 48 to 72 hours in the Bee-Hive Ovens.

Though many may be familiar with the general operation of a Coke Plant, yet we will review it here in a general way in order to appreciate the factors to be considered in deciding upon the equipment to be used. The general arrangement and cycle of operation of the various types of ovens are very similar and require practically the same class of

machinery for their operation.

The general scheme of Byproduct coke ovens, shown in an outlined diagram in Fig. 1, consists in conveying the different kinds of coal to a Broaker in the top of the building, which breaks the coal into pieces, the size of eggs. From these it passes down through chutes to a Hammer Mill, which hammers it into pieces, 85 per cent of which pass through a 1/8" mesh screen. The coal is then conveyed to a storage bin over the Ovens, from which it is distributed to the Ovens by lorry cars which drop the crushed coal through four holes on top of each oven.

After the coke has stayed in the Ovens the requisite length of time, varying from 16 to 30 hours, by which time the Ovens have attained a temperature of about 900° to 1000° C.,

Outline Diagram of Coke-making Process

the doors of the ovens are lifted by doorextracting machines, and the co've is pushed out by a Pushing Machine, into a Quenching Car. This car is then pushed by a Steam Locomotive to a quenching station which sprays water on the coke. The Coke is then hauled to the Coke Wharf and dumped upon it From the wharf it is conveyed to the Coke Screens by Belt Conveyors and passes through the screens to Railway wagons below for shipment to the Blast Furnaces The smaller particles, or coke breeze as it is called, pass into another wagon

Kopper Ovens

The gas is led from each oven to a main gas line, which conducts the hot gas to primary coolers, where the Tar and water vapours are condensed, and run into a

Settling Tank from which they are pumped to the Byproduct Building for further reinforcement. The gas is then pumped through Saturators where it bubbles through a weak solution of Sulphuric Acid, and the Ammonia in the gas is recovered as a white salt. called Ammonium Sulphate, which is an excellent fertilizer. The surplus gas from the Saturators is partly sent back to the Ovens to carry on the coking process, and the rest is consumed in heating the Boilers, Soaking Pits etc, throughout the Plant. The Tata Iron Works' Coke Ovens Plant

consists of 180 Copee non-recovery Ovens, a Battery of 50 Koppers Byproduct Ovens, shown in Fig 2 and three Batteries of 50 Ovens each of the Wilputte type, shown in Fig 3, making a total of 380 Ovens, with a consuming capacity of approximately 3200 tons of coal daily, and a production capacity of 2335 tons of Coke, 55 tons of Coal Tar and 25 tons of Ammonium Sulphate. This is on a 24-hours day

From the foregoing paragraph it will be seen that about 3200 tons of coal are converted every 24 hours. For handling this great amount of coal from the wagon to the finished coke, there is a large equipment of Electrical Machinery which is both laboursaving as well as efficient in its control

In the Crushing Plant, the coal wagons coming from the Collieries are placed over a large bin or track hopper and the coal is allowed to drop out into the hoppers from which motor-driven Shaker Feeds pass it to conveyor "A", driven by a 15 H. P., 440 volts, 750 R. P. M., Squirrel Cage Induction Motor, which delivers it to another Conveyor "B" driven by a 100 H. P., 440 volts, 750 R P.M., Squirrel Cage Induction Motor. which carries the coal to the Breaker Mills at the top of the building, approximately 100 feet high, where it is broken into small pieces. Here a Magnetic Separator removes any parcticles of iron which may be present with the coal. The Breaker Mill is driven by two 75 H. P., 440 volts, 300 R P. M., Slip Ring type Induction Motors. From the Breaker Mill it

passes over a mixing Conveyor, driven by a 10 H. P., 440 Volts, 750 R.P.M., Squirrel Cage A. C. Motor, to Hammer Mill Bins, from which it passes to Hammer Mills, driven by three 300

H. P., 3000 Volts, 750 R.P.M., Slip Ring Induction Motors. The coal passes from the Hammer Mill on to the conveyor "C", driven by a 75 H. P., 440 volts, 750 R. P. M., Squirrel Cage A. C. Motor, which lifts it up to a Conveyor "D", driven by a 50 H. P., 440 volts, 750 R. P. M., Squirrel Cage A. C. Motor which distributes it over two Conveyors driven by one 15 H. P., 440 volts, 750 RPM, Squirrel Cage A C Motor, which again delivers it to the top of Storage Bins of about 2500 tons capacity over the Ovens. All the Coal and Coke Conveyor feeders, Hammer and Breaker controllers are so interlocked that if Conveyor feeders etc., stop for any cause, all the Conveyors can be stopped from any of the push button control stations situated at various points, thus preventing the coal from piling upon dead Conveyors.

The coal is taken from the Storage Bin in a Lorry or Coal Charging Car driven by a 30 H. P., 220 volts, 625 R P. M., Mill type series Motor, the current upplied by collector being rails mounted on asbestos-moulded hlocks to stand the heat of the Ovens. The car travels on a wide-gauge track over the top of the Ovens. This machine carries four coal hoppers, the outlets of which correspond with the four charging holes on the top of each Oven. The Operator by

hand lever works the sluices which allow the innely crushed coal to fall from the hoppers into the Ovens.

When the oven is nearly full, the charge suniformly levelled up by means of a combined Pusher and Leveller machine.

The levelling arrangement consists of a long bar which is carried back and forth horizontally, through a small side-door near the top of the ovens. During the coking process the ends of the Ovens are sealed with

Willputte Cyens

Coke Pusher

doors held in position with suitable clamps. When the coal is coked and ready to be pushed, the door on the back of oven is removed by the door extractor machine. This machine has three Motors—

- (1) Door Extracting Mill type series motor, 4 H. P., 220 volts, 950 R. P. M.
- •(2) Door Lifting Mill type series motor, 4 H. P., 220 volts, 950 R. P. M.

Machine Travel Mill type series. 8 H. P., 220 volts, 900 R.P.M.

The door on the front is removed by the Coke Pushing Machine, and the ram of the machine is started through the oven, shown the ram of the in Fig. 9, pushing the coke ahead of it into a Quenching Car on the other side of Oven.

It will be of interest to know just how much work this combined Pusher and Leveller Machine is expected to do Each Oven has

approximately the following dimensions—
Length—39 5, height—11 0, and its walls are tapered from a width of 19 on the coke side to 16 1/2 at the Pusher side. This Chamber or Oven has a capacity of about 534 c.ft. which in terms of coal would mean about 12-3/4 tons. Now the Pusher Ram has approximately 9-1/4 tons of coke to push through a distance of about 39-0. The load is greatest just at the beginning of the operation, that is the greatest amount of force must be applied at this time to start the mass of coke on its journey to the Quenching Car The load becomes less as the Ram Head moves forward due entirely to the fact that a lesser amount of coke remains to be handled. This machine has six motors of the following types:-

(1) Ram Driving Mill type series motor 75 H. P. 220 volts 490 R P M

Leveller Mill type series motor, 45 H.P., 220 volts 500 R.P M.

(3) Machine Travel Mill type series motor, 45 H.P., 220 Volts, 500 R.P.M.

(4) Door Ram Mill type series motor, 8 H.P., 220 Volts, 900 R. P M.

Door-lifting Mill type series motor.

4 H. P. 220 Volts, 900 R. P. M. (6) Leveller Carriage Mill type series motor, 8 HP, 220 volts, 900 R.P.M.

Of these, the Ram Motor is the largest and

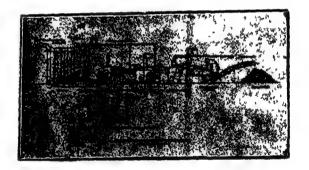

has the heaviest duty to perform.

Now, coming back to the cycle of operation, the coke after being pushed and dumped into Quenching Car is taken by Steam Locomotive to the Quenching Station The Quenching Station equipped is with a motor driven Centrifugal Pump, pumping water into a spray tank. The motor is automatically operated by a float in the tank. After the coke is quenched, the car is then run back, and the coke is discharged on an inclined Wharf. The coke Wharf Feeders that feed the coke from the Wharf on to the Conveyor, are driven by two 5 H.P., 440 volts Squirrel Cage A.C. Motors. The coke is thence conveyed to the Screening Station by means of Conveyors where it is screened through Station-

ary Screens and then delivered by chutes into the wagons for shipment to the Blast The Coke Conveyors to the Furnaces. driven by two Station are Screening 440 volts, 750 R.P.M., Squirrel Cage A. C Motors, 10 & 15 H. P. respectively. The Coke breeze is carried by another Conveyor, driven by a 5 H.P., 440 volts, 750 R.P.M., Squirrel Cage Motor, to another wagon

In order that gas and air may be reversed at regular intervals and in proper cycle, an automatic controller, operated by a clock, has been installed. The three 220 volts, Shunt Motors, one 8 H.P., and two 4 H P., operating the valves, can be operated either by the clock electrically, or by hand electrically, or mechanically This operation takes about 30 seconds, and occurs every half an hour.

Fig 15 shows an outline diagram of the Tar and Ammonia recovery process hot gas from the Ovens has a temperature of about 300°C In order to recover the Tar and Sulphate of Ammonia, as before

Outline Diagram of Tar and Ammonia Recovery Process

mentioned, the gas onters a series of Water Coolers of the tubular type, being thereby cooled to about 35° C and depositing the bulk of Tar and Liquor by condensation. The gas is then drawn by a Steam driven Exhauster, shown in Fig. 16, and driven forward to a motor driven Tar Extractor in which the last traces of tar are eliminated.

After leaving the Extractor, the gas passthrough a re-heater where it becomes heated to about 80°C so as to permit of the gas being delivered direct into the Saturator, where it bubbles through a weak solution of Sulphuric Acid, and the Ammonia in the gas is recovered as Ammonium Sulphate. Any liquor produced in the preliminary coolers is treated in a Still with addition of lime to drive off any ammonia it contains, the heat for this and for the re-heater being supplied by the Exhaust steam from the engines driving the Exhauster.
Ammonium Sulphate from Cen-

ı

Ammonium Sulphate from Centrifugal Dryers, is delivered by Belt Conveyors to a Storage room where a Drag Conveyer distribute- it to the storage space This Conveyor is driven by a small Horizontal Steam Engine

The surplus gas from the Saturator at about 60°C is partly sent back to the Ovens to carry on the coking process, and the rest is sent to a motor driven Booster Station to supply necessary gas for the Re-heating Furnaces at the Plate Mill and Blooming Mill Soaking Pits The Booster Station is driven by one 300 H P 3000 Volts, 750 R. P. M. Ship ring type A.C. Motor, shown in Fig. 18.

H. T. Power for the coke works is supplied from Power House No 2 at 3000 Volts, 50 cycle, 3 phase, over one circuit of 300,000 C M, Weather-proof Copper

D C. Supply at 220 volts is taken from Sub-station No 2 at the Plate Mill

A C Supply at 440 volts is obtained from 500 K V A Stepdown Transformer situated at the Switch House

The motor equipment consists of 107 motors, with a total rating of 3,630 H P. of various types as described. All the transmission lines to the Substation and line feeders from the Substation are carried on towers or structural work and then through conduits to the control switches near which the power is utilized.

In considering the Electrification of the Byproduct Coke Plant, it is most essential to select the system of Electrical Current which will best conform with most of the

characteristics required for the various operations of the Plant. There are two classes of motors which may be considered first. The DC series motor and the 3-phase Induction motor. In the D.C. series motor the maximum torque occurs at starting. The torque developed by this motor decreases with increase in speed, and increases with decreasing speed. Under heavy load it slows down, thus relieving the Power Station of wide load fluctuation.

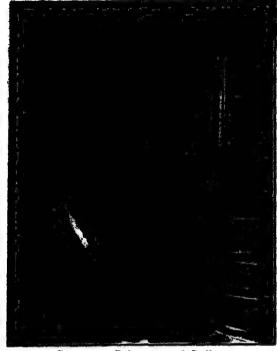

Exhauster and Tar Extractor

B oster Station

The polyphase induction motor is a constant speed motor. It operates over a certain limited range of speed. It cannot exceed its synchronous speed and when operated below its normal speed it is less efficient. In other words, the speed of the induction motor, in order to produce a given torque, uses the same amount of power at low speed as it does at high speed although the power' delivered to the

machine, which it is driving, is reduced in proportion to the speed, and a corresponding loss in motor efficiency is effected. More-

Saturator, Reheater and Still

over, the A. C. motor is not so active a machine as the D. C notor, c. g the A.C. motor cannot speed up quickly, stop and accelerate quickly in the reverse direction as

the D. C. series motor can. The D.C. series motor is capable of doing the above cycle of operation, as it has a higher starting and accelerating torque.

In my opinion, all such machines as are not stationary, having several motors to be supplied with current from a collecting system, and are usually started, stopped and plugged under load, e.g. charging, pushing etc., should be direct current, while motors that are running at constant speed, such as Line Shafts, Conveyors, Hammer Mill Motors etc., should be A.C. A double system, using both A.C and D.C. as in our Tata's Plant, seems to be the best solution.

In conclusion, I may say that with the facilities offered by the Electric drive, it may be quite possible, before long, that an Iron & Steel Works with its Byproduct Coke Plant may be so designed as to coke all the coal required in Plant and to use the resulting products for heating purposes, so that no other tuel would need to be brought in there would be sufficient coke for the Blast Furnaces. the small coke and breeze would be used under the Boilers, Coke Oven gas and tar in the Open Hearth Furnaces, the Blast Furnace gases in Stoves and Gas Engines; and the finished product of steel would be turned out with complete economy of the heat contained in the coal*

WOMEN'S WELFARE ORGANISATIONS IN BENGAL*

By SAROJNALINI DUTT, MB.E.

SINCE coming to Calcutta I have associated myself with a few women's movements and I find that there are many European

*This article was written a few months before the writer's lamented death. Her husband Mr. G. S. Dutt, Los., has, at her Sradh ceremony held on the 8th March, 1925, made a donation of rupees one thousand to be placed at the disposal of a Bengal Mahila Samiti Federation if it is organised on the lines suggested in this article. and a few Indian Ladies who are doing most admirable work. But most of the work that I have seen and heard of is being done chiefly for the benefit of the inhabitants of Calcutta. I have no doubt that this is very important work which has to be done. I myself will be very pleased to do anything that is in my power to help such work. But at the same time I think some of us should

take up work which will help the muffassil as well.

This task is no doubt very difficult and may not appeal to many ladies residing in Calcutta. But it is very important work and unless it is taken up by some of us, there can be no real improvement in the country.

I have lived the greater part of my life in the muffasil and have seen a great deal of district and village life in Bengal. It is probably for that reason that I have always felt for our sisters in the villages and districts who are very much more backward in every way than the dwellers in Calcutta and I think it is our duty to help them I have tried to do a little in my humble way for the uplift of our sisters in the villages and towns of the muffasil where I was living till only recently Much good can be done to the ladies in the muffassil by bringing them in contact with wider ideas and by giving them a wider vision and I think it would be very useful if we could have a big organisation in Calcutta to help the small organisations already existing districts.

I do not think that our sisters who have lived most of their lives in the cities can realise the colossal work that is waiting to be done in the villages and towns of Bengal I am sure it is a very difficult task but I think it should be tackled. There can be no real improvement in the country unless we can educate, and widen the ideas of, women in the muffassil towns and villages.

I have had occasion to organise four "Mahila Samitis" in three different districts in my capacity of the District Officer's wife. One of them is unfortunately extinct, as we had to leave the district soon after starting it. The other three are still in existence One has been fortunate in getting a few ladies to take interest in the work but the other two exist only in name with a Secretary who is willing to work but requires guidance and help.

Most of the "Mahila Samitis" have, I must explain, been some time or other started by wives of officials. It is for that reason that as soon as any particular lady who starts a "Samiti" leaves the district the work has to suffer unless some other sympathetic lady takes it up which is unfortunately very

There are many districts in Bengal where there are "Mahila Samitis" in existence already. Some are doing good work but the others—probably the majority—exist only in

name as there is no one sympathetic enough, or has the ability, to guide the work. It is therefore that I have a scheme in my mind which, if worked properly, will solve this difficulty and help to keep these scattered organisations in touch with each other and with a central organisation and supply the advice and guidance which they need

For the benefit of the ladies who have no idea as to what a Mahila Samiti in the districts and villages if organised properly can do, I will give a brief account of the work that the Bankura Mahila Samiti has done and is still doing and can do if further organised. the Samiti with about 80 We started members who paid Re 1 annually for membership There were a few generous ladies however who voluntarily paid more than Re 1 The Samiti consists of an Executive Committee with a President and Vice-President and Secretaries and about a dozen members. The Executive Committee meets once a month and discusses business and accounts

The General Committee meets once in two months All carriage expenses are paid by the Samiti as otherwise no ladies would come. As funds are short the general meeting cannot take place more than once in two months. These meetings are mostly of a social nature. At the same time it is the intention of the Samiti to impart education and with this view interesting lantern lectures form a gatherings and feature of these social have been much appreciated. An exhibition of Mrs Bentley's cinema film was arranged Bankura Samiti at their last general meeting and this I learn was very much appreciated by the ladies. The Samiti has presented gifts of articles such as cooking utensils and brass coockery, etc. for the hospitals in the town which did not possess any such things and the poor patients had to he fed in shal leaves and earthen pots before the Samiti presented them these thins. Articles of furniture, clothes and eatables, etc., for the comfort of the patients have been presented by the Samiti The Samiti encourages educational institutions in the town by giving medals and prizes. The Samiti has taken up the difficult but important task of training dais and has also recently started a Child Welfare Clinic. I am sure that if every district and later on every village had a Mahila Samiti, much good work could be done in the country.

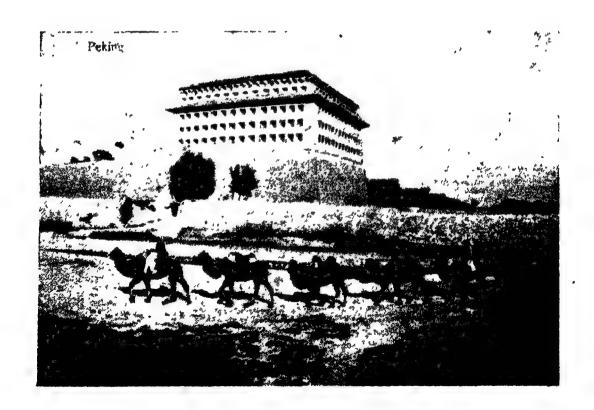

An organisation to be called the Bengal Mahila Samiti Federation (क्योब व्यक्त क्रिक

should be formed in Calcutta and should consist entirely of Women Workers.

This organisation shall have an Executive Committee consisting of helf a dozon members, a President and one or two Secretaries as may be necessary. The Bengal Mahila Samiti Federation should be prepared to give the fullest information as to how Mahila Samitis are to be formed, to furnish speakers, to supply model rules and helpful literature and to assist in securing expert demonstrators and lecturers with lantern slides if possible when required and generally to give the movement every encouragement But the Mahila Samitis should be left to manage their own affairs, control their own funds and undertake whatever work seems to the members best suited to their locality. Any one desirous of starting a Mahila Samiti in a particular district or village will be expected to write to the General Secretary of the Bengal

Mahila Samiti Federation who will put the correspondent in touch with the local Committee responsible for the propaganda wor in connection with Mahila Samitis in the province.

It may not be possible at the beginning to send out women lecturers but I know of Mahila Samilis which will not object to men lecturers. I may mention here that i the Director of Public Health be approached he may be able to help with lecturers and lantern slides, etc, whenever any Mahila Samiti requires them The Bankura Mahile Samiti had only to write to the Director of Public Health and he sent out a very capable lecturer with interesting and educative lantern slides absolutely free. The Federation should take up the work of informing the Mahila Samitis about this or arranging to send lecturers with lantern slides from the Director of Public Health.

"BURIED TEMPLES"

To that inner shrine within each one of us that sometimes we know so little about. or forget we have

To the small lamp that shines steadily in each, giving inward peace and calm-

and the hope that grows stronger as life approaches its sunset

To the individual Peace that reigns supreme—fearless of the storms that rage outside,

To the fragrant incense-offering of unconscious prayer

that escapes from every beating heart in the silence of its dim-lit walls

To the fresh flower-offerings of duty made honcy-sweet with thoughts of Love and Beauty,

To the soft murmurings of each hope-laden soul—those silent little heart-beats

of love striving to gain perfection amidst doubt and despair To the soft sad music of each grief-stricken soul that sends its sobs

in harmony with the sea and its still canopy of midnight stars

To the shadows which lurk in the far-off corners,

making the cares of life press heavily; the heart-breaks so crushing

To the filmy black cobwebs of doubt which pure inward trust clears.

To the sunshine of inner happiness that throws its clear life-giving rays of light

through its one narrow window of daily cares, making the dust

of despair and monotony, bright with a thousand colours

To the Image of Truth that is carved in the black stone of pure Ideals—and decorated in the red and gold of true Love

To the great studded door of each where is disclosed all the wondrous silent

workings of a mystery beyond consciousness

To the child mind which can enter at any time, and worship in silence at the

feet of the great Soul-Image of Truth

To the Beauty, the Knowledge,

The Power and the Good-

The Supreme Light that sparkles within like gems set in darkness—

We bow down and call upon Love to enlighten us!

ENGLISH

INTEROPUTION TO THE LITERATURE OF CHEMINS-BY F. A. Mason, M. A. (Quon) Ph. D. Coll. F. L. C., etc. Oxford Univ. Press. Press 2s

i little guide for beginners in chemical fix who require help in their sairch lies reserving their subject in extent

INDIA'S FOREST WEALTH: By E.A. Smythies, B.A. Oxford Unio, Press. Price Rs. 2-8. pp. 131 with 12 illustrations.

A fitting companion volume to that excellent fittle book, India's Mineral Wealth by Mr. J. Coggin Brown. A great deal of information has been condensed into the limited space available and yet the result is quite palatable to the lay reader who has a thirst for information regarding India.

K. R. C.

Prayati & India and Other Sonners: By Nation Mohan Chatterjee. (Published by the author. 14-A Haro Kumar Tagore Square, Calcutta. Re. 1 sach)

We extend a cordial welcome to these two promising volumes of poetry, though the former is not in metre and the latter has to make some more advance in the assimilation of the sonnet-form before it can reach a high level of poetic excellence. Mr. Chatterjee has a good command of poetic diction and has many a pleasant sentiment worthy of expression in verse. Here is part of his address to India which is responsible for the title of one of the volumes. for the title of one of the volumes:

Thou hast for ever spoken to our souls-Now with a voice that thunders from the hills, Now o'er the tumbling ocean waves it rolls, And now it pours bewitching notes and thrills From song-birds breasting through the stainless

blue, And thou hast stirred to depths my wondering heart.

Bengal has always stirred her children to fine emotional fervour and one of the most successful sonnets of the author is addressed to her.

While all the world on wings of wind doth fly, And fills the heaven's vault with tumult wild, Why dost thou linger with a tearful eye And hold still closer thy sweet pratting child? While men are seeking gold in distant lands, ... What dreams enchain thy soul, what timidness hope

Builds out of all thy days a heaven on earth Where all happiness gathers round the hearth?

It is clear in many a place that Mr. Chatterjee is still not a very practised hand in the craftsmanship of verse. A fine line like "this adamantine throne impearled by suns" can be followed with such poor poetry as 'blessing runs' in the next line which is also unfortunately the culmination of a sonnet. Regarding the prose-lyrics of Pravats: it is only necessary to say that greater economy of only necessary to say that greater economy of words and concentration of poetic feeling would have achieved better results.

P. SESHADRI.

ROADS TO FREEDOM AND SLAVEBY: By Ratish Mohan Agarwala, M. A., LL.B. Garga Book Depot, Meerut. Price Rs. 1-8-0, 1924.

The author is an attentive student of economics. He does not pretend to originality, and admits that to do full justice to the task undertaken by him he would have to wait six or seven years to be spent in study and research. That task is to show that liberal socialism furnishes the correct remedy for the evils of capitalism, while it retains as much of individualism as is wholesome for society. This liberal socialism, being a compromise between individualism and communism, is explained by him at some length with reference to its finantiold relations, viz., its relation to religion, marriage, general morality, private property, etc. The author deprecates laissez fairs in legislation as well as excessive legislative interference with the private liberty of individuals. He devotes considerable space to Bolesevism in theory and practice, as well as syndicalism. Though young, the author is clear-headed, but it must be said that the task is too hard for a novice. The value of the book lies in the fact that it will be of great help to students of econo-The author is an attentive student of economics.

mics who want clear definitions of terms used in their text-books on the subject. It is to be regretted however that the proofs have not been attentively and patiently examined by the author, who has followed the professional note-book method, avoiding all attempts at elegance of expression and literary charm. On the whole, the book holds out great promise regarding the author's career as a writer on economical subjects. The book is well bound, though not well printed. RIBLIOPHILE.

CURRENCY AND EXCHANGE IN INDIA: By B. B. Bhatnagar, M. A., F. S. S. Published by Ramnara-yan Lal, Publisher and Book-seller, Allahabad, Pp. 139. Price Rs. 2 (1924).

The problem of the Indian currency is complicated by the peculiar trade relations existing between India and England, to which bulk of its tween India and England, to which bulk of its foreign trade goes, and more especially by the political ties binding them. In this handy book of about 140 pages Mr. Bhatnagar of the Allahabad University has made a vivid exposition of the problems affecting currency and exchange in India. About 100 pages of the book are devoted to a succinct but graphic history of the vicasitudes of the currency legislation and the exchange rate between the currencies of India and England during the closing decade of the last century and the first the closing decade of the last century and the first quarter of the present century, and the remaining pages have been devoted to his suggestions for a better currency system for the country.

Mr. Bhatnagar has rightly shown that up to the beginning of this century the Government had in yiew the policy of introducing a gold standard in view the policy of introducing a gold standard in India, but suddenly when the circumstances had been so shaped as to make it an accomplished fact, the policy was changed with "a complete disregard of the welfare of Indian trade and commerce", and in order (1) to make India purchase silver to benefit the big silver dealers of England, and (2) to build a gold reserve out of the profits of additional coinage of rupees to be kept and lent in England at favourable low rates of interest. He stoutly controverts the view that "rupees were coined (in the beginning of the century and onwards) because people did not want gold" and affirms that "the real reason of it (this view) lies in the British anxiety to prevent gold from coming to India and not in India's refusal to accept it".

As regards his suggestions, although Mr.

British anxiety to prevent gold from coming to India and not in India's refusal to accept it".

As regards his suggestions, although Mr. Bhatnagar has a fling at the advocates of the gold standard in India, who mostly hail from Bombay, his own scheme differs from them only in that he advocates festina lente and a restricted use of the gold currency. He entirely agrees with the recommendations of the Fowler Committee, the easence of which is that "Gold is kept in the reserves of Hanks or Government Treasuries and is made obtainable as far as possible only for making payments abroad. It is not denied to the people legally but the whole thing is so managed that people take as little of it as possible. Both gold and paper are made unlimited legal tender, while the subsidiary coinage is made tenderable only up to a limited amount". With this idea of his (p. 111) there will be few to quarrel not even from the point of view of the Indian States to a considerable extent.

The book is remarkably free from printing mistakes. We have discovered one only vis. in the foot-note to page 120 infline 5 from the bottom the word "Excess" should be "access".

embellished with the necessary statistics, which e most useful both for understanding the text of generally the subject. The get-up of the book commendable. It is written in simple running yle and we strongly recommend it both to the pert, as it is a hand-book of reference and to the udent for a genuine understanding of the real sues involved.

M. V. K.

ENDOCRIN GLANDS: By Chandra Chakraberty. ublished by Omin & Co., New York, 1923.

The study of endocrin glands and the influence The study of endocrin glands and the influence their secretions on the metabolism, growth and welopment of the body and mind form a subject absorbing and fascinating interest to the Medical rofession at the present moment. It is no exagnation to say that a correct diagnosis of many seases cannot be arrived at without a clear underanding of the true physiological functions and thological changes of such glands as the thyroid, a suprarenal, the pancreas, the pituitory body and few others of a similar nature. There was a time, it very long ago, when nobody understood the aportance of such structures which were considered superfluities and some people went so far as to tery long ago, when nobody understood the portance of such structures which were considered superfluities and some people went so far as to restion the wisdom of Nature in placing them thin the human organism. A few of them such the suprarenal, were vaguely associated with it incidence of certain peculiar diseases but their use import was not understood. Times are changed at the mass of information now available as a result of carefully conducted experiments on the human and animal subjects in regard to the per and hypo-activities of the endocrin glands as thrown considerable light on the ill-understood iology of many a serious disease to which the man body is subject and for the successful reatment of which the medical man has hitherto can practically helpless. Let us take a concrete se. The relation of the pancreas with incidence glycosuria was long known, as its extripation as always followed by the appearance of sugar urine. But it was not known until recently at, besides the external secretion, there was such thing as the internal secretion, there was such thing as the internal secretion of the pancreas hich exercises an effective control on the amount sugar present in the blood and whose deficiency absence in the animal organism leads to defective irrohydrate metabolism and induces Diabetes, he result of a careful study of the functions of the pancreas of recent times has culminated in the iscovery of that wonderful medicine, Insulia, hich is present in the internal secretion of the rean, and this has placed in the hands of the edical Profession, a most potent remedy to successfully combat the serious complications of Diabetes. In this handy volume of 150 pages, the author as incorporated much useful and interesting formation regarding the structure and functions of less endocrin glands and the pathological changes which they are subject. It will be found help if to the busy practitioner for ready reference.

CHUNI LAL BORN

Yoga as Philipper and Religion: By Dr. urendraugh Das Gusta (Truebner's Oriental Series) ublished by Kapas Poul, Trouch Truebner and Co., ondon and E. P. Dulton & Co., New York. Pp. 20 200. Prins 10s. 6d.
In this best there are 15 chapters: vis. (i) rakrill, (ii) Philippers. (iii) The Reality of the Ex-

110 730

ternal World, (iv) The Process of Evolution, (v) The Evolution of the Categories, (vi) Evolution and Change of Qualities, (vii) Evolution and God, (viii) Mind and Moral States, (ix) The Theory of Karma, (x) The Ethical Problem, (xi) Yoga Practice, (xii) The Yogangas, (xii) Stages of Samadhi, (xiv) God in Yoga, (xv) Matter and Mind, and also an Appendix on Sphota-vada and an Index.

The first seven chapters form the first book of the treatise, dealing with Yoga Metaphysics and the last eight chapters form the second book dealing with Yoga Ethics and Practice. This book does not deal with any of the 'mystical practices nor does it lay any stress on the performance of any of those miracles described by Patanjali. The scope of this work is limited to a brief exposition of the intellectual foundation—or the theoretical side—of the Yoga practices, consisting of the philosophical, psychological, cosmological, ethical, religious and other doctrines which underlie these practices' (ix).

Metaphysically, the Samkhya and the Yoga are usually classed as one system of philosophy, though there are certain points of difference. Our author has discussed the subject in this book and we quote below his summary "of all the points of difference between Yoga and Samkhya". Says our author, "the admission of Isvara by the former and the emphasis given by it to the Yoga practices are the most important in distinguishing it from the latter. It seems probable that Isvara was traditionally believed in the Yoga School to be a protector of the Yogins proceeding in their arduous course of complete self-control and absorptive concentration. The chances of a person adopting the tonally believed in the Yoga School to be a protector of the Yogins proceeding in their arduous course of complete self-control and absorptive concentration. The chances of a person adopting the course of Yoga practices for the attainment of success in this field does not depend only on the exertions of the Yogin, but upon the concurrence of many convenient circumstances such as physical fitness, freedom from illness and other obstacles. Faith in the patronage of God in favour of honest workers and believers served to pacify their minds and fill them with cheerful hope and confidence which were so necessary for the success of Yoga practices. The metaphysical functions which are ascribed to Isvara seem to be later additions for the sake of rendering his position more in harmony with the system. Mere faith in Isvara for the practical benefit of the Yogins is thus interpreted by a reference to his superintendence of the development of cosmic evolution. Samkhya relied largely on philosophical thinking leading to proper discrimination as to the difference between prakrit and purusha which is the stage immediately antecedent to emancipation. There being thus no practical need for the admission of Isvara, the theoretical need was also ignored and it was held that the inherent teleological purpose (purusharthata) of prakriti was sufficient to explain all the stages of cosmic evolution as well as its final separations from the purushas.

Samkhya does not admit the existence of God and considers that salvation can be obtained only by a steady perseverance in philosophical thinking and does not put emphasis on the practical exercises which are regarded as essential by the Yoga. One other point of difference ought to be noted with regard to the conception of avidya. According to Yoga, avidya......means positive untrue beliefs such as believing the impure the impure.

tion of the difference between prakriti and purusha. Both Samkhya and Yoga admit that our bondage to prakriti is due to an illusion or ignorance (aridya), but Samkhya holds the akhyan theory which regards non-distinction of the difference as the cause of the illusion, whereas the Yoga holds the anyatha khyan theory which regards positive misapprehension of the one as the other to be the cause of illusion" (pp. 163-1641).

The author has also described "the difference in the course of the evolution of the categories as held by Samkhya and Yoga. This also accounts for the difference between the technical terms of Prakriti, Vibriti and Prakriti-Vibriti of Samkhya and the Visesha and Avisesha of the Yoga. The doctrine of dharms, lakshana and avastha-parinama, though not in any way antagonistic to Samkhya, is not so definitely described as in the Yoga. Some scholars think that Samkhya did not believe in atoms as Yoga did. But though the word paramanu has not been mentioned in the Karika it does not seem that Samkhya did not believe in atoms as Yoga did. But though the word paramanu has not been mentioned in the Karika it does not seem that Samkhya did not believe in atoms. Bhikshu considers the word Sukshma in Karika 39, as referring to the atoms. There are also slight differences with regard to the process involved in perception. On almost all other fundamental points Samkhya and Yoga are in complete agreement, (pp. 164-165)

Our author has not in this book discussed the relation of the Yoga philosophy to other Indian

Our author has not in this book discussed the relation of the Yoga philosophy to other Indian systems of thought. This has been, we have been given to understand, dealt with by the author in another book which, however, has not as yet been published. We are eagerly waiting for the publication

published. We are eagerly waiting for the publication of the book.

Our author's expesition is based, not upon second-hand materials, but upon original commentaries of Vyasa, Vacaspati, Vijnan Bhikshu and other scholars. His treatment of the subject is clear, logical and scholarly, and we doubt not the book will be appreciated both by scholars and laymen. It will be a standard book on the Yoga philography. sophy.

MAHES CHANDRA GHOSH.

HISTORY OF KERALA: By K. P. Padmanabha Menon. Published by Mr. Padmanabha Menon, Dinoans' Road, Ernakulam. Pp. 562. Price Rs. 8.

Malabar is a land of backwaters. This is true not only in the sense of its geographical features but equally of its cultural and political history. Till the railways penetrated the isolation which the Western Chats had ensured it from the beginning, Kerala was ethnologically, culturally and politically a different unit from the other parts of India. It hardly ever comes into the main currents of South Indian history. Except when Vira Ravi Varma, King of Quilon taking advantage of the anarchy that followed the invasion of Malik Katur, conquered the Pandyas, Cholas and other well-established monarchies and carved out for himself an empire with Kanchivaram as its capital, there is no occasion in the history of Dravidian India when Kerala bears any part in the common political evolution. But this must not be taken as evidence of Malabar living all through ages a life of its own embracing within itself the diverse culture of the Phoenicians, Jews, Arabe, Syrian Christians and finally the Europeans. Its affinities and associations were with the sea-faring peoples and we have surble evidence of class and ministernated inter-

course between Malabar and the Western National till the time that the Portuguese annihilated the see-power of the Zamorin. Dr. Elliot Smith in his Ryland's Library' Memoirs on the Migration of Culture has conclusively proved the influences that came in the wake of the Phoemicians to Malabar. The allusion to Dravidian words in the Old Testament is well known and a persistent tradition tells us that the last Emperor of Malabar accepted Islam during the life-time of the Prophet and left for Mecca to die there. The arrival of the Apostie St. Thomas at Malankera in A. D. 52 followed by such adventurous missionaries as Thomas of Cana in the 4th century and Mar Sapor and Mar Peroz in \$23 who could be considered the founders of the flourishing Christian Church of Malabar is proof enough of the cirect communication that existed between Kerala and the countries on the other side of the Arabian Sea. During the time of the Baghdad Khalifs and in fact up to the discovery of the sea-route by Vasco da Gama, the Moors held the sovereignty of the Arabian Sea, and their association politically and commercially with Malabar was intimate. In Batuta, Marco Polo and many other equally famous travellers of those times bear witness to this fact. Since the arrival of the Portuguese and following them the Dutch, Malabar became the scene of considerable commercial rivalry especially as the control of Malabar trade meant the monopoly of pepper and cardamom.

Malabar has not so far attracted the attention of Indian historical scholars. Even South Indian historical scholars. Even South Indian historical scholars and the conditions under which he worked made it impossible to do it satisfactorily. His History of Kerala, does not attempte dither and the conditions under which he worked made it impossible to do it satisfactorily. His History of Kerala, does not attempte either a continuous narrative or a detailed study of any important epoch. It is merely a collection of notes on different subjects ranging from place names to a description of

on different subjects ranging from place names was a description of the arms used by the Nairs in war. These rotes were meant to explain the obscure parts in Visscher's "Letters from Malabar," and they are jumbled tegether in this book by the editor under the pompous but utterly misleading name of "The History of Kerala". Under the circumstances it is only to be expected that these Notes are generally 'scrappy' and occasionally discursive-Visscher was a Dutch Chaplain at Cochin who regaled his family at home with a descriptive account of the country in which it was his lot to serve. Though a book of some value in matters relating to the Dutch administration of that port, and the relations of the Netherlands East India Company with the local princes, the "Letters" are not of much use for the general history of Kerala. On the social questions of the time, Visscher is altogether unreliable, and on political events before his time, he only stands home what he had heard in the bazaars. Mr. Padmanabha Menon simpotated this work and brought to bear upon his characteris.

dealing with all kinds of subjects. Even so far as the more elaborate. Notes, are concerned, Mr. Padmanable Menon's attempt seems to have been to bring bogether conflicting views of various travellers without attempting either to discuss their reliability as historical evidence. The publications of the Haklyut Society afford ample scope for scholarship of the kind and Mr. Menon seems to have been content with noting down the views expressed by these observers. This is hardly an acceptable historical method.

The most interesting portion of Mr. Menon's work deals with the popular institutions in Malabar. The existence in ancient India of political institutions through which popular opinion was brought to bear on monarchs is a well-es'ablished fact now, but it is doubtful whether anywhere else in India they attained that stage of political importance or persisted for so long a time as in Malabar. There were two distinct experiments—one among the Nambudris and the other among the Nayars, and there is sufficient material available about both which make their history fascinating in the extreme. The first in point of time was the theocratic republic which the Nambudris wanted to establish. The whole Brahmin community which was spread over Malabar consisted of 64 gramas. These were constituted into 4 provinces over each of which was a governor elected by the members of all the gramas in assembly. Over these governors was a Rakshapurushan, also elected, whose duty it was to see that the governors and Rakshapurushans began to oppress the people who met together in a general assembly and decided to invite rulers from Pandya and Chola countries to rule over the country for successive terms of 12 years.

The second system continued until very recently and is of greater interest as it was essentially popu-

The second system continued until very recently

The second system continued until very recently and is of greater interest as it was essentially popular. The following summarised extract from Mr. Menon's Note on the subject will be found interesting. "The national assemblies form a peculiar feature in the early political organisation of Malabar.... The Keralotpatti refers to these assemblies or Kuttams. There were three of this sort and these were composed of representatives of the various divisions into which the country was divided...

(1) Kuttam of the Tara or the village, (2) the Kuttam of the Nadu or district, (3) the Kuttam of all Kerala. The last or the National Assembly under ordinary circumstances assembled only once in 12 years and when the whole Kerala assembled it did so at Tirunavaye on the banks of the Ponnani river on the occasion of Mahamakam festival... Of the three, the Kuttam of the Nadu was the most important. It was a representative body of immense power which when necessity existed set at naught the authority of the Rajah and punished his ministers... The great Kuttam or the national assembly was held once in 12 years. Originally it was presided over by the Valluvanad Raja which arrangement continued until the 12th or 13th century when the Zamorin becoming supreme in Kerala assumed the presidency of the assembly. The last celebration of the feetival took place in 1743 and the political struggles that convulsed Malabar soon after made it impossible to celebrate it any longer. Ordinarity the next celebration should have some on in 1745 but Hyder's invasion of Malabar made it impossible. With his attack the assembly and the

Rajahs and chieftains returned, they came back not as the feudal chiefs of old but as the deputies of an all-powerful suzerain."

Thus these representative institutions continued up to the time of British occupation and it is only the consolidation of British power that caused the breakdown of so powerful a system based on the tradition and history of the Malayali race. These and other interesting phases of institutional evolution require scientific investigation. Mr. Menon's book does not—in spite of its name—pretend to undertake any such work. In fact the editor did a distinct disservice to this useful collection of interesting notes by calling it the history of Malabar. Much of the matter could have been compressed and a few of the Notes which have not even antiquarian interest, left out. As it is, the book is almost an exhibition of futile scholarship though there are many Notes here and there which evidence paintaking and methodical study. There are a few pictures in the volume most of which are reproduced from Mr. Anantakrishna Aiyar's well-known anthropological work on Cochin Castes and Tribes.

K. M. Pannear.

K. M. PANIKKAR.

ARA DI VAR (GUBU NANAK'S ODE): Translated by Teja Singh. M.A., Professor, Khalsa College, Amritsar. Price 1-14. To be had of Secretary, Sikk Tract Society, Khalsa College, Amritsar.

It is a translation, with an Introduction and Notes, of ASA-DI-VAR, the great morning service of the Sikhs. Prof. Teja Singh has given to the English-knowing world a very readable and con-nected rendering of this great hymn of Guru Nanak.

Besides enjoying in it the sublime ideas of the Besides enjoying in it the sublime ideas of the great prophet about man and his work in this world, we have here also a reasonable explanation of some of the greatest difficulties about Sikhism, such as the institution of guruship and its connection with the principle of organisation among the Sikhs, the place of forms and symbols in their religion. Coming from an educated Sikh who is engaged in the teaching of religion, these views have got an especial value to the student of comparative religion.

Further Milestones in Gujarati Literature: By Krishnalal Mohanlal Jhaveri, M.A., LL.B., J.P., Chief Judge, Presidency Small Cause Court, Bombay. N. M. Tripathi and Co., Bombay. Rs. 4. Cloth. Gill letters. Pp. 279+xiv, with a portrail of Ranchhoddas Girdharbhai, "the moneer of vernacular education in Gujaral" and a facsimile of his letter showing how the Education Department worked in the early fifties of the last century.

This book deals with the modern period of Gujarati literature, the older period having been treated of in the author's "Milestones in Gujarati Literature," published in 1914. It is neatly got up

Literature," published in 1914. It is nestly got up and is almost free from misprints.

We have no knowledge of the Gujarati language and literature. But as in spite of that disqualification, we have been led on by the author to read his book with interest from cover to cover and we have thereby got some idea of modern Gujarati literature, we cannot resist the conclusion that it is an excellent handbook. The style is elegant and lucid. We are not 'qualified to judge of the correctness or otherwise of the opinions the author.

the Muslims, who are far more numerous than the Parsis, According to Mr. Jhaveri, in Gujarati fiction the Parsis carry the palm on its humorous

we are sorry to read the author's paragraph on Gujarati poetesses. Says he:

"Poetesses too have flourished during this period, but not quite to that extent that is found the same too quite a lot of them period, but not quite to that extent that is found in the older times. Here too quite a lot of them contribute to the monthlies, but their number is necessarily more restricted than that of men. The quality of their work is decidedly inferior; beyond uttering a few platitudes they have done nothing, they have conceived nothing original. Their work is a mere fifth-rate copy of the work of their brethren. Not a single female writer has reached the height of Mirabai; none can reach even to her knees. There are, however, some ladies who have written poems of some merit."

The author tells us that a very large part,

even to her knees. There are, however, some ladies who have written poems of some merit."

The author tells us that a very large part, more than half, of the Guiarati literature of flotion consists of translations: "in a majority of cases it is easier to translate than to write an original work. Translations from Sanskrit, Bengali, Hindi and Marathi, even from Urdu, and by far the greatest number from English, bear out the above observation. The translators naturally fall into two categories, Hindus and Parsis. There are a very few Mahomedans, and their number is negligible."

"Hardly has a good book in Bengali remained untranslated into Guiarati. A great many of the novels, depicting scenes and narrating incidents from the history of Maharashtra, given away' as presents to their subscribers by the "Guzarati" of Bombay and the two other weeklies of Ahmedabad are founded on Marathi works and are more or less translations. Marathi itself has not yet advanced far in this branch of literature. It is far inferior to Bengali, and even to Guiarati, and is only now beginning to make headway."

The author says in conclusion:

"An endeavour has been made in the preceding pages to trace the rise of Guiarati literature, from

An endeavour has been made in the preceding cages to trace the rise of Gujarati literature, from the time that education on the lines imparted in the country of our rulers began to be imparted in Gujarat, and the early as well as the later effects of such instruction on the different departments of our literature.....Once it became established in schools and later in colleges, its ideals of liberty line for the last twenty-five years or so. Looking to the rapidity with which everything is moving all over the world after the great war, it is possible to predict for our ideas in literature

certain line of development. We also are caught in the maelstrom of disturbance and democracy; none knows where we shall land. We have therefore rested content with presenting the different stages in our literature, which in their turn reflect the different stages in the line of our progress, political, social and economic. We have nothing to be ashamed of in our past record. May God, in the years to come, make its pages still better and brighter!"

THE POCKET OXFORD DICTIONARY OF CURRENT ENGLISH: Compiled by F. G. Fowler and H. W. Fowler. Oxford University Press. Pp. xvi+1000. Rs. 4-8. Cloth. Gilt letters.

It is a marvel of compression and usefulness. We keep it constantly on our table and find it quite satisfactory for all ordinary purposes.

For school boys and girls we do not know of a

better dictionary of the same size.

THE JAPAN YEAR BOOK: COMPLETE CYCLOPARDIA OF GENERAL INFORMATION AND STATISTICS ON JAPAN AND JAPANESE TERRITORIES FOR THE YEAR 1924-25: By Y. Takenobu, Professor at the Wasedo University and late of the "Japan Times." Fighteenth Annual Publication. The Japan Year Book Office, Haramachi Sanchome, Ushigome, Tokyo. Pp. 1012.

There are, besides, one coloured general map of Japan, Korea and Manchuria; coloured plan of Reconstruction of Tokyo; coloured plan of Reconstruction of Yokohama; a coloured map showing the depth of the Bay of Sagami as affected by the Great Earthquake; another coloured map showing the epicenters, the isoseismals and the epicenter of the principal after-shocks of the great Sagami-Sea-earthquake; and coloured plan showing the sections burned in Tokyo.

This edition of the Japan Year Book has been called the Earthquake Edition, and contains 270 pages of reading-matter telling all about the earthquake and its effects, besides the plans and maps mentioned above.

mentioned above.

The Japan Year Book has been all along a very useful book of reference, indispensable to all journalists, statesmen, politicians and others interested in public affairs. The present issue is an improvement on all previous ones. It fully deserves a world-wide circulation.

LETTERS FROM ABROAD: By Rabindranath Tagore-S. Ganesan, Madras. Pp. 156. Cloth. Gilt letters. The get-up is good.

Mr. C. F. Andrews writes in the preface that these letters were written to him by the poet each week during a long absence from the Asram at Santiniketan.

Santiniketan.

Like the English translations of many of the poet's works which have been published by Messra. Macmillan and Co., in book form, many or perhaps all of the letters comprised in this book originally appeared in The Modern Review. It is, therefore, not necessary for us to commend this book to the acceptance of our readers, who know the value and charm of the letters. It is only necessary to draw attention to the fact that these letters were written in English by the poet, and therefore give a better idea of his English style—and, may we add, his pervasive humour?—than many of the translations, done by himself or others, excellent as most of the latter are.

In going through the letters again, it occurs to

my the

us that they should be translated into Bengali and other vernaculars,—they are so full of wisdom, spiritual, moral, educational and (our politicians will pardon us for adding) political. We mention Bengali in particular, because we Bengalis seem to labour under the wrong notion that the poet has given us all that he had to give through the vehicle of the Bengali language and that all his English writings are only repetitions in a foreign garb. Some are no doubt translations, but many are original productions. are original productions.

Some Japanese Artists: By Yone Noguchi.

The author of this book has dealt with a subject of no little value. Some of his wise remarks such as, "Enter into nature and forget her," "Signature to a Japanese Artist is a part of the picture and a matter of serious thinking, for the balance, to perfection is the union of reality and imagination etc," are of rare critical merit. From ages man is born with an instinct to love the beautiful. The art in a man gradually developes or decays according to the taste he acquires from the society he keeps. Our ideas are often misdirected towards the cheap and the vulgar place, than directed towards real appreciation of art. Only a real artist and a critic can save the society from degeneration. The great poet and author of this book has a true admiration for art, no doubt, but we are disappointed by the poor reproductions in western halftone process, which practically have failed to carry any idea of the famous originals. Still, the Fowl among Hemp Palms by Jakuchu, proves the magnificent personality of the artist and traditional atmosphere in it. Yestoku's screen is a marvellous execution with Chinese influence on the bold lines of the figures. After all with much regret we are compelled to say, that the great poet with so much keen artistic sense in him, has misrepresented his country's works by using mechanical western blocks instead of Japan's woodcut blocks which have established a name for themselves in the world of art.

The Psychology of the Free Carlo: By The author of this book has dealt with a subject

THE PSYCHOLOGY OF THE FREE CHILD: By Christabel M. Meredith. Published by Constable & Co., Ltd., London. Price 5 shillings.

In this book the author deals with the subject of education of children between the ages of three and twelve. The book advocates that the three R's. History and Geography, Handwork and Modelling, Drawing and Painting, Music and Dancing, are all to be taught indirectly by creating an "environment which, for children of this age, is both more possible and more important than direct teaching or training". The desirable conditions in home and school-rooms to foster a spirit of self-dependence in school-rooms to foster a spirit of self-dependence in severyday activities and to form habits which will persist after their education is over have been discussed in the book in an interesting way. The author advocates omission of a definite lesson time. author advocates omission of a definite lesson time. This however does not necessarily mean the omission of all the subject-matter which would ordinarily be included in lessons. Rigid time-table too often makes things uninteresting to children. Training in self-dependence and general helpfulness is seldom effective if it is made uupleasant. Therefore "definite lessons are at any rate for young children (below nine years of age), of much less value intellectually than free occupations because they can hardly ever have the same spirit of self-directed.

children should not be too rigid, it should be so drawn up that children might do a certain task arms day for a short period and that other things should be studied by all teachers of

woung children.

J. M. S.

HINDI.

Hindi Lorokti Kosa: A Dictionary of Hindi Proverbe: By B. Bishambhuranath Khetri Price Re. 3-8, cloth bound Rs. 4, to be had from the author, 39 Harrison Road, Calcutta.

It is not the dexterous arrangement of thousands of beautiful proverbs but the incidental insersands of occurring proverbs but the incidental insertion of stories pertaining to the creation of the same, and their masterly elucidation that constitute the true achievement of the author.

The giving of well-chosen quotations from the renowned poets of the past to exemplify the proper name of various proverbs has greatly facilitated the task of readers and has made the whole thing highly useful.

A proverb is to speech what salt is to food?

8-27

4.

A proverb is to speech what salt is to food': A proverb is to speech what salt is to food':
therefore the book, in our opinion, is not only of a
great help to students and scholars, writers and
noets but also to all readers and public speakers,
specially at this transitional period, when great
minds are suggesting to make Hindi the lingua
france of India.

The author of such a useful book has undoubtedely rendered a signal service to us all in
general and to the Hindi world in particular. We
offer our heartiest congratulations to the author

offer our heartiest congratulations to the author and entertain high hopes that the book will be appreciated by the public.

GUJARATI.

KAYYA PRAKASH. PART I: Translated by Ram Narayan Vishnoanath Pathak, and Rasiklal Chhota-lal Parikh, printed at the 'Navjivan Printing Press. Ahmedabad, Thick card bound. Pp. 116. Price Rs. 1-8. 0 (1924)

As observed in our prior observations on the publications of the Gujarat Puratattva Mandir, it has been doing a lot of useful work. This fine translation of Mammat's Kavva Prekash, Ullas 1-6, will be appreciated fully by those who are acquainted with the excellences of the original. The preface is a practical piece of writing, and it have proper note of some of the excellences. takes proper note of some of the erotic illus-trations in the text, which cannot be defended at

DEALGRAPADA: By Dharmanand Kocambi, and Print Narayan V. Pathak, printed at the Navjivan Printing Press, Ahmedabad Thick card bound. Pp. 156. Price Rs. 1. 0. 0. (1924).

This is another production of the Puratattva Mandir. As a scholarly translation of this ancient religious book of the Buddhistic creed into Gujarati, it stands by itself, and the way in which it is added with explanations and an erudite preface, does great credit to the culture of their writers.

Mahan Napoleon; By Narmadashankar Buk shankar Pandya. Pp. 797; with pictures. Oloth bosmi Price Re. 3. 0. 0.

GIRDRAR KRIT RANATANA. Pp. 749, illustrated, cloth bound, price Rs. 2. 8. 0.

AKHA NI VANI. Pp. 446, cloth bound. Price Ro. 1.10. 0.

BANKIN NIBANDHA-MALA: By various translators. Pp. 187 cloth bound. Price Re. 2. All printed and published by the Society for the Encouragement of Cheap Literature, Ahmedabad. 1924.

Enough praise cannot be given to the Society for having published all these four substantial volumes comparatively so cheaply. They are all second editions, the first ones having been sold off in a short time. As second editions, they show considerable additions to the text and fresh research also: the preface to the Ramayana is very interesting as it shows that in some parts of Guiarat the unity between Hindus and Mahomedans is so close that Borah Patels are found singing and explaining as story-reciters mythological poems of the Hindus, such as, the Okha Haran and the Ramayana.

NIRMALA: By Chaturbhuj Manakeshwar Bhatt. Printed at the Guyarat Printing Press, Ahmedabad Paper cover. Pp. 234. Price Re. 2. 0.0, (1924)

The object of the writer of this short novel is to point out the evil and work for the eradication of the numerous subcastes and subdivisions into which the four primary castes have drifted, and, in consequence, scarcity of eligible brides and bridegrooms. He is an advocate of the original Varnashram Dharm. He is not a novice in literature, and consequently says what he has to say with efficact and unaggressively. He does not go "the whole hog and want to abolish the caste system. He standimidway, and even if the ideal for which he stands he achieved, much of the evil from which our society suffers at present would surely disappear. His three heroines are well portrayed.

SHANGHANE KOM: By "Koipan" ("Anyone" Printed at the Deshi Mitra Printing Press. P. 185. Cloth bound. Price Re. 2. 0. 0. (1924)

The title means, A Conch and a Shell. It is described by the author to be a comedy in three acts, and it deals with three social questions of importance, viz. marriages of old men with your brides, the sale of the latter, and widow remarriages in placement, though often The humour in places is pleasant, though oftene coarse. He has however been able to make h observations effective and piquant. K. M. J.

TAMIL.

GHANDHI PURANAN, PART III: By Srimathi Pa dithai Achdambikai Ammal. Thurupathiripuliya Pp. 64. Prics 12 as.

The talented authoress has kept up in this per also the highly pleasing style of Parts I and She is evidently mistaken when she means Hind by the word Indians. She does not seem to knot that the hierarchy of caste has no place in it twentieth century politics.

INDIAN PERIODICALS

Russian Muslim Women's Inspiring Move

To The New Orient of Lahore Mr Abdul Qayyum Malik has contributed an informing article on intellectual and political revival among Russian Muslims, from which we extract below some passages relating to the work done by Russian Muslim women

By far the greatest, the most significant and most far-reaching feature of this Russian awakening is the noble and worthy part played by the Russian women in the up-building of a new Tartar Russia. In order to ensure the success of the new movement for more political rights and more extensive popular education it was found necessary to make the masses, if not educated, at least literate While men were engaged in directing other phases of the movement, leading women took upon themselves the duty of spreading the blessings of the three R's among the younger members of the people To achieve this aim, women's committees in Azarbaijan, Daghistan and Crimea were constituted and from its head-quarters at Simfropol, the "Central Committee of Popular Amelioration" launched forth its ambitious programme, controlling hundreds of branch com-mittees in all parts of Eastern and Western Russia. A Central Executive to promote the work of these Committees was formed under the leadership of Shafiqa Ghazanfrinskia Khanum, wife of ship of Shafiqa Ghazanfrinskia Khanum, wife of Ismail Ghazanfrinski, the famous Editor of the Tarjuman-i-Haqiqat of Raghcha Serai, Crimea, with Aisha Ishkova Khanum, Dilara Bulgakova Khanum, Ilhamieli Taktarova Khanum and others as members. One of the first successes of this body was the founding of hundreds of "reading and writing schools," and recognition, by Kouraltar of Crimea, of the right of women to vote for representative political hodies. The great Oriental Conference of Baku held in September, 1920, reaffirmed women's right to participate in, and to promote, all social and nolitical work of the community and as an and political work of the community and as an carnest of this policy admitted 55 women to the membership of its Central Bureau

In another Conference held at the same place between May 26 and 31, 1922, no less than 262 women representatives were present on behalf of the Soviet of all Russias Out of these 262, the Republics of Georgia, Azarbaijan and Armenia sent 70 members, and the Republic of Daghistan and Ajaristan sent 63, so that with the exception of representatives of Armenia and Georgia all other Caucasian members were Mussalmans. In the Women's Committee, which met before the General Conference, resolutions were passed for the :—

for the :-

(1) abolition of polygamy,
(2) abolition of child marriages.
(3) abolition of "Kalym" pand by the bridegroom to the bride's relatiges at marriage.
The first resolution according to "Pravada"
was really intended to improve the status of

大学ないながられる 1 ACL ちゃ 1 ack かっている サード 10 ack で 10 ack 10 a

women in the more backward parts of Caucasia where polygamy was rampant. It is needless to say that all these activities have considerably broadened Russian Muslim women's outlook on life in changing Russia This happy result is most in evidence in Azarbaijan where every district and principal town has its Ladies' Club, that of Baku having a membership of 500 Muslim ladies. These Clubs are not only literary, educational and social in their aim, but contain special arrangements for the members to get instructions in arts and music.

The following newly constituted Muslim States are either federated integral units of Soviet Russia or are independent recognised units :-

1 The Republic of Azarbanan,-independent of the Russian Federation

The Kirghiz Republic, -independent

3. Daghistan Republic.—member of the Federa-North Caucasian Republic -member of the

Federation

Republic of Ablikazia,—member Republic of Tataristan—member

Republic of Turkestan,—independent,
Republic of Turkestan,—independent,
Republic of Bokhara,—independent,
Republic of Khiva,—independent,
Republic of Crimea,—independent,

Work as a Foundation of National Life

Professor M Timur, M A, contributes to the same review a paper treating of work as a foundation of national life. He observes that

The secret of the strength of a nation does not he in its numbers or the extent and natural wealth of its country, so much as in the moral and intellectual virtues of its members, and again, not in their intellectual qualities so much as in their moral worth If a nation wants to be strong and prosperous, it does not require clever debators and men who can draw nice distinction in law, and men who can draw more distinction in law, but men loyal and devoted to the cause, working for it with their whole might and loving one another like brothers. The article is an attempt at studying the causal relation between national greatness and a people's love of work

The following passage should provoke thought both among Muslims and Hindus:-

The followers of the Prophet who did not consider it below his dignity to mend his shoes and put a patch on his shirt time when he was the would be expected to exhibit a more democratic spirit even when hying among the highly aristocracy is a spirit of such potency that even among the Muhammadans of India the weaver and the shoemaker, although the equals of the greatest monarch when praying in the mosque, are regarded as men of low caste. The teaching and the example of the prophet have no influence outside the mosque. A high-caste Muhammadan feels ashamed of adopting manual profession even when the income he expects from it is higher than what he could earn in any other way. He adopts it with an apology and considers himself degraded in the eyes of his friends and relatives. This is a purely Hindu spirit which the Muhammadans of India have imbibed from their fellow countrymen. It is strong where the Hindus predominate, but in places like Peshawar where the Muhammadan element is stronger, one may find even Sayeds earning their living by making shoes. Fortunately under economic stress and through inability to compete with the industrious Hindus in trade and the learned professions, the Muhammadans of every part of India are returning to the original Islamic spirit of democracy and are making no nice distinction in taking up manual crafts for their living. But the spirit of aristocracy is a dangerous spirit and no man can ever be safe from its secret influence.

If India has to learn anything from Europe, it

If India has to learn anything from Europe, it is the love of work The beautiful roads, the magnificent houses, the well-cultivated fields and the busy factories are a sure evidence of the hard work habitually done by the people "Workman" is not a term of reproach there as it is here. It is a term, which signifies independence, determination and honour with the added significance of danger for those who till now considered them-

selves the masters of the land.

Communal Representation and Difference in Economic Conditions

In the same monthly, Mr. Nur Ahmad discusses the problem of national unity in India. The remedy he proposes is contained in substance in the following passages—

Communal representation in spheres of public administration is a device for enabling the weaker party in this conflict to put up something like an equal fight against the stronger one. This safe-guard is, no doubt, indispensable for the time being from the nationalist's point of view. For, in its absence the difference between the economic conditions of the two parties will only tend to increase, thereby intensifying their mutual conflict still further. But we should not be content with merely checking the aggravation of the existing evil. We should also seek its total elimination.

The line of economic distinction between Hindus

The line of economic distinction between Hindus and Muslims must, at all events, be obliterated before they can both be merged into a single community. The "levelling up" of the backward communities

The "levelling up" of the backward communities is admitted by most thinking persons to be a desirable and even a necessary thing for India. The method of uniting Hindus and Muslims, which I am advocating here, resolves itself into a plea for this very ideal, with particular reference to the difference between their respective economic conditions. How precisely this ideal is to be achieved is a question, which it would require both time and thought to answer. For, such an answer, if it

is to be of any practical use, must be based on a study of carefully collected economic facts. But it is obvious that special educational facilities for the backward community and the popularisation of co-operative credit and other forms of cooperation among its members are some of the most important methods of relieving the economic tension between the two classes. Let Hindu and Muslim leaders join hands in preparing and working out a practical programme for equalising the economic position of the two communities. And it will be only after their endeavours in this direction achieve a certain measure of success that the forces of union and assimilation will assert themselves in the case of Hindus and Muslims. Such a programme should, I think, also provide for a programme should, as certain definite stages in the relative economic progress of the backward community are reached certain aspects of the system of communal representation should, according to the provisions of a Pact, automatically cease to exist or to be demanded. A Pact regarding the rights of, and safeguards for, the two premier communities in India can lead us to nationalism only if it embodies a self-eliminating tendency.

It should be remembered in this connection that large sections of Hindus are indigent, and large sections of Muslims are prosperous; so that the line of economic demarcation does not always run along sectarian lines. It is generally thought that Muslims are everywhere more illiterate and ignorant than the Hindus. The fact, however, is that in many provinces and States, Muslims are educationally more advanced than the Hindus, and even where the Muslims are more backward than the Hindus, numerous castes of Hindus are more backward than the Muslims. What is true in the sphere of education is generally true also as regards the economic condition of Hindus and Muslims.

The Life of Postal Clerks and Sorters

Labour writes -

If the life of the clerical class is so sorrowful, that of Postal clerks and sorters is simply tragic, It is a longdrawn tale of suffering and distress. He has to live a life of forced exile, subject to frequent transfers. Most of his life has to be spent in unhealthly places and despicable quarters. He knows no holiday or rest, even the Sabhath is almost denied to him. His life is a monotonous drudgery. In his youth which is the time of enjoyment he has to lead the life of forced asceticism, far away from his near and dear ones, his wife even, as he can ill afford to maintain a separate establishment. By the time his wages increase he steps into premature old age without any zent for life left in him He can then possibly keep his wife and chidren with him but has hardly any leisure to enjoy their company. Chill penusy, long hours of monotonous drudgery, unsympathetic treatment from the superior officers and the public turn them into cynics.

devoid of love and sympathy, the highest treasures on earth. Their wives and children famish not only from want of food but also from want of love. There is hardly any sunshine or joy in the Postal clerk's life. It is a life of bondage, of servitude.

The life of R. M. S. sorters is harder still. It is a life of continous motion in running trains, of

humiliating body searches and house searches up to the last days of their life when they become physically incapable of performing the rough work. And yet their pay has been fixed at a lower scale than even that of the lowpaid postal clerks. Is such a life worth living at all ?

Formerly these public servants and benefactors hore their sufferings with fatalistic resignation; but now that they have learnt to combine and agitate, let us hope their condition will improve. Our sympathies are entirely with them

"Capital" on Mr. Jayaswal's "Hindu Polity"

As many educated Indians doubt whether their ancestors ever enjoyed self-government in the modern democratic sense, it may be permissible to extract some passages from the review of Mr. K. P Jayaswal's "Hindu Polity" which has appeared in Capital, the well-known weekly journal of commerce, edited by Mr. Patrick O'R Lovett It is said therein:-

"Prof Jayaswal's book on Hindu Polity is a remarkable production It epitomises within a handy volume—two volumes compressed into one—a vast amount of research and a rare combination of the historical method of enquiry. These who are anxious to have a glimpse of the Hindu past will read it with profit and pleasure. And the Hindu will read it with pride, for it is of the utmost importance that a particular band a learner. importance that a nation should have a glorious past to look back upon...Prof Jayaswal comes to the conclusion that 'national life and activities in the earliest times on record were expressed through popular assemblies and institutions' In fact, these institutions were extant even in the Yedic times which synchronised with the very dawn of human history. The Hindu had his notions of representative institutions fully developed in that remaining even. in that primitive age.

The reviewer then proceeds to state.—

".....the continent of India or rather the vast expanse that compose the northern portion of It was a conglomeration of republics, each with an independent status with its distinguishing characteristics and distinctive traits. The Lain lines on which the constitutions were based were practically the same, the voice of the people reigning supreme in each. And the Indian was a freeman in the truest sense of the term."

Regarding the Hindu Republics, it is said:-

"In these early Hindu Republics, the President

was always invested with supreme power. He was assisted by a body of Ministers and as in modern democracies each was entrusted with a separate portfolio. The deliberations used to be conducted on quite modern lines. There were motions debates and voting—just as, for instance, we have in the House of Commons of England. So that, after all, there is practically nothing new in the world......The world thought moves in a cycle lit may or may not be the case. But some people It may or may not be the case But some people seriously believe in this cycle theory If that theory is correct, the cycle of representative government seems to have started in India and reappears today in the democracies of the West However, one thing is clear. The early Hindu was the progenitor of the idea and was signally successful in giving that idea shape. That is a record of which the Hindu is entitled to be justly proud.

As to what Alexander the Great saw and as to whether he "conquered" the Punjab. the reviewer's observations are.-

When Alexander the Great was in India with his Macedonian phalanx on his self-imposed mission of Hellenising the world, he found his path obstructed and his career of conquest checkued by a group of sturdy Hindu Republics. The Greek account of these Republics is really edifying. Prof. Jayaswal with consummate skill delves deep into the Greek history of India during the period and places before his readers some every rare chips. The Indian was manly excellent physique, good looking valuant and well-skilled in the art of war. After the last tussle Alexander had with him, be found. that in this sanguinary trial of strength his mer went to the wall and the parley he had with his for with a view to concluding peace—and not so much to conclude peace as to make his retieat easy—was a regular field of the cloth of gold which finally dismisses the idea of a meeting of the victor and the vanquished. It was a meeting of equals. The Greek account presents an excellent nurror of the Hindu Republics of those day - well-ordered States of free men who could hold their own against any body and everybody in the world

As regards monarchy in India, we read '-

"India eventually came to have kings. But the idea of kingship was originally divorced from all sorts of autociacy. The tyrant is of later growth and is an abnormality. The king, according to the Hindin idea, was the slave of the people place on the throne to please them. He was the Lords anointed, but he was guided by a body of Ministers who were selected by him, but not subservient to his wishes. It was said of Gladstone that he once told Queen Victoria. Madain, I represent the people of England. The Hindin Ministers fulfilled an analogous position in relation to their king. But more than the Ministers there was another body of men whom the king tacitly obeyed—the ascetic Brahmins of the ferest—men who, were the ascetic Brahmins of the ferest-men who were ever ready to outstare revally itself. The forests and the hermitages were the nurseries of newer-ful public opinion in those times just as the viere the primitive Universities of ancient India. The place which these Brahmins filled in the Indian States of those days was unique.... the old Hind thing was found to loyally discharge his duties in respect of his people—he inted for then good—for their moral, material and points al well-being. The

institution was grand and the structure superb, but it toppled down eventually with the efflux of time".

Capital's concluding observations are :-

"It may be an irony of fate that Western constitutionalism should set to itself the task of restoring the home of constitutionalism—the first and earliest temple where it was installed and worshipped. But that cannot be helped. That is no matter for lament. Indies uplift can no longer has not off lament. be put off. However, it is a grand book Prof. Jayaswal has written. It deserves to be widely read. The style is quite in keeping with the subject."

Something About the Bengal-Nagpur Railway

The Bengal-Nagpur Railway Magazine, which it is a pleasure to handle and to read. says about the Railway of which it is the organ :-

There is a quotation which we would like to use at the head of this article,—
"Man wants but little here below
But wants that little good."
That man does not always get it is a commonplace of life. Various things arise to annoy him
daily and as a rule he has his roundy. Hearts them daily and as a rule he has his remedy. He cuts them out. By this picturesque phrase we mean that man learns rather to do without than to be annoyed.

Unfortunately if we annoy the Public whom we serve they cannot retaliate in the manner of the individual mentioned above. Transport in these days takes its place as one of the primary necess-

ities of existence.

The Railway Administration being intensely human has no desire to annoy. Rather and very The Railway much the reverse. It has before it a constant desire to render good service to the country which it serves. All of which sounds very much like a free advertisement which indeed it is not intended

to be.
This Railway goes to what may be accurately described as the commercial limit in its desire to do the right thing. There are people of course who are never pleased. They resemble the gentle-man who sat down to dine in the Refreshment Car. After partaking of an excellent dinner he called for the complaint book and wrote therein: "Drinks should be provided free with meals." Even had he been so provided, he would have saked for cigars and so on. There are others who

wish to carry pet animals in the carriages and one went so f r as to ride with a pet panther. It is not to such as these that an administration looks for legitimate complaints. The general public is however not exactly like that and it is to the average individual willing to be satisfied that these words are addressed.

We do not claim to be above "the average individual," but we do claim to be a member of the general public. As such, we suggest that a Railway which can publish such a finely got-up magazine ought to be able to provide clean and lighted lavatories for its third class and intermediate class passengers

in all carriages, and waiting rooms, halls or sheds for them in all stations, and to see that in no station have they to wait for their tickets exposed to rain and the fierce rays of the Indian sun. We do not want comfortable dinners, and wines free, provided for us. But we do want to travel like men and to be treated as such.

Jail Reform.

Mr. J. P. Bhansali concludes a helpful and informing article on jail reform in the Social Service Quarterly with the following paragraphs :-

This then is a short picture of a convict's life This then is a short picture of a convict's life in jail. There is no sympathy extended towards him. Condemned by society, which after all is responsible for his production, he lives a veritable dog's life in the jail. The question may be asked, "does he not live a similar life when free? Why then, as he is outside, so is he in jail". Let not such a hurried opinion be passed against him. Are we not to improve him? Are we not to improve we not to improve him? Are we not to embrace him and say, brother dear, how will you be looked to? Should society wash its hands of the affair? The chain is to be judged by its weakest links, So long as we have not tackled the problem of jail-reform earnestly and with devotion, so long we shall be responsible to our Maker, for making the prisoner what he is.

We turn our noses upwards at the mention or the sight of a thief, or a murderer or a man who has committed a rape. If judged by the absolute standard of Truth, who amongst us shall escape whipping? Jail Reform is a scrious problem It requires our scrious attention. People are shocked to read Victor Hugo's Les Miserables or Dickens' Tale of Two Cities. Let them but try to see misery amidst them, and they will have enough work for

a life-time.

Let us make the jails real reformatories—houses for the regeneration of lost souls, hot-houses where tender misguided plants will be sheltered and protected and taken care of. It is not enough to lock up a man in prison. Seciety's duties commence with that act. List us give him more and better food, let us eliminate all punishments which are noted for their savagery and brutality, let us not make him sweat like a slave. In short let us make a man of him The function of the jail is to awaken the man in him, not to inject more brute in him. Let us try to realise this in our brute in him. Let us try to realise this in our prison-houses.

Here is one of the barbarous jail punishments described by the writer :-

Some of the punishments are simply barbarous. Fancy a prisoner lying at full stretch on his back, his hands tied down with handcuffs, his feet tied down by a piece of string; and lest he might sit up in bed, two long banboos about 5 feet each tied to his both sides, extending from neck to his ankles, lying on his back in this condition from 5 P.M. to 6-30 A.M., that is, for more than 13 hours without being able to the property of his sides. without being able to turn on either of his sides without being able to attend even to nature's call

or even to make water in the pots provided in the cell, locked up, alone, the whole night long!

Shri Rama Chandra

Among other interesting articles, Young Citizen tells in one the story of king Shri Rama Chandra of Ayodhya, observing -

In India, the name of this beloved King has become a talisman of speech and men greet each other in his name, so living under his protection still. But he is the great Aryan Hero, even more than Indian, as witness the many stories, Greek and Celtic, which derive their coloring from this the original.

In many parts of Upper India, Hindus greet one another by saying "Ram, Ram", just as Englishmen say "good morning" on meeting one another.

What the State Is

In Everyman's Review, Mr P. Jogannadha Swami writes --

In what sense then is the State pre-eminent? When in the community there are a host of associations, it is rather possible that some of them may temporarily fall into the lapses of hostile relations. A central co-ordinating agency is therefore required to deal justice and to run smoothly these, general associations. The justice, here referred to is not the civil and the criminal justice but is rather social and personal; that is, to regulate and control the and personal; that is, to regulate and control the evils of unfair competition carried on by the associations. The most urgent interference now longed for is in regard to a very vital matter, e.g. how to afford equal opportunities to all as against unequal distribution of wealth and power, birth and creed that have now formed the canker of all the Governments in the world. The trouble is not merely reconomic, though it is there most urgently felt but is largely cultural. The state justice is not therefore inerely negative justice as exhibited in the prevention of crime or individual tyranny. It shall be positive and constructive. To endow research, to patronise art and culture, to protect against to patronise art and culture, to protect against accident and ill-health, to stimulate and to en-courage cultural centres and to develop the personality of the individual, to take charge of interna-tional relationships—these are some of the direc-tions in which the State has to utilise its quality of pre-eminence and co-ordination. These functions are potentially vested in the community and they tend to increase the communal welfare. The State but an organ of the community that takes them up as its common aim in the same manner in which other functions of the community are the common interests of other organised associations.

Recent Developments in the Manufacture of Saws

We read in the Indian and Eastern Engineer :--

The new is one of the oldest of known tools.

the same of the sa

Perhaps the earliest known type consisted of a chipped flint with a serrated edge, which was merely drawn backwards and forwards across wood or similar substances in order to cut it or whittle it to similar substances in order to cut it or writtle it to a certain shape. Later came a development which took the form of inserting the serrated flint into a branch of a growing tree, so that as the tree grew, the wood grew round the flint and held it fast in a natural cleft. These saws were used approximately 10,000 years ago by the lake dwellers of Switzerland. In the bronze age, true saws were cut, and the ancient Egyptians had the ingenuity to embed jewels of corundum, and even small diamonds, in bronze blades used for cutting granite and other hard rock. The same practice survives to the present day, or, rather it has been

revived for modern use.

In the ancient Aztec civilisation of Mexico, obsidian was used for the teeth of primitive saws, and in the South Sea Islands shark's teeth and even notched shells have been found in use to this day. Circular saws were first used by Brunel day. Circular saws were first used by Brunel in 1790.

The last 50 years have seen few revolutionary

developments in the manufacture and employment of circular saws, but progress has continued along three main lines, each of which will be dealt with separately in the following notes

The first is the modern revival, already referred to in the above lines, of the jewel-studded saw used by the ancient Egyptians. This is known as the diamond saw, the object of which is to cut the diamond saw, the object of which is to cut granite at a rate never previously practicable. Formerely granite was sawn by a double-handled saw operated entirely by hand. Progress was, as will be realised, very slow until the diamond saw was put into use. In these saws the periphery is studded at intervals with small black diamonds very little resembling the jeweller's gem. These diamonds are largely mined in South Africa and December and are what are known as "commercial" diamonds are largely mined in South Africa and Brazil, and are what are known as "commercial" diamonds A saw of this kind can cut through many feet of granite in a few minutes. It will be seen that this has considerably helped the development of the granite and marble-quarrying industry, and has rendered possible architectural and could ture achievements in a much shorter time. and sculpture achievements in a much shorter time.

The second important development of the last 50 years is the invention, if it can be so-called of the circular friction saw disc, which is made in various sizes and gauges from a special steel. Where a quick and rough cut only is needed they are a most satisfactory tool. They cut material cold, and being run at a very high speed, force or burn their way through. Two types of these or these are manufactured. One with a rilem turned discs are manufactured. One with a plain turned periphery, which is notched on the edge by the user and the other with small teeth cut along the periphery at short intervals Machines are made specially for driving these high-speed cutting discs.

specially for driving these high-speed cutting discs. Like hot saws running at a great speed they generate much heat on the outer edge, and burn rather than cut their way through the material.

Perhaps the most important modern development is the designing of the inserted-tooth circular saw for cutting cold metals and other materials. Inserted tooth saws consist of an ordinary six ellowy with renewable teeth of high-speed steel. The object of using detachable teeth is to save the expense of constructing the whole saw of high-speed steel.

speed steel.

Value of Milk.

Mr. P. E Lander, Agricultural Chemist to the Government of the Punjab, expresses in the Agricultural Journal of India the opinion

Milk is a complete food in itself, and the sole food for most animals at the time of birth, and there is no subject worthy of more sustained attention on the part of all branches of the community than that of producing an adequate supply of pure and whole-some milk for the people. The eugenist is at work on the production of improved breeds of cattle suitable to the country, the biochemist should be at work in collaboration with him in determining how to obtain the most economical yield of the greatest quantity of milk of the highest possible quality. There can be no doubt that the people generally do not realize the importance of milk and other dairy products in the diet. There is no substitute for milk, and its use should be distinctly increased instead of diminished, regardless of cost, whilst every possible means should be employed to reduce the cost of production. The processity for the labor. the cost of production. The necessity for the liberal use of milk and its products both in the diets of children and adults should be emphasized. The value of milk as a food cannot be estimated solely on the basis of its content of protein and energy, even when measured by this standard, it compares most favourably with other foods, but it has a value as a protective food in improving the quality of the diet, which can be estimated only in terms of health and efficiency, and the greatest stress should be laid on the importance to the population of India of increasing the quantity and quality of its milk supply.

Must One's Religion be the National One?

The arguments in favour of an affirmative answer to the question put above have been thus summarised by The Light of the East -

A nation is not a thing of the present alone but A nation is not a thing of the present alone but of the past and the future also. A nation without past is like a new born babe: shapeless, ignorant, a thing not fully evolved yet but still in the making. It has no traditions to mould its conduct and define its ideals, no learning or arts of its own, no individual civilisation no characteristics to distinguish it from the rest of mankind and mark it out as a separate self-sufficient individuality. It is not yet a nation

The worst crime that can be committed against nation is therefore to destroy its past. This is

like destroying the roots of a tree or tearing a babe away from its mother's breast

But change the religion of a nation and, so again it is argued, you do cut it off from its past. For to say it once more, religion is at the root of it all. It is religion that has moulded the conduct, shaped the ideals, created the arts and the literature, the culture and the civilisation. of the past; cut off this root and the past of the nation is past indeed, something gone for ever. A new nation may arise from the ash, so of the old; but it will no more be the old one than a babe is its step-mother.

These are therefore, briefly stated, the reasons

which seem to inspire so many men, when consciously, or unconsciously, they adhere to the national religion, because it is the national religion "right or wrong": First, if there is no religious unity, the nation cannot be fully one at present; then if any other religion but the national one, the religion of the fathers, is accepted, there is a break of continuity with the past, a revolution with all its perils instead of an evolution with its promises; a destruction of the nation with the dim possibility of building up another on its ruins instead of the

slow moulding of the old into the new.

If, besides, the new religion be that of another race, to all the risks we have just mentioned there race, to all the risks we have just mentioned there is added the danger of an utter denationalisation of the people. With the religion of the foreigners are bound up his laws, his customs, his culture. Will they not invade the land through the gate and perhaps under the cover of the foreign religion? If on the other hand, the religion be catholic, universal, embracing or tending to embrace every race and creed, is it not likely that it will suppress nations, and matonalism altogether? Having nations and nationalism altogether? Having breached the walls that separate men of various races and languages will it not mix them up hope-

Taces and languages will it not mix them up hopelessly into a non-descript whole?

To all this we might answer at once in the words of the old Roman: Frat justitia rual coelum' Let truth prevail, let the best or only true religion have its due, and nationalities crumble down if they have to But the model would be the second of the company of the languages. down if they have to But the reader would probably think that such a short answer to a long and somewhat complex argument is hardly sufficient. We shall therefore reserve for another article a longer and we trust a cogent answer.

Honours for Women Professors.

Prof. Dr Winternitz of Prague has contributed to Stri-Dharma the article printed below.

Twenty, or even ten years ago, nobody would have thought it possible that there would be as many lady professors and lecturers in German Universities as there are now. Dr. Rhoda Erdmann has been appointed as Professor at the medical faculty of Berlin University. She has been assistant at the Institute for infectious diseases in Berlin, afterwards lecturer of biology at Yale University, since 1919 director of one of the departments of the Institute for cancer research in Berlin and lecturer in biology. Dr. Lise Meitner is professor of physics at Berlin. Dr. Paula Hertwig lectures on biology and geology at the University of Berlin. Dr. A. M. Gurtrud von Petzold is lecturer for English at Frankfurt University Dr. Margarete Bieber is professor of classical archeology at the University of Giessen. Dr. Charlotte Lenbuscher University of Giessen. Dr. Charlotte Lenbuscher lectures on socialism and political economy at the University of Gottingen. In the same University University of Gottingen. In the same University Dr. Emmy Noether, an eminent mathematican, is professor of mathematics. Dr. Betty Hiemann is lecturer on Sanskrit at the University of Halle. Her special subject is Indian philosophy. The University of Leipzig also has a lady lecturer for Sanskrit and comparative philology. Dr. Charlotte Krause, who makes a special study of Indian vernaculars. Dr. Matilde Baerting is professor of pedagogies and sociology at the University of Jens.

In the same University Dr. Anna Siemens lectures as honorary professor on pedagogics especially on the education of women. At the University of Tueibingen, four ladies are appointed as lecturers, one for French, two for English and one for rhetorics. There is also a lady lecturer in rhetorics at the University of Koenig-berg; and one at the German University of Prague (Czechoslovakia). In the new University of Chogne, one laly lectures on modern history, and two ladies are lecturers for English There is a lady lecturer for German philology at the University of Marburg. Dr. Berthold. And Dr. Adele Hartmann is lecturer on morphology in the medical faculty of the University of Munich.

The Future of Hindustani Music.

Mr. P. B Joshi tries to show in The Allahabad University Magazine that

The future of Hindustam music rests neither with the di-chord nor with western musical psychology nor yet with the South, What is wanted most, in t now, is a definite recognition by the public that our music is an art worthy of cultivation. While it thus gains popularity, let the workers in its cause combine to collect and put to notation all available songs and what is more important learn to imitate the graces from the Ustads themselves and the rest will take care of itself. Let the leaders of the nation who seem so engrossed in the political future of the country realise that the new India must be a full grown entity and that it will never do to omit regeneration of our music which is the most cloquent expression of the national mind. Fine arts have all over the world flourished under the patronage of kings and princes, But that is evidently not possible in India. Therefore, we must naturally look to the populace to supply the sinews of war "When" as has been well said, "the princes have ceased to rain in thousands and millions, if the commons irrigate in ones and tens, the seed planted by those who strive disinterestedly for the cause of music will survive and their labour will hear ample truit."

Place of Agriculture in University Curriculum.

Mr. S. Higginbottom makes out a case for teaching agriculture in our universities in the same magazine. His reasons are, briefly:—

Firstly, on the ground of a sufficiently large cientific content, secondly, on the ground of its importance to the continuance of the human race, and thirdly for the reason that progressive improvement in agriculture can be made, that agriculture is worthy of a place in a university curriculum. In fact, it may be doubted whether a university that does not offer agriculture as a university that does not offer agriculture as a university is not misnamed and behind the times.

Some of the greatest and oldest British universy ties—Oxford, Cambridge, Elinburgh are not sahamed to have departments of agriculture as also most of the greatest Canadian and American universities. Harvard University, recognized as the

Mary Company of the C

home of arts and liberal culture, had Professor Storer, who gave a course of lectures on agriculture that serious students still consult.

Agriculture is already considered worthy of a place by institutions that are recognised as careful guardians of the lamp of learning and are very jealous that its light be pure and undimmed. There was a time when lawyers, doctors, engineers, were not college-trained, but to-day almost all are, and if there be any exception, it is wilely advertised

The day is now here when the leaders in agricultural science are almost without exception collegetrained

As one compares Indian student life with that of some other countries one is struck by the small number of occupations open to educated Indians and the narrowness of the range of these occupations. They are usually restricted to the non-productive industries, (lovernment Naukary, law, medicine, (dare we say teaching also?) while luminess, commerce, engineering and industry and agriculture have very few who wish to enter, and it is progress in this latter group that fits a nation for self-government

Our feelings are repeatedly harrowed by the unfortunate lot of the unemployed Indian college graduates, all ready educated but nothing to do and like one of old he cannot dig, to beg he is a shamed.

A thorough training in agriculture would enable an Indian to get a living with honour and independence. It is not an easy living it would be by hard work that he would win it, only by the sweat of his brow can he get his bread. But it is well worth it.

I hope therefore that every Indian University will have a department or college of agriculture as part of its regular activities

God speed the day when the Allahalad Univer-

Gir! Students at Aligarh

In the nicely got-up and interesting convocation number of the Aligarh Magazine, we read.

The first batch of four girls appeared in the Middle Vernacular examination in 1915. Three out of four were successful, and one of them stood first in the whole Province. Since 1916 girls have been appearing in the Anglo-Vernacular Middle examination. With one or two exceptions all of them have come out successful securing. Government merit scholarship every year. The number of girls who have passed this examination from the school is about forty. The first batch of students was sent for the Matriculation Examination of the Allahabad University in 1921. Two girls were successful and both of them got the Government merit scholarship. Next year three passed the Matric. Examination of the Allahabad University and one of them got the Government merit scholarship. Since then girls have passed the Matric. Examination every year. Most of them have joined the girls' colleges in the Province. One of the tirst batch of the Matric will appear in the B. A. Examination this year. One of the sgirls who passed this Matric. Examination of the Muslim University from this school has joined the Lady. Hardinge. Medica

Call the Tall and

College, Delhi, and the other has joined the Medical School at Agra.

Blake and the Sufis on Good and Evil.

The poet Harindranath Chattopadhyaya writes in Shama'a:-

It is the essential quality of all loveliness to become known, to grow into conscious intimacy with the creative impulse, to find itself in spontaneous manifestation. The universe is a visible symbol, the Divine Body of God's eternal Beauty. "I was a hidden treasure and I wished to be known, so I created Creation, that I might be known." (Koran-e-Sherif)

But the consciousness of light becomes defined

known, so I created Creation, that I might be known." (Koran-e-Sherif)

But the consciousness of light becomes defined only when revealed with darkness for its background. Good depends on its contrary Evil for its accurate definition, and the impalpable eternal Being stands begging at the door of the phenomenal world of Not-being for its fame and recognition But for the whole evolution of reality and truth these contraries are of vital necessity since, according to Blake, "without contraries is no progression." "But contraries are not negations What we call evil is a necessary consequence of manifestation, so that the mystery of evil is really identical with the mystery of creation and inseparable therefrom" (Browne's Literary History of Persia). But evil must not be regarded as a separate and independent entity. Darkness is not-light, and evil is merely not-good. This is the Sufi doctrine of good and evil and coincides with remarkable affinity with at which William Blake preached to his century. They both came under the fascinating influence of the Nee-Platonists who lived four centuries earlier than the latter and were contemporaries of some of the most distinlived four centuries earlier than the latter and were contemporaries of some of the most distinguished Sufi Mystics who spread their philosophical doctrines over the second and fourth centuries.

From Rigveda to Rammohun.

Mr. Mani Bhushan Majumdar writes, in Prabuddha Bharata:-

When India was at the height of her glory, the great sages sang the Vedic hymns, and there was peace and prosperity in all the spheres of her life. At that time flourished such poet-seers as Valmiki, Vyasa, Kalidasa and Bhavabhuti, such philosophers as Kapila and Gautama and such astronomers as Aryabhatta and Bhaskaracharya, and they exercised a great influence throughout the country. Then the high spiritual culture as embodied in the Upanishads was the key-note of Indian life, communal or individual. But during the Buddhistic period when the Vedic religion was on the decline, a readjustment was badly needed. And the great teacher Sankerschery and he influed teacher Sankaracharya was born, and he infused life and strength into society by rehabilitating the religion of the Vedas. Subsequently when the Mohammedans were the rulers of India, we see such religious and social reformers as Nanak, Guru Govinda, Kabir and Sri Chaitanya, such poets as Jayadeva, Vidyapati', Chandidasa, Mirabai and Tulsidasa, At the decline of the Mohammedan sovereignty in India when the British became the sovereignty in India when the British became the

rulers many prominent persons who did much for the good of the country, were also born. Of them it may be said without any fear of contradiction that Raja Rammonan Roy was the greatest.

Activity of the Arya Samai.

What Mr. C. F. Andrews bears witness to in the Vedic Magazive is this:-

I have found the spirit of Swami Dayananda still living through the Arya Samaj in places as distant as Fiji in the South Pacific and Kenya and Uganda in the centre of Africa. I have been to Arya Samaj meetings in places as distant as Zanzibar and Durban, Lahore and Madras, Malabar and Singapore, Hong Kong and Suya, Kampila and and Singapore, Hong Kong and Suva, Kampila and Bulawayo. I have met members of the Arya Samaj, fulfilling Swami Dayananda's precepts, in New Zealand and Japan and China, in Europe, in Africa and in Australia. If I had been able to go to North America, or if at this very time it had been permitted to me to go with Rabindranath Tagore, the poet, to South America, I know well that I should have found in both the continents of the New World, even as I have found in other continents of the Old World, the faithful workers of the Arya Samaj carrying out their precepts of reform with faithful allegiance to Swami Dayananda, whose Arya Samaj carrying out their precepts of reform with faithful allegiance to Swami Dayananda, whose centenary is now being celebrated throughout the world. To mention only a few of the things I have seen, I have seen the uplifting of untouchables. I have seen schools for girls, and societies for the higher education of women. I have seen children being taught in distant lands where religion was forgotten, I have seen men and women doing their duty, not only to their fellow Indians but also to the native inhabitants for away, realising the ideal of Rishi Dayananda himself, that humanity is one even as God Himself is one, and that is one even as God Himself is one, and that truth is to be preached and taught to every living

It is this which makes me feel that among many of the movements of religion in the Nineteenth make it profoundly progressive in the future, and will give to it a high place as the promoter of social and religious reform. Among the families of mankind, I do not think that its work in the future will be at all confined to India only. I look forward to the time when some of its restrictions. forward to the time when some of its greatest work will be done among barbarous tribes of savage people, who have never yet been able to learn the truth about God and the soul.

The Churches and the War.

According to the Oriental Watchman

During the late war most of the churches keyed their music to the war pitch, and glorified the art of killing your enemies, by covering it with the sanctity of religion. But since the war is over some of the churches are having a twinge of conscience and a continuate large way. science and a sentiment is growing in the world that the church should teach the people to "love their enemies", and not to kill them.

Graduates as Volunteer Scavengers and Bweepers

A member of the All-India Congress Committee states in the Volunteer:

By inquiry I came to know that there were about By inquiry I came to know that there were about four graduates working in the Bhangi Corps; 14 Medical (National) College students and a number of undergraduates, national school teachers, pleaders, merchants and Sawkars who owned thousands, all working as Volunteers. Some of them were R. C. Members, few were delegates and so on. I wondered how these people were inferior to the yellow flowered gentry some of whom thought that they were a superior class to this class of "labourers,"

Buddha's First Converts

Mr. Nalmaksha Dutta writes in the Mahahodhi :--

Buddha's ministration commenced with the conversion of two foreign traders Trapusa and Bhallika who were travelling with a caravan along the trade-route from the Dakkhinapatha to Ukkala, a town in the kingdom of Gandhar. Their conversion at Uruvala was later on commemorated by the erection of stupas in their native villages in Gandhara. Gandhara.

Buddha after enlightenment turned his thoughts first to his comrades in asceticism then residing

at Inipatana near Benares.

Here at Isipatana he visited his five comrades who would not accept Buddha's arguments regardwho would not accept buddha's arguments regarding the futility of extreme self-mortification in taking them to their spiritual goal. Their conviction had to be slowly overcome by Buddha through teachings from day to day, impressing upon their minds the impermanence of all worldly upon their minds the impermanence of all worldly things. They were enjoined to live as recluses, practising phanas and self-control. It was for them he delivered his famous discourse, the Dhammacakkapavattans which embodies truths revealed to Buddha under the Bodhi tree. It explains the maijhima patipada or, in other words, the practice of control over citta which included dhyana, attainment of panna or true knowledge and perfection in the silai by pursing the golden mean. The discourse shows the hollowness of extreme self-mortifications practised by the five Brahmins as the only path leading to mukti (salvation). The accumulated effect of the discourse and the teachings was the conversion of the five Brahmins to Buddhism.

Care and Training of the Blind

Mr. P. N. V. Rau says in The Light to the Blind:-

The blind are taught to read, to write and to do sums in Arithmetic. They have received lessons in music both vocal and instrumental. They can make the sad life of a number of people tolerable and peaceful by their sweet music. So also are the deat. They whom the people wrongly call dumb are taught to speak. Both the defectives have thus shown proofs of their fitness to learn as

others do, live as we do and feel and enjoy as any other body. So, I close this my paper with the following statement: That a man should be capable of receiving knowledge and to remain ignorant in a tragedy.

Why We Should Learn About Foreign Countries

Mr. K. T. Paul urges in the Young Men of India that

With the shrinking of the world not only in economic relationships but, since the War, very much more so in regard to political affairs—it is imperative that we who have responsibilities conferred by education should steadily try to learn about the various countries who are our neighbours. Whatever our estimate of the League of Nations may be, it is an undeniable fact that in most public questions which affect the destinies of any nation, small or large, the public opinion of the world has in these days come to play an important part. Since 1918 the world has not been without incidents where nations have acted in flat contravention of the best judgment of the world. Even as recently as November last there was a flagrant instance of this. The pity of it is that every such incident distinctly lowers the ethical standards of international relationship. Nevertheless, the intrinsic excellence of the principle of the golden With the shrinking of the world not only in of international relationship. Nevertheless, the intrinsic excellence of the principle of the golden rule seems somehow to be released into effective operation, even in the field of international relationships, since the grand debacle of the War proved the hollowness of the illusion that Might can get away with Right. The pathetic way in which Diehards are trying to cultivate public opinion in distant countries in favour of their own points of view, is further evidence of the power of world public opinion. Particularly for us in India who are in a most delicate situation among the nations of the world, it is imperative that we know more and more, what is happening in other nations. more and more, what is happening in other nations, what are their scales of values, how their moral and economic evolutions are being worked out; and, if possible also, that we get in direct touch with as many of them as we possibly can. It is the common experience of most Indian visitors to those common experience of most Indian visitors to those countries, that India and Indian culture are held in the highest esteem by them. Doors are everywhere open to their hearts. Our great men are revered by them, even when they are unable to take for practical purposes the principles they advocate. Our aspirations are viewed with great sympathy, the future mission of India to the world is a thing in which they have undoubted faith. There is no race or colour prejudice toward us, not anywhere in Europe, at all events.

Moreover, some of these problems of rehabilita-

mot anywhere in Europe, at all events.

Moreover, some of these problems of rehabilitation are, undoubtedly, such as it would be highly profitable for us to study in connection with our own problems of to-day. They also cover the field of economics, social relationships, education and culture. The solutions attemped are everywhere experiments. With great wisdom they are multiplying facilities for learning of one another, as regards results of these experiments. They eagerly enquire of the Indian visitor as to what our experiences are in similar lines of activity. One craves for opportunities for our publicists to know, from day to day, how things have been worked out by other nations, besides the Anglo-Saxon.

Slovekia Mr. Paul writes, in part:

In five short years they have done such high work, such volume of it and of such deeply contractive quality, that it is difficult to believe that year not seeing a settled administration of several decades.

It was highly refreshing to come in touch with people who, in a difficult situation, do not fear, with feet firm on terra firms set out to counter similarity and danger by applying radical cures to sindumental diseases. "We do not fear the Bolshe-ties; we find the remedy in wide-spreading education, in agrarian reform, in economic justice."

But no kind the remedy in wide-spreading outcomes, in agrarian reform, in economic justice."
But no kind of need seems to fail to secure attention. From forcible commandeering of land for distribution to the peasants, to the facilitating of a new expression of feeling in fine arts, every line of social and economic reform is carefully attended

Above all, the thing which drew my admiration must was the service which the Czecho-Slovakian Republic is doing to Russia. It practically keeps are open door to all refugees, and takes very special years of the students. In Prague alone, 9,000 Russian students are freely educated and even partially re wholly fed and clothed. What deeper service this a country do to Russia in this her day of visitation? Such high philanthropy in international service is not to be surprised at in a country which has elected a prophet and philosopher as the first President of its Republic and re-elected him as Life President. Still, such altruism is very rare in the history of nations.

The Ordinance in Bengal

To the silver jubilee number of the Indian Review, which deserves to be congratulated on its longevity according to Indian standards, the Rt. Hon. V. S. Srinivasa Sastri, P. C., has contributed an article on the Ordinance in Bengal. He rightly observes :-

To admit the existence of anarchical crime and he evident anxiety of Government to put an end wit is not the same thing as to approve of every the taken with that object. The Anglo-Indian press taken writing as though there was no alternative. The crudeness of this reasoning is not less than that it is ereasoning by which young Non-Co-operators used to jump to the conclusion that every one who altered in the wrongs of the Jallianwals Bagh and he Khilafat was bound to join their ranks. The speedy of Government against the Bengal situation the Khilafat was bound to join their ranks. The sinety of Government against the Bengal situation income justifiable on its inherent merits than the transfer the remedy promulgated by Mr. Gandhi in 1920. The profestations of Lord Reading and Lord Lytton ments only to this—that they wish the ordinance of the put into effect only against those whom the papers submitted to them the guilty of revolutionary crime. Perhaps, too, we had be told hereafter by apologists that they felt into the papers submitted to them the guilty of revolutionary crime. Perhaps, too, we had be told hereafter by apologists that they felt into the papers submitted to them the still be told hereafter by apologists that they felt into the papers of the conscious that they actually delayed it by a few that they refused permission for proceedings to be their inder the ordinance. But these facts afford the consoliation to those who complain that their bestim are placed at the mercy of the executive.

Regarding the achievements of Czecho
After short years they have done such high

A such volume of it and of such deeply con
After quality, that it is difficult to believe that the post seeing a settled administration of seve
Broadcast.

It is well known that even experienced judges, if compelled to decide cases on the evidence of the prosecution only, might occasionally convict innocent persons, that no evidence can be really trusted which was not submitted to cross-examination and that no condemnation of a prisoner can be safely accepted till he has had an opportunity of confronting because of the prosecution only, might occasionally convict innocent persons, that no evidence can be really trusted which was not submitted to cross-examination and that no condemnation of a prisoner can be safely accepted till he has had an opportunity of confronting the control of the prosecution only, might occasionally convict innocent persons, that no evidence can be really trusted which was not submitted to cross-examination and that no condemnation of a prisoner can be safely accepted till he has had an opportunity of confronting the control of the c accepted till he has had an opportunity of confronting his accusers and producing evidence in defence of himself. Where punitive action is taken against individuals merely on the papers produced by the police against them, there are no means of ascertaining in how many cases out of a hundred injustice has been done. The judgment of another set of people who read the same papers is all that is available. A test of this dubious type was made a few years ago, and the percentage of error that it disclosed was about five. If an open trial had been possible in all the cases, the percentage would certainly have been much higher. Let us assume that among every hundred proceeded against under the ordinance ten are innocent. In the ordinary judicial process every chance would be given to these judicial process every chance would be given to these judicial process every chance would be given to these ten of escaping through an open trial or in appeal. The ninety whom we assume to be guilty, have their own rights in the matter as subjects of a constitutionally governed State. They are not outlaws, as a high authority recently described them in a moment of vexation. Government and its critics are alike in the habit of confining their attention to the innocent, as if it did not matter one whit what happened to those who were supposed to be guilty. Even they must be tried and judged to be guilty. Even they must be tried and judged according to the forms of law. An ordinance which suspend the law and substitutes the will of the executive is for this purpose not a law.

> With respect to the exhortation addressed to the public on such occasions to put our trust in Viceroys and Governors, he re-

> We respect and honour them duly; but where do they come in here? They proclaim, they authorise and they disappear. The daily exercise of arbitrary power is not theirs and cannot be. Political workers in this country have to deal with

Political workers in this country have to deal with the members of a bureaucracy, largely foreign in personnel, without active sympathy with popular movements, and always concerned about their special prerogatives and privileges. It is notorious that they are in a state of perpetual irritation against the educated classes, against lawyers and particularly against political agitators.

Is it any wonder that they welcome arbitrary power at all times and regard it as an administrative convenience in times of trouble? It is an essentially demoralising practice to read the reports of the C. I. D. You may be never so full of the milk of human kindness, but if there is a system under which reports pour in upon you from all sides, apparently emanating from different quarters and conveying something or other against the sides, apparently emanating from different quarters and conveying something or other against the best men in the land, you cannot help living in an atmosphere of suspicion and believing that human nature in India is cursed with a double dose of every sin.

Supposing the future ministers of autonomous governments started a system of espionage and secret reports against the prominent members of the Anglo-Indian community, what strange things they would read from say to day, most of thism.

they would read from gay to day, most of then false but so seemingly true that one might seemingly true that one might

Min !

around one many plotters against the advance of India to dominion status!

Some of Mr. Sastri's concluding observations are also worth noting. Says he :-

If in Bengal at the present moment there is need for drastic action on the part of the executive, assured for considering and the part of the executive, sober opinion would support the adoption of extraordinary measures, provided they stopped short of the closure of all chance of redress to the aggrieved subject. The gravamen of public displeasure is against the indefinite duration and the apparent represents of detertion in the constant to the pressure is against the indefinite duration and the apparent permanence of detention, imprisonment or other restrictive order. If it is necessary to put out of action certain suspected persons, let it be done, subject to the condition that after a certain period, say three or four weeks, the executive is under an obligation to bring the victims to trial before a regular court of law.

At first when drastic nowers are assumed or

Property of the second

At first, when drastic powers are assumed or asked for, promises are made of the most scrupulous care in their exercise. No doubt at the time they are sincerely made. Once however, a representation they are sincerely made. Once however, a repressive measure finds its way into the statute-book and subordinate officials here and there begin to put it into operation, they interpret the promises in their own way, look into the letter of the law and decline to be bound by statements of intention or interpretation made at the time of enactment. This is precisely what happened in the case of the Press Act of 1910. The member in charge and the Law member undertook that existing presses would not be affected prejudicially, and the statement of objects and reasons had words to that effect. But not many months passed before the statement of objects and reasons had words to that effect. But not many months passed before magistrates brought old presses also under its operation. Mr. Gokhale, who had lent reluctant support to the Act, felt compelled to make public protest against this abuse of its provisions. Other safeguards too were pronounced to be illusory by the highest courts in the land. Still the Act was worked in all its rigour and, though often requested to do so, Government would neither amend nor repeal it. Officials found it an administrative convenience, and Anglo-Indian opinion favoured convenience, and Anglo-Indian opinion favoured it. So it continued till the other day.

Democracy Not a Failure

In the Swadesamitran annual number Prof. Rushbrook Williams writes with reference to the dissatisfaction with the system of parliamentary Government:-

The fact is that peoples in many different countries are so dissatisfied with the system of Parliamentary Government that they are discussing eagerly any alternative device which presents itself. If I understand the popular demand, it is for some system of political machinery that will operate smoothly and efficiently under the guidance of experts, but which will respond instantly to the pressure of public opinion. Hence it is that such institutions as the Cabinet Secretariat, which seem to hold the germ of continuity in administration while party politicians rise and fall, are beginning to find favour in many countries. Hence the tendency to train up professional administrators for the public service, and to leave them an increasingly the land in the conduct of everyday business.

The state of the s

It is, however, important to notice that this impatience at the inefficiency and clumsiness of Parliamentary Government only really touches the democratic idea at a single point. No one desires to revert to the days of the uncontrolled autocrat; although, as we have noticed, men of to-day will endure much from a leader who employs absolute power to execute the popular will. The fact that democracy and parliamentary institutions are at present almost synonymous terms, is a historical accident. The general wave of impatience which we have noticed is directed, not against democracy itself, but against the inefficient machinery at present employed to carry into effect the will of the people. It may be that the political architects will be able so to patch and to repair traditional structure of Parliamentary Government that it will be able to sustain the overwhelming burden—and this is the real root of the whole trouble—placed upon able to sustain the overwhelming burden—and this is the real root of the whole trouble—placed upon it by the modern state. It may be that we shall be compelled to fall back upon a federal system of small, semi-self-contained units, such as is postulated by the theory—as opposed to the practice—of the Soviet plan. I do not know. But upon this, at least, I am quite clear. The Will of the People is in no danger from the present wave of discontent. What men seek is to make it more effectively operative.

The People and the Nation

In a lecture on international relations, delivered in Japan, the poet Rabindranath Tagore drew a distinction between the results of the work of the people and the results of the work of the nation. He said in part, as reproduced in the Visvabharati Quarterly:-

It is the people in the Western countries, that have produced its literature, its art, its music and dance, it is the spirit of the people that spake through the voice of the great dramatists and artists of Greece, through the voice of Dante, Shakespeare and Goethe; it is the soul of your people, which reigns in your homes, giving them a profound quiet of beauty, in the dignified self-control of your behaviour, in the combination of usefulness and grace in all things that you produce, in your immitable partings and dramatic performances. formances

m your inimitable pantings and dramatic performances.

But what are these products of the Nation,—the machinery of destruction and profit-making, the double dealings of diplomacy,—in the face of which moral obligation lies defeated and the spirit of human brotherhood destroyed? You have been tempted, or perhaps almost compelled, to accept them; and we in India are envying you ready for ourselves to accept as much of them as comes our way. The cruelty and meanness of lies and exaggration and the greed of self-seeking are creeping up over that soil on which were born those great sages who preached mains and self-emancipation.

Whenever the spirit of the Nation has come that destroyed sympathy and beauty, and driven out the generous obligations of human relationships from the hearts of men. It has spread the usliness of its cause and its markets into the minds and enthroned the demon of deformity on the hearts of men. Though to-day it dominates the apirit of man everywhere in the world,

It will die like the worm which dies in the heart of the trifit that it has devoured. It will dielist unfortunately it may meanwhile destroy things of incivalled worth, the products of centuries of incival and spiritual training.

I have come to warn you in Japan, the country where I wrote my first lectures against Nationatian at a time when people laughed my ideas to form. They thought that I did not know the meaning of the word and accused me of having confused the word Nation with State. But I stuck to my possyletion and now after the war, do you not hear the word that collective egoism of the people, which is moiversally hardening their hearts?

I have come once again to remind you. I hope to be able to meet individuals in this country, who have the courage of faith needed to bring about a great future. Let Japan find her own true mind, which will not merely accept lesson from others, but will create a world of her own, which will be generous of its sifts to all humanity. Make all other secopies of Asia proud in their acknowledgment of your greatness, which is not based upon the enslavenent of victims, upon the accumulation of material wealth exclusively for your own enjoyment,—wealth which is not accepted by man for all time and is rejected by God.

" Nationality in Theory and Practice

Prof. Benoy Kumar Sarkar says in the Hindustan Review:-

Nationality is a very young phenomenon both as a conceptand as a fact. Consequently a good deal of warme thinking is still associated with it not only its the East but also in the West.

Nationality as interpreted by the political philosophers of the nineteenth century is not the same as the nationalities actually realized in modern times. The theoretical ideal embodies itself in such formulae as "One language, one state," or "One race, one state," or, more vaguely, "One culture, one state." As a matter of fact, however, neither in the mineteenth century nor even on earth since the

one state." or, more vaguely, "One culture, one state." As a matter of fact, however, neither in the nineteenth century nor even on earth since the stays of Memphis and Nineveh has this metaphysical states by the states and politicians also know only "states." Diplomats and politicians also know only states. But patriots, philosophers and poets talk of nations.

Muck of the present-day muddle in political thinking is due to the ignoring of this great discrepancy between the speculation of modern theorists and the practice evolved in actual history. The political mind of the whole world is conscibility or unconsciously "sicklied o'er" with the altitude idealism of Fichte, Hegel, Mazzini and John that Mill. It has fought shy of the effort to prose the theory with the facts of concrete political experience. Rather, the old dogma of the mass state or the language-state has acquired a make lease of life under the Reconstruction of contract the new map of Europe are not nationally at the sense in which one is taught to make at all in the sense in which one is taught to the state at all in the sense in which one is taught to the state at a poly-glot and autit-racial, in other words, an old Austria indicates in miniature.

Not the least disturbing factor in the political milious is furnished by the fact that twenty million German men and women, about a third of the entire German-speaking population, has been distributed right and left among a dozen or so old and new states of Europe to give birth to a "German irredenta" in every so-called nation-state.

The Birth of Nations

The same writer states in the same review:

From an inductive study of the nationalities old and new, oriental and occidental, one is then in a position to define the objective foundations of the State. The first formative force is the will or consent of the people, the plebiscite, silent or declared. The second agency that operates in the birth of nations is the force of arms, the power of offence and defence in open war.

The State owner into existence, first, because

and defence in open war.

The State comes into existence, first, because certain men and women are determined to create it, and secondly because they are in a position to maintain it against all odds. In regard to offence and defence the nation-makers or manufactures of States have to see to it that not only the military-naval-serial equipments are adequate but also that financially, industrially and economically the staying power of the people during war is up to the mark. Historically speaking, nations are born in wars and wars only. Genetically, therefore, nationality is in essence a militaristic concept. If there be any spirituality associated with nationalism it is the

spirituality associated with nationalism it is the spirituality of war or the categorical imperative of

Kehatrianism.

Nationality thus postulates, as a matter of course, the milieu of a conflict of rivals to browbeat one another as in a Kautilyan mandala (circle or sphere of states). The being of the nation of the materianism of the material of depends on a condition of the maisyanyaya (logic of the fish) and on a thorough-going "preparedness" of the vivigisu (the aspirant) against thousand and one eventualities.

The Health-giving Sea

Ellis Barker discourses in the Mysor Economic Journal on the sea as a source of health.

Guided by sound instinct, and the wisdom experience, the majority of English people who tal a holiday go to the seaside. "There is nothing lit the sea for a holiday" is a trite and a true saying The sea is indeed the great giver of health as strength. Air, light, water and salt are the mopotent natural anedicines. There are no better toni obtainable for the town-dweller.

We live on air and sunshing and are starmed.

We live on air and sunshine and are starved air and sunshine during our long winter spent a more or less sunless and devitalized atmosphe which is often poisoned by smoke, soot and unwho

which is orien poisoned by smoke, soot and this some chemicals.

Professor Leonard Hill, perhaps the highest authity on the curative properties of air and light, I teld us that the air on the see-shore is ten the as invigorating as country air inland.

There are mysterious health-giving qualities the see-air. Besides, we receive a double days

sunshine, the direct sunshine, and the light which is reflected from the water.

Why the West Can be Saved

In Current Thought Mr. Wilfred Wellock tells us why he thinks the West can be saved.

We know the West can be saved because a powerful spiritual impulse is beginning to move within it. All manner of external changes will have to take place, but the motive behind them all, if success is to be assured, must be the desire to give freedom and increased opportunity to the human

The re-born soul of the West wants cooperation in industry so that work may be a pleasure. It desires a juster distribution of the industrial output so that the people may be freed from the fear of poverty and unemployment. It demands a rational organisation of production so that all may have ample leisure in which to cultivate the arts and handicrafts—the arts and handicrafts which commercialism has swept away, and new arts and crafts also. It seeks to revolutionise foreign relationships so that selfish nationalism, or what is commonly called patriotism, may be brought to an end, and the peoples of the world drawn together in a great co-operative commonwealth.

In a word, it asks for the substitution of the creative principle of love for the destructive principle of greed. And it wants the change to begin now, for greed is fast breaking the world asunder, increasing war, enmity, poverty, hatred and every destructive agency, converting science into an instrument of death and art into a perverter of the instincts. That love, or the desire to serve, is a practical principle is obvious, for the creative impulse is the strongest impulse in human nature. And who is not able to work better where relations are amiable, where justice abounds, and where the object of all labour is the happiness and welfare of men? If, then, fear and greed have been able to accomplish wonders in the production of wealth, how much greater wonders should love and the

how much greater wonders should love and the joy of free service be able to accomplish?

The spirit of co-operation, love, and the joy of service infused into the processes of modern civilisation, would accomplish the greatest revolution in the history of mankind. That, indeed, is the revolution which is destined to mark the beginning of a quite new type of civilisation, an order of society wherein the craving and need for private possessions have been overcome by virtue of a sufficiency of goods for all and the adoption of a more wholesome motive. It is patent to every thinking person, that with a little co-operative effort all the needs of mankind can quite easily be satisfied, thus affording to all ample scope for free self-expression through the medium of the arts. The transition to a spiritual order of society would set free for noble uses immense reservoirs of spiritual force now being ignored, wasted, or worse, perverted—spiritual force that through a better directing of the artistic impulse would transform the world out of a recognition inside a generation.

Welfare February

In this number appears an article from the pen of Mr. M. N. Roy who criticises

Rabindranath Tagore's views on Private Property as expressed in a writing in the Visvabharati Quarterly.

Mr. Roy says:

The poet's opposition to industrialism leads him in such questionable directions, because he is actuated by a reactionary social ideal. Had his criticism of the industrial system been revolutionary—even progressive,—he would find that the root of all trouble lies in the right of property. But he frankly believes in the eternal nature of property. His solution of the present social problem is to replace the existing form of property-relations by an earlier form, already left behind in the evolution of modern civilization.

Mr. Roy further points out:

He (Tagore) believes in private property, but is opposed to the evolution of property-forms and relations. He affirms the existence of property to be a "moral force", yet denies the essential "morality" of the present form of property-relations capitalist industrialism, which rests upon and is a product of the sacred right of private property. Not knowing how to extricate himself from this dilemma, Tagore postulates that property-relations should develop as far as feudal-patriarchy, and stop there. But this is impossible. The forces that determine the evolution of benevolent despotism out of tribal patriarchy, do not cease to operate at the bidding of a reactionary dreamer. The modern plutocrat is just as inevitable a product of these forces of evolution as was the kind king and benevolent despot. If property is sternal, as Tagore holds, its successive stages of evolution cannot be denied. To preach the eternal nature and beneficial role of property, and to denounce modern industrialism, whose foundation is private property, as immoral, is either hypocrisy or blinking at facts.

A criticism of Mr. M. N. Roy's article by Mr. Ashoke Chatterjee apears in the same number of Welfare. Mr. Chatterjee writes:

Mr. Roy says "that the root of all trouble lies in the right of Property". We are atraid that Mr. Roy is a bit over-confident in his diagnosis. When we come to make up a list of all the ills that afflict mankind we dare not say that by merely making all wealth common or social we shall get out of our troubles. We do not believe that any one has a birthright to wealth, but there is such a thing as Worthright, if we may coin a word. Mr. Roy hates to think that a patriarchal aristocracy should dole out charity to the less fortunate. We do not see how it would improve matters if the charity were doled out by a benevolence that repel those who believe in worth, and not their source. But so long as all men are not equally worthy, the less worthy shall depend to some extent on the charity of the better class of men. A peevish proclamation of some metaphysical (a thing which Mr. Roy does not approve of) equality will not help matters. As to private possession of wealth, all possession is by nature private wealth, all possession is by nature private and the satisfaction of having a coat on one's are private things. How the coat came to

The state of the s

to Mr. A., whether through some hereditary or through some socialistic distributive organ, matters little. The mechanism of distribution is of secondary importance. It is its fairness that we should worry about. Rabindranath paints a picture of special distribution of wealth but social idealism balances things much more than "class-war" has succeeded in doing in the West. Mr. Roy may think that the masses were treated nicely only because they were like human cattle belonging to the aristocracy, but history does not support his contention. It was only when the relation between the rich and the poor was dehumanised during the days of the so-called Industrial Revolution that such inhumanity found a place in man's heart. Abnormal men there have been and there are even in Soviet Russia; but Mr. Roy's picture of social relations does not do justice to normal of social relations does not do justice to normal men as they have been, let us say, in the Middle

Mr. Doongersee Dharamsee's article on Petroleum Trade gives us the following opi-

By the Laws of Supply and Demand the price of petrol should not have so much difference as it has today with American locally sold petrol. The coest of transport ought to be the same in the case of bringing the oil from Mexico to New York and from Rangoon to Calcutta. Yet the rate there is about 12s. per gallon, while Re. 1-10 as, is charged at Calcutta. The U. S. of America's Government compel great oil kings to sell petrol cheaply in local markets and at high rates in foreign markets. While Indian Government tolerate selling petrol at a very high rate in local markets and at cheap rate in foreign markets.

Petrol is an article of commerce and is a commercial processity to a market and a commercial processity.

retrol is an article of commerce and is a commercial necessity to a modern nation. It is a business asset, as motor car and lorries are doing service and have become a necessity. The business men of India wish that inland duties levied as a war measure should be now removed. The matter was brought in the Council of State but with no result. With the increased pay contemplated for bighly paid services the new budget is not likely to bring such surprise packets, as removal of inland tax on netrol.

tax on petrol.

Mr. Benoykumar Sarkar gives us the following information in his article on French School of Vocational Training .

Co-operation from the side of private bodies and non-official experts is brought to bear on the technical schools in and through the "inspecteurs" or visitors who are nominated or elected on account of the part they play in agriculture, industry or commerce. Their functions, although honorary, are almost semi-official, and although not inspectors in the administrative sense they serve to supplement the work of the covergence in the server. ment the work of the government inspectors of schools. The number of such visitors is 200. Professional education is in every way enabled to act and react upon economic development.

FOREIGN PERIODICALS

"Our Debt to the Ancient Wisdom of India"

Mr. Edmond Holmes writes in The Hibbert Journal :-

"In the raper on this theme which appeared in the October (1924) number of the Hibbert Journal I tried to show that we owe to the 'Ancient Wisdom' of India a noble idealistic philosophy which was informally set forth in the Upanishads and found its chief practical exponent in Buddha".

NIRVANA

Mr. Holmes holds that Nirvana is not an sternity of nothingness.

The word means going out, extinction. What is that is extinguished? Not the flame of life, but a smouldering fires of earth-born desire. When tryans has been won, the desire, or group of stires, which attached the soul to earth and drew latter again and again into the whirlpool of retain, has been fully and finally extinguished. In the words, a long and arduous stage in the latinance of the soul has ended, and a new stage in the latinance of the soul has ended, and a new stage in the latinance of the soul has ended, and a new stage in the latinance of the soul has ended, and a new stage in the latinance of the soul has ended, and a new stage in the latinance of the soul has ended, and a new stage in the latinance of the soul has ended, and a new stage in the latinance of the soul has ended, and a new stage in the latinance of the soul has ended, and a new stage in the latinance of the soul to earth and drew that the soul to earth and drew latinates the

na is to pass into the new order of things, whatever that may be, which awaits the soul when the last of its earth-lives is over. What the new order of things may be, we do not know. Buddha did well to keep silence about it. Its mysteries and glories can no more be realised by the ordinary dweller on earth, than can the mysteries and the glories of colour be realised by one who was born blind, or the mysteries and the glories of sound by one who was born deaf. But whatever it may be we may be sure that it is a higher and purer state of existence than that which we are now passing through. The soul has climbed to a higher rung in the ladder of spiritual evolution. It is a stage nearer to its ideal goal, the goal of oneness with the Brahman, the spirit of God".

WORK OF BUDDHISM IN INDIA

Though the number of people who profess Buddhism in India is very small, Mr. Holmes thinks that

"In India itself, in spite of its apparent failure, Buddhism accomplished a great and beneficent work, 'Buddha', say the authors of the article on "India" in the 11th Edition of the Engels and Britannica, 'never ousted Brahmanism from Accompanies

DEBT OF THE WEST TO INDIA'S ANCIENT WISDOM

Mr. Holmes then proceeds to show that was outside the land of its birth that ldhism won its greatest triumph. Having ribed what it has done for Asia, he asks hat of the West? Does it owe nothing to Ancient Wisdom of India?"

His answer is:-

I think it owes more than it is willing to admit. are ready enough to acknowledge our debt to thinkers of Greece. But what is a direct debt tem may well be, in part at least, an indirect to the Upanishads and Buddha. Pythagoreat, with its doctrine of metempsychosis. Its tice of vegetarianism, and the quasi-monasticism its Brotherhood, savours so strongly of an influences that it is difficult to avoid the clusion that when (as is highly probable) hagores visited Egypt, he drank there at a which had received an influx of Indian 19th."

Mr. Holmes gives his reasons for coming this conclusion. He also quotes Dr. iders Petrie, the eminent Egyptologist, who ribes an Indian origin to the ascetic monassm which is found established in Egypt 340 B. C., which persisted there for some turies and which spread thence into ghbouring countries such as Palestine and ria. There seem to have been two separate asions of Egypt by Indian asceticism. Dr. inders Petries says:

There may have been at that time (before B. C.) only an idea of withdrawal of the acruous from the world, due to the Indian influence ler the Persian Empire; and the fuller adoption he Indian form of contemplative life may be to the great Buddhist mission under Asoka in B. C."

The reasons that Dr. Flinders Petrie gives ascribing an Indian origin to both insions seem to be fairly strong. The consion which he reaches is that "practically whole system of life [ascetic life in

Mary State of the State of the

Egypt] was that of Indian asceticism, planted as an ethical system."

If Pythagoras owed anything to India derived through Egypt, and if Mr. F. M. Cornford, in his work on Greek Religious Thought, is right in regarding Plato "as the successor of Pythagoras and the inheritor of the invstical tradition in Greek religion." responsibility for the debt which Pythagoras contracted has been passed on to the West, says Mr Holmes "The mystical tradition," says Mr. Cornford, "asserts the unity of all life-divine, human, animal-and accordingly denies that there is any gulf fixed between the nature of the gods and the nature of man". This is the teaching of the Upanishads, says Mr. Holmes. Mr. Cornford goes on to say that "Plato's adoption of the Pythagorean religion raised it to a position of incalculable importance in the whole subsequent history of European theology. It made possible the alliance of Platonism with the religion of Christ and of St. Paul" If that alliance, observes Mr Holmes, was in any way facilitated by the secret influence of Indian idealism, the debt which Christendom owes to the Upanishads great.

JESUS CHRIST'S DEBT TO THE UPANISHADS

"Did Christ owe anything to the Upanishads?", asks Mr. Holmes. His reply is:—

"Perhaps he did. A great soul is peculiarly sensitive to the spiritual influences of the age in which it lives, and of the world in which it finds itself. Indeed it is its mission to accept what is best in those influences, to assimilate them, to transform them, to make them its very own. And the greater the soul the greater are its obligations and the more fruitful the use that it makes of what it borrows. The Levant in the time of Christ was a whirlpool of conflicting and commingling beliefs. The building-up of great empires such as the Persian, the Macedonian, and the Roman, had at ence denationalised and supernationalised religion; and many of the religious ideas which were current in the Judaeo-Hellenic world were of quasi-universal significance.

Foremost among these was the idea of the unity of all life and the consequent oneness of man with God. With this went the kindred idea of the duty of purifying the soul through the medium of conduct in general and of virtuous conduct in particular, the latter idea having found practical expression in the lives of the Essenes, some of whose communities Christ may well have visited. Both these ideas had come from India. They may have had other sources as well; but their Indian origin is indisputable, and India had set its own special stamp upon them. And both ideas are at the heart of Christ's teaching. In his conception of God as the loving Father of all man and all other living things he brings God very near

Tay may analogue to a b of

٨,

o ms. In his memorable saying, "I and my ather are one," he brings God nearer still.

"Choser is He than breathing, and hearer than hands and feet," Then he says to us, "Be ye perfect even as your father which is heaven is perfect," he sets before us the purification of the soul tredgh, virtue as the end and aim of our lives, and he again publishes the nearness of God--of the very perfection, the very finitude of God--to man. It is true that this sublime precept, at because it brings God very near to us, and because in doing it bids us aim at an unattainable ideal, has never been taken glously by Christendom. But its day is yet to come."

India's Ancient Wisdom, the Antidote to Western Materialism

In concluding his article, Mr. Edmond Iolmes savs:-

"Ten years ago the civilisation of the West was Ten years ago the civilisation of the West was all appearance orderly, progressive, prosperous, nd stable. Then came the tragedy of the Great Var, which revealed the hollowness of our attends prosperity and accelerated the process of a hitherto unsuspected decay. Now, after five ears of peace, Europe is a weltering chaos of onficting aims and interests, a whirlpool of affish desires, of angry passions, of dark suspicions, f jealous fears. Nation is set against nation, class marty against party creed against gainst class, party against party, creed against reed, cause against cause. The whole social tructure is rocking as if in an earthquake; and its

tructure is rocking as if in an earthquake; and its ery foundations seem to be breaking up.

"The catastrophe has been sudden and swift, ut the preparation for it has gone on for centuries. The civilisation of the West is materialistic to the preparation of the West is false standard of alues, and its open encouragement of greed and alf-indulgence—a Nemesis which delays its coming if the materialistic civilization is at the zenith of its restness—is moral decadence, social disorder, and onomic disaster.

"Why is the civilisation of the West materialistic the core? Because the mind of the West has ever been able to realise the essential spirituality. Nature and the consequent Unity—in the rinity of Man and Nature and God—of the Universal Life. It has exiled its God to the dreaming of the Supernatural; and in that phantasmal or of the God has become a phantom and is now

resal Life. It has exiled its God to the dreamnd of the Supernatural; and in that phantasmal
orld its God has become a phantom and is now
ding away into nothingness. Bereft of God's
dwelling spirit nature has become a complex of
achinery, in which each of us—an automaton in
sown being—is but a helpless atom in a whirling
ass of steel. In such a world human conduct is
at to be regulated by such maxims as "Each for
meelf and the devil take the hindmost," and "Let
i eat and drink, for to-morrow we die". When
less inverted ideals win general acceptance the
massouent corruption of society becomes the
massouent corruption of society becomes the
massouent corruption of society becomes the
infless.

"If we are to find the antidote to that false
illosophy we must turn for guidance to the
ncient Wisdom' of India,—to the speculative
illosophy of the Upanishads and the ethical philosory of Buddha. To place God at the heart of
itare by thinking of him as the ideal self of man
to marge in ideal oneness the spirit of man, the
irit of nature, and the spirit of God—was the
passure achievement of the Upanishads. The
passure achievement of the Upanishads.

Until the higher thought of the West is able to enter, with some measure of understanding and sympathy, into the ideas that dominate the Upanishads, it will continue to waver, as it has long done, between supernaturalism and materialism seeking rest and finding none,—finding none, because it does not see that the only rest which can refresh and revivify the soul is the inward peace which comes from the progressive realisation of our potential oneness with God, the peace which passeth understanding, the rest of infinite unrest."

Birth Control as an Unsolved Problem

We read in Current Opinion:-

For two generations the martyr-propagandists of the so-called "birth control" movement on both sides of the Atlantic have endured imprisonment and persecution as a result of their efforts to publish contraceptive information; and yet, if the publish contraceptive information; and yet, if the truth were told, one would have to admit, according to Morris Fishbein, Associate Editor of the Journal of the American Medical Association, that birth control is still an unsolved problem. In connection with this statement, Dr. Fishbein cites the presidential address, before the American Medical Association last June, in which Dr. William Allen Pusey devoted himself to the subject of the limitation of population,... "I particularly desire", he said, "that the mistaken impression should not go out that I mean to say that medicine now has any satisfactory program impression should not go out that I mean to say that medicine now has any satisfactory program for birth control. It has not"...Dr. Fishbein continues (in an article in the American Mercury: "The fact is that none of the students of the problem, not even the physicians, have ever perfected any method of birth control that is physiologically, psychologically and biologically sound in both principle and practice." "Of all the devices at present available, the most ancient and the most certain of all is that of simple continence"

Each of the chief advocates of birth control

Each of the chief advocates of birth control has some method which he or she considers the ideal; but the fact that Margaret Sanger, in America, and Dr. Marie Stopes, in England, do not agree should be sufficient evidence in itself that the ideal has not been reached.

The conclusion reached by Dr. Fishbein is that medical science, despite all the time and effort spent, is not yet satisfied with the achievements of its investigators in this field. Research workers are still seeking methods which are scientifically safe and psychologically satisfactory.

A Million Words in a Square Inch

It will appear from the following passages extracted from Current Opinion that diplomacy is going to be more effectively secretive and bypocritical and war more difficult than bitherto:

An invention tested by the United States Bureau An invention tested by the United States Durest of standards has been perfected that will engrave letters so small that in the space of one square inch the inventor, Alfred Mckwen, claims he could write eighty complete copies of the Rible. To the Buresu the inventor sent a sample of the

described the distributer prior has been seemed to the writing of the Lord's prayers (fifty Six Words) on the above described slide has been measured and found to be 0.0016 inch wide by 0.0008 inch high. Test number T. W. L. 34.374."

These dimensions multiplied give a total area of 128 hundred millionths of a square inch or the 781,250th part of a space one inch wide by one inch deep. That is equal to the 78th part of a 10.000th part of a square inch, so that 78 prayers 4,368 words, could be accommodated where the two letters "L" on the page might be made to cross each other at right angles. What chance would the most inquisitive enemy secret service agent have of discovering a message so minutely engraved?

The inventor, according to the New York World, intends his efforts to perfect the process of microscopic engraving to be applied particularly to the transmission of secret documents or messages during war time. A suspected messenger could carry written communications of unlimited length engraved on the surface of a button, or hidden in a tiny corner of his averlasses—perhans

carry written communications of unlimited length engraved on the surface of a button, or hidden in a tiny corner of his eye-glasses—perhaps covered by the attachment of the nose piece. It would be literally impossible for the keenest enemy officer, unless he were an expert micrographist and knew exactly where to look, to find a trace of the message that was passing right under his nose. Imagine a metal button composed of two parts soldered together. On the inside of one of those parts a message longer than the complete works of Shakespeare could be engraved. Or a messenger could carry the complete hnancial messenger could carry the complete inancial records of some secret transaction on space smaller than the eye of a needle.

Another use suggested by the inventor is the making of permanent records on some such material as the new rustless steel. These records would occupy such a small compass that whole volumes of valuable data could be kept in a small

safe deposit box.

Splitting Seconds into a Billion Parts

Current Opinion records that.

"Professor Paul Heymans and his laboratory assistant, Nathaniel H. Frank, of the Massachusetts assistant, Nathaniel H. Frank, of the Massachusetts Institute of Technology, have succeeded in measuring intervals of time down to one billionth of a second and are confident of being able presently to split a second into a hundred billion parts. In accomplishing this extraordinary feat the two physicists employed a modification of a method devised by Dr. P. O. Pederson, of the University of Copenhagen, involving what are known as Lichtenberg Figures which manifest themselves when an electric wave is reflected from an electrode."

Chemistry and Peace

This is a notable contribution to the note Konthly by Mr. J. B. S. Haldane, Sir William Dunn Reader in Ricchemis-Contesting University.

And the state of t

THE PREVENTION OF WAR

Mr. Haldane thinks.

"War will be prevented only by a scientific study of its causes such as has prevented most epidemic diseases. For many centuries people had guessed that epidemic diseases constituted a punishment for human misconduct of some kind. They tried to prevent them by prayer and almsgiving. Christians gave up washing; Hindus liberated rats captured during plague repidemica. [Did Hindus ever do this? Ed., M. R.] Religious orders and priests of the church gave the most magnificent examples of self-sacrifice in times of pestilences can be prevented. Besides good intentions a special type of accurate thinking was needed. We have not yet made a scientific study of the causes of war and, until we do, may expect of the causes of war and, until we do, may expect more wars."

Mr. Haldane says that twenty-five different poisonous weapons were employed during the last great war, of which mustard gas or dichlorethyl sulphide caused more casualties to the British than all other chemical weapons put together.

Mr. Haldane's paper contains many other interesting things, but nothing as to how chemistry can be made to promote peace. So the caption chosen for his paper appears

to be a misfit.

Religion as a Force in Modern Life

Mr. Reinhold Niebuhr writes in the same monthly:

"If religion is to be restored as a force in modern life, it must be able to guage the evil in human life and yet maintain its faith in the spiritual potentialities of human nature. It must be able to deal with the problems of economic and political life in the spirit of scientific realism and offer for their solution the dynamic of a faith that is incurably romantic. Nothing less than a transcendentally oriented religion is equal to this task, but it must be a religion which tearlessly faces the moral implications of its faith."

Count Keyserling on Indian Music.

Count Hermann Keyserling is a wellknown German author. One of his works, Das Reisetagebuch eines Philosophen, is a comprehensive record of the impressions, emotions, and thoughts called forth experiences in the Far East and North America during 1911 and 1912. An English translation of this "Travel Diary of a Philosopher" has been recently published in America. Dr. Kuno Francke, Professor Emeritus and honorary Curator of the Germanic Messain at Harvard University, has written an article.

this book in The Atlantic Monthly. Educated dus will find both the book and the ble them to understand what in Hinduism reals most to a cultured German author * Keyserling.

Incidentally Dr. Francke writes :-

Incidentally Dr. Francke writes:—
"It is a pity that Count Keyserling did not see is after the Gandhi Movement had stirred all sees of the nation to a new and unprecedented ritual effort. The last days, however, of his lian accourn were devoted to a stay with the er great representative of modern Hindu culture bindranath Tagore. Of an evening spent at his use, listening to native musicians, he says:
"Indian music is only another, richer, and fuller greation of Indian wisdom. He who wishes to derstand it must have realised his own self, must tow that the individual is only a fleeting tone the great world symphony, that everything longs together, that nothing can be isolated, and stevery objective existence is only the glimpse of noment in the current of mysterious ever-flowing a. He must know that all phenomena are only reflection of the invisible Being, and that our hemption lies in anchoring our consciousness this Being. Tagore himself impressed me as a sitor from that higher region. Never perhaps we I seen so much spirituality concentrated in a man form."

Count Keyserling on the Future

According to Dr. Francke,

The Hindu ideal of individual perfection within The Hiudu ideal of individual perfection within given limit, Chinese belief in the harmony beyon the moral and the physical order, Japanese enius for intellectual exploitation, American power individual initiative—these, unsatisfactory as it such formulas are, may be said to constitute the mental harvest which Keyserling brought ack from his trip around the world."

The following are among the closing words of Count Keyserling's remarkable book :

"We are coming to a broadening of the generally "We are coming to a broadening of the generally human basis of our life such as was never known leafore, and at the same time to a deepening and intensifying of every individual racial tendency enably unparalleled. While formerly there was the alternative, nationalism or cosmopolitanism, will henceforth be a mutual penetration of the two. The different types of culture and belief two and more be transformed into a conscious complements of each other. The former "He or I" will more and more be transformed into a conscious and selicerate "We". And this will take place almost independently of all goodwill, because the life of the world is itself a connected whole. About in acience, in money, in economic interceptations, foundations have been laid on the basis which mutual agreement is inevitable; soon the will be the case in legal relations. These consective realizations of internationalism, or their more transfer and more leading minds are renounced. More and more leading minds are renounced. ternational solidarity of Labour is daily becoming more powerful. On some day of grace all humani-ty will feel as one, in spite of all conflicts and contrasts.

"To help in bringing about this blessed day and this better world—that, and not the Occidentalization of the rest of the globe, is the mission of the occidentals. It is the mission of the West to put into practice what the East, and especially India, has first understood as a theoretical command."

What is civilisation?

"What is civilisation?" asks the Forum. railroads, telegraphs, skyscrapers, and open plumbing? Is it the conquest of the air and of disease? Is it literature and art, philosophy and religion, the superlative excellence of the few, or the greatest

good of the greatest number?

"In this age of vast material progress, too many of us are prone to limit our definition of civilisation by the very prejudices born of our own particular type of culture. We are apt to regard civilisation in terms of our mechanistic achievements, and to hook down pityingly from the altitude of our progress upon the backwardness of other times and neonless. nok down pityingly from the altitude of our progress upon the backwardness of other times and peoples. To-day this attitude is being challenged by many writers, who bid us look to other cultures and see what we can learn from them. In the brilliant kaleidoscope of history many diverse civilisations have flashed and faded. Each one has contributed something to the great wealth of culture of which we of to-day are the heirs and beneficiaries."

A Scheme for the Medical Profession

Major-General Sir Gerard Giffard, I. M. S. (Retired), writes in The Asiatic Review :

I hold in my hand a document just received from Madras sent by the Raja of Panagal, the first from Madras sent by the Raja of Panagal, the nest Minister of the Madras Government. I have received it, from my old friend the Minister, with great pleasure because he has just carried out a scheme which I recommended to him before I left India last year. The scheme is based on the belief that the future of Medicine in India cannot be a future of Government Medical Servants. Although the medical graduates of Madras are few in number in magnetion to the number of persons needing medical graduates. proportion to the number of persons needing medical help in the Presidency, many of them are unemployed. The medical graduates and also the unemployed. The medical graduates and also the L. M. P.'s (Sub-Assistant Surgeons grade), up to the L. M. P.'s (Sub-Assistant Surgeons grade), up to the present, crowd into the large towns where there are already too many doctors. They have to compets there with the Government servants who, being in charge of the Medical Institutions, and receiving a fixed salary, are easily able to obtain the greater part of the private practice. These private practicioners have usually spent all the money they can command on their education and so they cannot make a start in the rural districts. The Minister's scheme proposes to subsidize these men and to supply them with a house for a certain number of years and with a free supply of medicines and apparatus. The subsidy will gradually distribute, thus leaving the doctors, at the end of a few years mean time they must treat the poor gradual.

charge such sees as they can collect from well-to-do satisate. I welcome this scheme as a small beginning towards the establishment of an independent medical profession, and I hope that, if the recommendations of the Lee Commission be also carried out, and the Professional chairs be no longer held by the Services, the handing over to an independent Medical Profession of the top and bottom may eventually lead to the growth throughout India of a self-reliant, self-respecting, independent Indian Medical Profession, no longer divided by educational barriers, but itself capable, in the future, of building up for India a position in the Scientific World to which its numbers and intelligence will entitle it.

Democracy in Islam

We read in an article on Democracy in Islam by Mr. Syud Hossain in The New Orient of New York :-

I claim for Islam that it alone among the religions of the world has provided a working basis for true democracy. It has reduced the principle of the brotherhood of man to terms of actuality—to practice and not merely profession—both socially and internationally. Go where you will in the Moslem world, from Morocco to China, from South Africa to Siberia, you will not find any barriers of race or color or caste dividing Moslem from Moslem. The Moslems of the world constitute one great family. No sense of strangeness keeps them apart; no artificial inequalities mar their social organization or intercourse. or intercourse.

After a somewhat extensive study of democratic conditions and institutions in the West, I can still conditions and institutions in the West, I can still affirm that the reality of democracy, in a fundamental sense, has been better realized in Islam than in any other system. True, there have been flagrant spells of corruption and backsliding, and there are present today phases of self-betrayal in Moslem society. Moslems, indeed, have fallen because they fell away from Islam—alike from its truth and its tolerance. But even so, a marvelous traternal spirit, transcending all barriers of race or country or colour, still animates the great country or colour, still animates the great brotherhood of Islam in a degree perhaps not discoverable in any other great community of men. Here, at any rate, we have a great example, and a great promise for the redemption of humanity. Islam had done nothing else than eliminate, as it has incontactably done the propagatory by

It islam had done nothing else than eliminate, as it has incontestably done, the unconscionable barriers of racial antipathy and national exclusiveness from among one-fifth of the human race scattered over the surface of the globe, covering every land and clime, it must hold civilization its debtor.

Christianity, after two thousand years of evolution, has signally failed in this vital respect. The conception of a human brotherhood, a social communion, that would transcend geographical, racial or national boundaries seems to be equally unrealized in the other great religious systems of the world. It is Islam alone that rules out, in theory no less than in practice, the claims of race or nation, caste or colour, to break the unity or mar the harmony of the human family. And there can be so question that it is along that path the world. The writer says is true. But it is

also true that Islam has not solved the problem of political democracy; for though it has ruled out "the claims of race or nation, caste or colour", if not always in practice, at least in theory, it has not ruled out the claims of creed. All Muslims may be equal, but in Islamic theory, Muslims and non-Muslims are not equal politically or otherwise.

Measuring Genius

Mr. William Douglas tells us in Chambers's Journal.

The world in general is content to regard genius The world in general is content to regard genius as a phenomenon that appears at rare intervals in defiance of, rather than in accordance with, natural laws. The fact of genius, its choice of the medium in which it expresses itself, and the form of that expression, are unquestioningly accepted as inevitable and inexplicable. The reading-public, while it is eager to be amused or interested or thrilled, will not readily consent to think. So it prefers to look upon genus as something alterether missen. look upon genius as something altogether miraculous, and loves such fine phrases as Wordsworth's light that never was on sea or land and Carlyle's inspired gift of God'.

Most people are strangely gratified when there is striking contrast between the circumstances of genius and its performance. The greater the contrast, the greater the miracle. If a ploughman turn poet or a policeman paint pictures the world applauds the prodigy. It would be disappointed if Bacon proved to be Shakespeare. This trick of contrasting opposites is as old as history. David of Israel and Jack the Giant Killer are heroes because they were, comparatively speaking, possessions. because they were, comparatively speaking, pyrmies. Diogenes steps from his tub into the temple of fame. The average man is particularly delighted of tame. The average man is particularly designed when the personality or history of a poet seems out of keeping with his poetry. He thinks of Chatterton as the 'marvellous boy' who starved in a garret. Marlowe is the tavern brawler who is killed in a drunken scuffle over a prostitute—by Will Shakespeare himself, if we are to believe Miss. Clemence Dane, who certainly knows better. Milton writes Pareduse Lost and Homer The Iliad, each after he is blind. Dr. Johnson is scrofulous, gluttonous, and a boor. Goldsmith is the inspired fool' who wrote like an angel but talked like poor Poll'. Shelley is an atheist, and Byron a black-

Poll'. Shelley is an atheist, and Byron a black-guard.

Yet it is obvious that Shakespeare would have been no less a genius if he had been Lord Chancellor of England. Homer and Milton would not have written worse poetry even if they had had Argus's hundred eyes. Shelley, although he had turned Quaker, would still have 'dabbled his fingers in the day-fall, and littered the floor of heaven with his broken fancies'. Were Mr. Chesterton thin as an eel and Mr. Bernard Shaw gargantuan, their charm would be no less potent. The man in the street cannot be made to think so. Believing that the marvellous essential is rendered more marvellous by contrasting concomitant incessentials, he measures the first by its distance from the secondari if genius were not something above and burgest such accidentals; and he is encouraged in this laise correlation of opposites by literary biographents.

second of the miraculous because he is ignorant at appreciants.

But the man in the street has other the tritely true, the strongly emotional, the bloomy large lever, and the broady humanus. he distrusts his preference because he pects simplicity.

rempticity of subject and expression is so often remarked as a mark of mediocrity that the worth work is frequently measured in inverse pro-

Men of Genius are believed to be wanting in sanity.

The man of the world sometimes judges genius, The man of the world sometimes judges genius, marticularly poetic genius, by comparing its menticularly with his own, flattering himself considerably in the process. By this method of calculation, tening is measured in inverse ratio to its sanity. The man of the world does not make the comparison in respect of originality, inventive power, invention, perception, receptivity, spiritual energy and enthusiasm; that were too exhausting a method—and the result might not be so flattering to his self-esteem. The standard of his measurement common-sense, and he fondly misapplies Dryden's is common-sense, and he fondly misapplies Dryden's

Great wits are sure to madness near allied And this partitions do their bounds divide.

So be regards genius as a kind of mental disease,

the credits the weaknesses of the long-haired types,

mailtar in caricatures, to poets like Chaucer,

Spenser, Shakespeare, Mitton, and Wordsworth.

An a matter of fact, these the greatest masters of lagish poetry, are characterised by a practical matter, and commonsense that the man of the world the control of the control of the man of the world the intervals of making out bills of lading and the intervals of making out bills of lading and the intervals of the dutties as ambassador, master the intervals of making out bills of lading and attending to his duties as ambassador, master torks, and member of Parliament for Kent.

The state of the deputy-governor of Ireland.

The state of the state of the deputy-governor of Ireland.

The state in was, prosaically enough, earning his living as school master that he wrote his Areopagitica "the classic classic of spiritual and intellectual freedom its outbursts of shattering vituperation, its houndless power, and overgrand over grand overgrand overgrand overgrand overgrand over grand overgrand ove

The department of the partment of the partment

Other methods of measuring genius have Them mentioned as follows:

Bonne people would measure realize a measure the efficiency of machinery, by base illusion that poets produce their mastery is without effort. They love to read of poets winever blotted a line, who lisped in numbers for ti numbers came. To such people he is no heave horn poet who scerns delights and lives laboriously whose gening is an infinite caracity for table days, whose genius is an infinite capacity for taking pains. Poeta nascitus non fit! He must be able toss off a sonnet with his 'night-cap' before ste ping into bed.

oray's immortal elegy, which took eight yea to complete, is, on this basis of measurement, no poetry. But Cecil's saying of Sir Walter Raleig 'I know he can toil terribly,' is true of genius of every sphere of sotivity. Shakespear's knowleds is as wide as his range. He must have been a commivorous resder, an observant and diligent student of men and affairs. Originality imagination dent of men and affairs. Originality, imaginatio comprehensiveness of soul, sensibility to impression, sincerity, sympathy, emotion, eloquence, just sense of proportion, and a delicate appreciation of musical sound, are some of the chief element of genius; but all are useless without that bound less energy of mind, that self-denying tenacity (purpose, which exercises and cultivates them an transmutes capacity into impershable wor. A few writers like Rousseau may learn more from men than from books, more by meditating on the own experiences than by meditating on the exper ences of others, but to produce work that wi quicken the intellect, stir the emotions, and fit the imagination they must not only think trul; feel deeply, and imagine nobly, they must to terribly.

A good measure of genius has been thus described by La Bruyere: 'Whenever,' he says, 'th perusal of a book elevates your mind and inspire you with noble and courageous sentiments, do no seek for any other measure to judge the work: the work is good and written by the hand of a master

Mosques Open to All Worshippers of God

"Once a deputation from a Christian tribe waite Once a deputation from a Unristian trine waite upon our Holy Prophet Muhammad (may peace and the blessings of God he upon him). They were having a discussion with him on doctrinal points. The argument grew long and it was their time to pray. They asked his permission to go out and say their prayers. He said there was no need to them to go out for they could pray in the Mosqu where they were holding the discussion. So we where they were holding the discussion. So we know from the Holy Quran as well as from the Life of the Holy Prophet, that the doors of Moslen Mosques are open to all those who want to wor ship God alone and that the Moslem Mosques are the centres of unity."—The Review of Religions.

The Future of Africa.

"The future of Africa lies with the African, and this more particularly applies to the Centra and Equatorial zone. With the exception of the lands surrounded by the mountain groups of I kilimanjaro, and Elgon, little of this is sufficient white settlement. I think I am right in anyth the policy of the British Government mast.

stands appeared to encouraging projects which have the their object the creation of Suropean-owned and suranged plantations to replace agricultural industries which are already in existence or which are capable of being developed by the Africans themselves."

"Africa is at last awakening from an age-lorg inertia, and there is a slow but sure movement in which one can already recognize the beginnings of a race-consciousness among millions of reconle who

a race-consciousness among millions of people who have up till now been regarded as the most back-ward of mankind."—R. St. Barbe Baker in The English Review.

The Future of Constantinople

According to Le Temps, Constantinople is a dying city. Its formerly busy harbor is deserted, banks will loan money only on exorbitant terms, big business houses are liquidating their affairs and closing their doors. Foreigners are leaving en masse, or—as in case of the Greeks and Armenians—are being expelled by the authorities; and even part of the Mussulman population is migrating to Anatolia in the hope of bettering its condition.

Constantinople suffered severely during the suc-

Anatolia in the hope of bettering its condition.

Constantinople suffered severely during the succession of wars that began with the Balkan conflict in 1912 and only ended with the defeat of the Greeks last year. A series of confiagrations, the ravages of which could not be repaired in the prevailing unsettlement, has swept away more than one fifth of the city. Revolution and civil war have practically extinguished the Black Sea trade; and Constantinople, like Vienna, is suffering from the shrinkage of the territories of which it formerly was the commercial centre. Last of all, the departure of 300,000 Greeks and Armenians, like the expulsion of the Jews from Spain and the Huguenots from France, has prostrated important economic activities of the city. Meanwhile Constantinople's rivals are profiting by the distress of their old competitor Alexandria. Beirut. Pirzeus, and Saloniki are no longer simple satellites of the Saloniki are no longer simple satellites of the metropolis on the Bosphorus, but are rapidly becoming independent trade-centres.

Notwithstanding this discouraging situation, however, correspondents point out that the causes of the present depression are political and transitory, while the natural advantage that has made Constan-

while the natural advantage that has made Constantinople great—her strategic situation at a focus of land and sea routes—remains unaffected, and they confidently predict her ultimate revival.—The Living

Europe and Internationalism.

Mr. Junnosuke Inouye, ex-minister of finance of Japan, writes in the Japan Magazine :-

I was present at the meeting of the League of Nations Association held in Lyons, in which I made an address on the equal treatment of all the peoples in the world, regardless of their nationalities. In the meeting I had the opportunity of personally seeing various people representing various countries. What I was heartly moved by on the occasion was hat the does antertained by various peoples in the world was further and further receding from the office meeting of internationalism or that of the latter as and they had begun to be

inclined, to the idea of nationalism or that of nationalistic egoism. It is true that each of the representatives arrued with dignity and impartiality, expressing quite fairly his own views superficially. However, I was able to find very easily the idea of nationalism and nationalistic egoism burning ablaze behind it.

It may be no wonder that nationalism has begun to prevail, because it may be the shortest cut for the European nations to resume the normal economic situation by consolidating themselves nation by nation or it may be the only means for a nation that they consolidate their national unison, in order to prevent themselves from other nations' contempt. At any rate, it cannot be overlooked that the idea of all the European nations is now inclined to nationalism. I don't know whether it is a deplorable or congratulative phenomenon, but, nevertheless, it is an undentable fact. In this way it can be safely said that the centre of the current of thought of the World is moving to nationalism from internationalism.

A Message from Mahatma Gandhi to "The World Tomorrow"

"My study and experience of non-violence have proved to me that it is the greatest force in the world. It is the surest method of discovering truth and it is the quickest because there is no other. It and it is the quickest because there is no other. It works silently, almost imperceptibly, but none the less surely. It is the one constructive process of nature in the midst of incessant destruction going on about us. I hold it to be a superstition to believe that it can work only in private life. There is no department of life, public or private, to which that force cannot be applied. But this non-violence is impossible without complete self-effacement."

Americans and the Red Indians of America

Is there any reason, asks the American Indian Defense Association, why the tuberculosis deathrate of the Navajo Indians should be ten times that of the registration area of the United States; why there should be twenty-five thousand cases among two hundred and ten thousand Indians; why their trachoma patients should be allowed to go blind in the presence of known methods of prevention? There are, of course, plenty of reasons. The American Indian is a charge that has sat very lightly on the Puritan conscience of America. The shortage of decent medical services among them is by no means decent medical service among them is by no means the greatest of the ills the Indians have suffered at our hands. Neither will the rectification of these conditions make amends for the wiping out of their civilization. But nothing could do that, while immediate assistance will do something toward elizainting the most deployable aspects of the preparation. ating the most deplorable aspects of the present. Therefore the association is preparing to launch a comprehensive drive against the whole existing system of handling Indian affairs. The future may offer the Indian no alternative but what has confronted him in the papt: externination or assimilation. ed him in the past; extermination or assimilation. But even so, he is entitled in the present to the most humane treatment the 'superior' civilization can muster."—The New Republic.

Mr. Sevel Zimend on Mahatma Gandhi.

No matter what one may think of Gandhi's economic program, of his idea that modern civilization is pernicious in its effects upon the individual of his belief that railways and hospitals, for the striple, are at best a necessary evil—Tolstoi and taskin preached such theories two generations back—it must be admitted that his method of non-miclenge has not only contributed to the advance

Stack—it must be admitted that his method of nonsiclence has not only contributed to the advance
the self-sacrifice and self-respect in India, but has
also had a far-reaching influence all over Asia.

What he asks of his countrymen is to adopt
non-violence for the purpose of regulating the relations between the different races and for the purpose of attaining Swarm; (self-government). "This
I venture to place before India, not as a weapon
of the weak, but of the strong."

"Do you believe." I asked, "that your people
"will give up every kind of violent method in their
attraggle for Swara;?"

I believe that the Indian people will gradually
come to "adopt the doctrine of non-violence," he
replied. "All our ancient traditions, our epics, our
listory show that we are more ready to suffer than
to inflict punishment on others."

He has never asked his people to eschew violence
in their dealings with robbers or thieves, or with
mations that may invade India. He has never
presented that extreme form of non-violence, if
only because he does not regard himself fit enough
to re-deliver that ancient message. Though his
intellect has fully understood and grasped it, it has
not as yet become part of his whole being. His
strength lies in asking people to do nothing that
he has not tried repeatedly in his own life. But
in order that they may be better able to protect
themselves, they must learn to restrain themselves.
The method of non-violence can never lead to loss
of strength, but it alone will make it possible, if themselves, they must learn to restrain themselves.

The method of non-violence can never lead to loss of strength, but it alone will make it possible, if the nation wills it, to offer disciplined and concerted action in time of danger.

As he was talking, I seemed to hear again the voices of India, to see the stormy background of his possible, to seen the lofty passages of Indian scriptures.

people to scan the lofty passages of Indian scriptures, so accertione the exalted deeds of his countrymen. I heard the triumphant music of the reborn location. I heard the sacred tidings of peace on earth and goodwill which Asia sends, once more, the children of men.

And then the Mahatma summed up his message:

The fighting for nothing less than world peace." said he, 'if the Indian movement is carried by success on a non-violent basis, it will give a new marking to patriotism. and if I may so say, in all marking, to life itself."—Survey Graphic.

Science of Government

Erou Science Progress:

The question which is the best form of govern-The question which is the best form of government for the human race to adopt is really a which scientific question, requiring scientific goldes of thought by man who have had experience it scientific methods. The popular idea to day that the popular idea to day the popular id

form just opinions on modern astronomy, physical or medicine. As long as men imagine that his can be properly ruled by amateurs in the science and art of government, so long will they be hadly ruled—they may as well have their engineering or medical treatment done by similar people. It has been proved over and over again in scientific works on political economy that the creed commonly called Socialism is as impossible as the creed that two sides of a triangle are together less than the third side."

Progress

Concluding an analysis, in the Nineteenth Century, of the idea of Progress, Mr. G. H. Bonner writes that progress

"Is a kind of awakening, a gradual lifting up of the object of pursuit from the material to the mental, from the mental to the spiritual plane. The first effect of such an awakening is to produce chaos: the good which is at first pursued is not the good itself, but a partitive and personal good. And so the chaos of the world of to-day is not a cause for pessimism, but for rejoicing, for it is an infallible sign that the great awakening has begun. infallible sign that the great awakening has begun. The throes of birth are upon the world, for the old order is changing. The darkness which is around us is the darkness of the very early morning, and from it will be born a day more beautiful than any

that has yet been.
"It is idle for the pessimist to moan of the wrath to come: Goodness, Truth and Beauty must inevitably prevail, for they are the foundations upon which both man and the universe are built. Some time and somewhere that ideal perfection of manhood which has existed in the world of the real from all eternity will blossom out in man. And it rests with himself whether the time be a

long or a short one.

Even now there are many signs that a new age is beginning. There is abroad a spirit of questioning, of dissatisfaction with established systems and institutions, of determination to arrive at truth. The very existence of all kinds of new sects and teachings, almost all purporting to have a panaces for every ill, is but another evidence of this dissatisfaction with things as they are."

Translation and Original Creation

Mr. George Russell (A. E.), writing in the Irish Statesman, expresses the opinion that the work of the translator is even more difficult that the work of the creator.

"It is easy to us to find words to expresse our intimate feelings. But how hard it is to put words on the thoughts of another. When a man is himself exalted, the words which fly up to the brain seem to be brought by some affinity, a law of spiritual gravitation which acts as the power which attracts the filings to the magnet. There is a write collaboration between thought and its symbols. We do not understand by what magic an idea works awiftly out of so many thousand symbols which fit it with a body. We find ourselves ling so swiftly that the word seems to tollar the symbols when so swiftly that the word seems to the same to the same seems to the same

thought as the shadow the emistance, there is hardly a second for conscious selection of phrase. Indeed, it may be said in most speech, and eften in the finest writing, there is no conscious selection of phrase at all. The imagination of man is a despotic genie and words are its trembling slaves who wait obediently on it to mirror its lightest motions. But when a writer sets himself to translate, he has not this swift magic of the unconscious to aid him. Everything he does he must do deliberately with reference to an original. For him there can be no ecstasy of swift creation such as enabled Shelley to write the 'Prometheus Unbound' in a few weeks."

Books and Magazines in Japan

The following items of information are compiled from The Japan Magazine:-

Women's magazines are very prosperous today. They sell far more than other periodicals. They are, therefore, able to pay handsomely their novel writers. They are headed by the Fujo-kai and the Shufu-no-tomo, each of which has a circulation of 300,000 a month. No other Japanese periodicals outnumber them except some juvenile and popular magazines, such as the Kodan-Club.

The Shufu-no-tomo paid as much as 10,000 yen for Hasen (Shipwreck) by Mr. Masao Kume and the Fujo-kai paid similarly for the Shinju (New Jewel) by Mr. Kan. Kikuchi at the rate of 25 yen a sheet of copy paper. This created a precedent and the "Central Review" is said to have come to pay a similar rate.

As compared with Western countries, the reading public of Japan is very limited and is confined to a small circle, and a book that sells to the number of 5,000 copies is thought to be a success. Some vulgar books have sold over 10,000 copies, but this is an exception, such publications being taken little account of in the literary world.

The prosperity of Juvenile Magazines.—Juvenile

magazines in Japan are at the pinnacle of prosperity. At a bookstore, one will find tens of these magazines arranged before him, and he will be perplexed as

At a bookstore, one will find tens of these magazines arranged before him, and he will be perplexed as to which to choose.

There are several kinds of juvenile magazines. The first is for children of 2-6 years. Their contents are mostly coloured pictures with simple explanations. The second kind is for common school children with plenty of illustrations, and much more reading-matter, mainly fairy tales and popular songs. Besides, they collect freehand drawings from their subscribers. The third is for senior class children of common schools and junior class pupils of middle or girl's nigh schools, there being separate publications for boys and girls. The reading-matter is somewhat more difficult than in the second kind, the space being occupied chiefly by juvenile detective stories, adventures and stories of heroes, while the girls' magazines contain sentimental stories for the most part. These juvenile magazines welcome contributions from their readers more than the rest, publishing on the last pages their compositions, popular songs and free-hand drawings, some of which receive prizes. The fourth high colour interest to these pupils. They give the second intermation about entrance the second intermation about entrance to higher schools or former examina-

the state of the s

tion questions, to help their young readers pre-paring to undergo the entrance examinations for academies, the competition in which is particularly severe in Japan.

Children's songs are very popular to-day and every juvenile magazine gives in each issue a few of these songs. Many pictures enrich these publi-

cations by them.

Careers for Japanese Women

From the same magazine we gather the following facts about women's careers in Japan :--

A great many Japanese women work in business or professionally in every direction. These professional women are not confined simply to those, who work absolutely from necessity but even those who wish to provide against separation from their husbands by death or to earn their marriage expens-

es themselves.

Typists have an occupation, which most girls are eager to take. The demand for them is increasing rapidly.

Clerks have a position preferable to comparatively sober women. Everywhere in banks, mercantile houses and offices women clerks are at work; yet the demand is much on the increase.

Another unportant position filled by women is that of saleswomen.

The telephone girl has one of the oldest callings monopolized by the gentle sex.

monopolized by the genue sex.

In the educational field, positions as school teachers are popular and appropriate. They teach in primary and girls' high schools and academies.

Midwives have had a privileged feminine occupation since olden times. One simply with experience of assisting at child-birth is not licensed as such to-day as in bygone days. There are certain legal requirements demanded of them. They must be trained in maternity hospit-

them. They must be trained in maternity hospitals or offices of midwives and pass the license examination or must be trained in schools attached to certain hospitals, in order to qualify.

Nurses belong either to hospitals or nurses', associations.

Associations.

Hair-dressers have perhaps the most remunerative of women's occupations, while they socially rank low. This has been a monopoly of women from ancient times. Their husbands have been henpecked, serving their bread-winning wives like servants. There are about 150 styles of Japanese hair-dressing, of which only about 5 are in practical use to-day. There are a number of female hair-dressers' schools in Tokyo and Osaka, where the art of hair-dressing is taught for six months or a year.

Beauty-parlours also belong to the domain of women. This is quite a new occupation. They dress women and prepare their persons for weddings and other ceremonial occasions. The fee is 1-3 yen for beautifying the face and 5 yen for other attention. The capital needed is comparatively large but the income is better than that of the legislations of the legislation of the legislation.

Japanese hair-dressers.

Flower-arrangement, the tea ceremony and Japanese music are taught by those who hold certificates granted by their masters, the isometric (the head-houses), after taking at loast three years' lessons under them or their direct pupils.

Foreign music teachers are paid better than

the of Japanese music, and get over 5 year for secting for a lesson to the purit's house.

The teaching of needle-work has been an occupation of genteel women since old times.

Hausemaids have an occupation unpopular with wimen, for they have to work all day at comparately small wages, and the work of spinning hands and waitresses is preferred. A new occupation has then created to fill the want, called "hahusu-fu," in large cities. They are onen for engagement for certain fixed periods. They do the work of ordinary maids, and their regular daily wages are 150-2,00 yen for first class maids and 0.96-1.20 yen for assistant maids.

Waitresses of cafes have a position offered to good-looking girls of 16-20 years.

Models have a calling that did not exist before the Meiji era.

the Meiji era.

Miss Nobuko Koda was the first independent techer of western music in Japan.

The pioneer of women physicians in Japan was the daughter of Kenzan Nonaka, a senior retainer of the Tosa clan in pre-tle storation days

Kinema-actresses have an occupation eagerly sought after by "new women" of good appearance and physical beauty.

The English-speaking Union and the Latin Union

We read in an article in the Century Magazine by Mr. Charles Edward Russell:-

Anglo-Saxon solidarity means another solidarity and in the latin. "We labor to spread and uphold the English-Speaking Union. "We read those ideals in the histories of Ireland and India." responds the latin, "and if you spread them here, you must advance over our dead bodies."

Hence the Latin Union.

Mr. Russell continues:-

Scorn of the Latin seems to glow in every Sagrish breast. For generations the idea has been state-spread in England that Latin peoples are both decadent and dying. "Their day passed long ago," has been the accepted doctrine of the Maglish school as year after year the English fournals have with manifest gusto repeated the formula devected the Anglo-American alliance suggested that its sure consequence would be the forming of a combination against it, and the world would therefore made just another battle-ground.

What of it?" cried the Englishman. "Great lighter made just another battle-ground.

What of it?" cried the Englishman. "Great lighter made just another battle-ground.

There is no doubt that this is the view of the matter generally taken in England and the sole ground appen which the alliance is urged as a measure of peace. Who could withstand the first help the formula of physical preponderance all such forestimant before the war. Even upon the low manual of physical preponderance all such forestimant are illusory. Giving full weight to the motion organization and resources of some of the lattin outnumbers the Tenion.

As this will not be readily believed by readile strong is habitual thinking to the contrary. It refer to the figures.

POPULATIONS IN ROUND NUMBERS

at least.

Of course these divisions are political rath than ethnological: Walloons in Belgium, may bloods in South America 3000000, Germans Czechoslovakia, and many other mixtures composed the estimates, which are sufficiently appalling without these details. The chief thing is to not that numerically, at least, the Nordica, if the are without Russia, start with no such suprema as should breed over-confidence. Conceding the Bolivian navy will never be a deciding fact in the universal two-camp struggle to which seem to be heading, it is evident that the idea securing the world's peace by overawing it was Anglo-Saxona guns is chimerical. It is manifely not true that the Anglo-Saxon can with e and one hand tied behind his back beat up these peoples that he despises as "low foreigness It is equally manifest that if the world's peace to be maintained, other means must be for than the noisy furthering of racial combinations; antipathies. Because these methods lead not peace, but straight to certain war, and what it will be when it comes, we can galler foregoing figures. foregoing figures.

The question, on which side word

1. 1

fight in case of a racial war has also occurred to Mr. Russell. So he writes:-

Some superficial support for the overawing theory of peace is found by adding to the Nordic strength the hordes of India To anybody that has been in India this is a bitter jest. Nothing is needed for the final separation of India from the British Empire but a great foreign war If the hordes of India were to take sides at all in such a struggle, it would be on the side of England's foes, particularly after Austran. particularly after Amritsar

America Growing Healthier, But India-?

Mr. Robert L. Duffus observes in the Century Magazine

The basis of human happiness is health. Now, it is probable that civilized man in the twentieth entury is not only healthier than any other human being that ever lived, with the possible exception of a few happy-go-lucky savage tribes living in lands of plenty, but that he is the first civilized man who ever attained anything like a state of health.

health.

The proof is in death and mortality rates. At the beginning of the century, in the United States registration area the death-rate was 176 a thousand, in 1921 it was 11.6, and though it rose to 126 during 1923, its general tendency is still downward. In New York City—the rate dropped from 2026 in 1898 to 11.72 in 1923. Infant mortality in New York. City—was reduced during the same period from 205 a thousand to 63 Death-rates are, of course, an average—between extremes. rates are, of course, an average between extremes. In the cities of Mississippi in 1923 the rate was 103 a thousand, in the rural districts of Iowa 65 a thousand; among large groups of insurance policy-holders, 89 a thousand. As hygienic knowledge spreads, the average will naturally tend to approach the minimum But even now medical science in the United States may be credited with saving at least half a million lives yearly that twenty-five years ago would have been lost.

The baby born in 1900 had a life expectation of about 49 years, now it may count on hiving with reasonable luck, seven years longer ('ertain diseases, as every one knows, have been almost wiped out. The death-rate from typhoid has been reduced nearly eighty per cent, that from tuberculosis nearly fifty per cent. Yellow fever, typhus, malaria, diabetes, the hookworm disease, diphtheria, and scarlet fever are wiped out or under control. Suggesty of all descriptions has made remarkable Surgery of all descriptions has made remarkable advances. New drugs have been found which alleviate suffering and promote recovery, in fact, it may almost be said that a new medical chemistry has developed. More and more the treatment of disease is an exact science, with predictable results. The modern physician is almost as far ahead of the practitioner of the eighties as the latter was shead of an Indian medicine-man. Good roads, the automobile, and modern methods of sanitary organivation have made the new knowledge accessible even in remote regions.

What figures and facts has British-ruled India to adduce for comparison?

What the West Requires;

The same writer observes in the same magazine

A civilization, to be healthy and significant, must be going somewhere. A nation, like an individual man, must look forward, or to all intents and appearances it ceases to live. The tragedy of our century is loss of faith, not in (iod, but in man. Humanity is in desperate need of a new synthesis which will give meaning to life. Until that boon to worklasted our could have the second the second transfer. is vouchsafed, our sparkling toys, increase though they may in number and in splendor, will not bring content. But the lack is hard to fill, for we require now not a Thomas Alva Edison, not a Henry Ford but Buddha, Confucius, Plato, some godlike philosopher able to take these scattered, glowing stones and rear them into a vast and himmonic to our resing to heaven for any ways all luminous tower, rising to heaven, toward which all men's eyes shall be turned.

"White, but Black"

An anonymous writer contributes to the Century Maga: tue an article with this caption, which begins thus

My eyes are light blue, my hair is light brown, my features are undenably Nordic, my skin is white, yet in my veins run a few drops of negro blood. Therefore in America, I am a negro. My wife and daughter and I live on the outskirts of negro Harlem, in New York City. My wife is of olive-brown skin with lustrous black hair. Others than my self have called her beautiful. When first I saw her I thought instantly of a mantila-clad Castiban in some lovely old spanish town. clad Castilian in some lovely old Spanish town.

After detailing various experiences of his and his wife's, in which the white man's racial prejudices, superstitions and unreason play a predominant part, he says in conclusion

Last year I spent several months in Europe. In London I was invited to luncheon by an author whose work is known wherever books are read. He opened the door and hesitated then introduced himself. A puzzled frown wrinkled his face when I told him my name.

"Pardon me" he said "but I expected from your

randon me 'ne said 'out I expected from your writings to see an elderly colored man Instead, you are a young white man'.

I laughed as naturally as the circumstances would permit, and assured him that though guilty of being young. I was innocent of being white-that I was a negro. His bewildered expression increased

as he asked "Do you mean to tell me they class you as a negro in America?"

I assured him that I was so labeled "What damned fools Americans must be on the race question!" he exclaimed

In India, there are thousands of Brahmins and "untouchables" having exactly the same types of features and the same complexion; and the same kinds of morals and brains, but the former are "holy , the latter are "un-

clean", "untouchable," "unapproachable," "unshadowable"!

Home Recreation.

Introducing the subject of Home Recreation, Mrs. Milton P. Higgins, Past President of National Congress of Mothers and Parent-Teacher Associations, stressed the need for recognizing that play is not merely for babies and small children but for the entire family group; that means of entertainment and social activities of a recreative nature must be taught parents so that the individual members of the family will be resourceful and capable of taking care of the lesure hours of the family so of their own individual needs.

as a group as well as of their own individual needs.

The developing and planning of play rooms, play boxes, backyard playgrounds and children's corners are necessary in every home. The entire family must participate in the playing of games, parents playing with their children. Pleasant family must participate in the playing of games, parents playing with their children. Pleasant evening programs should be planned around the family fireside, with stories, singing and games, the family thus being cemented together in bonds of friendship. How can we help this plan? What activities can we suggest? How may we train the parents? Who can distribute the necessary information? These, Mrs Higgins pointed out, are some of the questions which recreation workers must consider:—The Playpround

Imperial Preference

In the Contemporary Review for February

Sir Charles Mallet observes .

"The proposal for preference is not a proposal for giving us equal treatment. It is frankly a proposal that we should tax our consumers, reduce our revenue—so far as revenue duties exist already—and prejudice our trade with foreign notions, in order to secure larger profits for certain Colonial in order to secure larger profits for certain Colonial interests. And at present it is open to one grave objection, that on both sides it is to some extent in the nature of a sham. So long as we decline to give the Dominions on their great natural products, bread and meat, wool, timber and hides, a Preference which must raise the cost of food and raw materials for our people, we are in fact, in Mr. Bruce's words, "dodging the isque," pretending to offer advantages which we do not really mean to offer advantages which we do not really mean to give. And so long as they on their side take every opportunity of imposing freeh tariffs against British manufactures, it is evident that they have no desire to facilitate imports of British goods which compete with their own."

Sir Charles disposes of several illusions in regard to the Preferences given by the Domi-

nions, and concludes :-

.....The whole scheme of Preference is based upon illusions, illusions of fact, of policy, of economics and most of all on the profound illusion flat anything less than unrestricted freedom in matters of taxation and in matters of trade can ever be acceptable to the English people."

The Mandatory System after Five Years' Working

In the Contemporary Review Mr. John H. Harris examines the mandatory system as it has worked during five years and defends it thus :---

THE STATE OF THE S

The most active element in the machinery is The most active element in the machinery is the Permanent Mandates Commission. It may be true that this body has disappointed some of the more extravagant hopes, in that it has not yet taken severely to task any Administration, called for the dismissal of any particular official, requested an enquiry into the treatment of the inhabitants or recommended the revocation of any Mandate, but the members have proved themselves to be remarkably conscientions and printed bing. The remarkably conscientious and painstaking remarkably conscientious and painstaking. The single task of reading reports from all the territories under their supervison is an exceedingly heavy one; in addition to this there is a continuous output of correspondence with Headquarters in Geneva. Once a year (now apparently to be twice a year), these Commissioners meet in Geneva or elsewhere to discuss the work and prepare reports for the Council or Assembly. The whole of this work is done without one penny prepare reports for the Council or Assembly. The whole of this work is done without one penny remuneration, beyond, of course, out-of-pocket expenses. All this means a large expenditure of physical and mental energy and represents without doubt, one of the most generous pieces of disinterested public service performed by the League: civilisation owes to every member of the Permanent Mandates Commission a debt it cannot easily repay.

"Those who may be inclined to be critical of the effect of the Mandatory machinery would do well to reflect upon the very healthy control which is set up by the fact that each year the Mandatory powers submit to a pretty stiff cross-

Mandatory powers submit to a pretty stiff cross-examination upon their stewardship—a procedure which might be adopted with no little advantage by the Colonial Powers with regard to those of their respective Dependencies where there is no system of self-government. On the whole, the League of Nations may be justly proud of the success of the Mandatory system."

Just as in India, the system of "self-government" has given the people the power to exert "moral influence" on the Government, so the mandatory system has given the League of Nations the power to exert "moral influence" on the mandatory powers. Therefore, the success of the mandatory system is not greater, but seems to be rather less, than the success of "self-government" in India.

Negro Race-Movements in America

The Rev. A. M. Chirgwin describes in the Contemporary Review Negro race-movements in America.

He starts with this bit of talk :--

"Why, you niggers have an easier time than I do", said a white storekeeper in Georgia to his black customer. "Yes", he replied, "so does Yo' logs." It is not an easier time that the ten million stripes of Anglist are specified with the black citizens of America are seeking but the aftainment of racial manhood. The negroes in the Southern States are Gemanding their place in the sun.

".....There are new ferments at work in their lives; they are beginning to organise, and through clearly marked schools of thought are giving expression to their emerging race consciousness. One group is openly hostile to the white man, another section stands for cordial co-operation, while a third school arms school aims at forcing the white man to yield to the negro fair and equal treatment."

One of these schools is led by Dr W. E. B. DuBoys, editor of The Crisis, a monthly journal for negro people with a circulation of upwards of 50,000.

He stands for the assertion of full negro rights, and affirms that his race has a worthy contribution to make to the world's life. He is out to remove the colour-bar and all the disabilities that are associated with it. In a word, he found that the negroes are a segregated, servile caste, with restants are a segregated and the service of t tricted rights and privileges, and he claims for his race an open road to betterment."

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. No criticism of reviews and notices of books will be published. Writers are requested not to exceed the limit of five hundred words.—Editor, "The Modern Review."]

"Dravidian Origins and the Beginnings of Indian Civilization"

Dr. S. K. Chattern in the course of his article the "Dravidian Origins and Beginnings of Indian On the Dravidian Origins and Degember number of the "Modern Review" thus observes in one place: "The Aryans in India burned their dead, their ancestors certainly did it in their primitive home, and we find their kinsmen (at least those who inherited the same culture and language with them) in Europe—the old Greeks, the Teutons and the Slavs and others doing the same thing" (p. 672). cremation was certainly an old custom with the Aryans of India and Europe, but burial appears to be older still. I have fully discussed the subject in my forthcoming work "Rigvedie Culture" (in the press) and I make no apology to your readers for making the following extracts from it—
"The following Rigvedie mantros (X. 18, 10-13), as translated by Wilson, indicate the existence of the custom of burial in early Rigvedie times."

the custom of burial in early Rigvedic times—
Go to this thy mother-earth, the wide-spread delightful earth; this viigin (earth is) as soft as wool to the liberal (worshipper); may she protect thee from the proximity of Nirriti.

Earth, rise above him; oppress him not, he attentive to him (and) comfortable; cover him up, Earth, as a mother covers her child with the skirt of her garment.

'May the earth heaped over him he light; may thousands of particles (of dust) envelope him. may these mansions dusti ghee (for him); may they every day be an asylum to him in this world.

'I heap up the earth around thee, placing (upon thee) this clod of earth; may I not be injured; may the Pitris sustain this thy monument belong may Yama make thee a dwelling here.'

Savana sava that the above mantars were

Sayana says that the above mantras were bolds of ashes of the dead, they were put into an and buried in a grave; and in this opinion he is supported by the Asvalayana Gribya Sutra (iv. 5). This may have been a later custom for aught we know, and may be regarded as a relic of the ancient custom of burial which was being replaced by the custom of cremation, and also as a compromise between the two customs. It will be seen

大きないない マール・・・

that at the time of cremation, maniras were uttered with the object of sending the dead man to heaven. the dominion of Yama, situated in the highest heaven. If he had already gone to heaven, why, very soon afterwards at the time of burying his ashes and bones, should he be asked again to "go to this thy mother-earth, the widespread delightful earth?" Would not such a procedure by inconsistent and contradictory? The procedure be inconsistent and contradictory? The perusal of the original mantras thus leaves no doubt in the mird that they were in ancient times uttered at the time of burial, otherwise, they would be quite meaningless. If it were at all possible for the -dead corpse to suffer any pain, it must have suffered extreme agony at the time of its cremation, and the burnt hones or ashes would suffer no fur-ther pain or agony at the time of their burnal in a grave, after having been enclosed in an urn prograve, after naving been enclosed in an urn provided with a lid, over which earth was heaped up. But the mantras become quite sensible when they are applied to the burial of a corpse. The dead body was still there, and the mourners could not as yet dissociate themselves from their feeling and belief that the dead man who had been quite and bener that the dead man who had been quite alive a few hours ago could not feel any pain so soon afterwards. It was therefore, quite natural for them, while performing their last melancholy rites towards him to entertain tender feelings for him and address him as follows. 'Go to this thy mother-earth, the widespread delightful each,' this virgin earth is as soft as wood.' The Farth also is becought, 'to convess him not and 'to be attentive. besought 'to oppress him not and 'to be attentive to him and comfortable' and 'to cover him up as a mother covers her child with the skirt of her garment.' Then again it is prayed that the earth heaped over him may lie light. It is certain that a monument or fundlus (Shuna) was raised over the provided the present of th grave, and the Pitris were besought to sustain it and Yama to make thee a dwelling here. The last and Yama 'to make thee a dwelling here' verse (mantra 14) of the above hymn is very currous: At the decline of the day they have placed me (in the grave) like the feathers of an arrow. I have restrained my declining voice as (they check) a horse with a bridle. What is the real significance, of this verse? Sayana is quite silent, and I am not aware of any one throwing any light on it. That it was intended to be the soliloquy of the dead person just buried seems most probable. The

buried man seems to say to himself, after hearing all the prayers and wishes of the mourners: have placed me in the grave at the decline of day, when darkness is approaching; or, in a grave where day has declined, i.e. which is dark. And you have placed me in a slanting (i.e. not fully-stretched on-length) posture, as feathers are tied slantingly to an arrow, and this posture is far from comfortable to me. But what do complaints now avail?

My voice is dumb'
"If the above interpretation be correct, then the mantras undoubtedly refer to the burial of a dead person, and not merely of his ashes or bones after person, and not merely of his ashes or bones after cremation. It is noteworthy that the dead man is not asked to go to Yama's world in the highest heaven where Yama, Varuna and the Pitris dwell in great happiness and enjoyment of bliss, nor to join his ancestors in that blessed region, but he is asked to go to Mothe'-earth, 'to widespread and delightful Earth' and to live in the mansion created for him, which, it is hoped, would prove to be 'an asylum to him in this world'. The Pitris are simply asked 'to sustain this thy monument' (sthuna), and Yama is besought 'to make thee a dwelling here'. There is no question here of the dead man enjoying any bliss for his good actions or suffering or suffering any bliss for his good actions or suffering the standard of the standard here'. There is no question here of the dead man enjoying any bliss for his good actions or suffering any pangs or punishment for his misdeeds. He is simply asked to rest there in peace probably till the end of Time, though from the supposed soli-loquy of the dead man, an eternal peaceful sleep in a rather dark mansion under the ground was considered to be a far from ideal existence even for the dead." (Chap X)

In the face of these evidences regarding the existence of the burial-custom in early Indo-Aryan society, it is indeed very bold to assert, as Dr. Chatterii has done, that "the burial customs are un-Aryan". The custom of cremating or burning the dead body must have followed that of burial, when the Fire-cult came to be firmly established. As Fire was supposed to carry the oblations consigned to it to the gods to whom they were offered, so the dead person was supposed to be translated to heaven by Fire consuming his remains, and speed-ing the "unborn portion" (Ajo bhaga) to the celestial regions in order to enable it to assume a new body there and live in happiness with the Gods and the Pitris. If Central Europe was the original cradle of the Aryans, it would be strange if the ancient Greeks, the Romans, the Teutons and the Slavs had no burial custom prevailing among them, anterior to the custom of burning the dead. If no traces of the burial custom be found among them, the natural inference would be that Central Europe was not their original cradle, and that they separated from the ancestors of the Indo-Aryans after the custom of burning the dead had come into proving of burning the dead had come into vogue.

Mr. Rakhaldas Bannerji has discovered at Mohen-jo-Daro various strata in which "were found four kinds of burial—in kennel-like tombs (tholos burial), in Terracotta chests containing the entire body (larnax bursal) similar to those found at Adittanallur, besides what has been called jar bursal in which an unburnt bone was placed in a small jar inside a big one with food, drink and garments in small pots also placed inside: and urn bursal, with ashes and burnt bones, together with stone implements within urns. The other kinds of bursal, without bursing the body, at all are found in the other burning the body at all, are found in the other strata—dating from the sub-neolithic stage to historical or post-Buddhic times." There is an hing to show in the Rigveda that all these different kinds of burial were "un-Aryan." The following

inferences drawn by Dr. Chatterji are also unwar ranted: "The Mohon-jo-Daro and Harappa culture does not seem to be Aryan. The burial customs are distinctly un-Aryan; they show a deep-rooted difference in racial and cultural origins. When the half-pastoral and half-agricultural Aryan barbarians were invading and fighting in North Mesopotamia and then later were settling in Eastern Iran. Gandlarm and the Punish the Mohen to Daryand the Punish the Mohen the Punish th hara and the Punjab, the Mohen-jo-Daro and Harappa people were a flourishing community in the fertile people were a flourishing community in the fertile valley of the lower Indus. The Arvans came into India, and as we see from the Rigveda and other literature, they expanded east into the Ganges valley and south-east into the Vidarbha country on the eastern side of the desert. It is strange that no Aryan States graw up in Sindh in the Vedic and Declaration and the theory was no carly average. Brahmana periods, that there was no early expansion of the Aryans southwards along the Indus. With regard to this last statement, Dr Chattern will be surprised to learn that the Rigveda mentions an Aryan king, Bhavya or Svanava as the power-ful lord of Sindh (Sindhau adhi) who presented hundreds of fine-bred horses (for which ancient Sindh was famous), gold coins (miskas) chariots with vadhus (girls), cows bulls & to Risis (vide Rv. 1 126, 1-5) As regards, the expansion of the Aryans to the east or the south, it may be stated here that during Rigvedic times they never advanced beyond the upper courses of the Ganga and the Yamuna towards the east, as they could not do so on account of a physical barrier like a sea existing in that direction, nor southwards to the Deccan for very similar reasons. It is a pity that Western Vedic scholars, and their disciples in India have not taken note of unmistak able evidences in the Rigveda of the existence of seas to the east and south of the l'unjah and of an extremely cold climate in that region during Rigvedic times, which go to prove its horry antiquity.

ABINAS CHANDRA DAS. January 7, 1925.

Dr. Chatterji's Reply

Dr. Das joins issue with me on the question of Dr. Das joins issue with me on the question of the racial affinity of the Mohen-jo-Daro and Harappe (as well as Adittanallur) peoples They appear to Mr. Rakhal Das Banerji and myself as having been non-Aryan and in all likeli hood Dravidian, while Dr. Das thinks they were Aryan. I pointed out that the distinctive Aryar and Indo-European practice for disposal of the dead was cremation, whereas at Mohen-jo-Darw we find the practice of interring the uncremate body either in a kennel-like tomb, or in a terra cotta larnax (a practice which obtained equally a cotta larnax (a practice which obtained equally a Aditionallur), or of placing an unburnt bone within a jar; and the practice of burning the body and placing a burnt bone within an urn is found only in the latest stratum at Mohen-10-Daro (2nd Century A. C.) I also mentioned that Aryan expan sion in the direction of Sindh was arrested, and Aryans had to direct themselves to the cast and the south-east, and this fact can be well accounted for by the presence of a strong non-Aryan people being already settled in the south-west of the Panjab and in the lower valley of the Indus.

Dr. Das has taken pains to show at length tha interment was known to the Rigveda Aryans. This is a point which I had not mentioned in my article and I now hasten to cry peccavi. But Dr. Da has been slaying a dead lion. What I insisted upon was that cremation was the common or cha
